The National Catholic Union of Bakers, defendant in the action, had a closed shop agreement with a firm of bakers in Quebec City. The plaintiff was formerly a member of the union but had allowed his membership to lapse while he was unemployed. At the end of August, 1937, the firm had dismissed from their employ the president of the union for what the Court concluded were personal reasons which had nothing to do with the union as a union. Another man was promoted to his job and the plaintiff was hired for the vacancy on August 28 but was notified by the firm that he would have to join the union. On September 4, he made verbal application, which was a customary method, and on November 20 made written application for reinstatement but was not admitted until December 4.

The Court was satisfied that the plaintiff was a qualified workman and that the delay in accepting his application was entirely due to the desire of the president of the union to be re-engaged and to his influence with the executive of the union. In the opinion of the Court, the rule of the union requiring that an application for membership should be decided by the union at the first meeting following had not been observed. The plaintiff's application had been dealt with by the executive committee and not by the union itself. The firm had been willing to give reasonable time for the plaintiff to be admitted to membership and had hired a baker by the day. At the end of September, however, a permanent man was taken on and the plaintiff informed that even if he were admitted to the union he could not then be employed. *Lemelin v. Union Nationale Catholique des Boulangers-Compagnons du Canada,* June 13, 1938.

Collective Agreement in Quebec Shoe Industry held Valid

On May 10 Mr. Justice Langlais of the Superior Court of Quebec dismissed with costs an action by way of a writ of Quo Warranto brought by the Association of Rural Shoe Manufacturers of Quebec questioning the right of a joint committee of employers and employees to enforce against its members the terms of a collective agreement between la Fédération Nationale du Cuir et de la Chaussure du Canada, Inc., and certain manufacturers which from September 4, 1937, had been made binding by order in council under the Workmen's Wages Act on all employers and employed in the shoe-manufacturing industry in the province.

The only essential point to be determined by the Court appeared to be the validity of section 15 of the statute. This section provides that the publication of an order in council in the *Quebec Official Gazette* declaring an agreement legally binding on all in the industry in the district covered by the agreement "shall bar any contestation alleging the incapacity of the parties to the agreement, the invalidity thereof, the insufficiency of notices and in all other respects; generally, it shall create a presumption, *juris et de jure,* establishing the legality of all proceedings relating to its adoption."

This section was passed in 1937 but even before its enactment the Quebec Court of King's Bench had upheld the judgment of the lower court in the Diva Shoe Company case (LABOUR GAZETTE, 1937, p. 1050) and declared valid an agreement in the shoe industry in spite of some informality in connection with the issuing of the decree regarding it. With the addition of section 15 to the statute, there was no doubt that the agreement in question was valid and the joint committee had the powers claimed by it.

The Court, however, dealt with certain arguments raised by counsel for the plaintiff and reviewed the history of the Quebec legislation concerning collective agreements, the Professional Syndicates Act, enacted in 1924, which gives legal effect to agreements between employers and professional syndicates registered under the Act and the Collective Labour Agreements Extension Act, 1935, providing for the extension of collective agreements to non-parties. The title of the latter statute was changed in 1937 to the Workmen's Wages Act and in 1938 to the Collective Labour Agreements Act. Section 20 of the Act gives to a joint committee, established by the parties to an agreement and to which the Minister may add not more than four members as representatives of the employers and employees who were not parties to the agreement, the right to inspect premises of employers in the industry, to require the latter to keep records and to produce them for inspection and to do other things necessary for the enforcement of the agreement. The Rural Shoe Manufacturers' Association challenged the validity of these powers.

The right of the Province to legislate concerning contracts of employment was beyond dispute. In this connection, the Court referred to the Privy Council decision of 1937 declaring invalid certain Dominion statutes relating to minimum wages and hours of labour of workers in industrial and commercial establishments since these were matters affecting "property and civil rights" and so within provincial jurisdiction. In Mr. Justice Langlais' opinion, the Workmen's Wages Act was a statute for the regulation of wages and was within the powers of the legislature of Quebec.

Counsel for the plaintiff association argued that the decree legalizing and extending the agreement was invalid for several reasons among which were the following: (1) the agreement was entered into by the Syndicat des Travailleurs en Chaussures de Montreal, Inc., as representing the workers and the order in council substituted for this union the federation of shoe and leather workers; (2) the decree applied the agreement to the whole province and not to "a stated region of the province" as the Act provided; (3) a clause of the agreement prohibited home-work, except when permitted by the joint committee, and the Act only authorizes the legalization of provisions relating to wages, hours and apprenticeship.

On the first point, the Court held that since the federation wished to be party to the agreement, it was merely a case of its adhering to the agreement or, in any case, of one decree covering two agreements. In applying the agreement to the whole province, the decree established minimum standards for three different regions of the province and, in the court's opinion, this was tantamount to issuing a decree for each of these regions.

As regards the regulation of home-work, it was pointed out that Article 10 of the Act which is general and provides that the decree may make binding "with or without amendment, the provisions of the agreement respecting the classification of operations and the determining of the various classes of employees and employers and also such provisions as the Lieutenant-Governor in Council may deem in conformity with the spirit of this Act." It can hardly be said, the Court considered, that it is not in the spirit of the law to distinguish between work in a factory and work at home by fixing different wage rates for such work. Nor is there anything in the Act which forbids authorizing the joint committee to change the classification of operations and to make exceptions. *D'Association Rurale des Manufacturiers de Chaussures de la province de Quebec et al v. La Federation Nationale du Cuir et de la Chaussure du Canada Inc., et al.* Cour Superieur, May 10, 1938.

Damages against Montreal Longshoremen's Union Reduced

The Quebec Court of King's Bench has dismissed the appeal of the National Independent Union of Longshoremen of the Island of Montreal and its business agent against the judgment of the Superior Court on November 30 (Labour Gazette, March, 1938, p. 360), but reduced the amount of damages allowed by the lower Court. It was pointed out that the only financial loss suffered by the plaintiff was four days' wages which, including overtime, amounted to $38, and that any humiliation suffered by him was due to a considerable extent to his own fault and the damages awarded on this head should be reduced by one-half, that is, to $75. *Duchaine v. l'Union Nationale Independante des Debardeurs de l'Ile de Montreal, Inc., et al,* Court of King's Bench, June 29, 1938.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Twenty-Fourth Session of the International Labour Conference

THE Twenty-fourth Session* of the International Labour Conference (League of Nations) was held at Geneva, Switzerland, from June 2 to 22, 1938.

Under the terms of the Treaties of Peace, each Member State is entitled to send four delegates to the Conference, two of whom must be government delegates and the other two must represent, respectively, employers and workpeople. These two latter representatives must be chosen in agreement with the industrial organizations, if such organizations exist, which are most representative of employers or workpeople. Each delegate may be accompanied by advisers not exceeding two in number for each item on the agenda of the meeting, but these advisers may not speak or vote, except as authorized deputies for the delegate.

The decisions of the Conference may take the form of draft international Conventions, or Recommendations to be submitted to the Member States for consideration with a view to effect being given to them by national legislation or other action. A two-thirds majority of the votes cast by the delegates is required for the adoption of any Draft Convention or Recommendation by the Conference. The Draft Conventions and Recommendations are afterwards communicated by the Secretary-General of the League of Nations to the countries represented in the International Labour Organizations. Each country is obliged under the Treaties, within the period of one year at most from the closing of the Conference, or if it is impossible owing to exceptional circumstances to do so within one year, then at the earliest possible moment and in no case later than eighteen months from the closing of the Conference, to bring the Draft Convention or Recommendations before the authority or authorities within whose competence the matters lie, for the enactment of legislation or other action.

In Canada, the Draft Conventions and Recommendations adopted at each session of the Conference have been examined by the Law Officers of the Crown to determine whether the subject-matters were within federal or provincial jurisdiction, and then, with the Law Officers' reports on the question of jurisdiction, have been brought before the Dominion Parliament and the respective Provincial authorities.

* A session of the Conference has been held annually since the first session in 1919. Two sessions were held in 1926 and in 1929, and three in 1936. A report of each session was given in the LABOUR GAZETTE for the year.

Countries Represented at the Conference

Of the sixty-one countries which are members of the International Labour Organization, fifty sent delegates. The attendance was practically equal to last year's record figure. There were 89 Government delegates, 34 Employers' delegates, and 33 Workers' delegates, with 254 advisers, making a total of 409 persons who took part in the work of the Conference.

A list of the countries represented follows: Afghanistan, Albania, Argentine Republic, Australia, Belgium, Bolivia, Brazil, British Empire, Bulgaria, Canada, Chile, China, Colombia, Cuba, Czechoslovakia, Denmark, Ecuador, Egypt, Estonia, Finland, France, Greece, Hungary, India, Iran, Iraq, Ireland, Japan, Latvia, Lithuania, Luxenburg, Mexico, Netherlands, New Zealand, Norway, Panama, Peru, Poland, Portugal, Rumania, Siam, Spain, Sweden, Switzerland, Turkey, Union of South Africa, United States of America, Uruguay, Venezuela, and Yugoslavia.

Canadian Delegation

The Canadian delegation to the Conference was made up as follows: —

Government Delegates:

Mr. H. H. Wrong, Geneva, Switzerland, Permanent Delegate of Canada to the League of Nations.

Mr. Gerald H. Brown, Ottawa, Assistant Deputy Minister of Labour.

Advisers to Government Delegates:

Mr. H. B. Chase, Montreal, Assistant Grand Chief Engineer and Dominion Legislative Representative, Brotherhood of Locomotive Engineers.

Mr. Charles Beattie, Toronto, Vice-President of the All-Canadian Congress of Labour.

Mr. Emile Tellier, Three Rivers, Second Vice-President, La Confédération des Travailleurs Catholiques du Canada, Inc.

Mr. W. T. Burford, Ottawa, Secretary-Treasurer of the Canadian Federation of Labour.

Employers' Delegate:

Mr. A. R. Goldie, Galt, President of Goldie and McCulloch, Company, Limited, and Past Chairman of the Industrial Relations Committee of the Canadian Manufacturers' Association.

Adviser to Employers' Delegate:

Mr. J. M. McIntosh, Toronto, Secretary of the Ontario Division, Canadian Manufacturers' Association.

Workers' Delegate:

Mr. Percy R. Bengough, Vancouver, Vice-President of the Trades and Labour Congress of Canada and Secretary of the Vancouver, New Westminster and District Trades and Labour Council.

Adviser to Workers' Delegate:

Mr. Raoul Trépanier, Vice-President of the Trades and Labour Congress of Canada and President of the Montreal Trades and Labour Council.

Mr. P. E. Renaud, Secretary to the Permanent Delegation of Canada to the League of Nations, Geneva, acted as secretary to the delegation.

Officers of the Conference

The following officers were elected:—

President.—Mr. Waldemar Falcao, Minister of Labour, Industry and Commerce of the Republic of Brazil, and Brazilian Government delegate.

Vice-Presidents.—Mr. Aalberse, Government delegate from the Netherlands; Mr. Knob, Employers' delegate from Hungary; and Mr. Hallsworth, Workers' delegate from the British Empire.

Secretary-General.—Mr. Harold Butler, Director of the International Labour Office.

Agenda

The agenda of the Conference comprised the following six subjects, the first five being for preliminary consideration only and will not come up for final attention until next year:—

I. Technical and vocational education and apprenticeship—(*First discussion.*)

II. Regulation of contracts of employment of indigenous workers—(*First discussion*).

III. Recruiting, placing and conditions of labour (equality of treatment) of migrant workers—(*First discussion*).

IV. Regulation of hours of work and rest periods of professional drivers (and their assistants) of vehicles engaged in road transport—(*First discussion*).

V. Generalization of the reduction of hours of work—(*First discussion*).

VI. Statistics of hours and wages in the principal mining and manufacturing industries, including building and construction, and in agriculture—(*First or single discussion*).

In addition, the Conference had before it for conideration: (1) the annual report of the Director of the International Labour Office; (2) the summary of the annual reports by Member States on the measures taken to give effect to the provisions of Conventions to which they are parties; (3) decennial reports on the working of: (a) Night Work (Bakeries) Convention, 1925; (b) Seamen's Articles of Agreement Convention, 1926; (c) Repatriation of Seamen Convention, 1926; (d) Sickness Insurance (Industry, etc.) Convention, 1927; and (e) Sickness Insurance (Agriculture) Convention, 1927; (4) Standing Orders and procedure; and (5) a number of draft resolutions on various subjects submitted by members of the Conference.

Appointment of Committees

On the recommendation of the Selection Committee, the Conference appointed the following committees:

Committee on Standing Orders.—Twenty members: ten from the Government group and five from the Employers' and Workers' groups respectively.

Resolutions Committee.—Twelve members: six from the Government group and three from the Employers' and Workers' groups, respectively.

Committee on the Application of Conventions.—Fifteen members: five from each group.

Committee on Technical Education.—Sixty members: thirty from the Government group and fifteen each from the Employers' and Workers' groups.

Committee on Indigenous Workers' Contracts.—Sixteen members: eight from the Government group and four each from the Employers' and Workers' groups.

Committee on Migrant Workers.—Forty-four members: twenty-two from the Government group, and eleven each from the Employers' and Workers' groups.

Committee on Hours of Work in Road Transport.—Forty-eight members: twenty-four from the Government group and twelve each from the Employers' and Workers' groups.

Committee on Statistics.—Thirty-six members: eighteen from the Government group, and nine each from the Employers' and Workers' groups.

Committee on Hours of Work.—Sixty-three members: twenty-seven from the Government group, eighteen from the Employers' group and eighteen from the Workers' group.

The Employers' delegate from Denmark, referring to the appointment of the last-named Committee, announced on behalf of the Employers' group that, in view of the objection of that group to proposals for the

reduction of hours, the group (apart from two members) would refuse to take any part in the drafting of a Convention for generalization of the reduction of working hours. It would, however, take part in the general discussion, whether in full sitting or in committee.

The Canadian delegation sought and secured representation on the following five committees:—

Selection Committee:
Mr. Wrong; substitute, Mr. Renaud.

Committee on Technical Eduction and Apprenticeship:
Mr. Wrong; substitute, Mr. Beattie.
Mr. Goldie; substitute, Mr. McIntosh.

Committee on Hours of Work in Road Transport:
Mr. Wrong (Chairman); substitute, Mr. Burford.
Mr. Trépanier, substitute member.

Committee on Statistics:
Mr. Brown; substitute, Mr. Tellier.
Mr. Goldie; substitute, Mr. McIntosh.

Committee on Regularization of the Reduction of Hours of Work:
Mr. Goldie (Vice-Chairman); substitute, Mr. McIntosh.
Mr. Brown; substitute, Mr. Chase.
Mr. Bengough.

Decisions of the Conference

The following is a summary of the decisions of the Conference:—

Statistics of Wages and Hours

It was decided by the Conference to deal with this subject at the present Session after a single discussion. The Employers' group considered that the double discussion method was the right one for the consideration of Conventions but recognized that there were exceptional cases when single-discussion might be wise and in this instance abstained from voting.

The Conference adopted, by 125 votes to nil a draft Convention on Statistics of Hours and Wages in the Mining and Manufacturing Industries and in Agriculture. Supplementing the Convention, were three resolutions,, adopted by the Conference as follows:

(1) concerning Statistics of Wages and Hours of Work in Agriculture; (2) concerning Statistics of Real Wages; and (3) concerning Supplementary Statistics of Wages and Hours of Work. The four Canadian delegates voted in favour of the Draft Convention. The texts of the Draft Convention and Resolutions are given in their proper sequence at the end of this review.

Technical and Vocational Eduction and Apprenticeship

The problem of international regulation of technical and vocational education and apprenticeship has been before the Conference on several occasions. In 1925, the International Labour Office was instructed to undertake preliminary work and necessary investigations and again in 1927, while in 1930 emphasis was laid on the need of enabling children and young persons fully to develop their aptitudes. Finally, in 1935, the discussion on unemployment among young persons showed how urgent, owing to the depression, was the need for re-organizing vocational training, and a resolution was passed requesting the Governing Body "to consider urgently the desirability of placing on the agenda of an early session of the Conference the question of vocational guidance, apprenticeship and technical education of young workers." This question was therefore put on the agenda of the present session of the Conference.

The Conference adopted the Committee's conclusions on this subject, including a questionnaire on which the Governments should be consulted by the International Labour Office, and two resolutions. As regards the questionnaire, before proceeding to its adoption as a whole a record vote had to be taken on Part IV (apprenticeship). In the course of the discussion of this report in plenary sitting of the Conference, the Employers' group made known that they objected to the introduction of trade union control into the field of technical education and for that reason they would vote against Part IV of the questionnaire as determined by the Committee. In supporting this view, Mr. J. M. McIntosh, Adviser to the Canadian Employers' delegate, spoke as follows:—

Address of Adviser to Canadian Employers' Delegate

Nothing would have given me more satisfaction, as a representative of employers authorized by the Government of Canada to attend this Conference, than to be able to say on my return that I had taken some part in the formulation of a list of points

to be used as a basis for a questionnaire on technical and vocational education and apprenticeship, and that the report of this Committee had received the unanimous approval of the Conference. May I say that in Canada for almost forty years employers and workers —not on opposite sides, but working together —have sought for the best in primary and secondary education that a sympathetic public opinion can give us. There has been nothing of a contentious character between us, and both parties down through the years have had an important part in the administration.

The report that is before you, for the most part, is an excellent document. There is much in it that will be helpful to us. There is much in it, I am told, that some other nations not so far advanced are hungry for, but it has points in it that have nothing to do with vocational education and the training of apprentices, and therefore we divide, and the great value that might have accrued from unanimous agreement is lost. What a pity it is. Vocational education is not a matter that is the property of employers or workers, organized or unorganized; it belongs to the public. We who have been interested in its development in Canada have been inspired by a desire to give those who follow us something better than we had ourselves, so that when their turn comes to succeed us in the administration of industry, either as managers or workers, they may do a better job than we have done.

Why should the control of the number of apprentices, the fixing of wages, wages during periods of sickness, holidays with pay, whether apprentices should be members of trade unions or otherwise, be mixed in with a most excellent document on education? Surely these are matters for agreements between the parties concerned. At all events, they are matters in which educational administrators have no concern.

In my country we have a great task ahead of us. I am proud to say that people have come to us from many European and other countries. Many of them came to us with handicaps. They did not know our customs; they could not speak our language. Our educational system has been adapted to meet their requirements. They have been helped to make use of their opportunities. Many of them have achieved high places in public affairs and business. A large percentage of our public men can look back with affection to European home lands, but I am sure from my own personal knowledge of them that they would not join in a Convention that sought to make our great educational system subject, in any degree, to the private contractual arrangements of a minority of the people.

I am sure employers from one end of Canada to the other would go with workers to our several Governments, and join enthusiastically in supporting a Convention that may ultimately emerge from the study we have given to the subject, were it not for the introduction into it of the points to which I have referred.

I have no authority to speak for Workers. I have not consulted with those who are here from Canada. I have not shown the memorandum I have prepared to the Employers. It is my own. But I venture to say that my fellow delegates from Canada will agree in principle with what I am now saying. No one need fear that there is any desire in Canada to exploit apprentices, or to deny them any advantage they may gain from association with others. I am a permanent official of the largest association of employers in Canada. The several Governments of Canada know that they can count upon our active support in the suppression of attempts to take advantage of those who are unable to protect themselves. These are all matters that come within the general laws of the country, but they are not part of the educational system.....

I am informed that in an extensive investigation made in the United States by a thoroughly representative committee—an investigation which has brought to the light of day the mistakes of the past, and has produced a report that points in the direction of a great educational advance—no one has sought to introduce the points on which there is disagreement here.

Without these points, the report which we have will show the way to world-wide achievement. With these in, you have a divided house. I, therefore, as a voice from Canada, knowing very little about matters which concern Europe, plead with you to pause a moment, even at this late stage, so that you may send us a document upon which the whole world may agree.

Part IV was adopted by 125 votes to 29, Mr. Brown, Mr. Wrong and Mr. Bengough voting for, and Mr. Goldie voting against. A vote by show of hands was then taken on the questionnaire as a whole which resulted in its adoption by 94 votes to 0.

It was decided by the Conference by 110 votes to nil that the question of technical education and apprenticeship should be placed on the agenda of the 1939 session with a view to the adoption of one or more recommendations. The text of the conclusions and of the resolutions in question appear at the close of this review.

Regulation of Contracts of Employment of Indigenous Workers

After adopting without opposition the Committee's conclusions, which contain a list of points for the consultation of the Governments by the International Labour Office prior to the second and final discussion, the Conference decided by 100 votes to 24 to place this question on the agenda of the 1939 session with a view to the adoption of international regulations in the form of two Draft Conventions (the first concerning the regulation of written contracts of employment of indigenous workers, and the second concerning penal sanctions in all contracts of employment of indigenous workers, whether required to be in writing or not) and possibly a recommendation with respect to the establishment of labour inspec-

torates. The Canadian Government delegates (Messrs. Brown and Wrong) and the Workers' delegate (Mr. Bengough) voted in favour of such action, but the Employers' delegate (Mr. Goldie) voted against it. The text of the Committee's conclusions is given in its proper sequence at the end of this review.

Recruiting, Placing and Conditions of Labour (Equality of Treatment) of Migrant Workers

This important question is of direct interest to all countries affected by migration problems, the South American countries in particular, as they absorb growing numbers of immigrants. The conclusions of the Committee appointed to deal with this subject were adopted by the Conference without opposition. These conclusions contain a list of points covering the various aspects of this problem: information to be given to emigrants; assistance through services organized or controlled by the authorities of the countries concerned; methods of recruiting and placing migrant workers; equality of treatment between nationals and aliens in regard to conditions of employment; the essential clauses to be included in migrants' contracts of employment, repatriation; and questions to be dealt with by collaboration between emigration and immigration countries with a view to facilitating the conclusion of bilateral agreements.

By a vote of 126 to nil the Conference decided to place this question on the agenda of the 1939 session, and the Governments of the member states will be consulted on the adoption of a proposed draft convention and one or more recommendations on the subject. The four Canadian delegates abstained from voting on this question. The Conference also adopted a resolution asking the governing body to resume its study of the question of the simplification of the formalities to be fulfilled by migrant workers previous to their departure from the country of origin, or in the course of the journey, or on arrival in the country of immigration. The texts of the Committee's conclusion and of the resolution appear at the close of this review.

Regulation of Hours of Work and Rest Periods of Professional Drivers (and their Assistants) of Vehicles Engaged in Road Transport

This question is of especial interest owing to the rapidly increasing importance of motor transportation with its attendant problems. The Committee examined in detail the various problems raised in determining the scope and enforcement of regulations, both from the social and from the safety standpoint. The questionnaire which was drawn up and which was accepted without opposition by the Conference will enable Governments to be consulted on a wide basis on the methods of limiting hours of work and fixing rest periods, and thus increase the available information necessary for drafting international regulations.

The Conference decided by a vote of 96 to 27 to place this question on the agenda of its 1939 session for second and final discussion.

The Canadian Government and Workers' delegates voted in favour of this proposal, but the Employers' delegate voted against it.

Generalization of the Reduction of Hours of Work

In 1935, the International Labour Conference adopted a Draft Convention whereby every state which ratified it was committed to the principle of the 40-hour week, without any reduction of worker's standard of living, and undertook to apply that principle to different categories of workers by separate conventions. Such a convention was adopted in 1935 for automatic glass-bottle works, and again in 1936 for public works. Yet another was adopted in 1937 extending the application of the 40-hour week to the textile industry. It was felt, however, that this procedure of the application of the 40-hour week industry by industry would take too many years before a result satisfactory to all workers was reached, and as a result of a resolution adopted last year the problem was considered at the present session on a new basis which envisaged the preparation of a limited number of conventions—one or two relating to industry, commerce and offices; another relating to coal mines; and one or more relating to rail, inland water and air transport.

The conclusions of the Committee include a questionnaire to Governments respecting hours of work in industry, commerce and offices, a resolution on the reduction of hours of work in coal mines, and a resolution on the reduction of hours of work in rail, inland water, and air transport.

The questionnaire was adopted as a whole by 79 votes to 26, Mr. Brown, Mr. Wrong, and Mr. Bengough voting for, and Mr. Goldie against its adoption. An amendment to the questionnaire presented by Mr. Goldie on behalf of the Employers' group had previously been defeated by 55 votes to 32, the Canadian Government and Workers' delegates voting against. This amendment read as follows:—

"To insert as first point of the questionnaire to be submitted to the Governments: 'The

effect which a reduction of hours to 40 per week would have, or has had, upon the economic situation of your country.'"

The resolution placing the question of coal mines on the agenda of the 1939 session of the Conference was adopted by 82 votes to 29.

The resolution concerning transport was also adopted by 93 votes to 28.

A final vote was then taken on the placing of the question of the generalization of hours of work (industry, commerce and offices) on the agenda of the 1939 Session of the Conference, and resulted as follows: for, 92; against, 27.

In these last three cases, the Canadian Government and Workers' Delegates voted for the proposals and the Employers' delegate against them.

(The complete texts of the decisions of the conference on this subject are given at the close of this review.)

During the discussion of this whole subject in committee, Mr. Goldie, the Canadian Employers' delegate and Vice-Chairman of this committee, cited as an argument against the 40-hour week, competition by non-members of the I. L. O. and by Germany in particular. Employer delegates from the United States and France were the only ones in support of it. Mr. Bengough, the Canadian Workers' delegate, joined his colleagues from Great Britain, the United States and France in replying to Mr. Goldie's arguments and stated:

"In Canada the workers have gone on record for the forty-hour week in full possession of the facts. The forty-eight hour week did not provide the job opportunities required and the reduction is essential with a view to reducing unemployment. In Western Canada the 40-hour week has been introduced in several industries (building, tramways, etc.) and unemployment has been thereby greatly reduced."

Address of Canadian Employers' Delegate on Reduction of Hours

Later, during the plenary sittings of the Conference, Mr. Goldie spoke as follows:—

On behalf of the great majority of the Employers' group I would like to present some reasons why the report of the Committee dealing with the generalization of the reduction of hours of work should not be adopted.

This question, as is well known by everyone here, is not a new question, having been introduced in 1933, and it has had a rather checkered existence until it now appears on the agenda of this session of the Conference under the imposing title which it now bears.

But it is still the old question of the 40-hour working week. This is amply borne out by the list of questions which the Office proposes should be asked of Governments and also by the discussions which have taken place in Committee and elsewhere. So that, as far as the Employers are concerned, we are discussing the 40-hour week.

At first this question was introduced as a means of reducing unemployment, but now it is being considered by its advocates as a social measure. But even as a social measure the proposition loses its significance immediately the possibility of working overtime with increased remuneration is introduced. This brings the question back to a basis for determinng the amount of wages to be paid. The Employers consider it is not only a social question but an economic one, and we feel that not enough emphasis is being placed on the economic side of the question.

The arguments which the Employers have used from the beginning are still valid. One of these, and it is a most important one, is that a reduction of the weekly working hours to 40, while maintaining the weekly wage, will raise the cost of production and therefore the selling prices of commodities. This has never been successfully disputed—the only answer being that prices are not raised so very much. This rise in prices will tend to reduce sales and in fact will reduce purchasing power; and this in turn will increase rather than decrease unemployment.

That this cycle of events does occur is amply borne out by the experience of the countries which, either by law or by practice, have adopted the 40-hour week principle either in whole or in part.

In the United States of America, prices have risen; people have refused to buy, with the result that there is an industrial depression almost as bad as in 1932; while the number of unemployed (given as approximately 12 million) is as great as, if not greater than, it was in the depths of the previous depression; and that notwithstanding the billions of dollars that the Government has spent in what is called "priming the pump."

In France, notwithstanding statements made to the contrary, it is well known that the 40-hour week is not working satisfactorily, and that industrial conditions in that country are not good.

In New Zealand, there seems to be no doubt that prices have risen considerably and purchasing power has decreased, and that unemployment there is being helped only by the money spent by the Government on public works, house building, etc.; and further, it is well to keep in mind that in New Zealand, while there is a limit to the amount of overtime that can be worked by women and boys, there is no legal limit to the amount of overtime that men can work in industry.

Shorter working hours may come in the course of time; but it will not be by compulsion, as it is now being proposed, but rather when technical progress permits it to be done economically without increase in the costs of production and therefore without injury to the consumer. There is a 48 hour Convention in force now, and very few countries in all have ratified it, and still fewer of the industrial countries; and it does seem strange that such a vigorous effort should be made to promote a 40-hour Convention when apparently so many countries are not prepared to ratify the Convention on 48-hours.

One argument used by the advocates of the 40-hour week is that it would give more leisure time to workers. This, of course, is all to the good, and it is a condition that we would like to see; but we must remember that leisure has

to be secured on an economic basis and if it is not so secured—as we do not believe it would be by the present proposal—it cannot be permanent. Further, as this world is constituted, whether we like it or not, we are not controlled by the law of leisure but by the law of work.

We are limited by the terms of reference and by the decision of the Committee to one or two Conventions. If two, it is presumed that one would be for industry and one for commerce. Can anyone visualize one Convention strict enough to be of any value and general enough to be workable that will take account of the thousand and one variations in industry? Will it take care of the lumberman in the northern woods of Canada and the paper mills in the Southern-States, of the construction industry and its irregular work, and of the bread bakeries that have to work every day? Personally I cannot so visualize it; and perhaps I am supported by the Director in his Report, where he says on page 55: "if it is difficult to make a single law uniformly and universally applicable to the whole industry of a single country, it is even more difficult to draft an international Convention of uniform and universal application." And again, "It is necessary to proceed with method and caution." With all of this I agree.

Of course it is proposed that the reduction in hours shall be done by graduated steps; but this would only delay bringing matters to a head, and the result would eventually be the same.

We have heard a great deal in the Director's Report and in subsequent speeches about the effects that the manufacture of arms and the fear of war is having and will have on industry. This condition is certainly a regrettable one; but as the world is constituted, it has to be constantly borne in mind. It is in order, then, to consider what is happening in two European countries which are not parties to our deliberations. Italy was the country that first proposed the 40-hour working week, but we learn from the publications of the International Labour Office that a working week of 60 hours is now permitted in all industries concerned with the production of war materials.

As regards Germany, the publications of the International Labour Office show that in many of the trades working days of 10 hours are by no means the exception and that in certain exceptional cases hours worked per week were as many as from 63½ to 72. In face of this, how can anyone ask nations that are straining every nerve to be able to keep their place in the world, to adopt a compulsory 40-hour working week. It just won't work.

It may be said that the proposition we are dealing with this year is only the submission of a questionnaire to Governments, and that therefore we need not regard it as of the same degree of importance as the formulation of a Convention. But for a Government to vote this year in favour of the submission of a questionnaire knowing that there is very little chance of their Government ratifying a Convention if passed is only holding out false hopes to the workers, and I trust that this will not happen this year.

Other Resolutions Adopted

The Conference also adopted five Resolutions not relating to items on the agenda but which had been submitted later by different members concerning: (1) the Renunciation of Racial Discrimination which might affect workers of certain races: (2) Improvement of the Situation of Forestry Workers; (3) Fixing the Maximum Weight of Loads to be Transported by Workers; (4) Indemnities due to Workers in case of Dismissal; and (5) Convening of a second Regional Conference of American States which are members of the I.L.O. (These Resolutions are given at the conclusion of this review).

The Conference adopted certain modifications of its Standing Orders and took decisions on several reports.

The Conference approved the conclusions of the Committee appointed to examine the annual reports of Governments on the measures taken to give effect to Conventions ratified by them.

It also had before it the reports which have to be submitted once in every ten years on the application of the following Conventions: Night Work in Bakeries; Seamen's Articles of Agreement; Repatriation of Seamen; and Sickness Insurance for Workers in Industry and for Agricultural Workers.

Opening Proceedings

The proceedings were formally opened by the Chairman of the Governing Body of the International Labour Office, Mr. F. W. Leggett, Government delegate of Great Britain. He referred to the profound regret felt at the resignation of Mr. Harold Butler as Director of the International Labour Office, which is to take effect at the end of the year, and stated that the continued and growing success of the work of the Organization constitutes a more eloquent tribute to Mr. Butler than any formal speech. "In the pioneer constructive work," he said, "which made this Organization possible, Mr. Butler, assisted by Mr. E. J. Phelan, played a decisive part. Albert Thomas by his genius gave the Organization the impetus which has enabled it to reach its present standing, and Mr. Harold Butler, who was his loyal collaborator through the first and difficult years, has faithfully maintained and developed this high enterprise. . . . It is a source of great satisfaction to know that Mr. Butler will still be able not only to continue in his own country his work for social betterment, but will also be able still to contribute to the international work by which he will always be remembered."

Mr. Leggett welcomed the large number of delegations and representatives at the Conference as well as the Secretary-General of the League of Nations, Mr. Joseph Avenol, and representatives of the Republic and Canton

of Geneva. He considered it a proof of the vitality of the Organization and the place it occupies that the attendance at the Conference was practically equal, both as regards numbers and the importance of the delegations, to that of last year, which was a record figure. He was particularly glad to welcome the ministers present who are responsible for directing their countries' social policies—e.g., Brazil, Estonia, Finland, Luxemberg and Yugoslavia—and to know that several Ministers of Labour would be attending the Conference.

He referred to the importance of the various subjects coming before the Conference and, with respect to that of hours of work expressed the hope that, with the long history of the consideration of this question before it, the Conference would be able to find a means by which the objective atmosphere which characterizes industrial negotiations day by day would be brought to bear on this problem and a new spirit of co-operation initiated. He hoped that the Conference would also be productive of new friendships and make a new and substantial contribution to the spread of kindliness throughout the world.

Mr. Falcao (Minister of Labour, Brazil) in taking the Chair as President of the Conference, said that in electing him the Conference had paid a tribute to the way in which his country had attacked and solved labour problems. Inspired by a past of faithful devotion to the ideals of social justice, he declared that Brazil always followed the loftiest aims of humanity as reflected in the activities of the International Labour Organization. He considered that the Brazilian Legislature has gone beyond the aspirations of the workers and has provided the country with an advanced scheme of social legislation on all matters concerning labour, social welfare and assistance, land settlement and population. This legislation was adopted without any disputes, strikes or lockouts, and with a lofty desire to achieve justice and harmony, which may be said to sum up the program of the International Labour Organization. He declared that the ideal of international harmony and co-operation which has always pervaded both the studies and the practical achievements of the Organization finds a full echo on the American continent.

He said that a considerable amount of publicity will be given to the work of the Conference on the subject of the generalization of the reduction of hours of work, which is of central importance to every branch of industry, and will be approached this year on the basis of the International Labour Office's very full report on the question. He observed that the cognate subject of the hours of work and rest periods of professional drivers of vehicles engaged in road transport is of great importance to-day on account of the bearing which it has upon the problem of the safety of the public. With respect to two other very important questions to come before the present session of the Conference—viz., technical and vocational education and apprenticeship, and the regulation of contracts of indigenous workers —he pointed out that the first of these relates to one of the great assets of industrial countries, namely, the skill of their workers, while the second is another question of special importance at the present time in view of the increasing rate at which colonial territories are being developed, and of the resulting labour problems involved both for European countries and for countries whose agricultural production resembles that of the colonies. The question of statistics of hours of work and wages in the principal mining and manufacturing industries derives its importance from the desirability of making these statistics comparable internationally. Finally, there was the question of the recruiting, placing and conditions of labour of migrant workers. He thought that at a time when, fortunately, there are signs of a revival of migration, there was no need to emphasize the importance of replacing, by successive stages, the disorder in which this problem has hitherto been left.

In conclusion, he assured the assembly of his heartfelt wish and conviction that its deliberations would prove successful and would result "in a series of measures providing the working masses with the benefits to which they are entitled by the laws of social justice, so that our peoples may enjoy the benediction of peace."

Director's Report, Conference Discussion, and Director's Reply

In his annual report to the Twenty-fourth Session of the International Labour Conference, Mr. Harold Butler, Director of the International Labour Office, as in previous years, gives penetrating analyses of the striking aspects of the world economic situation. In it he notes, first of all, that the summer of the year 1937 "marked the summit of the 'boom of the thirties.'" The indices of world industrial production exceeded the figures for 1929, "whose fabulous prosperity had become a distant mirage." The decline in world unem-

ployment, the increase in international trade and all other indices show a similar trend. That "the boom of the thirties" should have reached such considerable dimensions in spite of all the political obstacles in its way is "a remarkable testimony alike to the tenacious optimism of humanity and to the unfathomed possibilities of economic expansion which lie at its door."

This advance has not, however, been evenly distributed among the principal industrial countries: certain of them benefited considerably, while others hardly emerged from the shades of depression. Moreover, the boom itself had always led a suspect existence, because of the rôle played in it by the "mad race in armaments." It is impossible to estimate accurately how far the wave of industrial and commercial activity was due to the abnormal activity of war industries, as information is scanty. Mr. Butler adds:

"What is certain, however, is that genuine prosperity might have been more abundant and its prospects of endurance greater, had not an excessive portion of the national wealth of almost every country been diverted to war equipment."

The Director of the International Labour Office then shows that, in spite of all the national experiments, no matter how successful, a high standard of living cannot be realized by national effort alone.

"Peace as well as prosperity is dependent in large part on international trade. For countries with a large and rich territory at their disposal, trade with other nations is none the less necessary to maintain their standard of life or to raise it still further."

But, as the charts in the Report show, 1937 "was not a year of unalloyed prosperity." And "if the record were carried into the first few months of 1938 the turn in the economic tide would be still more clearly shown." Among the untoward developments which became evident in the spring and summer of last year, the Director notes, in certain countries: a decline on the stock exchanges; a rise in wholesale prices, involving an increase in the cost of living; and a fall in the prices of a number of raw materials, which had been forced to unduly high levels by speculation. Nevertheless, despite a sharp recession in industrial activity in the United States, and a marked reduction in its imports from other countries, the effects on the rest of the world have thus far been comparatively slight. Therefore, from a purely economic point of view, Mr. Butler believes that there would seem to be no obvious reason for pessimism.

Menace of War

However, at the end of this chapter of his Report, which he has headed "Prosperity regained—and lost?", he says that it would be foolish to regard the present situation with any kind of optimism.

"Indeed, by some readers of this Report, the cheerful passages describing the remarkable economic and social achievements of the past few years and the hopeful projects for a better future may be suspected of bitter irony. With war blazing in the Far East and in Spain, with Europe once more an armed camp, with the fear of war obsessing the public mind everywhere, all thoughts and plans of social progress may well seem more appropriate to some other planet. No secret of intense warlike preparations is made in a large number of countries. Progressively the whole national life and the activity of every individual is being subordinated to the requirements of the State in the event of conflict. Every country which feels itself menaced and insecure is perforce driven along the same road. Individual freedom and economic expansion are more and more cramped and distorted by the over-riding necessity of national preparedness. What was last year a darkening shadow now threatens to blot out the light from the whole earth. As will be seen in subsequent chapters, war is already invading the social field. It has already blocked some of the main avenues of advance, and may soon begin to sap the social edifice which this generation has raised. Should another general war break out, a total collapse is practically certain."

After his survey of the general situation, which affords ample evidence of the considerable degree of prosperity which has now been regained, the Director of the International Labour Office sums up the "social balance" of the past year, which gives a sense of positive achievement.

Improvement in Wages

"Judged by the first and most important test, the state of employment, there is no doubt that in most countries the industrial worker was in a far better position in 1937 than at any time since 1929. The index compiled by the International Labour Office for the world as a whole shows that unemployment was just above the 1929 level." Except in Germany, the general increase of prosperity has brought with it a general improvement in wages. The development and the extension of social insurance are successfully continuing. Other signs of progress are found in the wider definitions of decent housing and nutrition for workers.

"If it were possible," says Mr. Butler, "to isolate social phenomena and to consider them in complete abstraction from the economic and political conditions by which they are largely determined, it would be possible to say that on the whole considerable strides have been made in the last few years. Unfortunately, under existing economic and political circumstances the advances made cannot be regarded as secure or permanent. Only when suitable political and economic conditions are restored can they be properly consolidated. For it cannot be too often repeated that without real economic prosperity no lasting social progress is possible and that without real peace between nations, economic prosperity is largely illusory and precarious."

Maintenance of Employment

In his analysis of employment, the director considered it reassuring that the discussion of measures to maintain the volume of employment in times of depression has continued to attract a great deal of attention. He also regarded as significant that, in spite of the high level of prosperity which the country now enjoys, the Government of Sweden has continued its systematic effort to frame plans for meeting the next depression . . . . In this respect, the director observes:

"In view of the success achieved by the Swedish Government in dealing with the last depression, this endeavour to prepare in good time for meeting any further recession is a matter of great general interest. So far, no other country has taken similar measures on a comprehensive scale, but it can hardly be denied that one of the principal lessons of the recent slump has been the value of public expenditure wisely applied as a means of reviving business activity. It is therefore particularly timely that the International Labour Organization should have made a first step towards establishing international co-operation in the matter of public works. In accordance with the recommendations and the resolution adopted by last year's Conference, the Governing Body has decided to set up an International Public Works Committee. Governments have now been consulted as to their willingness to participate in a preliminary meeting of the Committee and to supply information concerning public works in accordance with a uniform plan to be drawn up by the Committee. Favourable replies have already been received from South Africa, Belgium, Canada, Czechoslovakia, Egypt, Estonia, France, Great Britain, Luxemburg, Norway, Poland, Rumania, Sweden, Switzerland, the United States and Yugoslavia."

Progress of Unemployment Insurance

Dealing with the progress made in providing against the effects of future depressions, the director notes that "unemployment insurance continues to make steady headway in the world." He outlined this progress in various countries as follows:

"In the United States the Social Security program has reached the stage of practical fulfilment. Every State in the Union together with Alaska, Hawaii and the District of Columbia now has an unemployment compensation scheme in force. In Wisconsin payments had already begun in 1937. In 29 States benefit payments are due to commence during the present year and in 21 others they will commence in 1939. It must not be forgotten that to all intents and purposes the United States system consists of 51 separate schemes, many of them covering a territory as extensive as one of the larger European countries. The initial work of organization both in the Social Security Board at Washington and in the various States has been enormous, and the difficulties have not yet been fully overcome. But in spite of all the initial difficulties in its path this gigantic social enterprise is being steadily carried through to success.

"In South Africa an Act providing for unemployment insurance in certain industries came into force on January 1, 1938. In Australia the Commonwealth Government invited an expert from the British Ministry of Labour (Mr. G. H. Ince) to help them in preparing an unemployment insurance scheme for the Commonwealth. Negotiations have been taking place with respresentatives of the States with a view to putting his recommendations into effect. In Belgium Mr. Henri Fuss, Royal Commissioner for the Study of the Unemployment Problem, has presented two reports on the subject and has prepared a Bill which is now under consideration by the Government.

"In Canada the Dominion Government has proposed an amendment to the British North America Act which would bring unemployment insurance within Dominion jurisdiction and has asked the provinces for their observations on it. Six of the nine provinces agreed immediately, but three provinces—Alberta, New Brunswick and Quebec—have raised serious objections. In preparing its scheme the Dominion Government called upon the International Labour Office for assistance. Mr. D. C. Tait was accordingly sent to Canada and took part in the preparation of a Bill for submission to Parliament as soon as the constitutional question is settled.

"In Norway a Bill providing for compulsory unemployment insurance was presented to the Storting in March, 1937, but does not appear to have been adopted. In Great Britain the scope of the scheme has been slightly widened by bringing in groups of workers who had previously been excluded."

Hours of Labour

The important question of the reduction of hours of work is the subject of a special chapter in the Report of the Director of the International Labour Office. It is well known that the generalization of this reform is one of the chief items on the agenda of this year's International Labour Conference, which will have before it a particularly complete documentation on the question. Mr. Butler shows how the reduction of hours of work, which began as an emergency measure to combat the disastrous social consequences of the slump, has now come to be regarded as the next phase in the evolution of social progress.

In actual fact, he remarks, there has not been as overwhelming a landslide towards the 40-hour week as there was towards the 48-hour week in 1919. Indeed, in 1937 the tendency was towards extending rather than curtailing the actual number of hours worked. Hours of work have been lengthened in countries actually at war and also in certain countries where armament or rearmament is being driven forward at high pressure. Thus "hours of work have been lengthened in two countries actually at war—Japan and Spain" . . . and longer hours have also been resorted to "in countries where preparedness for war now overshadows all other considerations."

The Director of the International Labour Office also shows the essential characteristics of the application of the 40-hour week in the countries which have adopted this measure, and pays particular attention to the "French experience."

The conclusion is clear from this survey that the tendency towards shorter hours continues, though checked through certain transitory circumstances. The problem remains, and its solution will be more urgent than ever when the armaments race inevitably slows down.

Progress of I. L. O.

In the next part of his Report, Mr. Butler deals more directly with the activity and progress of the International Labour Organization.

> "It would be idle to deny," he writes, "that the developments of the past two years have caused a good deal of disaffection towards international political institutions among those of short sight and little faith. The reversion to purely nationalistic modes of thinking in the realm of politics might have been expected to produce a similar decline of international co-operation in the social and economic spheres. Yet it may be said with some confidence that despite the departure of Italy, regrettable though it be, there are no signs of weakening in the International Labour Organization. Its stock stands high. Its membership is as representative and powerful as it was five years ago. In every one of the five continents its reputation and its influence are as great now as then."

Re-Distribution of Economic Power

The Director of the International Labour Office draws attention to an important change in the history of the International Labour Organization which the events of the last five years clearly denote. This is, that it is more and more evident that there has been a redistribution of economic power in the world. Europe has lost part of its former economic preponderance to extra-European countries. This shifting balance of power has been progressively reflected in the constitution and activities of the International Labour Organization. Its centre of gravity is slowly being displaced. Mr. Butler stresses, in particular, the growing importance of the Far East from the industrial point of view and the new problems continually arising therefrom. Such developments open larger horizons to the Organization, and are calculated to quicken rather than slacken its rhythm. "A new period of intense and varied activity is opening out before the Organization," concludes Mr. Butler.

> "Its purview is no longer confined to the technical problems of industrial regulation, which it inherited from the International Association for Labour Legislation. Its horizon embraces all those wider questions which are inherent in the vast problems of stabilizing employment and lifting the standard of life to more civilized levels everywhere. These problems are squarely attributed to the jurisdiction of the Organization by its Constitution. They are of the essence of its existence. In the future its work may not be cast in the same conventional moulds. Its Constitution may have to be adapted to meet new circumstances as they arise. Its centre of gravity will become more world-wide as time goes on. It may some day acquire the universality which it has never yet entirely achieved. But whatever its vicissitudes, its future is assured as long as civilization based on the economic dependence between nations and a common aspiration to improve the lot of the great masses of mankind endures."

Discussion of Report

In the discussion of the Director's report, to which seven plenary sittings were devoted, 68 delegates from various countries took part (39 Government, 10 Employers' and 19 Workers'). Among the speakers were the Ministers of Labour of Great Britain, France, Spain and Luxemburg, and the Secretary of Labour of the United States.

Nearly all the speakers expressed a keen appreciation of the breadth of vision, the boldness of expression and the constructive attitude which was characteristic of this report. They also expressed a special regret at the forthcoming departure of the Director from the organization after having been associated with it from its very inception. This regret was tempered with pleasure that he was to be succeeded by Mr. John Winant, distinguished citizen of the United States, and that the Deputy Director was to be Mr. E. J. Phelan, who has given conspicuous service to the organization since its earliest days.

The speakers deplored the present trend of world affairs which hinders the program of social betterment for which the International Labour Organization stands and urged that the efforts to promote social justice and social security, which alone can form a sound foundation for peaceful international relations, should be intensified.

Most of the Employers' delegates who spoke drew the attention of the Conference to the fact that most social questions have an economic aspect, and that only a strong and prosperous economic system can support a sound social policy. They also emphasized the unstable character of social progress carried out under the precarious conditions afforded by the present political uncertainty. They were convinced that the Organization could not but gain in moral authority if public

opinion were to see it occupied in studying the means of avoiding depressions. The opinion was expressed that the fundamental trouble was a diversion of a part of the nation's savings into non-work producing channels. Several referred particularly to loans abroad, to the hoarding of funds in banks or otherwise, and to speculation which, however stimulating it may be while it lasts, eventually collapses, and thus puts billions of bank credit out of circulation and throws men out of work.

Many allusions were made by the Asiatic delegates to the war waging between Japan and China and to the section of the Director's Report entitled "The Growing Importance of the East," and the annex of the Report called "Problems of Industry in the East."

The Latin American delegates shared the Director's view that the Organization should now look beyond the old continent of Europe to overseas countries. They recalled the results of the Santiago Conference and the resolution it had adopted providing for the possibility of convening similar conferences when circumstances showed that it was desirable, and thought that the time for convening such a conference had come.

Address of Canadian Government Delegate

The Canadian Government delegate, Mr. Gerald H. Brown, also addressed the Conference. The text of his speech follows:—

Mr. President, on behalf of the delegation from Canada, I desire to say how much pleased and impressed we are with your efficient control of the discussions in this gathering of nations, and how pleased we are also with your choice for the post of high honour and distinction involving, as it does, a recognition of the growing interests of the New World to which extended reference is made in the Director's Report.

As one of those who worked with Mr. Harold Butler in the first Session of the Conference of this organization in Washington, and again at the first Session held here in Geneva, and who has been in continual touch with the organization since, I desire to bear witness to the high qualities of knowledge, vision and resolute leadership which Mr. Butler brought to this work, in collaboration during successive years with Mr. Albert Thomas, and as Director since Mr. Thomas' regrettable death six years ago. The resignation of Mr. Butler from the directorship came as a great surprise to us in Canada and I take this opportunity of extending to him the expression of our cordial esteem and recognition of the conspicuous services which he has rendered to the cause of world peace in contributing to the removal of the causes of discontent by the formulation of wise measures of social policy.

Our highest esteem extends also to Mr. John G. Winant, who has been designated by the governing body to take up the responsibilities of the directorship in succession to Mr. Butler at the close of the present year. The new Director's name is well known in my country to all who are interested in social betterment, and we are assured that he takes up the work of Albert Thomas and of Harold Butler with a mind well trained both by study and experience for the work.

We are also glad that the conspicuous services of Mr. Phelan, the senior Assistant Director of the Labour Office, have been recognized by his advancement to the post of Deputy Director, in which his collaboration will be of the utmost value to the new Director.

The Canadian Government delegation tenders its congratulations to the Director on the survey made in his Report of the measure of social progress which has been achieved throughout the world during the past year, notwithstanding the difficulties of the times. It is a sad picture indeed that the Director paints of the substantial progress of economic recovery which had been attained through painful effort in various countries being turned so soon into a recession under the black shadow of political insecurity and of restrictive trade policies and exchange controls, born of the hope of national self-sufficiency, or of the fear of national insufficiency in the event of war.

The Director finds the economists in general agreement that a major economic decline is not likely for the present, and observes that the very rapidity of the downward movement in the United States makes an early resumption of normal activity the more probable in that country. It is sincerely to be hoped that his optimism in this respect may prove to be justified, and so far as Canada is concerned we are fortunate indeed to have been able to maintain thus far our accelerated pace of production to the extent we have.

The most recent statistics available show that the physical volume of business in Canada in mining, manufacturing, construction and distribution in the year 1937 was about 10 per cent greater than in 1936, and about equal to that of 1929, but the level at the beginning of 1938 was somewhat lower than at the beginning of 1937. Mineral production was up 15 per cent over last year and higher by 46 per cent than in 1929. The volume of manufacturing was 12 per cent higher than in 1936 and almost up to the level of 1929. The total value of construction contracts was higher by 40 per cent than in 1936, although still below the level of the pre-depression years. A material factor in this improved showing in construction was the financial assistance given under Federal legislation—the Dominion Housing Act and the Home Improvement Loans Act. In a despatch from Ottawa to the London *Times* of Saturday, it is stated that the Minister of Finance gave details to the Canadian Parliament of a new housing program, estimating that loans and other forms of encouragement given by the Federal Government would result in the construction of new houses to the value of 100 million dollars.

The paragraph in the Director's Report on the progress of the Labour Organization during 1937 is indicative of continued momentum and initiative along useful lines in a number of different directions, and the record of ratifications proves clearly that the effort on behalf of social reform and the improvement of labour conditions, so necessary to human happiness and the attainment of peace in the world, is making steady headway alike in the eastern and western worlds.

Before dealing with other matters I would say, in common with many others here, how much I have been struck by the words of Lord Baldwin last year concerning the nervous strain

involved in the highly mechanised industries of the modern world. In this connection may I read a passage from a report which was made by the Right Hon. W. L. Mackenzie King, the present Prime Minister of Canada, an authority of international repute on social problems, when he was serving as Chairman of a Royal Commission of Enquiry into the conditions of work of telephone operators in Canada more than thirty years ago.

In telephone operating he says: "The operators are always upon the alert. The brain is in constant use, the mind on the *qui vive*. High tension in the special senses is combined with mental worry. There is a drain on the nervous force. The liability to occasional injury from shocks, the irritation caused by intermittent glowing of lights, reflecting the impatience of users, the occasional buzzing and snapping of instruments in the ear, the sense of crowding where work accumulates, the consciousness of supervision, the sense of responsibility in response to calls and the inevitable anxiety occasioned by seeking to make necessary connections whenever a rush takes place, all combine to accentuate the strain upon the nervous energies of an operator." I am sure we shall agree that the observations made by Mr. King in this passage are applicable to many other forms of modern mechanisation.

In an address which was delivered by one of the Government delegates for Canada in the Conference last year, reference was made to most important social and labour legislation which had been adopted in Canada during the preceding twelve months. It is not my intention to develop this topic further to-day, but let me say that the ensuing year has witnessed the continued development of legislation to safeguard and protect workers in their right of association in unions, and for the encouragement of collective agreements, the fixation of minimum wages for those least able to protect themselves, the training of unemployed young workers, and the care of those of more mature years who are still afflicted by lack of remunerative employment.

A comprehensive study of the whole problem of unemployment has recently been made for the Government of Canada by a representative body known as the National Employment Commission, to which I referred in an address delivered before the International Labour Conference two years ago. The Report of this body now before the Government breaks the general problem of unemployment down into its constituent parts and proposes means and methods looking to the solution of unemployment which will be of the utmost help to the Government in the formulation of public policies, and also to the business community in general.

On behalf of the Government of Canada I take this means of acknowledging the most helpful assistance which was given to us on request during the past year by Mr. D. Christie Tait, of the staff of the International Labour Office, in a study of the existing legislation of various countries on the subject of unemployment insurance and the administrative problems arising thereunder, looking to the establishment of a system of unemployment insurance in Canada suitable to the conditions of our country.

In discussions which have occurred in this Conference in previous years attention has been called to the division of constitutional authority over labour matters in Canada between the Dominion Parliament and the respective Provincial Legislatures, which has made it more difficult than otherwise might be the case to secure the effective application of international labour conventions in our country. Mention was made by one of the Government delegates for Canada in this Conference last year of a decision by the British Privy Council as to the inability of the Dominion Parliament to apply the provisions of the 8-hour Convention throughout the entire country by Federal enactment alone. Since that time a Royal Commission of Enquiry has been appointed by the Dominion Government to examine the economic and financial basis of our confederation and the distribution of legislative powers in the light of the economic and social developments of the last seventy years, since the Canadian provinces were brought together. Sittings of this Commission have been held in all of the nine provinces, and it is expected that the report will be presented to the Government in the early future and will doubtless be taken up with the provincial authorities in due course.

Let me conclude by stating that, notwithstanding the problem of the divided jurisdiction of labour matters in Canada, our delegation is happy to be able to inform the Conference that since coming to Geneva last week word has been received by cable that authority has been given by order in council for the ratification of three more Conventions of the International Labour Conference, dealing respectively with seamen's articles of agreement, the marking of the weight on heavy packages transported by vessels, and the protection against accidents of dockers. The instruments of ratification of these Conventions are being sent forward and will therefore reach the International Labour Office very shortly.

Address of U.S. Secretary of Labour

Miss Frances Perkins, Secretary of Labor of the United States, who is the first American cabinet member to address any conference in Geneva, observed that the Director in his report had made generous allusions to the world significance of the policy of trade agreements initiated by the U.S. Secretary of State, the Hon. Cordell Hull. She declared that, whereas their remoteness frequently makes them unfamiliar with the political problems involved in some forms of international co-operation, in such fields as the improvement of working and living conditions, in public health and social problems, in studies of nutrition, finance and economics, in the whole area of scientific humanitarianism, the United States finds itself able and glad to co-operate to the fullest possible extent and that they take part in its work with wholehearted conviction.

"We believe," she said, "that the International Labour Organization, avoiding involvement in political matters, can make a real contribution to world economic recovery by aiding in the removal of social and economic malajustments. What was once the need of the workers for better conditions has now become the need of the world of economic life itself. It is in this sense that our membership in the International Labour Organization has real significance in the United States.

"It is a promise of the life and future of the International Labour Office that, faced with the expanding needs in the world, its outlook and its procedures are also expanding. The Director has well referred to the value of the Santiago Conference, which will surely serve as the precedent for future regional meetings. Similarly, the careful analytical approach to the consideration of the broad range of problems of such world-wide industries as textiles and coal promises a wider and a more practical usefulness for the organization. We have learned the value of discussion in tripartite technical conferences, making use of prior economic research by the office. Positive effect should be given to the conclusions of such discussion through continuing committees representative of the industries themselves.

"The tripartite character of the International Labour Organization makes possible those democratic processes of negotiation and conciliation between organized workers and organized employers which are so central to our conception of labour policy in the United States, central but not exclusive."

After dealing with industrial relations, collective bargaining and social legislation in the United States, Miss Perkins said that the task of the International Labour Organization should be to extend the frontiers of social progress throughout the world and fulfil the promise of a better living standard. She considered that the improvement of working conditions up to the limit of present human knowledge in every country in the world was basic to that increased consumption that international trade and stabilization of industrial life so needed for recovery and for security. There should be no cheap or exploited labour as a basis of competition within a country or between the industries of different nations. It was for this reason that the United States supported Conventions setting international minimum standards of work.

Address of British Minister of Labour

Mr. Ernest Brown, Minister of Labour of Great Britain, was welcomed by the President on behalf of the Conference. Mr. Falcao said it was a pleasure to see amongst them the Minister of Labour of a country which was one of the pioneers of labour legislation, and which played an important part in the establishment of the International Labour Organization.

The British Minister of Labour stressed the need for encouraging individual initiative in industry and urged a general government policy of using legislation only as a complement to voluntary labour agreements.

"In Great Britain we attach greatest importance to co-operation between workers and employers. We believe that intervention of the state should be used only where absolutely essential and that, wherever the organization of employers and employed can make arrangements between themselves, it is far better that they should do so than that some system should be imposed upon them by the law: My country rejoices to see this principle being followed on an international scale and it is the general hope that one of the accomplishments of the International Labour Organization will be to continue to bring the employers and workers of the world into the closest possible relation . . . . That does not mean, however, that the law should never be used to assist in improving conditions of labour or in providing safeguards against the inevitable anxieties of industrial life. In Great Britain we regard our voluntary organizations as one of our safeguards for the protection of individual liberty and of human dignity, and our problem is to avoid State action of such a kind as would interfere with, or discourage, the further development of voluntary organizations of employers and workers."

Mr. Brown went on to mention the legislative steps which had been taken in his country recently in the industrial field and said that in these reforms they were ensuring that law shall be used as an ally of voluntary agreements. He declared that the British Government has endeavoured to show its faith in the International Labour Organization and its future by inviting the Governing Body to hold its autumn session this year in London.

Address of Minister of Labour of France

The French Minister of Labour, Mr. Ramadier, after stating that statistics on production, strikes and unemployment showed that the introduction of the 40-hour week had led to successful results in France, concluded his remarks by referring to the great lesson which the French experiment can teach to the Organization.

"The troubles of June, 1936, may have appeared grave and have threatened the very basis of our country, but France easily found its way to salvation, thanks to its democratic system, for democracy prevents violence by showing how unnecessary it is. France owes its salvation also to an energetic policy of social reform. Social reform is not only an element of progress, it is also one of the essential elements of a nation's stability and force. It is a bulwark which protects civilization against weakness and impatience. The French experiment, therefore, despite certain difficulties, has succeeded. It may be of general value to the world. In any case the International Labour Office, which has the duty of promoting social progress throughout the world, should learn the lessons of our experiment. The International Labour Office has accomplished its duty in a vigorous manner with the help of all the great democracies. The names of those it has called to its leadership: our own great friend and leader, Albert Thomas; Harold Butler, who followed the Organization from its cradle to maturity; and now John Winant, who is bringing the very valuable aid of America—these three men symbolize the universality of the action of the International Labour Office. No depression can attack the International Labour Organization without threatening the very basis of our industrial civilization."

Director's Reply

Mr. Butler observed that in energy and enthusiasm the Conference showed no falling away from the standards of previous years and that the debate indicated that there was no slackening in the effort to promote social justice because of the troublous times in which we live.

Question of Shorter Hours

Turning to the Report itself, Mr. Butler said that some speakers had accused him of optimism, others of pessimism and others of a contradictory mixture of the two. He pleaded guilty to all these accusations, because the present situation justified all of them. Unfavourable and favourable factors were inextricably interwoven. "On the one hand, there is an enormous increase in capacity to produce; on the other is failure to put it to the best use. On the one hand is the gradual growth of an international social consciousness, which ran like a golden thread through many speeches; on the other is the exaltation of violence and brutality which characterises the wars actually in progress and which is the psychological assumption underlying competition in armaments."

Mr. Jouhaux (Workers', France), for instance, had reproached him with pessimism in regard to the shorter working week. He did not agree that the mission of the Office would be ended if no international agreement for the reduction of hours of work were arrived at in the immediate future; but he agreed that, although the movement had been delayed by the armaments race, it remained necessary. It appeared to be generally admitted that the intensification of production and the fatigue resulting from it had generated an instinctive movement towards shorter hours. "Mr. Moston has shown that the 40-hour week is working successfully in New Zealand. Miss Perkins has explained how the reduction of hours by collective agreement is likely to be reinforced by Federal legislation in the United States. Mr. Ramadier has shown that the difficulties to which the 40-hour week has given rise in France have been considerably exaggerated, and that, with the necessary adaptations, they will no doubt be overcome. Mr. Culley has told us that the 45-hour week has become general in Australia, largely owing to the adoption of the Forty-Hour Convention by this Conference, while Mr. Lowe, though an opponent of the 40-hour week, considers the establishment of a 45-hour week in his own trade in Ireland as a matter for congratulation."

Armaments or Progress

Turning to the effects of the armaments race the Director said: "You can have excessive armaments or you can have social progress; but in the long run you cannot have both. To say this is not so much pessimism as an economic platitude." In the long run, as Mr. Knob (Employers', Hungary) had said, armaments must reduce living standards, and to that extent the appearance of prosperity which they produced was artificial. Both he and Mr. Watt (Workers', U.S.A.) had emphasized that nothing was more important than planning to prevent the slump which exaggerated expenditure on armaments might be expected to produce in the future, and this was a matter which the Office was not neglecting.

Agricultural Prices and Depressions

One of the outstanding characteristics of the last depression, continued the Director, was the collapse of agricultural prices. "It is impossible to see how the great agricultural countries either in America, Asia or Eastern Europe can maintain their consumption of industrial goods unless they can obtain a reasonable return for their foodstuffs and raw materials. This is an essentially international problem. Unless the great consuming countries of Western Europe and North America can maintain their purchases of rubber, tin, wheat, sugar, coffee, tea, wool, cotton and so on, it is idle to expect any improvement of the standards of living in the countries which produce them. Unless countries like Argentina, Brazil and India can obtain good prices on the world's markets for their primary products, it is idle to expect their wage standards to be improved, either in agriculture or in industry. The agricultural countries are largely dependent for their welfare on the ability to sell their foodstuffs and raw materials to the industrial countries. When a decline in industrial activity occurs, the agricultural countries are the first and greatest sufferers. Nothing can help them more, therefore, than a concerted and determined effort to solve the problem of the business cycle on an international scale. This is perhaps the greatest economic and social problem of our times."

Labour Problems in the East

After referring briefly to certain points dealt with in his Report on Problems of Industry in the East, the Director expressed his agreement with Mr. Kupers (Workers', Netherlands) on the desirability of a regional Asiatic Conference.

Latin America and the Organization

It was extremely encouraging, he said, to note that so many delegates had attributed the progress made in their countries to the influence of the organization. He had been especially pleased to hear the testimony of Mr. Noda (Workers', Venzuela), Mr. Almarza (Workers', Spain) and other delegates from Latin America, and particularly Mr. Garcia Oldini (Government, Chile) as to the beneficial results of the Santiago Conference. He agreed with the proposal for the convening of a second American Labour Conference next year, and hoped it would be successful.

Freedom of Association

When he suggested that the constitution would have to be modified from time to time in the future, he did not contemplate any infringement of its tripartite character. "Mr. Krekitch (Workers', Yugoslavia), Mr. Peyer (Workers', Hungary) and other delegates have said that freedom of association is one of its corner-stones. Without freedom of association and the freedom of expression which goes with it, it is impossible for the workers to make their voices effectively heard, nor could the systems of collective bargaining, upon the social value of which Mr. Ernest Brown and Miss Perkins so strongly insisted, have been built up. The constitution makes no discrimination in favour of organizations of any particular doctrinal complexion or political colour, but it does imply that they should be freely organized and administered by their own members without constraint from outside. That is an essential feature of any effective representation of employers or workers."

Achievements of the Organization

"In conclusion," said Mr. Butler, "after twenty years devoted to the conception, the construction and the guidance of this organization, I may perhaps be allowed to offer a few reflections on its achievement. Its gradual development has been a slow and at times a disheartening process. The initial task of overcoming the scepticism, the indifference and the hostility with which we had to struggle in the early years could probably not have been successfully performed at all without the dynamic qualities and the power of popular appeal which Albert Thomas possessed in such an eminent degree."

The opposition had come mainly from three sources: the dead-weight of conservatism, such as blocks the path of any progressive institution; the suspicion and dislike which, as an international organization, it encountered from all those who could not look beyond their national boundaries and who saw in the nation the final and complete form of human society; and the immense difficulties arising out of the political and economic dislocations and disturbances which the Great War left as its baneful heritage. The organization had never enjoyed a period of tranquillity.

Social Justice and Peace

"It has been beset by wars and revolutions, by economic disasters and social upheavals. That it should have survived at all in the turmoil of the post-war world is remarkable; that it should none the less have grown in strength and authority is astonishing. But, as we have been grimly reminded by the tragic pictures of China and Spain drawn by the Chinese and Spanish delegates, war and social degradation always go hand in hand. When the fruit of man's labour is turned to purposes of destruction, his last state is worse than the first. Social legislation goes by the board, hours are lengthened and real wages are forced down as soon as war takes control of a society. The work of the International Labour Organization cannot hope to prosper in a warlike atmosphere, and might be totally ruined in the chaos which another general war would not fail to bring. It can only live by peace. If peace cannot exist without social justice still less can social justice exist without peace.

"It was therefore right that this organization should have been conceived as part of the machinery of peace. I believe it has already made some contribution to peace and I am sure that it is capable of making a much greater contribution in the future. Perhaps the principal reason for the troubles and upheavals which have afflicted Europe since the war was the failure to supplement a new political organization with a new economic organization of the continent. It was apparently thought that once the political questions were settled, the economic questions would settle themselves. Subsequent events have shown how erroneous was any such supposition. Social and economic dislocations have lent a bitterness to political grievances which they could not otherwise have acquired. It may be doubted, however, whether this mistake will be repeated. It has now been understood that politics cannot be divorced from economics. The problems which now make statesmen uneasy in their beds are not only questions of frontiers and minorities and alliances, but also questions of currency and unemployment, of raw materials and foreign exchanges, of social security and the maintenance of living standards.

Tolerance and Understanding

"These matters now figure prominently in the field of international affairs. They are not susceptible to the old diplomatic technique, but none the less they often contain the germs of stability or upheaval within, and of war or peace without. Their discussion in the non-political atmosphere of this organization has already done something to promote greater tolerance and understanding, not only between employers and workers but also between nations. Every step which promotes the spread of social justice is a contribution, direct or indirect, to the cause of peace. For that reason alone, if for none of the others I have cited, this organization is an indispensable feature of the kind of civilization at which the world is now more and more consciously aiming. I have no fears for its future, and in passing on the torch to my successor I wish him the utmost success in the great task of carrying it another stage forward along the road, which will lead to still greater achievement than it has yet known."

The full texts of the Draft Convention and of the three Resolutions concerning statistics of hours and wages, and also of the conclusion reached by the Conference on the five other items on the agenda are given as hereunder:—

DRAFT CONVENTION CONCERNING STATISTICS OF WAGES AND HOURS OF WORK IN THE PRINCIPAL MINING AND MANUFACTURING INDUSTRIES, INCLUDING BUILDING AND CONSTRUCTION, AND IN AGRICULTURE

The General Conference of the International Labour Organization,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Twenty-fourth Session on 2 June, 1938, and

Having decided upon the adoption of certain proposals with regard to statistics of wages and hours of work in the principal mining and manufacturing industries, including building and construction, and in agriculture, which is the sixth item on the agenda of the Session, and

Having determined that these proposals shall take the form of a Draft International Convention, and

Having determined that, although it is desirable that all Members of the Organization should compile statistics of average earnings and of hours actually worked which comply with the requirements of Part II of this Convention, it is nevertheless expedient that the Convention should be open to ratification by Members which are not in a position to comply with the requirements of that Part,

Adopts, this 20th day of June of the year one thousand nine hundred and thirty-eight the following Draft Convention which may be cited as the Convention concerning statistics of Wages and Hours of Work, 1938:

PART I.—GENERAL PROVISIONS

Article 1

Each Member of the International Labour Organization which ratifies this Convention undertakes that:

(*a*) it will compile as required by this Convention statistics relating to wages and hours of work;

(*b*) it will publish the data compiled in pursuance of this Convention as promptly as possible and will endeavour to publish data collected at quarterly or more frequent intervals during the succeeding quarter and to publish data collected at intervals of six or twelve months during the succeeding six or twelve months respectively; and

(*c*) it will communicate the data compiled in pursuance of this Convention to the International Labour Office at the earliest possible date.

Article 2

1. Any Member which ratifies this Convention may, by a declaration appended to its ratification, exclude from its acceptance of the Convention:

(*a*) any one of Parts II, III, or IV; or

(*b*) Parts II and IV; or

(*c*) Parts III and IV.

2. Any Member which has made such a declaration may at any time cancel that declaration by a subsequent declaration.

3. Every Member for which a declaration made under paragraph 1 of this article is in force shall indicate each year in its annual report upon the application of this Convention the extent to which any progress has been made with a view to the application of the Part or Parts of the Convention excluded from its acceptance.

Article 3

Nothing in this Convention imposes any obligation to publish or to reveal particulars which would result in the disclosure of information relating to any individual undertaking or establishment.

Article 4

1. Each Member which ratifies this Convention undertakes that its competent statistical authority shall, unless it has already obtained the information in some other way, make enquiries relating either to all, or to a representative part, of the wage earners concerned, in order to obtain the information required for the purpose of the statistics which it has undertaken to compile in accordance with this Convention.

2. Nothing in this Convention shall be interpreted as requiring any Member to compile statistics in cases in which, after enquiries made in the manner required by paragraph 1 of this article, it is found impracticable to obtain the necessary information without the exercise of compulsory powers.

PART II.—STATISTICS OF AVERAGE EARNINGS AND OF HOURS ACTUALLY WORKED IN MINING AND MANUFACTURING INDUSTRIES

Article 5

1. Statistics of average earnings and of hours actually worked shall be compiled for wage earners employed in each of the principal mining and manufacturing industries, including building and construction.

2. The statistics of average earnings and of hours actually worked shall be compiled on the basis of data relating either to all establishments and wage earners or to a representative sample of establishment and wage earners.

3. The statistics of average earnings and of hours actually worked shall:

(*a*) give separate figures for each of the principal industries; and

(*b*) indicate briefly the scope of the industries or branches of industry for which figures are given.

Article 6

The statistics of average earnings shall include:

(*a*) all cash payments and bonuses received from the employer by the persons employed;

(*b*) contributions such as social insurance contributions payable by the employed persons and deducted by the employer; and

(*c*) taxes payable by the employed persons to a public authority and deducted by the employer.

Article 7

In the case of countries and industries in which allowances in kind, for example in the form of free or cheap housing, food or fuel, form a substantial part of the total remuneration of the wage earners employed, the statistics of average earnings shall be supplemented by particulars of such allowances, together with estimates, so far as practicable, of their money value.

Article 8

The statistics of average earnings shall be supplemented, so far as practicable, by indications as to the average amount of any family allowances per person employed in the period to which the statistics relate.

Article 9

1. The statistics of average earnings shall relate to average earnings per hour, day, week or other customary period.

2. Where the statistics of average earnings relate to average earnings per day, week or other customary period, the statistics of actual hours shall relate to the same period.

Article 10

1. The statistics of average earnings and of hours actually worked, referred to in Article 9, shall be compiled once every year and where possible at shorter intervals.

2. Once every three years and where possible at shorter intervals the statistics of average earnings and, so far as practicable, the statistics of hours actually worked shall be

supplemented by separate figures for each sex and for adults and juveniles; provided that it shall not be necessary to compile these separate figures in the case of industries in which all but an insignificant number of the wage earners belong to the same sex or age group, or to compile the separate figures of hours actually worked for males and females, or for adults and juveniles, in the case of industries in which the normal hours of work do not vary by sex or age.

Article 11

Where the statistics of average earnings and of hours actually worked relate not to the whole country but to certain districts, towns or industrial centres, these districts, towns or centres shall, so far as practicable, be indicated.

Article 12

1. Index numbers showing the general movement of earnings per hour and where possible per day, week or other customary period shall be compiled at as frequent and as regular intervals as possible on the basis of the statistics compiled in pursuance of this Part of this Convention.

2. In compiling such index numbers due account shall be taken *inter alia* of the relative importance of the different industries.

3. In publishing such index numbers indications shall be given as to the methods employed in their construction.

PART III.—STATISTICS OF TIME RATES OF WAGES AND OF NORMAL HOURS OF WORK IN MINING AND MANUFACTURING INDUSTRIES

Article 13

Statistics of time rates of wages and of normal hours of work of wage earners shall be compiled for a representative selection of the principal mining and manufacturing industries, including building and construction.

Article 14

1. The statistics of time rates of wages and of normal hours of work shall show the rates and hours:

(*a*) fixed by or in pursuance of laws or regulations, collective agreements or arbitral awards;

(*b*) ascertained from organizations of employers and workers, from joint bodies, or from other appropriate sources of information, in cases where rates and hours are not fixed by or in pursuance of laws or regulations, collective agreements or arbitral awards.

2. The statistics of time rates of wages and of normal hours of work shall indicate the nature and source of the information from which they have been compiled and whether it relates to rates or hours fixed by or in pursuance of laws or regulations, collective agreements or arbitral awards, or to rates or hours fixed by arrangements between employers and wage earners individually.

3. When rates of wages are described as minimum (other than statutory minimum) rates, standard rates, typical rates, or prevailing rates, or by similar terms, the terms used shall be explained.

4. "Normal hours of work," where not fixed by or in pursuance of laws or regulations, collective agreements or arbitral awards, shall be taken as meaning the number of hours, per day, week or other period, in excess of which any time worked is remunerated at overtime rates or forms an exception to the rules or custom of the establishment relating to the classes of wage earners concerned.

Article 15

1. The statistics of time rates of wages and of normal hours of work shall give:

(*a*) at intervals of not more than three years, separate figures for the principal occupations in a wide and representative selection of the different industries; and

(*b*) at least once a year, and if possible at shorter intervals, separate figures for the main occupations in the most important of these industries.

2. The data relating to time rates of wages and of normal hours of work shall be presented, so far as practicable, on the basis of the same occupational classification.

3. Where the sources of information from which the statistics are compiled do not indicate the separate occupations to which the rate or hours apply, but fix varying rates of wages or hours of work for other categories of workers (such as skilled workers, semi-skilled workers and unskilled workers) or fix normal hours of work by classes of undertakings or branches of undertakings, the separate figures shall be given according to these distinctions.

4. Where the categories of workers for which figures are given are not separate occupations, the scope of each category shall, in so far as the necessary particulars are given in the sources of information from which the statistics are compiled be indicated.

Article 16

Where the statistics of time rates do not give the rates per hour but give rates per day, week, or other customory period:

(*a*) the statistics of normal hours of work shall relate to the same period; and

(*b*) the Member shall communicate to the International Labour Office any information appropriate for the purpose of calculating the rates per hour.

Article 17

Where the sources of information from which the statistics are compiled give separate particulars classified by sex and age, the statistics of time rates of wages and of normal hours of work shall give separate figures for each sex and for adults and juveniles.

Article 18

Where the statistics of time rates of wages and of normal hours of works relate not to the whole country but to certain districts, towns or industrial centres, these districts, towns or centres shall, so far as practicable, be indicated.

Article 19

Where the source of information from which the statistics of time rates and of normal hours of work are compiled contain such particulars, the statistics shall at intervals not exceeding three years indicate:

(*a*) the scale of any payment for holidays;

(*b*) the scale of any family allowances;

(*c*) the rates or percentage additions to normal rates paid for overtime; and

(*d*) the amount of overtime permitted.

Article 20

In the case of countries and industries in which allowances in kind, for example in the form of free and cheap housing, food or fuel, form a substantial part of the total remuneration of the wage earners employed, the statistics of time rates of wages shall be supplemented by particulars of such allowances, together with estimates, so far as practicable, of their money value.

Article 21

1. Annual index numbers showing the general movement of rates of wages per hour or per week shall be compiled on the basis of the statistics compiled in pursuance of this Part of this Convention, supplemented, where necessary, by any other relevant information which may be available (for example, particulars as to changes in piece-work rates of wages).

2. Where only an index number of rates of wages per hour or only an index number of rates of wages per week is compiled, there shall be compiled an index number of changes in normal hours of work constructed on the same basis.

3. In compiling such index numbers due account shall be taken, *inter alia*, of the relative importance of the different industries.

4. In publishing such index numbers indications shall be given as to the methods employed in their construction.

PART IV.—STATISTICS OF WAGES AND HOURS OF WORK IN AGRICULTURE

Article 22

1. Statistics of wages shall be compiled in respect of wage earners engaged in agriculture.

2. The statistics of wages in agriculture shall:

(*a*) be compiled at intervals not exceeding two years;
(*b*) give separate figures for each of the principal districts; and
(*c*) indicate the nature of the allowances in kind (including housing), if any, by which money wages are supplemented, and, if possible, an estimate of the money value of such allowances.

3. The statistics of wages in agriculture shall be supplemented by indications as to:

(*a*) the categories of agricultural wage earners to which the statistics relate;
(*b*) the nature and source of the information from which they have been compiled;
(*c*) the methods employed in their compilation; and
(*d*) so far as practicable, the normal hours of work of the wage earners concerned.

PART V.—MISCELLANEOUS PROVISIONS

Article 23

1. Any Member the territory of which includes large areas in respect of which, by reason of the difficulty of creating the necessary administrative organization and the sparseness of the population or the stage of economic development of the area, it is impracticable to compile statistics complying with the requirements of this Convention may exclude such areas from the application of this Convention in whole or in part.

2. Each Member shall indicate in its first annual report upon the application of this Convention submitted under Article 22 of the Constitution of the International Labour Organization any areas in respect of which it proposes to have recourse to the provisions of this article and no Member shall, after the date of its first annual report, have recourse to the provisions of this article except in respect of areas so indicated.

3. Each Member having recourse to the provisions of the present article shall indicate in subsequent annual reports any areas in respect of which it renounces the right to have recourse to the provisions of this article.

Article 24

1. The Governing Body of the International Labour Office may, after taking such technical advice as it may deem appropriate, communicate to the Members of the Organization proposals for improving and amplifying the statistics compiled in pursuance of this Convention or for promoting their comparability.

2. Each Member ratifying this Convention undertakes that it will:

(*a*) submit for the consideration of its competent statistical authority any such proposals communicated to it by the Governing Body;
(*b*) indicate in its annual report upon the application of the Convention the extent to which it has given effect to such proposals.

Article 25

The formal ratifications of this Convention shall be communicated to the Secretary-General of the League of Nations for registration.

Article 26

1. This Convention shall be binding only upon Members of the International Labour Organization whose ratifications have been registered with the Secretary-General.

2. It shall come into force twelve months after the date on which the ratifications of two Members have been registered with the Secretary-General.

3. Thereafter, this Convention shall come into force for any Member twelve months after the date on which its ratification has been registered.

Article 27

As soon as the ratifications of two Members of the International Labour Organization have been registered, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

Article 28

1. A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered.

2. Each Member which has ratified this Convention and which does not, within the year following the expiration of the period of ten

years mentioned in the preceding paragraph, exercise the right of denunciation provided for in this article, will be bound for another period of ten years and, thereafter, may denounce this Convention at the expiration of each period of ten years under the terms provided for in this article.

Article 29

At the expiration of each period of ten years after the coming into force of this Convention, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the agenda of the Conference the question of its revision in whole or in part.

Article 30

1. Should the Conference adopt a new Convention revising this Convention in whole or in part, then, unless the new Convention otherwise provides

(*a*) the ratification by a Member of the new revising Convention shall *ipso jure* involve the immediate denunciation of this Convention, notwithstanding the provisions of Article 28 above, if and when the new revising Convention shall have come into force;

(*b*) as from the date when the new revising Convention comes into force this Convention shall cease to be open to ratification by the Members.

2. This Convention shall in any case remain in force in its actual form and content for those Members which have ratified it but have not ratified the revising Convention.

Article 31

The French and English texts of this Convention shall both be authentic.

RESOLUTION CONCERNING STATISTICS OF REAL WAGES

Whereas the utility of the statistics of wages and hours of work to be compiled in pursuance of the provisions of the Draft Convention on statistics of wages and hours of work in the principal mining and manufacturing industries and in agriculture would be enhanced if information were available as to the real value of wages, as measured by their purchasing power.

The Conference urges the International Labour Office to encourage the compilation and publication of the statistical data required for international comparisons of real wages and to continue and extend its studies on this subject.

RESOLUTION CONCERNING STATISTICS OF WAGES AND HOURS OF WORK IN AGRICULTURE

Whereas the Fifth Conference of Official Labour Statisticians, in its report of 2nd October, 1937, "considered it very desirable that in view of the special problems connected with the compilation of statistics of hours of work, wages and other factors in the remuneration of agricultural workers, these questions should be discussed at a special Conference of Labour Statisticians to be held in the near future"; and

Whereas the International Labour Conference at its Twenty-fourth Session has adopted a Draft Convention on statistics of wages and hours of work in the principal mining and manufacturing industries and in agriculture;

The Conference requests the Governing Body of the International Labour Office to consider the advisability of convening at an early date a special technical conference to examine the methods of compiling statistics of the remuneration and hours of work of persons employed in agriculture, with a view to the improvement and amplification of the statistics to be compiled in pursuance of the Convention.

RESOLUTION CONCERNING SUPPLEMENTARY STATISTICS OF WAGES AND HOURS OF WORK

Whereas the Fifth Conference of Official Labour Statisticians prepared a recommendation concerning statistics of wages and hours of work supplementing the provisions of the proposed Draft Convention on statistics of wages and hours of work in the principal mining and manufacturing industries and in agriculture, and

Whereas Article 23 of the Draft Convention provides that the Governing Body may communicate to the Members of the Organization proposals for improving and amplifying the statistics compiled in pursuance of this Convention and that each Member shall indicate in its annual report upon the application of the Convention the extent to which it has given effect to such proposals.

The Conference, by this resolution, requests the Governing Body to arrange that the proposals set forth on pages 110 and 112 of the grey-blue report and appended hereto be examined in accordance with the provisions of Article 23 of the Convention and that in the meantime this resolution, together with the appendix, be communicated to the various Governments at the earliest possible date.

Appendix

1. (1) At least once every ten years, the statistics of average earnings and of hours actually worked relating to wage earners employed in the principal mining and manufacturing industries, including building and construction, should give separate figures for each of the principal occupations in each industry.

(2) These statistics:

(*a*) should show the number of workpeople grouped according to the amount of their earnings; and

(*b*) should be given by sex and by age groups.

2. (1) Statistics showing the aggregate amount of wages paid per annum in each of the principal industries in mining and manufacture, including building and construction, should be compiled regularly and where possible at annual intervals.

(2) An approximate indication should be given of the extent to which the returns are representative of all employed persons.

3. Statistics showing average annual earnings of workers employed in each of the principal industries in mining and manufacture, including building and construction, should be compiled at intervals not exceeding three years.

4. The statistics of time rates of wages should so far as possible be accompanied by:

(*a*) indications as to the number of workers covered, and

(*b*) any information which may be available as to the relation between the time rates of wages and actual earnings.

CONCLUSIONS ON TECHNICAL AND VOCATIONAL EDUCATION AND APPRENTICESHIP

This Conference,

Having examined the report submitted by the International Labour Office on technical and vocational education and apprenticeship,

Invites the International Labour Office to consult the Governments on the following points:

I. Form of the Regulations

1. Adoption of one or more Recommendations.

II. General Organization

2. (1) Necessity of co-ordinating and developing the various official and private institutions which in each country are affected by the work of vocational training, on the basis of a general program taking into account:

(*a*) the occupational, cultural and moral interests of workers, the labour requirements of employers, and the economic and social interests of the community;

(*b*) the development of general education, vocational selection and guidance, changes in technique and methods of organization of work, the existing position and trend of development in the labour market, and national economic policy.

(2) Creation for this purpose of a central advisory body.

(3) Composition of this body:

(*a*) Representatives of the authorities concerned with matters of vocational guidance and training, general education, placing, economic policy, and the protection of the workers' interests;

(*b*) representatives of the various interested parties and in particular of the occupational organization of employers and workers.

III. Vocational and Technical Education

3. (1) Desirability of providing for all children on reaching a specific age an initiation into occupational life within the framework of the compulsory education system by developing the idea of and the taste for manual work in general and thus ultimately facilitating vocational guidance.

(2) Age of commencement and duration;

(3) Nature of the preparation (kinds of practical work and the importance assigned to it, taking into account the nature of the principal occupations and industries in the district without any vocational specialization).

4. (1) Desirability of providing special preparation for children intending to become apprentices or to enter a vocational school.

(2) Age of commencement and duration (total or partial inclusion of the period of such training in the period of compulsory school attendance):

(i) if the school leaving age is 14 years;

(ii) if the school leaving age is higher than 14 years.

(3) Character of the preparation (relation between theoretical courses and practical work; degree of specialization).

(4) Relation between the duration of the preparation in question and the duration of subsequent vocational training.

5. (1) Desirability of full-time vocational education for young workers before they enter employment (giving indications of the cases in which this system is considered appropriate); or

(2) Desirability of part-time vocational education for workers who are already in employment (giving indications of the cases in which this system is considered appropriate).

6. (1) Where vocational training is given before entering employment:

(i) performance of practical work under conditions as similar as possible to those of an actual undertaking and under the supervision of persons with practical experience of the trade (workshop schools);

(ii) combination of periods of practical work in an undertaking with periods of training in the school;

(iii) form of economic assistance for young workers attending the courses of training.

(2) Where vocational training is given during employment:

(i) means of ensuring the necessary co-ordination by collaboration between workshop and school;

(ii) provision, in undertakings which find it feasible, of separate workshops specially adapted for the purpose of giving training.

7. (1) Necessity of a network of vocational and technical schools, adjusted as regards number, location, and curricula to the economic requirements of each region or locality and affording the workers adequate opportunities for developing their technical knowledge.

(2) Necessity of admission without fees to vocational and technical schools, and of scholarships, to make it possible for young people who could otherwise not afford it to attend such schools.

(3) Measures for counteracting the curtailing of schemes of vocational and technical training in periods of economic depression and financial difficulties.

8. Organization of courses in several grades adjusted for each branch of economic activity, to the requirements for training (*a*) journeymen and similar grades; (*b*) staff in intermediate grades; (*c*) managerial staff.

9. Desirability in the interests of young workers that facilities should be given for transfer from one school or grade to another, including access to the higher technical education of a university or equivalent institution.

10. Measures for protecting the future vocational aptitude of the workers, in particular:

(*a*) development of theoretical knowledge;

(*b*) necessity of avoiding excessive or premature specialization.

11. (1) Inclusion of subjects of general and social educational value in all curricula for vocational and technical education of all grades.

(2) Inclusion of domestic science subjects in the vocational education curricula.

12. Organization of supplementary education:

(*a*) necessity for institutions sufficiently near to the undertakings to be accessible to workers in employment;

(*b*) desirability of including in the normal working hours the time spent in attending courses; necessity of this being included in all cases where attendance is compulsory;
(*c*) adjustment of curricula to the special requirements:
(i) of apprentices;
(ii) of young workers who enter industry at an early age to enable them, in the interests of industry itself, to obtain better posts later;
(iii) of adult workers who wish to acquire a definite technical qualification or to extend or improve their technical knowledge.

13. (1) Desirability of establishing a sufficient number of vocational schools including domestic science schools, for the occupations which mainly employ women and girls.

(2) In all other cases, equal rights of admission for workers of both sexes to all vocational and technical institutions, provided that women and girls are not required to undertake work which they are prohibited by law from performing on grounds of health.

(3) Equal rights for persons of both sexes to obtain the same certificates and diplomas on completion of the same studies.

14. Desirability of collaboration between the competent administrative departments and vocational and technical education institutions, public employment exchanges and the organizations concerned, in particular the occupational organizations of employers and workers, through local or regional committee, for the purpose of:

(*a*) promoting and co-ordinating official and private action in regard to selection, guidance, and vocational training in the locality or region;
(*b*) supervising the curricula and ensuring that they are adjusted to changes in practical requirements;
(*c*) supervising the conditions of work in vocational schools of young persons for admission to employment and ensuring that the work done by them is suitably restricted, is essentially of an educative character, and is not intended for commercial profit;
(*d*) supervising the conditions of work in industry of trainees who spend part time in school and part time at work, and ensuring that the work is suitably restricted and is essentially of an educative character.

15. Desirability of directing the attention to vocational training of a greater number of the more capable pupils who leave the primary schools each year.

IV. APPRENTICESHIP

16. Desirability of measures to make apprenticeship more effective in certain occupations or groups of occupations:

(*a*) by legislation, by regulations, or by decisions of the bodies charged with the control of apprenticeship;
(*b*) by means of collective agreements;
(*c*) by a combination of the systems provided for by (*a*) and (*b*), or by other methods of organizing apprenticeship.

(2) Desirability of a system of apprenticeship preceded by a period of training in a technical school, the duration of which would be taken into consideration.

17. Matters to which such measures should apply:

A. Questions relating to the organization of the training of apprentices:

(*a*) the right and competence of an employer to have and train apprentices;
(*b*) conditions of admission to apprenticeship;
(i) minimum age;
(ii) General educational standard required;
(iii) where necessary, examination of physical and mental aptitude;
(*c*) registration of apprentices;
(*d*) control of number of apprentices employed;
(*e*) transfer of apprentices from one firm to another where advisable for complete training;
(*f*) duration of apprenticeship, including the probationary period;
(*g*) organization of tests of competence and issue of certificates on termination of apprenticeship;
(*h*) designation of the body or bodies responsible for continuous supervision of apprenticeship, in particular as regards:
(i) the observance of the regulations;
(ii) the adequacy of the training.
(*i*) form and registration of apprenticeship contracts.

B. Questions relating to wages and holidays for apprentices:

(*a*) How to fix wages; provision for periodical advancement;
(*b*) Wages during periods of sickness;
(*c*) Holidays with pay;

C. Apprentices as members of trade unions.

18. Representation of the various parties concerned, and in particular of the organizations of employers and workers, on the bodies responsible for the supervision of apprenticeship, or at least collaboration between them.

19. Collaboration of the bodies responsible for the supervision of apprenticeship with the elementary and vocational education authorities, the public employment exchanges, and the labour inspection authorities.

20. Method of enforcing laws, regulations, or other means of organizing apprenticeship.

V. CERTIFICATES, EXCHANGES, TEACHING STAFF

21. (1) Co-ordination and recognition on a national basis of the certificates issued after examination on the termination of vocational education or apprenticeship.

(2) Collaboration of the occupational organizations of employers and workers in the organization of examinations.

22. (1) Organization of regional, national, and international exchanges of students and apprentices who have completed their training so as to enable them to acquire wider knowledge and experience.

(2) Collaboration of the occupational organizations of employers and workers in organizing such exchanges.

23. Qualifications of teachers:

(a) (i) Methods of recruiting technical teachers for theoretical and practical subjects;

(ii) Qualifications required, particularly in respect of industrial experience and teaching ability, for various types of service;

(b) Methods of training teachers recruited from industry and commerce;

(c) Methods of improving qualifications of teachers, and of keeping their knowledge up to date;

(i) by the establishment of contacts between the undertakings and the teacher responsible for giving practical training in the schools with a view, for example, to the realization of regular "refresher" periods of work.

(ii) by courses in educational institutions for individual teachers;

(iii) by travel and research;

(iv) by short vacation courses for groups of teachers.

(d) Methods of granting financial assistance and other facilities such as periods of special leave at regular intervals to teachers for the purpose of improving their qualifications;

(e) appointment to part-time positions as teachers of persons normally engaged in industry and commerce by co-operation between industry and educational authorities.

RESOLUTION ON VOCATIONAL GUIDANCE

Whereas the International Labour Conference has on its agenda the question of technical and vocational education and apprenticeship;

Whereas vocational guidance is recognized more and more as a necessary preliminary to vocational education both as a method of determining the individual aptitudes of the future worker and as means of adapting the choice of occupation to the needs of the labour market;

Whereas it appears urgent, in consequence, to supplement the decisions which the International Labour Conference may be called upon to take in 1939 on technical and vocational education and apprenticeship by decisions on vocational guidance.

The Conference ask the Governing Body of the International Labour Office to consider the desirability of placing the question of vocational guidance on the agenda of a very early session of the Conference.

RESOLUTION CONCERNING THE VOCATIONAL RETRAINING AND READJUSTMENT OF ADULT WORKERS

Whereas vocational retraining of adult workers whether its object is to facilitate the employment in a new occupation of workers who have no employment owing to lack of sufficient qualifications, or to fit for gainful occupation individuals whose capacity for work has been reduced, or again to place in new forms of activity persons likely to be unable ever again to find fresh employment in their own occupations, constitutes an important aspect of the wider problem of technical and vocational training;

Whereas the list of points proposed by the Office on the question of technical and vocational education and apprenticeship which figures on the agenda of the Twenty-fourth Session of the International Labour Conference considers this problem exclusively from the point of view of the vocational retraining of the unemployed;

Whereas it does not appear advisable to detach the special problem of the retraining of the unemployed from the more general problem of vocational readjustment and retraining;

And whereas it is urgent to supplement the decisions which the International Labour Conference may be called upon to take in 1939 on technical and vocational education and apprenticeship by decisions concerning the whole problem of the vocational readjustment and retraining of adult workers;

The Conference asks the Governing Body of the International Labour Office to consider the desirability of placing the question of the vocational retraining and readjustment of adult workers on the agenda of an early Session of the International Labour Conference.

CONCLUSIONS ON REGULATION OF CONTRACTS OF EMPLOYMENT OF INDIGENOUS WORKERS

The Conference,

Having examined the report submitted by the International Labour Office on the regulation of contracts of employment of indigenous workers;

Considers that the question of the regulation of contracts of employment of indigenous workers might suitably be made the subject of two Draft Conventions dealing respectively with (a) the regulation of written contracts of employment and (b) penal sanctions in all contracts of employment of indigenous workers, whether required to be in writing or not, and further that the question of the establishment of labour inspectorates for indigenous workers might suitably form the subject of a Recommendation,

Invites the International Labour Office to consult the Government on the following points:

1. Form of the International Regulations

1. (a) A Draft Convention concerning the regulation of written contracts of employment of indigenous workers.

(b) A Draft Convention concerning penal sanctions in all contracts of employment of indigenous workers, whether required to be in writing or not.

II. Scope and Definitions

2. Application to contracts of employment by which indigenous workers enter the service of an employer

(a) as manual workers,

(b) for remuneration in any form whatsoever; and

(c) otherwise than as apprentices.

Any exceptions to this application.

3. Definition of "employer" as including any individual, company or association, whether non-indigenous or indigenous.

4. Definition of "indigenous workers" as including "workers belonging to or assimilated to the indigenous populations of the dependent territories of Members of the Organization and workers belonging to or assimilated to the dependent indigenous populations of the home territories of Members of the Organization."

III. Contracts Required To Be in Writing

5. Contracts of employment of workers[1] to be required to be in writing

(*a*) when concluded for a period of, or exceeding, a minimum period to be fixed by law or regulations; such minimum period not to exceed
  (i) six months or a number of working days equivalent to six months, or
  (ii) any other period;
(*b*) when the conditions of employment stipulated in the contract differ materially from those customary in the district of employment for similar work;
(*c*) in any other cases.

6. Worker to have right to claim performance of contractual obligations by employer, or damages in lieu thereof, where employer wilfully or by negligence omits to conclude in writing a contract required to be in writing.

7. Responsibility for performance of any contract of employment entered into with any indigenous worker by a sub-contractor, jobber or other person acting as agent of an employer to rest with the employer.

IV. Contents of Contracts

8. Every contract required to be in writing to contain all particulars necessary, in conjunction with the provisions of the law or regulations, to define the rights and obligations of the parties, and to include more especially

(*a*) name of employer or accredited group of employers and, where practicable, of undertaking and of place of employment;
(*b*) worker's name, place of origin and other particulars necessary for identification;
(*c*) nature of employment;
(*d*) duration of employment and how calculated;
(*e*) wages; rates and how calculated, manner and periods of payment, advances and manner of repayment;
(*f*) repatriation conditions;
(*g*) any special conditions of the contract;

but not, by implication, to involve the family or dependants of the worker.

V. Administrative Supervision of Conclusion of Contracts

9. Validity of every contract required to be in writing to be made conditional upon the attestation of a public officer duly accredited for the purpose.

10. Such public officer to be bound to ascertain, before attesting the contract, that the worker has given his consent thereto freely and not under coercion or undue influence or as a result of error or misrepresentation.

11. Such public officer to be bound also to ascertain, before attesting the contract, that

(*a*) the contract is in due legal form;
(*b*) the terms of the contract are in accordance with the law or regulations;
(*c*) the worker understands the contract;
(*d*) the provisions of the law or regulations relating to medical examination have been complied with;
(*e*) the worker declares himself not bound by any previous engagement;
(*f*) any other points.

12. Every contract required to be in writing to be registered by the competent authority.

13. Worker to receive copy of contract or an equivalent document, e.g. work-book.

VI. Medical Examination

14. Conditions as to medical examination of workers concluding contracts required to be in writing

(*a*) to include:
  (i) that, as a general rule, every worker to be medically examined before conclusion of the contract and a medical certificate issued, and
  (ii) that where it is not possible for the worker to be medically examined before the conclusion of the contract, he should be so examined at the earliest possible opportunity; or
(*b*) to be specified in the law or regulations.

15. If the worker has not been medically examined before the conclusion of the contract, the public officer who attests the contract to endorse the contract to this effect.

16. Exception to requirement of medical examination in case of contracts concluded

(*a*) for agricultural work; or
(*b*) for other work

in the vicinity of the workers' homes.

VII. Special Provisions for Conclusion of Contracts by Women and Young Persons

17. Law or regulations relating to contracts required to be in writing not to include provisions restricting the right of women to conclude such contracts; or

Law or regulations to make special provision for conditions under which women may conclude contracts required to be in writing. Such conditions to include

(*a*) married women, except when a policy of restriction would be to their disadvantage, to be permitted to conclude contracts required to be in writing only
  (i) for employment not involving departure from their usual place of residence, or
  (ii) for employment involving departure from their usual place of residence if they are to be employed in the same undertaking as their husbands, or in the same neighbourhood, or as domestic servants;
(*b*) single women to be permitted to conclude contracts required to be in writing
  (i) without any restrictions, or
  (ii) with restrictions, and, if so, what restrictions.

Recognition to female workers of the rights granted by national legislations in regard to maternity benefit and care to be given to babies.

[1] Wherever the word "workers" or "worker" is used in Points 5-48 it means "indigenous workers" or "indigenous worker" as defined in Point 4.

18. Law or regulations to make special provision for conditions under which young persons may conclude contracts required to be in writing. Such conditions to include

(*a*) young persons under an apparent minimum age
  (i) to be fixed by the international regulations, and, if so, what age, or
  (ii) to be fixed by the law or regulations not to be permitted to conclude such contracts;

(*b*) young persons between apparent ages to be prescribed by the law or regulations not to be permitted to conclude contracts except, in the case of female young persons, for employment in domestic service or on light work approved by the competent authority and, in the case of male young persons, for employment on light work approved by the competent authority.

VIII. Length of Contracts

19. Maximum length of contracts required to be in writing to be

(*a*) prescribed by law or regulations, or
(*b*) specified in the international regulations.

20. If to be specified in the international regulations, the maximum length of contracts to be

(*a*) fixed separately for foreign and home contracts, or
(*b*) fixed separately for workers accompanied by their families and for workers not accompanied by their families, or
(*c*) fixed separately where it is the purpose to promote the settlement of workers in the area of employment, or
(*d*) fixed in any other way.

21. To be open to competent authority to exempt from provisions fixing maximum length of contracts any contracts of employment of agricultural workers which are partly tenancy contracts.

22. If contract required to be in writing concluded for

(*a*) a period of more than twelve months or
(*b*) any other period to be fixed by the law or regulations,

provision to be made for an annual leave of absence of sufficient length to allow the worker to visit his home.

IX. Transfer of Contracts

23. (*a*) Transfer of a contract from one employer to another or from one undertaking to another to be permitted only with consent of worker;

(*b*) such transfer to be endorsed by a public officer and to be subject to same administrative supervision as conclusion of a new contract in cases to be prescribed by law or regulations.

X. Termination of Contracts

24. Cases and conditions in which contracts required to be in writing are to be terminable, otherwise than on expiry of the period for which the contract is concluded, to be prescribed by the law or regulations, and to include such termination by reason of the inability of the employer or of the worker to fulfil the contract, by mutual agreement between the parties, and on the application of either of the parties.

25. Termination of contracts, otherwise than on expiry of period for which the contract is concluded, to be subject in the cases to be prescribed by law or regulations to approval of the competent authority.

26. Conditions under which contracts to be so terminable by reason of

(*a*) inability of employer to fulfil the contract,
(*b*) inability of worker to fulfil the contract owing to sickness or accident,

to include provisions safeguarding the right of the workers to wages earned and deferred pay, and his right to repatriation.

27. In the event of the competent authority being satisfied that the termination of the contract is a result of the unjustified refusal or unestablished inability of the worker to fulfil the contract, compulsory provisions freeing the employer from obligation to fulfil the contract.

28. Conditions under which contracts to be so terminable by mutual agreement between the parties to include provision that

(*a*) worker not to lose his right to repatriation unless the agreement otherwise provides, or
(*b*) worker not to lose his right to repatriation, and the competent authority to ensure that the agreement is voluntary and that all monetary liabilities have been settled.

29. Conditions under which contracts to be so terminable on the application of either of the parties to include provisions

(*a*) fixing the period of notice of termination of the contract,
(*b*) prescribing equitable methods of settlement of the monetary and other questions arising from such termination, including the question of the repatriation of the worker.

30. Contracts required to be in writing to be terminated *ipso facto* by the death of the worker, without prejudice to his heirs' or dependants' just claims.

XI. Repatriation

31. Every worker serving under a contract required to be in writing who was brought to the place of employment by the employer or anyone acting on his behalf, and the workers' family if authorized to accompany him to the place of employment, to have the right to be repatriated to his place of engagement or of origin without expense to the worker:

(*a*) on the expiry of the contract;
(*b*) on termination of the contract by reason of the inability of the employer to fulfil the contract;
(*c*) on termination of the contract by reason of the inability of the worker to fulfil the contract owing to sickness or accident;
(*d*) on termination of the contract by mutual agreement,
  (i) unless the agreement otherwise provides, or
  (ii) without this condition;
(*e*) on termination of the contract on the application of either party,
  (i) unless the competent authority otherwise decides, or
  (ii) without this condition;
(*f*) in any other circumstances.

32. Permissive exception to be allowed in cases where competent authority is satisfied that proper allowance has been made for the payment by workers of their own expenses in fixing the rate of wages.

33. Permissive exception to right to repatriation if worker, on expiry of contract, does not wish to be repatriated and has been settled, by his will and consent, at or near place of employment.

34. To be open to law or regulations to determine period on expiry of which, if he has not availed himself of right to repatriation, worker may be deemed to have renounced that right.

35. Worker's family if authorized to be with him at place of employment, to have right to repatriation in event of his death.

36. Expenses of maintenance of worker and of his family between expiry of the contract and date of repatriation to be borne by employer if repatriation delayed otherwise than by worker's own choice and for reasons of *force majeure* and employer has not been able, during the intervening period, to use the service of the worker at the rate of wages provided for in the expired contract.

37. Cost of repatriation to include travelling expenses and subsistence during journey.

38. Application to return journey of repatriated workers and their families of the provisions laid down in Article 19 of the Recruiting of Indigenous Workers Convention (1936) for the journey of recruited workers to the place of employment.

39. Competent authority to ensure that all necessary measures have been taken for welfare of repatriated workers during journey.

40. Contractual obligations regarding the repatriation of the worker and his family to be assumed by the competent authority in the event of the inability of the employer to perform such obligations.

XII. Re-engagement Contracts

41. Maximum length of re-engagement contracts to be

(*a*) prescribed by law or regulations
  (i) provided that the maximum length fixed is shorter than the maximum length permitted for new contracts, or
  (ii) without this restriction, or
(*b*) specified in the international regulations.

42. If to be specified in the international regulations, the maximum length of re-engagement contracts to be

(a) fixed separately for workers accompanied by their families and for workers not accompanied by their families, or
(*b*) fixed in any other way.

43. Conditions for conclusion of re-engagement contracts to include principle that, whenever practicable and desirable worker should not be permitted to conclude re-engagement contract unless he has had the opportunity to return home after the expiry of the previous contract.

44. Re-engagement contracts to be otherwise subject to the same provisions as new contracts, except the provisions relating to administrative supervision of conclusion of contracts and the provisions relating to medical examination.

45. When considered necessary by the competent authority, concise summaries of law or regulations relating to written contracts of employment of indigenous workers to be printed in official languages of territories concerned and in a language known to the workers, and to be made available to employers and workers.

XIII. Penal Sanctions

46. Criminal penalties in respect of all or any of the following breaches of contract on the part of the worker, viz.

(*a*) refusing or failing to commence the service stipulated in the contract,
(*b*) refusing or failing to perform the service stipulated in the contract.
(*c*) absenting himself without valid reason or without permission,
(*d*) deserting,
(*e*) neglect of duty,
(*f*) lack of diligence,

to be abolished in respect of all contracts, whether required to be in writing or not, and the said offences to be actionable only by civil process,

(*a*) immediately, or
(*b*) on the expiry of a period to be fixed in the international regulations, or
(*c*) progressively and as soon as possible.

47. If not generally abolished immediately, such criminal penalties to be abolished immediately in respect of

(*a*) all re-engagement contracts entered into on the expiry of a contract required to be in writing;
(*b*) all contracts entered into by young persons between apparent ages to be fixed by law or regulations;
(*c*) any other cases.

48. If such criminal penalties are not generally abolished immediately, employers to be obliged to employ increasing percentages of workers under other conditions than contracts providing for such criminal penalties.

49. If such criminal penalties are not generally abolished immediately the said breaches of contract to be dealt with where practicable, by a special jurisdiction and procedure, with the object of promoting the transition to the system of judging such breaches of contract by civil process.

50. Competent jurisdiction in cases of breach of contract to be empowered, at its discretion, to suspend the execution of the sentence or to limit such sentence to a warning.

51. Any other provisions relating to criminal penalties for breach of contract.

52. Abolition of criminal penalties for breach of contract to include abolition of criminal penalties for non-repayment by worker, who has committed a breach of contract, of any moneys or goods received from the recruiter or employers as a bonus or an advance of wages in respect of the engagement, or of travelling or other expenses incurred by the recruiter or employer in connection with the engagement, except when it is proved to the satisfaction of the competent jurisdiction that the non-repayment is the result of an intention on the part of the worker to defraud the recruiter or employer.

Supplement Recommendation

53. Establishment of labour inspectorates for indigenous workers in any territories where they do not already exist.

60859—10½

CONCLUSIONS ON RECRUITING, PLACING AND CONDITIONS OF LABOUR (EQUALITY OF TREATMENT) OF MIGRANT WORKERS

The Conference,

Having examined the report submitted by the International Labour Office on the recruiting, placing and conditions of labour (equality of treatment) of migrant workers,

Invites the International Labour Office to consult the Governments on the following points:

I. Form of the International Regulations

1. Adoption of a Draft Convention and of one or more Recommendations.

II. Supply of Information and Assistance to Migrant Workers

2. (1) Prohibition of, and penal sanctions in the case of any unauthorized and in particular misleading propaganda concerning emigration and immigration.

(2) Supervision of advertisements, posters, tracts and all other forms of publicity concerning offers of employment in one country to workers of another country.

3. (1) Establishment or maintenance in each state of a free service for:

(*a*) supplying information to workers and their families, and advising them, in the native language or dialect of the migrant workers on matters relating to emigration, immigration, repatriation, employment and living conditions in the place of destination, and generally speaking to any other question which may be of interest to them in their capacity of migrants.

(*b*) providing facilities for workers and their families with regard to the fulfilment of administrative formalities and other steps to be taken in connection with their departure, journey, admission into the country of destination, residence there, and return to the country of origin.

(2) (i) Responsibility of the authorities for operating such a service; or

(ii) Encouragement of voluntary societies for this purpose, approved by the authorities and subject to their supervision; or

(iii) A combination of the system mentioned under (i) and (ii) above.

4. Suitable measures for facilitating the supply of information to migrants;

(*a*) Fixing of an interval before any modification of the conditions on which emigration or immigration or employment of foreign workers is permitted comes into force, long enough to notify the change in good time to workers and their families preparing to emigrate.

(*b*) Display of the text of the principal measures of this kind or of notices relating thereto in the languages most commonly known to migrant workers, at the places of departure, transit, and arrival.

III. Recruiting and Placing Operations

5. (1) Examination and endorsement by the competent authorities of immigration and emigration countries of applications from employers in one country for engaging and introducing into that country workers who are in another country, with a view to ensuring, in particular, that the interests of the workers are safeguarded and that the employment situation is not adversely affected.

(2) Desirability that the immigration country should not allow the recruitment of workers in a foreign country for work on its territory without having verified whether there are already foreign workers in that territory capable of undertaking the work in question.

6. (1) Bodies to be authorized to recruit or select workers of one country and introduce them into, and place them in employment in, another country:

(*a*) Public employment exchanges or other public bodies;

(*b*) Subject to securing licences for this purpose from the authorities of the countries in which the operations are to take place:

(i) An employer or persons engaged by him and acting only on his behalf;

(ii) Private employment agencies not conducted with a view to profit (companies, institutions, agencies, or other organizations either for securing employment for a worker or a worker for an employer).

(2) Determination by the national laws or regulations concerned or by bilateral agreements, of the conditions for the issue, or renewal, of licences to the bodies referred to in (*b*) above.

(3) (*a*) Official supervision of the operations of these bodies.

(*b*) Methods of exercising this supervision (for example, forms of the guarantees to be furnished by any intermediary authorized in accordance with Point 6 (1) (*b*) (ii) for the payment of compensation to the migrant worker in respect of damages suffered by the latter through the fault of the intermediary.

7. Requirement that every intermediary referred to in Point 6 proceeding, on behalf of an employer in one country, to engage workers in another country be provided with a written warrant by that employer, in the native language or dialect of the migrant workers, setting forth the necessary particulars concerning the intermediary and the nature and scope of the recruiting operations that he has been asked to undertake as well as the nature of the work to be executed and the terms of payment therefor.

8. (1) Approval by the competent authorities of maximum scales for the expenditure that may be charged to the recruited worker or to his employer on account of the expenses of recruitment, admission (including maintenance during the journey), placing and repatriation or other operations connected therewith.

(2) Obligation not to charge the expenditure referred to in clause (1) to the worker.

9. (1) Examination by the competent authorities of the immigration country of migrant workers who have been recruited before their departure, in order to make sure that they will be eligible for admission into the country of destination.

(2) Requirement that a competent official of the emigration country be present when any operations are carried out for the collective recruiting of workers for employment abroad.

(3) Requirement that the examinations and operations referred to in (1) and (2) be carried out as near as possible to the workers' homes.

10. Facilities to be accorded to families of migrant workers desiring to accompany or join them:

(*a*) Priority in respect of leaving or admission or residence permits;

(*b*) Simplification of the formalities and reduction of the payments to be made on leaving or entering or setting up residence in a country.

11. Waiving by the immigration country of the right to levy customs duties on the necessary tools which the workers take with them.

IV. Conditions of Employment

1. *Equality of Treatment*

12. (1) Equality of treatment between national and foreign workers with regard to:

(*a*) conditions of work and, in particular, to all matters relating to wages;

(*b*) special employment taxes, contributions or payments, whether charged to the worker or to his employer;

(*c*) admission to employment of foreign workers authorized to reside in the country in that capacity and of members of their families authorized to accompany or join them;

(*d*) social insurance, by the application of the provisions concerning equality of treatment included in the international Conventions on social insurance;

(*e*) right to belong to trade unions;

(*f*) legal enforcement of contracts of employment.

(2) Application of the principle of equality of treatment specified under (1) above to;

(i) all foreigners irrespective of nationality; or

(ii) nationals of Members which grant reciprocity; or

(iii) nationals of any Member having ratified the proposed Convention.

2. *Contracts of Employment*

13. In the event of the conclusion of a contract of employment between an employer or an agent acting on his behalf and a migrant worker before the latter has left the country of emigration:

(1) Particulars to be specified in all such contracts in addition to any other clauses:

(*a*) exact duration of the contract;

(*b*) exact date on which, and place at which, the migrant worker is required;

(*c*) method of meeting travelling expenses:

(i) for the outward journey;

(ii) for the homeward journey at the end of the term of the contract, or prior to its expiry if the denunciation or the breach of contract is not due to the fault of the worker.

(iii) for members of the workers' family authorized to accompany him or join him later, provision being made for the event of his death either in the course of the journey to the place of employment or during the period of his employment;

(*d*) amount of any sums spent by the employer or his agents in connection with the recruitment, admission, or placing of the worker, the repayment of which they are entitled to claim;

(*e*) nature and extent of housing accommodation available;

(*f*) provision for maintenance of the worker's family in the country of origin, especially to prevent desertion of the family.

(2) Drafting of the contract in the language of the worker as well as in that of the employer.

3. *Labour Inspection*

14. (1) (*a*) Establishment in the labour inspectorate or any other similar administrative department of the immigration country of a special inspectorate *or service* for supervising the conditions of work of migrants whenever this is rendered necessary by their number;

(*b*) or alternatively: specialization of labour inspectors or other officials whose duty it is to supervise the conditions of work of migrant workers.

(2) Desirability of systematic co-operation between such an inspectorate and voluntary societies for the assistance of migrants approved by the authorities.

V. Repatriation

15. Cost of repatriation (payment of dues, transport and maintenance charges up to the final destination including the transport of household belongings) of the recruited worker and of any members of his family who may be with him, if for reasons beyond his control he fails to secure the employment for which he was engaged.

Payment of these expenses by the employer or the recruiting agent or any other party legally liable, in particular, constitution of a common guarantee fund for repatriation to which premiums are paid by employers who receive one or several foreign workers.

16. Repatriation of migrant workers for reasons connected with the employment situation or their lack of means:

(*a*) Undertaking by the country of residence not to expel regularly admitted migrant workers or their families for the above reasons, unless the immigration and the emigration country have agreed to such repatriation.

Or alternatively:

(*b*) (1) Determination of a period of residence on the territory of the immigration country after which the regularly admitted immigrant worker may not be expelled for the above reasons; determination of this period (five years?);

(2) In the event of repatriation for the above reasons of migrant workers not having

completed the period of residence mentioned above on the territory of the immigration country, obligation of that country to ascertain;

(i) that the migrant worker has in fact exhausted all his rights to unemployment insurance benefit;

(ii) that when repatriated he is treated with every consideration (due notice, giving him reasonable time in particular to dispose of his property, transport conditions, etc.) called for in the circumstances;

(iii) that he will be paid the whole cost of his repatriation and that of his family, including the transport of household belongings, if any, to the final destination, or else to undertake this payment itself.

17. Return to their country of origin of migrant workers and members of their families who have retained their nationality:

(*a*) Requirement that the scope of the various measures in force in the country of origin for poor relief and unemployment relief and for promoting the absorption of the unemployed into employment to be extended to cover such repatriated workers by exempting them from fulfilment of conditions as to previous residence or employment in the country or locality.

(*b*) Waiving by the country of origin of the right to impose customs duties on the things which are in daily use by the repatriated worker (tools, clothes, bicycle, household belongings).

VI. Bilateral Agreements

18. Conclusion of special agreements between the countries directly concerned regarding:

(*a*) Supply of information to migrant workers and exchange of information between the competent Government departments;

(*b*) Repression of unauthorized and in particular misleading propaganda;

(*c*) Issue of certificates and identification papers, which the migrant workers are required to obtain, and recognition in either country of the validity of such documents issued by the other country as well as of contracts of engagement of migrant workers concluded in the other country;

(*d*) Methods of recruiting, admitting and placing workers of either of the two countries emigrating to the other;

(*e*) Prevention of separation of families or of desertion of their families by migrant workers; facilities for reuniting families or for securing that heads of families in one country carry out their legal obligations to support their dependants in the other country;

(*f*) Facilities for enabling migrant workers to take any sums of money that they may require out of the country of emigration and to transfer their savings from the country of residence to the country of origin (on the basis of the most favourable exchange rate);

(*g*) Determination of the procedure governing the repatriation of migrant workers and of their families and the methods of covering the cost thereof;

(*h*) Determination of the guarantees under which nationals of one of the contracting States residing in the other may be recruited by undertakings situated in territories outside the latter State but placed under its sovereignty or administration.

(*i*) The settlement of pension rights of migrant workers in old age—invalidity-survivors' insurance in case the maintenance of those rights is not otherwise provided for by the States concerned.

19. Questions concerning procedure of co-operation that may be treated in agreements between the countries directly concerned:

(*a*) Establishment of standard forms of application and of standard contracts to be used in engaging workers of one country with a view to their employment in the other country;

(*b*) Fixing in advance of quotas of workers of one country to be admitted into the territory of the other country in any one year or season, the numbers being determined for different classes according to sex, age and occupation;

(*c*) Co-operation of the countries of immigration and emigration with a view to selection and recruitment in the country of emigration and with a view to the protection of the interests of the migrant workers in the country of immigration; conditions of this co-operation;

(*d*) Periodical meetings of a mixed committee of representatives of the emigration and immigration countries for considering the enforcement or adaptation of proposals or measures for recruiting, introducing, placing, employing, protecting, and, if necessary, repatriating migrant workers and their families.

RESOLUTION

Considering that the importance of the question of the simplification of the formalities to be fulfilled by migrant workers previous to their departure from the country of origin, or in the course of the journey, or on arrival in the country of immigration has for a long time been recognized and that it has already been the subject of numerous studies made by the official international bodies;

Considering, in particular, that the possibility of replacing the numerous and varied papers required of migrant workers by a single document has been examined by Committees set up by the International Labour Organization and by the Communications and Transit Organization of the League of Nations as well as by the International Conference on Emigration and Immigration held at Rome in 1924 and at Havana in 1928, and that, moreover, this problem is being studied from the point of view of the improvement and comparability of international migration statistics, in accordance with a resolution adopted by the International Conference of Migration Statisticians held by the International Labour Office in 1932;

Considering that the migrant workers are subjected to a great deal of hardship by way of loss of time, expense and all kinds of inconvenience on account of the extremely complicated nature of the formalities to be fulfilled and the documents to be obtained and that the simplification of these formalities and documents, the acceleration of the procedure involved and the reduction of the fees charged would result in improving such a situation, which is harmful to the interests of migrant workers and interferes with the proper organization of the migration of workers.

The Conference requests the Governing Body to consider how this question might be taken up anew with a view to arriving at a practical solution.

CONCLUSIONS ON WORKING HOURS OF PROFESSIONAL DRIVERS IN ROAD TRANSPORT

The Conference,

Having examined the report submitted by the International Labour Office on the regulation of hours of work and rest periods of professional drivers (and their assistants) of vehicles engaged in road transport.

Considers that the question of the regulation of hours of work and rest periods of professional drivers (and their assistants) of vehicles engaged in road transport might suitably be made subject of international regulations;

Invites the International Labour Office to consult the Governments on the following points:

I. FORM OF THE REGULATIONS

1. (*a*) Draft Convention;
(*b*) Recommendation;
(*c*) Draft Convention and one or more Recommendations. In this case indication of the points which should be included in the Draft Convention and in the Recommendation or Recommendations.

II. SCOPE

1. Scope as Regards Undertakings

2. Application of the international regulations:
(*a*) to transport of goods by road, to any distance, effected by:
(i) Undertakings engaged in the carriage of goods for hire or reward i.e. in the carrying of goods for others.
(ii) Undertakings engaged both in the carriage of goods for hire or reward, and in the carriage of goods produced manufactured or sold by the same undertaking.
(iii) Undertakings carrying only goods produced manufactured or sold by themselves.
(*b*) Passenger road transport:
(i) trams, trolley cars;
(ii) omnibuses and other stage carriages;
(iii) long distance and other passenger services.
(*c*) Any other classes of undertakings or classes of transport by road for any distance.

3. Possibility of excluding by national laws and regulations the following classes of undertakings or classes of transport:
(*a*) transport by agricultural and forestry undertakings in so far as such transport is necessarily connected with the work of these undertakings. Criteria to be proposed;
(*b*) Transport of sick and injured persons by hospitals, nursing homes and similar establishments;
(*c*) Public transport under the authority of the State or Local Authority in cases of emergency and to maintain public safety.

2. Scope as Regards Vehicles

4. Application of the international regulations:
(*a*) To vehicles used in road transport and propelled by mechanical power including:
(i) internal combustion engines;
(ii) steam;
(iii) electricity;
(iv) other power methods.
(*b*) To vehicles used in road transport and drawn or propelled by any other means,
(*c*) To trailers drawn by vehicles propelled by any of the methods mentioned in clauses (*a*) and (*b*).

3. Scope as Regards Persons

5. Application of the international regulations:
(*a*) To drivers of passenger and goods vehicles;
(*b*) To attendants on passenger and goods vehicles;
(*c*) To other workers engaged in connection with passenger and goods vehicles and their loads, if required to travel.

6. Application of the international regulations:
(*a*) To all persons covered by Point 5;
(*b*) Only to wage-earning staff, to the exclusion of owners, persons operating a concession, managers or directors of undertakings and members of their families.

7. Possibility of exempting by national laws and regulations professional drivers of private vehicles used solely for personal services.

III. NORMAL HOURS OF WORK

1. Hours of Work

8. (*a*) Definition of hours of work to comprise the time during which the worker is at the disposal of the employer or of any person entitled to claim his services.
(*b*) Definition of the factors constituting hours of work.
(i) Inclusion in hours of work of time spent on the vehicle and in any other work done during the running time of the vehicle, as well as subsidiary work, and of periods of attendance or waiting time during which the worker remains at his post in order to meet possible calls or to resume work at the time fixed in the time-table.
(ii) Inclusion in hours of work of breaks for rest not exceeding a duration specified in each country or of rest periods during which the worker is not free to dispose of his time as he pleases.
(iii) Exclusion from hours of work of breaks during which the worker is free to dispose of his time as he pleases.

9. Definition of running time to comprise the time from the moment when the vehicle starts at the beginning of duty until the

moment when it stops at the end of duty, excluding breaks and interruptions of work during which the worker is free to dispose of his time as he pleases.

10. Definition of subsidiary work to comprise all work connected with the vehicle and its load outside the running time of the vehicle, and more particularly:

(*a*) Formalities completed before, during or after service (accounts relating to transport, signing register, handing in service-sheets, checking tickets and pay-in cash, etc.);
(*b*) Taking over and garaging of the vehicle and incidental running of the vehicle during service, including travelling to and from the point where the person signs on or off and the point where he takes or leaves the vehicle:
(*c*) Upkeep and repair of the vehicle;
(*d*) Loading and unloading of the vehicle;
(*e*) Feeding and care of draught animals.

11. Limitation of the hours of work, for example to 40, 44, or 48 hours per week.

12. Principle that the competent authority may authorize normal weekly hours of work exceeding 40 when the work performed is of such a nature as to involve a considerable proportion of subsidiary work, attendance or waiting.

13. Application of this principle:

(*a*) to persons who ordinarily do a considerable amount of subsidiary work, but whose work is not frequently interrupted by periods of attendance or waiting; 44 or 46 hours, for example;
(*b*) to persons whose work is frequently interrupted by periods of attendance or waiting; 48 hours, for example.

14. Limitation of daily hours of work, for example, to 8 hours per day.

15. (*a*) Calculation of weekly hours of work as an average over a longer period than a week;
(*b*) Fixing of the maximum period over which hours may be averaged.

2. *Uninterrupted Driving Time*

16. Definition of uninterrupted driving time, to include the time spent in driving a vehicle between two rest periods (breaks or daily rest period) or between a rest period and some work or duty other than driving.

17. Limitation of the period of uninterrupted driving, for example to 4, 4½, 5, 5½ or 6 hours.

18. Exceptions to this limit by national laws and regulations in cases where stops provided for in the time-table or the intermittent nature of the work ensure adequate breaks for the driver.

3. *Spread of the Working Day*

19. Fixing in each country by the competent national authority, after consultation with the organizations of the employers and workers concerned of the maximum spread of the working day, through the stipulation of the number of hours permissible between the beginning and end of duty.

4. *Making up Lost Time*

20. Making up of time lost as a result of:
(*a*) Accidental causes;
(*b*) Legal public holidays falling on a working day.

21. Fixing of a time limit for the making up of lost time.

IV. Extensions of Hours of Work

1. *Extensions in View of Exceptional Circumstances*

22. Indication of the circumstances justifying extension:
(*a*) Accidents, running repairs, dislocation of services or interruptions of traffic due to *force majeure*, rescue work.
(*b*) Unforeseen delays;
(*c*) Replacement of absent staff;
(*d*) Transport of sick or injured persons when transporting them with the object of providing relief in case of earthquake, flood, fire, epidemic or other calamitous visitation or disaster.

23. Extensions to meet exceptional requirements concerning the,
(*a*) transport of sick and injured persons by hospitals, nursing homes, and similar establishments or by undertakings exclusively engaged in this branch of transport;
(*b*) transport by hotels of passengers and their luggage between the establishment and the station or port of arrival or departure.
(*c*) funeral undertakings.

24. Limitation of extensions to time needed for indispensable work.

2. *Extensions Due to Shortage of Skilled Labour*

25. Extension allowed only in the case of proved lack of indispensable skilled labour.

26. Procedure for the authorization of extension: decision of the competent national authority after consultation with the organization of employers and workers concerned where such exist.

3. *Overtime at Increased Rates of Remuneration*

27. Possibility of introducing overtime on condition that increased rates are paid.

28. Limitation of the maximum annual allowance of overtime by the international regulations:
(*a*) When hours of work are calculated as an average over a period exceeding a week: to 75 hours for example.
(*b*) When hours of work are calculated over a period not exceeding a week: to 150 hours, for example.

29. Procedure: fixing of the allowance by the competent national authority, after consultation with the organizations of employers and workers concerned, where such exist.

30. Fixing by the international regulations of the minimum rate of overtime pay, for example, time and a quarter, time and a half, double time or some other rate, according to the occasions on which or circumstances in which overtime is worked.

V. PERIODS OF REST

1. *Daily rest*

31. Principle of an uninterrupted daily rest in every period of 24 hours.

32. Fixing of the minimum length of the uninterrupted daily rest: at 10, 11, 12, or 13 hours, for example.

33. Reduction in the length of the uninterrupted daily rest:

(*a*) On a specified number of days in the week, provided that the resulting average rest does not fall below the prescribed minimum;

(*b*) When shifts are changed over.

2. *Night work*

34. Possibility of limiting night work.

3. *Weekly rest*

35. Principle of an uninterrupted period of weekly rest in every period of seven days.

36. (*a*) Fixing of the minimum length of the uninterrupted weekly rest, for example, at 30 hours.

(*b*) Fixing of the minimum length of the uninterrupted weekly rest to be comprised within one calendar day, for example, 22 hours.

VI. GRADUAL APPLICATION OF THE REGULATIONS

37. Principle of reducing hours by stages.

38. Fixing of the maximum length of the transitional period (three years, for example).

39. Fixing of maximum limits during the transitional period exceeding, for example, by two hours the limits contemplated in Points 11, 12 and 13.

VII. SPECIAL PROVISIONS FOR CERTAIN COUNTRIES

40. Possibility of exempting from the application of the international regulations, in the case of certain countries, the territories in respect of which by reason of the sparseness of their population or the stage of their economic development it is impracticable to create the administrative organization necessary to secure effective enforcement of the proposed regulations.

41. Possibility for certain countries of exempting from the application of the international regulations family undertakings and undertakings employing a number of workers lower than a figure to be specified by these regulations.

42. Exceptions for certain countries to the normal hours of work laid down for undertakings subject to the international regulations:

(*a*) Possibility of fixing, for the travelling staff of undertakings engaged in passenger transport by motor bus or coach on regular routes, a weekly limit for normal hours of work, not exceeding by more than four hours, for example, the limits fixed in Points 11, 12, and 13.

(*b*) Possibility of fixing, in the international regulations, limits higher than those laid down under 42 (*a*) for the driving time and hours of work of persons engaged in other classes of passenger and goods transport.

VIII. SUSPENSION OF THE APPLICATION OF THE REGULATIONS

43. Principle of suspension:

(*a*) In case of necessity for meeting the requirements of national safety;

(*b*) In case of necessity for ensuring the working of a service of public utility;

(*c*) In case of necessity for protecting the national economic system.

44. Obligation to notify the International Labour Office immediately of the suspension of the regulations, with an indication of the reasons which have led to it.

IX. SAFEGUARDS CLAUSE

45. Inclusion in the regulations of a safeguarding clause provising that, in accordance with Article 19, paragraph 11 of the Constitution of the International Labour Organization, nothing in the international regulations shall affect any law, award, custom or agreement between employers and workers which ensures more favourable conditions to the workers than those provided for in such regulations.

X. SUPERVISION OF ENFORCEMENT

1. *Obligations on employers and drivers*

46. Drawing up by the employer of a roster, to be communicated to the staff and supervisory authorities.

47. Keeping by the employer of a register or individual card for each worker showing the number of hours worked.

48. Issue by the employer to each driver of an individual control book.

49. Keeping by the driver of an individual control book and entering therein of driving time and hours of work.

50. Other methods of control, for example, installation on mechanically-propelled vehicles of instruments registering the effective hours of work of the driver.

2. *Obligations on Governments*

51. Establishment of a standard form for control books.

52. Setting up or maintenance of a system for the supervision of enforcement of the regulations by the labour inspection department, traffic commissioners, police, or other appropriate administrative authority, extending not only to garages, depots and other premises, but also to the roads.

53. Indication in the annual reports under Article 22 of the Constitution of the International Labour Organization of the action taken for supervision of application of the international regulations, and in particular:

(*a*) The method of averaging for hours of work;

(*b*) The number of hours of overtime worked;

(*c*) Any recourse to the special provisions for the gradual application of the international regulations;

(*d*) Any recourse to the special provisions for certain areas or countries.

CONCLUSIONS ON GENERALIZATION OF REDUCTION OF HOURS OF WORK

I. Form of the Regulations

1. (*a*) A single Draft Convention, applying to industry, commerce and offices; or

(*b*) Two Draft Conventions, applying respectively to:
(i) industry, and
(ii) commerce and offices.

II. Scope

1. *Method of determination of scope*

2. Determination of scope by enumeration of the categories of undertakings in which are employed the manual and non-manual workers, including apprentices, to be covered.

2. *Scope as regards undertakings*

3. Application of the international regulations to the following categories of industrial undertakings:

(*a*) undertakings in which articles are manufactured, altered, cleaned, repaired, ornamented, finished, adapted for sale, broken up or demolished, or in which materials are transformed—including undertakings engaged in the generation, transformation or transmission of electricity or motive power of any kind;

(*b*) undertakings engaged in the construction, reconstruction, maintenance, repair, alteration or demolition of buildings, railways, tramways, airports, harbours, docks, piers, works of protection against floods or coast erosion, canals, works for the purpose of inland, maritime or aerial navigation, roads, tunnels, bridges, viaducts, sewers, drains, wells, irrigation or drainage works, tele-communication installations, works for the production or distribution of electricity or gas, pipe lines, waterworks, or undertakings engaged in other similar work or in the preparations for or laying the foundation of, any such work or structure;

(*c*) mines, quarries, and other works for the extraction of minerals from the earth, excluding mines from which coal, including lignite, is the only or principal mineral extracted;

(*d*) other categories of undertakings which might be covered.

4. Application of the international regulations to the following categories of commercial establishments and offices:

(*a*) commercial or trading establishments, including postal, telegraph and telephone services and commercial or trading branches of any other establishment;

(*b*) establishments and administrative services in which the persons employed are mainly engaged in office work;

(*c*) mixed commercial and industrial establishments, unless they are deemed to be industrial undertakings;

(*d*) establishments, public or private, for the treatment or care particularly of the aged, sick, infirm destitute or mentally unfit;

(*e*) hotels, restaurants, boarding-houses, clubs, cafes and other refreshment houses;

(*f*) theatres and places of public amusement;

(*g*) other categories of establishments which might be covered.

5. Application of the general international regulations:

(*a*) to the transport services of the industrial undertakings and commercial establishments covered by Points 3 and 4, where these services are used only to meet the requirements of these undertakings or establishments, are not open to public traffic and do not operate on public roads or waterways.

(*b*) to the parts or services of transport undertakings which have no direct and necessary connection with the operation of the transport services themselves (e.g. large engineering or repair shops, hotels, restaurants, book-stalls, etc., incorporated in the transport undertakings).

6. Possibility of excluding by national regulations the following categories of undertakings:

(*a*) undertakings where only members of the employers' family are employed;

(*b*) small undertakings ordinarily employing not more than six persons.

3. *Scope as regards persons*

7. Application of the international regulations to all manual and non-manual workers, including apprentices, employed in the undertakings covered.

8. Possibility of excluding by national regulations the following categories of persons:

(*a*) Persons occupied:
(i) in a position of management,
(ii) in a confidential capacity; or
classes of persons who by reason of their special responsibilities are not subjected to the normal rules governing the length of the working time.

(*b*) Travellers and representatives, in so far as they carry on their work outside the undertaking;

(*c*) The staffs, or parts of the staffs, of Government services, whether national, provincial or local, other than those employed in industrial or commercial activity (which includes postal, telegraph and telephonic services).

III. Limitation of Normal Hours of Work

1. *Definition of hours of work*

9. (*a*) Principle of the inclusion in the international regulations of a definition of hours of work;

(*b*) Adoption of the following definition:

"The term 'hours of work' means the time during which the person employed is at the disposal of the employer and is not free to dispose of his own time and movements."

2. *General limitation of normal hours of work for not necessarily continuous processes*

10. Limitation of normal weekly hours of work to 40.

11. (*a*) Possibility for the competent authority to permit by regulation the calculation of the normal limit of hours of work as an average over a period exceeding one week.

(*b*) Obligation on the competent authority in cases in which hours of work are calculated as an average to:

(i) consult the organizations of employers and workers concerned, where such exist;

(ii) determine by regulation the period over which the limit of hours may be calculated.

3. *Limitation of normal hours of work for necessarily continuous processes*

12. (*a*) Limitation of normal hours of work to a weekly average of 42 hours, calculated over a period to be determined by the competent authority, for necessarily continuous processes, namely, processes required by reason of the nature of the process to be carried on by a succession of shifts without a break at any time of the day, night or week.

(*b*) Obligation on the competent authority in cases in which a 42-hour average weekly limit is applied to determine by regulation, after consultation with the organizations of employers and workers concerned, where such exist.

(i) the processes in respect of which this limit shall apply;

(ii) the period over which the limit of hours may be calculated.

4. *Special limitation of normal hours of work for certain categories of undertakings or occupations*

13. (*a*) Principle that the competent authority may authorize normal weekly hours of work in excess of 40 in respect of any undertaking or branch thereof, falling within the categories mentioned below, in the cases in which the nature of the work of a considerable proportion of the persons employed is such that it comprises periods of activity interrupted by substantial periods of inactivity or mere presence.

(*b*) Principle that the competent authority determines the categories of persons employed in any such undertaking or branch thereof in respect of whom the longer limit may, owing to the nature of their work, apply.

Retail and service trades

14. Possibility of providing in the international regulations that a normal weekly limit of hours not exceeding 44 may be applied by the competent authority to all or certain persons employed in establishments in the retail and service trades.

15. Possibility of providing in the international regulations that, notwithstanding the above, a normal weekly limit of hours not exceeding 48 may be applied by the competent authority to all or certain persons employed in establishments in the retail and service trades which, owing to their nature, are customarily required by the public to remain open during prolonged periods of the day or week or at unforeseen times.

Hotels, restaurants and similar establishments

16. Possibility of providing in the international regulations that a normal weekly limit of hours not exceeding 52 may be applied by the competent authority to all or certain persons employed in hotels, restaurants, boarding-houses, clubs, cafes and other refreshment houses.

Curative establishments

17. Possibility of providing in the international regulations that a normal weekly limit of hours not exceeding 48 may be applied by the competent authority to all or certain persons employed in public or private establishments for the treatment or care particularly of the aged, sick, infirm, destitute or mentally unfit.

Theatres and places of amusement

18. Possibility of providing in the international regulations that a normal weekly limit of hours not exceeding 48 may be applied by the competent authority to all or certain persons employed in theatres and places of public amusement.

Other undertakings

19. (*a*) Indication of any other categories of undertakings or occupations for which the international regulations may prescribe that a normal weekly limit of hours in excess of 40 hours may be applied by the competent authority.

(*b*) Indication of such limits.

20. Possibility for the competent authority to permit the calculation of the special limits of normal hours of work, provided for the above categories of undertakings or occupations, as an average over a period to be determined by such competent authority.

21. Obligation on the competent authority to consult the organizations of employers and workers concerned, where such exist, before authorizing the use of the provisions found in points 14 to 20.

5. *Making up lost time*

22. Possibility of making up time lost through collective stoppages of work resulting from:

(*a*) accidental causes or cases of *force majeure*;

(*b*) weather conditions;

(*c*) public holidays falling on a working day.

23. Obligation on the competent authority to determine after consultation with the organizations of employers and workers concerned, where such exist;

(*a*) the conditions under which lost time may be made up;

(*b*) the period within which lost time may be made up; and

(*c*) the maximum extension of weekly hours permitted.

IV. EXTENSION OF HOURS OF WORK

1. *Extensions for certain categories of work or of occupation*

24. Possibility for the competent authority to permit extensions of the normal hours of work in the case of persons engaged in:

(*a*) preparatory or complementary work which must necessarily be carried on outside the limits laid down for the general working of the undertaking, branch or shift;

(*b*) essentially intermittent work such as that of caretakers, night watchmen, doorkeepers, fire services and other staff, which by its nature consists of long periods of inaction during which the persons concerned have to display neither physical activity nor sustained attention, or remain at their posts only to reply to possible calls;

(*c*) work which, for technical reasons, cannot be interrupted at will or which must be completed in order to prevent the deterioration of raw materials or manufactured goods;
(*d*) work required to co-ordinate the work of two succeeding shifts;
(*e*) work necessary for stocktaking and the preparation of balance-sheets, settlement days, liquidations and the balancing and closing of accounts;
(*f*) other extensions.

25. Determinations of the conditions and limits under which the extensions may be granted by regulations issued by the competent authority after consultation with the organizations of employers and workers concerned, where such exist.

2. Extensions for accidental circumstances

26. Possibility of exceeding the normal hours of work:

(*a*) in case of accident, actual or threatened, or in case of urgent work to be done to machinery or plant, or in case of *force majeure*, but only in so far as may be necessary to avoid serious interference with the ordinary working of the undertaking;
(*b*) in order to make good the unforeseen absence of one or more members of a shift.

3. Extensions for lack of skilled workers

27. Possibility for the competent authority to permit extensions of the normal hours of work in case of proven lack of skilled workers.

28. Determination of the limits and conditions under which the extensions may be permited by regulations issued by the competent authority after consultation with the organizations of employers and workers concerned, where such exist.

4. Extensions for categories of undertakings whose activity is subject to seasonal fluctuations

29. Possibility for the competent authority to permit extensions for categories of undertakings whose activity is subject to seasonal fluctuations.

30. Determination by the competent authority by regulations issued after consultation with the organizations of employers and workers concerned, where such exist:

(*a*) of the categories of undertakings considered to be undertakings whose activity is subject to seasonal fluctuations;
(*b*) the conditions and limits under which the extensions may be granted.

5. Overtime with increased remuneration

31. Possibility of working overtime with increased remuneration.

32. Limitation by the international regulations of the annual maximum amount of overtime:

(*a*) when the hours of work are fixed by national regulations as an average calculated over a period longer than a week: 100 hours, for example;
(*b*) when the hours of work are fixed by national regulations on the basis of a period not exceeding one week: 200 hours, for example.

33. Determination of the amount of overtime by the competent authority by regulations issued after consultation with the organizations of employers and workers concerned, where such exist.

34. Determination by international regulations of the minimum rate of increase of pay for overtime:

For example:
time-and-a-quarter,
time-and-a-half,
double time,
or some other rate

according to the occasion on which or circumstances in which overtime is worked.

V. Gradual Application of the Regulations

35. Principle of reducing hours of work by stages.

36. Determination of the maximum length of the transitional period (three years, for example).

37. Determination of the general limit of normal hours of work during the transitional period at, for example, 44 hours per week.

38. Possibility for the competent authority to authorize during the transitional period after consultation with the organizations of employers and workers concerned, where such exist, special limits of normal weekly hours of work in excess of those indicated in points 14 to 19.

VI. Special Provisions for Certain Countries

39. Possibility of exempting from the application of the international regulations, in the case of certain countries, the areas in respect of which, by reason of the sparseness of their population or the stage of their economic development, it is impracticable to create the administrative organization necessary to secure effective enforcement of the proposed regulations.

40. Possibility for certain countries of exempting from the international regulations in respect either of the whole or of specified parts of their territory, undertakings employing a number of workers not exceeding the figure of twenty, or such lower figure as may be specified in the relevant national regulations in force at the time of the adoption of the itnernational regulations.

41. Possibility for the international regulations to authorize limits of normal hours of work in excess of those laid down in the international regulations (points 10 to 21) in the case of the countries contemplated in points 39 and 40 or of certain classes of undertakings within these countries:

(*a*) determination of the general limits of normal hours of work corresponding to those indicated in points 10 and 12 at, for example, 48 per week;
(*b*) provision that the competent authority may, after consultation with the organizations of employers and workers concerned, where such exist, authorize special limits of normal weekly hours of work corresponding to those indicated in points 14 to 19.

VII. Special Provisions for Underground Mines Other Than Coal Mines

42. Principle of the inclusion in international regulations of a definition of hours of work for workers employed underground in mines other than coal mines, based on the following definition of time spent in the mine:

(*a*) time spent in an underground mine for each worker employed in underground mines other than coal mines shall mean the period between the time when the worker enters the cage in order to descend and the time when he leaves the cage after reascending;

(*b*) in mines where access is by an adit, the time spent in the mine shall mean the period between the time when the worker passes through the entrance of the adit and the time of his return to the surface.

The above provision shall be deemed to be complied with if the period between the time when the first workers of the shift or of any group leave the surface and the time when they return to the surface is the same as the time spent in the mine by each worker. The order of and the time required for the descent and ascent of a shift or of any group of workers shall, moreover, be approximately the same.

43. Limitation of daily and weekly time spent in the mine, for any worker, to:

(*a*) 7¾ hours per day and 38¾ hours per week; or

(*b*) 8 hours per day and 40 hours per week; or

(*c*) 38¾ hours per week as an average calculated over a fixed period consisting of a certain number of weeks of six days and a certain number of weeks of five days, the daily time not to exceed 7¾ hours. Length of period.

(*d*) 40 hours per week on the average calculated over a fixed period consisting of a certain number of weeks of six days and a certain number of weeks of five days, the daily time not to exceed 8 hours. Length of period.

(*e*) 7½ hours per day and 45 hours per week; or

(*f*) other limits.

44. Should the immediate application of the 38¾-hour or 40-hour week as provided in clauses (*a*), (*b*), (*c*) and (*d*) of point 43 prove difficult, gradual application of the international regulations, as regards the reduction of hours of work, for all the mines, other than coal mines, of any country or for certain classes of mines, or for certain lining districts, the competent authority being empowered:

(*a*) to establish both a scheme providing for 11 shifts in the fortnight (6 shifts in one week and 5 shifts in the next) of 7 hours 45 minutes or 8 hours each for underground workers; and
an equivalent scheme providing for 6 shifts in the week of 7 hours 6 minutes or 7 hours 20 minutes for underground workers; or

(*b*) to establish both a scheme providing for 11 shifts in the fortnight (6 shifts in one week and 5 in the next) of 7 hours 38 minutes for underground workers and an equivalent scheme providing for 6 shifts in the week of 7 hours for underground workers; or

(*c*) to establish other transitional schemes providing either for the even distribution of weekly hours of work over all the working days in the week, or for the elimination of working days, or for a combination of these two systems.

45. Possibility of extending the length of the shift of each worker employed on operations which must be carried on continuously to 8 hours per day, exclusive of the time spent in the mine by that worker in reaching and returning from his place of work, it being understood that in each case this time will be reduced to the indispensable minimum.

46. Limitation of the number of hours of overtime which may be worked in mines other than coal mines:

(*a*) under the same conditions as for coal mines (other than lignite mines);

(*b*) without distinguishing mines other than coal mines from other undertakings covered by the general regulations.

VIII. Suspension of the Application of the Regulations

47. Principle of suspension:

(*a*) in case of necessity for meeting the requirements of national safety;

(*b*) in case of necessity for ensuring the working of a service of public utility;

(*c*) in case of necessity for protecting the national economic system.

48. Obligation to notify the International Labour Office immediately of the suspension of the regulations with an indication of the reasons which have led to it.

IX. Safeguarding Clause

49. Inclusion in the regulations of a safeguarding clause providing that, in accordance with Article 19, paragraph 11, of the Constitution of the International Labour Organization, nothing in the international regulations shall affect any law, award, custom or agreement between employers and workers which ensure more favourable conditions to the workers than those provided for in such regulations.

X. Supervision of the Application

50. Notification by the employer, in a manner approved by the competent authority, by the posting of notices or otherwise:

(*a*) the hours at which work begins and ends;

(*b*) where work is carried on by shifts, the hours at which each shift begins and ends;

(*c*) where a rotation system is applied, a description of the system, including a time-table for each person or group of persons;

(*d*) the arrangements made in cases where the average duration of the working week is calculated over a period exceeding one week;

(*e*) the arrangements made in cases where lost time is made up; and

(*f*) rest periods which are not reckoned as part of the working hours.

51. The keeping by the employer of a record, in the form prescribed by the competent authority, in which shall be included all additional hours worked (Points 27 to 34) and of the payments made in respect thereof.

XI. Annual Reports

52. Indication in the annual reports presented in execution of Article 22 of the Constitution of the International Labour Organization of the measures taken for the control of the application of the international regulations, in particular:

(*a*) exemptions provided in the scope of the regulations and the conditions under which these exemptions are granted;
(*b*) regulations covering the cases in which average hours of work are calculated over a period exceeding one week;
(*c*) the determination of necessarily continuous work for which a 42-hour week is authorized;
(*d*) the determinations by the competent authority concerning the special limits to normal hours of work (Points 14 to 20);
(*e*) measures taken by the competent authority concerning the conditions under which the making up of lost time is permitted;
(*f*) regulations covering the extension of hours of work (Points 24 to 30);
(*g*) regulations covering overtime (Points 31 to 34);
(*h*) any recourse to the special provisions authorizing the gradual application of the international regulations; and
(*i*) any recourse to the special provisions for certain areas or countries.

RESOLUTION ON THE REDUCTION OF HOURS OF WORK IN COAL MINES

The Conference,

Having taken note of the Report of the Technical Tripartite Meeting on the Coal-Mining Industry held in Geneva from 2nd to 10th May, 1938, and in particular on the resolution adopted by the meeting:

Taking account of the fact that the question of the reduction of hours of work in coal mines figures on the agenda of the Conference for first discussion as part of the item concerning the generalization of the reduction of hours of work;

Observing that the proceedings of the Technical Tripartite Meeting on the Coal-Mining Industry have provided the Office with all the information and opinions necessary for drafting a questionnaire with a view to the consultation of Governments on the reduction of hours of work in coal mines;

And having taken note of Chapter II of the supplementary report to Part III (Coal Mines) of the report on the generalization of the reduction of hours of work, indicating the changes to be made in the list of points in order to take account of the work of the meeting;

Adopts the list of points contained in Part III (Coal Mines) of the report on the generalization of the reduction of hours of work, with the amendments indicated in Chapter II of the Supplementary Report; and

Decides to place the question of the reduction of hours of work in coal mines on the agenda of the 1939 session of the Conference as a separate item and with a view to final discussion.

This draft resolution was adopted by 73 votes to 36, the Employers' members voting against it with the exception of the French Employers' member who voted in favour.

RESOLUTION ON THE REDUCTION OF HOURS OF WORK IN TRANSPORT

The Committee having decided in principle to refer the question of the regulation of hours of work in transport to one or more Technical Tripartite Meetings, the Government members of the United States of America, the British Empire, Canada, Denmark, France, New Zealand and Norway, submitted the following resolution:

Whereas it has not been possible for practical reasons to consider this year the conclusions of the parts of the Report on the generalization of the reduction of hours of work relating to rail transport, inland water transport and air transport;

Whereas the regulation on hours of work in transport raises special problems which call for particular solutions adapted to the conditions obtaining in this industry;

Whereas special international regulations, which might consist of one or more Draft Conventions, should be contemplated for this industry;

The Conference requests the Governing Body of the International Labour Office:

(*a*) to summon in 1938 or 1939 one or more preparatory technical tripartite meetings with a view to studying the bases of international regulations on the reduction of hours of work in transport, including the handling of goods in transit, at docks, quays, wharves, warehouses, airports, etc.;
(*b*) to enter on the agenda of the Conference the question of the reduction of hours of work in transport as soon as it shall have received the results of the work of the preparatory technical tripartite meetings.

OTHER RESOLUTIONS OF THE CONFERENCE

In addition to the above action taken on the six items of the agenda, the Conference also adopted five resolutions as follows:—

Renunciation of Racial and Religious Discrimination

The Conference, noting that in certain states measures have been taken, based on the notion of race or confession, which establish inequalities of treatment among the workers of the same country, especially with regard to conditions of admission to public or private posts, and that similar measures are in contemplation in other countries,

Points out that such measures are in contradiction with the general principles laid down in Section II (Article 41) of the Constitution of the International Labour Organization, and more particularly with point 8 of Article 41, which states that the standard set by law in each country with respect to the conditions of labour should have due regard to the equitable economic treatment of all workers lawfully resident therein;

Invites all Members of the International Labour Organization to apply the principle of equality of treatment to all workers resident in their territory, and to renounce all measures of exception which might in particular establish discrimination against workers belonging to certain races or confessions with regard to their admission to public or private posts.

(*Moved by Mr. Jouhaux, Workers, France*).

Forestry Workers

Whereas forestry plays a prominent, not to say decisive, part in the general economy of a large number of countries and areas throughout the world;

Whereas the increasing importance of wood as an industrial raw material for meeting vital human demands is steadily making the part played by forestry more evident;

Whereas the millions of forestry workers, who in the timber-producing countries proper form a class of workers with special characters of its own, should not be deprived of their fair share of social and cultural progress;

Whereas the remoteness of the work places, the influence of the weather, and the high risk of accident mean special hardships and dangers for this class of workers in carrying on their occupation, hardships and dangers which nevertheless can be much alleviated by systematic action;

The Conference requests the Governing Body to consider the desirability:

Of instructing the International Labour Office at the earliest possible date to organize a world-wide enquiry into the standard of living and conditions of employment of the workers engaged in the production of timber as a raw material;

Of taking steps which may lead to an improvement in the situation of forestry workers, if possible in the form of Conventions and Recommendations, especially in regard to the questions of housing, the accommodation and maintenance given at the workplace, general hygiene, occupational diseases, accident prevention, and the truck system, and also in regard to general questions of wages and hours of work;

Of setting up a permanent joint committee on questions concerning forestry workers, which should consist of representatives of the three groups of the Governing Body, together with representatives of the international bodies concerned and other experts, and should act in an advisory capacity when the International Labour Organization treats any of these questions.

(*Moved by Mr. Gunnar Andersson, Workers, Sweden*).

Fixing of Maximum Weight of Loads to be Transported by Workers

The Twenty-fourth Session of the International Labour Conference:

Considering that it is still the practice in certain countries to require men to carry on their backs sacks or other packages so heavy as to require an effort exceeding human strength or likely to injure the health of the workers;

Considering that some of such sacks and packages are sent all over the world and that consequently the fixing of their maximum weight is a matter of international interest;

Requests the Governing Body of the International Labour Office to consider the desirability of placing on the agenda of an early session of the Conference the question of the fixing of the maximum weight of loads, packages and sacks to be transported by workers. (*Moved by Mr. Dominguez Aspiazo, Workers, Cuba*).

Dismissal Allowances

Considering that the question of the indemnities due to workers in case of dismissal has given rise to considerable difficulties in certain countries;

The Conference requests the Governing Body to consider the desirability of instructing the International Labour Office to make a special study of this question with a view to placing it on the agenda of an early session of the International Labour Conference. (*Moved by Mr. Alamo Ybarra, Government, Venezuela*).

Regional Conference of American States Members

The Conference,

Profoundly impressed by the report laid before it by decision of the Governing Body of 31st May, 1938, concerning the remarkable results which followed the works of the first Conference of American States which are Members of the International Labour Organization, held at Santiago (Chile) in January, 1936;

Considering that the Conference of Santiago, having observed that its meeting had greatly helped to increase the effectiveness of the full and sincere collaboration of the American States in the work of the Organization, had expressed the hope that the Governing Body would consider the possibility of convening, in the future, whenever circumstances make such a step appear desirable, periodical conferences of a similar nature;

Considering that the happy development of the general and regional activities of the Office and the recent progress made in its relations and technical collaboration with the extra-European countries make the convening of a second Regional Conference of the same nature extremely desirable:

Invites the Governing Body of the International Labour Office to examine the possibility of taking the necessary measures to convene, in 1939, a second Regional Conference of the American States which are Members of the International Labour Organization. (*Submitted jointly by a number of delegates of the United States, Argentina, Brazil, British Empire, Canada, Chile, Colombia, Cuba, Czechoslovakia, Ecuador, Finland, Hungary, India, Ireland, Luxemburg, Mexico, Norway, New Zealand, Netherlands, Panama, Peru, Spain, Sweden, Switzerland, Uruguay and Venezuela.*)

Eighty-fourth Session of Governing Body of International Labour Office

The eighty-fourth session of the Governing Body of the International Labour Office met at Geneva on May 31 under the chairmanship of Mr. Leggett (Great Britain). This session was attended for Canada by Mr. Gerald H. Brown, Assistant Deputy Minister of Labour; Mr. H. Hume Wrong, Permanent delegate of Canada to the League of Nations; and Mr. P. E. Renaud.

The Governing Body considered the report of the Preparatory Technical Meeting on the coal mining industry which was held at Geneva from May 2-10. This meeting had adopted a resolution which the Governing Body decided to transmit to the International Labour Conference. The resolution expressed the opinion "that it would be desirable to provide for the placing of the question of the

reduction of hours of work in coal mines on the agenda of the 1939 session of the International Labour Conference as a separate item and with a view to final discussion."

The Governing Body decided by 20 votes to 6 to publish the records of the Session of the Advisory Committee on Management, held on May 2 and 3, which studied the practical measures to be taken to alleviate the immediate social consequences of certain forms of rationalization on undertakings, and of the rapid and intensive mechanization of production. It also discussed the use of office machinery and its influence on conditions of work for staff. (The meeting of this committee was under the chairmanship of Mr. Hume Wrong).

The Governing Body considered a Report prepared by the Office on the measures taken to give effect to the resolutions adopted by the Conference held at Santiago, Chile, in January, 1936. This Report gave an account of the useful work accomplished in consequence of this first "Labour Conference of the American States which are Members of the International Labour Organization," and suggested that the time had perhaps come to consider the possibility of convening, whenever circumstances may make it desirable, periodical Conferences similar to that at Santiago. It will be for the Governing Body of the Office to take the necessary decisions on the matter.

At a private sitting the Governing Body considered the question of the resignation of the Director of the International Labour Office, and adopted the following Resolution:

> "The Governing Body decides to accept, with much regret, the resignation of the Director, and desires to place on record its sincere gratitude to him and its high appreciation of the very great services which he has rendered to the International Labour Organization since its inception."

Subsequently the Governing Body at a special meeting elected Mr. J. G. Winant as director and Mr. Edward Phelan as deputy director (see this issue on page 722).

Employer-Employee Co-operation

"Incentives and Contentment" is the title of a book written by Patricia Hall, B.Sc., and H. W. Locke, M.A., and published recently by Pitman and Sons.

The book is based on a study made in a British cocoa factory and contains a foreword by B. Seebohm Rowntree. The book is divided into six chapters entitled: The Background of the Inquiry; Nature and Methods of the Enquiry; Satisfaction and Discontent in Workrooms; Motives and Incentives to Work; The Difficult Worker.

The general conclusions reached as a result of the study are given as follows:—

1. Cordial co-operation between workers and the management is an important factor in the success of every business. It can be fostered by making a closer study than is usually made of the conditions which encourage or discourage it. These will vary from one factory to another.

2. The workers must feel that a policy of co-operation will benefit them. There must be no justification for their thinking that the question is being investigated merely to benefit shareholders.

3. A number of factors influence the degree of satisfaction likely to be experienced, foremost of which is the suitability of the worker for his job. This is usually decided by a wasteful system of trying an employee on a variety of jobs until he finds one he can do best. In place of this, the more scientific method of vocational selection is to be recommended.

4. Despite initial selection of this kind, other factors will come into operation to disturb the workers' satisfaction, and constant attention is needed to such matters as the system of remuneration and the earnings received; the security of employment; the health of the workers, and the opportunities afforded them for promotion.

5. Machinery should be set up for discovering grievances as soon as they arise, and they should always be dealt with promptly.

6. Ways should be devised for dealing sympathetically with "difficult" workers, suffering from some psychological maladjustment. Most of these lack an absorbing interest in either life or work.

7. In the appointment of managers and foremen it is essential to select men who have the power of leadership and who can enter sympathetically into the workers' point of view. In this connection it is important to remember that the life of the worker outside the factory is an important factor in his industrial efficiency. The troubles and joys of home life cannot be dropped at the factory gate on arriving in the morning, nor can factory difficulties be put aside when the worker leaves at night. An unsatisfactory home life will reduce efficiency and may even bring about complete unfitness for industry.

8. It is important to give foremen full opportunities to understand the Company's policy, especially as it affects industrial relations.

9. In every factory there are employees of the "born leader" type. It is desirable to consider whether these cannot be given some legitimate channel for their abilities. A system of advertising all jobs which carry promotion in rank has been found efficacious at the Cocoa Works. Where trade unions are recognized, men of this type often find scope as duly elected shop stewards.

THE LABOUR GAZETTE

PREPARED AND EDITED BY

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 38] AUGUST, 1938 [NUMBER 8

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada at the beginning of July showed further improvement, according to the Dominion Bureau of Statistics, which tabulated returns from 10,791 firms (each employing a minimum of 15 persons) in all industries except agriculture, fishing, hunting and highly specialized business. The staffs of these firms aggregated 1,086,773 workers, or 14,650 more than they employed at June 1. The index (based upon the average for the calendar year 1926 as 100), stood at 113·5, compared with 111·9 in the preceding month, and 119·1 at July 1 of last year, when a larger advance had taken place. At the same date in preceding years, the index was as follows: 1936, 104·6; 1935, 99·5; 1934, 101·0; 1933, 84·5; 1932, 88·7; 1931, 103·8; 1930, 118·9; 1929, 124·7; 1928, 117·7 and 1927, 109·7. The increase at July 1, 1938, was not equal to the average gain between June and July in the experience of the last seventeen years.

Unemployment in Trade Unions.—Reports were forwarded to the Department of Labour at the beginning of July by 1,876 local trade unions embracing a membership of 221,003 persons, 29,941 of whom, or a percentage of 13·5, were out of work in contrast with a percentage of 13·2 at the beginning of June and with 10·4 per cent at the beginning of July, 1937.

Employment Office Reports.—Reports received by the Department of Labour from the offices of the Employment Service of Canada indicated a gain in the volume of business transacted in June, 1938, over that of the previous month, but a decline from June of last year, these computations being based on the average daily placements effected during the periods under review. All groups, except logging and services, showed gains over May, while the only division to show an increase of any size over June, 1937, was transportation. Vacancies in June, 1938, numbered 33,485, applications, 58,975 and placements in regular and casual employment, 31,828.

Prices.—In retail prices the cost per week of a family budget of staple foods, fuel and lighting, and rent was $17.45 at the beginning of July as compared with $17.43 for June; $17.24 for July, 1937; $16.51 for July, 1936; $15.41 for June, 1933 (the low point in recent years); and $21.26 for June, 1930. In wholesale prices the weekly index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 declined gradually week by week during July due in large part to lower prices for grains and pig iron. For the week ended July 29 the index number was 78 as compared with 79·9 for the week ended July 1. On a monthly basis the index number was 80·1 for June; 87·5 for July, 1937; 74·4 for July, 1936; 63·5 for February, 1933 (the low point in recent years); and 97·2 for July, 1929.

Business Statistics.—The latest information available reflecting industrial conditions in Canada is given in the table on page 862. The index of the physical volume of business was about 2 per cent lower in June than in the previous month and 14 per cent lower than in June, 1937. Of the principal groups used in the construction of this index number and after corrections for seasonal variation mineral production was substantially lower than in the previous month, exports of copper, nickel, zinc and asbestos showing appreciable declines. The manufacturing group was slightly lower also, production of foodstuffs, tobacco and textiles being in smaller volume than in May while forest products, iron and steel indicated improvement. Other principal groups to show decline in the same comparison were electric power output, carloadings, and imports. Construction and trade employment were higher. All of the above mentioned principal groups were lower in June, 1938, than in June, 1937. Information available for July shows improvement as compared with June in employment, the number of cars loaded and in the value of contracts awarded. All were lower than in July, 1937.

Strikes and Lockouts.—The number of strikes and lockouts during July was 15, involving 1,423 workers with a time loss of 10,435 man working days, as compared with

*Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

†For the week ended July 29, 1938.

(1) Calculated from yields of Ontario bonds.

(2) For group figures see articles elsewhere in this issue.

(3) Adjusted for number of business days and seasonal variations.

(4) Figures for end of previous month.

(5) Figures for four weeks ending July 30, 1938, and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending July 16, June 18 and May 21, 1938; July 17, June 19 and May 22, 1937.

(7) MacLean's Building Review.

(8) Index numbers ar cadjusted when necessary for seasonal variation.

(a) Preliminary.

19 disputes involving 2,366 workers and time loss of 12,216 days during June. The principal disputes during July involved lime plant workers at Blubber Bay, B.C., and restaurant employees at Toronto, Ont., carried over from June, and hat factory workers at Guelph, Ont. In June most of the time loss was due to the strike of lime plant workers at Blubber Bay and to strikes of sawmill workers at Fort Francis, Ont., and hosiery workers at Hamilton, Ont. In July, 1937, the important disputes involved cotton factory workers at Cornwall, Ont., woollen mill workers at Peterborough, Ont. and gold miners at Wells, B.C. The total number of disputes in July, 1937, was 41 involving 7,083 workers with time loss of 67,587 days. Of the 15 disputes recorded in July, 1938, eleven were terminated, five resulting in favour of the workers, one in favour of the employer, with compromise settlements in four cases and one indefinite. Four disputes involving 240 workers were recorded as unterminated at the end of July. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or definitely declared terminated by the unions involved.

Industrial Disputes Investigation Act

During the month, there was received in the Department the report of the Board of Conciliation and Investigation in connection with the dispute between coal operators in the Drumheller district and their employees. This report is given elsewhere in this issue, commencing on page 871.

Other proceedings under the Act are summarized on page 869.

Dominion-Provincial youth training agreements

The Minister of Labour, Hon. Norman McL. Rogers, issued the following press release in regard to youth training agreements for the fiscal year 1938-39.

"Agreements under which youth training projects will be carried on in all the provinces of Canada during the present fiscal year, have been approved by the Dominion Government.

"This year an increased appropriation by the Federal Parliament will permit an appreciable broadening of the Youth Training Program. Assuming that the entire estimate is taken up, nearly $3,000,000 will be spent on projects for youth training. Last year, the sum available was approximately a million dollars less. It is anticipated that the increased amount available, coupled with the experience gained last year, will enable the plan to proceed on a larger and more comprehensive scale. The Dominion Government is anxious that training projects should go forward as rapidly as possible.

"These agreements provide for continuation of the valuable work carried on last year whereby more than 50,000 unemployed, young Canadian men and women received beneficial training. Again this year, Dominion and provinces will co-operate on a dollar-for-dollar basis in a wide variety of training projects. These projects are submitted by the provinces, naturally in the best position to determine the kind of undertakings which will meet their peculiar needs.

"The Dominion Government hopes that during the present year there will be a continuation and extension of the valuable work, commenced with last year's program, of training apprentices and learners for skilled and semi-skilled industrial occupations in co-operation with employers and organized labour.

"Last year's experience has indicated clearly the importance of emphasizing certain points in connection with youth training. Obviously, the purpose of the training is to fit young Canadians, men and women, for employment. But the agreements go farther. Not only do they provide training for employment, but they also make provision for placement officers whose function will be to endeavour to place those who have been trained. It is the intention of the Dominion Government this year to emphasize the importance of this placement work. Its importance is fully recognized and everything possible will be done to make it effective.

"The need for co-operation if youth training is to achieve the full measure of success hoped for, cannot be over-emphasized. Co-operation of the Dominion and provinces has produced a workable, beneficial program which is training thousands of young Canadians. If Canadian industry and Canadian agriculture will do its utmost to co-operate by absorbing into useful employment as many as possible of these trained young men and women, a long step toward solving unemployment will have been taken. The Dominion and provinces are bending every effort to the conservation and training of what is Canada's greatest asset, her youth. Success of this effort will require a continuation and extension of the co-operation so generously extended last year by organizations and individuals across Canada."

Statistics of Material Aid Recipients for June

Early figures from the Department's national registration for June, 1938, reveal a continuing reduction in numbers on unemployment aid compared to the same month a year before.

Registration figures issued on August 12 by Hon. Norman McL. Rogers, Minister of Labour, showed that 139,000 fully employable persons were receiving non-agricultural material aid in June, 1938. This was a decrease of over 23 per cent from June, 1937, when the number was 181,689. In comparison with the total for May, 1938, a decrease of 9·7 per cent was indicated. Seventy-two per cent of the total of fully employable persons on aid were reported from the 51 cities of over 10,000 population distributing aid.

When totals of all those in receipt of non-agricultural material aid in June were compared with the corresponding month of 1937, a decrease of nearly 18 per cent was shown. The total number (including totally unemployable, partially employable and fully employable, together with all dependents of family heads) was estimated to be 524,000 in June, 1938. This was a decrease of 9 per cent from May, 1938.

A total of 82,000 farmers (resident farm operators), who, together with their dependents, accounted for a farm population of 368,000 across the country, was reported as receiving agricultural material aid for subsistence. This figure was a decrease of 3·3 per cent from May, 1938, but an increase of over 39 per cent over June, 1937. Of this Dominion total, 321,000 were in the Province of Saskatchewan, still reflecting the effects of the drought situation in 1937. While the Saskatchewan total showed a drop of 2·3 per cent from the previous month, it still showed an increase of nearly 86·7 per cent from June, 1937.

The grand total of all classes of persons on material and agricultural aid in June this year was 892,000 (preliminary figure), a decrease of 6·7 per cent from May and a decrease of 1 per cent from June of the year before, although as stated, persons on agricultural aid included in this grand total had increased by over 39 per cent in the year. The drop of 6·7 per cent in the grand total from May to June was thus about the same relatively as the decrease from April to May, when the figures declined by 6·6 per cent.

Conference of Canadian Institute of Economics and Politics

The Canadian Institute of Economics and Politics was holding its seventh annual conference at Geneva park, Lake Couchiching, August 6-19, as this issue of the LABOUR GAZETTE was in process of publication. Featuring a comprehensive program were sections entitled "Contrasts and Cleavages" and "Dominion-Provincial Relations" under which problems affecting unity were discussed.

The subject of "Labour and Unionization" was also prominent on the agenda in a three-day discussion from August 12-15. Under this heading were listed the following sections:

(*a*) History and development of trade union organizations.
(*b*) Status and legal rights of Trade Unions in Canada (consideration of the right to organize, etc.)
(*c*) Present forms of trade union organization: A. F. of L., National Unions, Catholic Unions, C.I.O.
(*d*) Attitude of Employers to trade union organization.
(*e*) Relations of Government to trade unions and labour questions.
(*f*) What can we learn from British and American experience?

Two other major parts in the discussion program were the "Rehabilitation of Agriculture" and an "Analysis of International Events."

In a later issue it is the intention to give a more extended review of the proceedings of the conference, particularly those sessions dealing with labour.

Legislation on holidays with pay in Great Britain

A summary of the report of the Committee on Holidays with Pay in Great Britain (appointed under the chairmanship of Lord Amulree) was given in the LABOUR GAZETTE for June, page 653. The report was followed by the introduction of legislation which broadly incorporated the committee's recommendations. The Bill, which was given third reading on July 22, is in the category of "enabling" legislation, and according to a press interpretation, "it authorizes but does not compel." The British *Ministry of Labour Gazette* in noting the second reading of the Bill observes that it is "to enable certain wage regulating authorities to require the provision of holidays with pay, and to enable the Minister of Labour to assist the administration of voluntary schemes for securing holidays with pay.

"Following upon the recommendations in the Report of Lord Amulree's Committee on Holidays with Pay, the Bill proposes to empower Trade Boards, Agricultural Wages Committees both in England and Wales and in Scotland, and the Road Haulage Central Wages Board which is to be set up when the Road Haulage Wages Bill becomes law, to direct that any workers whose wages they regulate shall be granted holidays, and requires those Authorities to provide that the workers shall receive pay for any period of holiday granted under their direction.

"The Bill also enables the Minister of Labour to assist the administration of voluntary schemes for securing holidays with pay in an industry or branch of an industry. For

this purpose he may issue, on behalf of employers, sums by way of holiday payments, subject to repayment of the sums issued and the expenses incurred by the Minister which are attributable to the schemes."

Its primary object is stated to be for the purpose of authorizing trade boards and agricultural wage committees to provide for paid vacations when fixing rates of wages. At present the power of such boards and committees is limited to determining wages for the time worked and related matters, but they have no power to fix or determine holiday remuneration.

It is understood that the present measure is only a beginning. There is to be a period of two or three years to permit industry to adjust itself. Then, in the 1940-1941 session, it is indicated, there will be legislation making provision for holidays with pay throughout industry and agriculture.

This year, it is estimated, 8,000,000 British workers will receive holidays with pay. This is 42 per cent of the working population.

Co-partnership and profit-sharing in Great Britain

The British *Ministry of Labour Gazette* for July contains a statistical article on profit-sharing and co-partnership in Great Britain in 1937 from which the following information has been extracted.

According to the latest available information, the total number of undertakings in Great Britain and Northern Ireland practising profit-sharing at the end of 1937 was 410. Five firms had each two separate schemes in operation, so that the total number of schemes was 415, as compared with 426 at the end of 1936. About 429,000 workpeople were employed in the 410 businesses concerned, of whom about 264,000 were entitled to participate in the benefits of the schemes.

At the end of 1937 the total number of schemes known to be in operation was only about four-fifths of the number at the end of 1928, although the total number of participating employees was approximately the same at these two dates. The figures given include schemes in co-operative societies as well as those in other businesses.

In schemes, other than those in the co-operative group, there were 261 firms with profit-sharing or co-partnership schemes at the end of 1937. Five of these firms had each two separate schemes, so that the number of schemes in operation was 266, as compared with 271 at the end of 1936.

According to the statistical classification profit-sharing has been tried in a wide variety of industries; in nearly every industry, however, the number of schemes known to have been started is very small in comparison with the total number of firms engaged in the industry; and, in all industries taken together, nearly 60 per cent of the schemes started have come to an end. In the gas industry, however, which accounts for 60 of the 68 schemes in the gas, water and electricity supply group which were still operating at the end of 1937, a considerable proportion of the principal company-owned undertakings have introduced schemes. Comparatively few of these schemes have been discontinued, and nineteen have been in operation for more than twenty-five years.

It may be noted that 177 of the schemes in operation at the end of 1937 are of post-war origin, but only 21 of these have been started since 1930. On the other hand, 19 of the existing schemes commenced before 1901, and 7 of these have been in operation for over 50 years.

For all industries taken together, the number of persons employed by firms with schemes in operation at the end of 1937 was approximately 385,000, of whom about 223,000 were eligible to participate in the benefits conferred by the schemes. At the end of the previous year (when there were 265 firms operating 271 schemes), the number of employees entitled to participate in the schemes then in operation was approximately 222,000 out of a total of about 375,000 persons employed.

The substantial extent to which employees of the firms concerned did not come within the profit-sharing arrangements is in part due to the fact that participation in many schemes rests upon certain qualifications, such as the attainment of a certain age, or employment with the firm for a minimum number of years. To a much greater degree, however, it results from the fact that the figures given include a considerable number of schemes which admit employees to participation in the profits only if they are able and willing to deposit savings with the firm, or to purchase shares in the undertaking; under schemes other than those of this type, over 80 per cent of the employees were entitled to participate.

Profit-sharing schemes in co-operative societies at the end of 1937 totalled 149, as compared with 155 at the end of 1936. The employees of the 149 societies in 1937 totalled nearly 44,000, over 41,000 of these being entitled to participate under the schemes. Many other societies are understood to pay to their employees additional remuneration in the form of bonuses on output, commission on sales,

etc., but such arrangements are not regarded as coming within the scope of the Department's statistics of profit-sharing. The co-operatives with schemes in force are classified as agricultural societies, industrial productive societies and retail distributive societies.

Adoption of health and pensions insurance in Australia

The report and recommendations on health and pensions insurance made by Sir Walter S. Kinnear at the request of the Australian government were reviewed in the LABOUR GAZETTE for June, pages 606-7. Following the Kinnear report, a measure, based upon it, was introduced in the Commonwealth Parliament. After five weeks of debate, the Bill was adopted by both Houses of Parliament.

According to press reports, the Prime Minister, Hon. Joseph Lyons, defended the scheme against attacks of Labour members, who maintained the government should provide the money to operate the plan. Mr. Lyons contended Labour's demands would make the scheme actuarily unsound and dependent on the condition of the treasury.

The Premier also defended the plan against attacks of representatives of industry who objected to making their contribution to the tri-partite measure. He succeeded, however, in getting it through both Houses, although the vote on third reading in the House was 33 to 28 when five members of the Country Party voted with Labour in opposition.

The scheme is compulsory and applies to all persons in the Commonwealth over 14 years of age and employed under a contract of service, except persons employed otherwise than in manual labour at more than £365 ($1,442) annually and certain other special classes to whom the scheme is unnecessary or unsuitable.

It is estimated that approximately 1,850,000 workers, earning less than £365 a year, will be insured against sickness and disablement as well as for receiving old age pensions. The cost to the government is reported at £1,000,000 annually for the first five years and thereafter by annual increases it will total £10,000,000 a year. Meantime the existing non-contributing old age and invalidity pensions will gradually decline until benevolence has been replaced by compulsory, contributory insurance. A more detailed review of this legislation will be given in a subsequent issue of the LABOUR GAZETTE.

Youth employment in Western Australia

In 1937 the Government of Western Australia appointed a commissioner to enquire into, and report upon, the position regarding youth employment and unemployment in the State. The enquiry was to include vocational training, apprenticeship, and the absorption of youth into primary and secondary industry. Included in a comprehensive report were a number of outstanding recommendations as follows:

Establishment of a state scheme of unemployment insurance with contributions from the government, employers and workers. (Complementary to this scheme there was advocated a system of state control and labour exchanges with junior and adult branches.)

Establishment of a Bureau of Economic Research to collect and disseminate information regarding the causes and extent of unemployment; to endeavour to improve the relations of employers and workers, and to assist in improving the efficiency of existing, and to develop new enterprises.

Co-operation with the Commonwealth and sister states in the formulation of a scheme for providing credit for new types of industries, the fostering of which is recommended by the Bureau of Economic Research, acting in conjunction with the credit banks established for this purpose.

In a section dealing with education, the measures advocated urged increased attention to elementary studies, increased vocational school facilities for industrial occupations and agriculture, and the continuance of technical instruction in the apprentice trades throughout the term of apprenticeship. The establishment of a vocational guidance bureau under a psychologist was also suggested together with a recommendation that an effort be made to reach an agreement with other States in Australia to raise the school leaving age to fifteen years.

In regard to apprenticeship, there was a strong recommendation for the continuance of the system of indentured apprenticeship under the control of a central body, representing government, educational authorities, employers and employees with the formulation of arrangements governing each trade—i.e., wages, ratio of apprentices, etc.—left to a trade committee in each industry.

United States Senate Approves Ratification of International Labour Conference Decisions

On June 13, 1938, the United States Senate approved the ratification of the following Draft Conventions adopted by the International Labour Conference at its Twenty-first and Twenty-second Sessions:—

Officers' Competency Certificates Convention, 1936;

Holidays with Pay (Sea) Convention, 1936;

Shipowners' Liability (Sick and Injured Seamen) Convention, 1936;

Hours of Work and Manning (Sea) Convention, 1936; and

Minimum Age (Sea) Convention (Revised), 1936.

On the same date the Senate decided to insert in the Record the Seamen's Welfare in Ports Recommendation, 1936, with the suggestion that it should be referred to the Committee on Commerce for future reference.

The Reduction of Hours of Work (Textiles) Convention, 1937, was submitted to the Senate by a Presidential Message on June 9. The remaining Draft Conventions and Recommendations adopted by the Conference at its Twenty-third Session were submitted to the United States Congress by a further Presidential Message on June 9.

With reference to the Public Works (International Co-operation) Recommendation, 1937, the Message pointed out that the United States Government had already indicated its readiness to co-operate in the work of an international committee and that a representative of the Government would be appointed to attend its first sitting. The various branches of the Government would be prepared to communicate annually to such a committee statistical and other information concerning public works already undertaken or planned.

With reference to the Public Works (National Planning) Recommendation, 1937, the Message stated that the Government has already endorsed the principle of stabilizing public works and is endeavouring to put it into practice, and that the forms of the Recommendation embrace many proposals which the United States is already applying.

Survey of World Unemployment Situation

According to *Industrial and Labour Information* of July 4 published by the International Labour Office, statistics indicate an increase in industrial employment for the second quarter of 1938, and industrial unemployment has diminished as compared with the corresponding period a year ago.

Of the 22 countries for which statistics of employment are published, 18 show an increase and 4 show a decrease (Belgium, Great Britain, Luxemburg and the United States), the decrease being in most cases rather small. A slight increase in unemployment is reported in 9 countries (Belgium, Bulgaria, Canada, Denmark, France, Iceland, Norway, United Kingdom and the United States). It may be noted that in 3 countries, namely, Canada, France and Norway, employment and unemployment both show an increase; these seemingly inconsistent trends are due to the growth in the working population.

Previous quarterly statistics issued by the International Labour Office dealing with the world employment and unemployment situation have been reviewed in the Labour Gazette (May 1938, page 477; February 1938, page 128, etc.).

In presenting these statistics of employment and unemployment, the International Labour Office emphasizes the limitations of such figures and states that they do not afford any comparison of levels of unemployment or employment in the various countries as methods applied in compiling such statistics differ from one country to another, and the figures only serve as an indication of the trend of employment and unemployment in the countries concerned.

Statistics based on unemployment insurance schemes indicate declines in unemployment over the corresponding period of 1937, ranging from 2·7 in the Netherlands to 0·6 in Czechoslovakia, 1·4 in Switzerland. Increases in unemployment were registered in Belgium 1·6, Denmark 3·1, and the United Kingdom 2·7.

Returns from trade unions show declines in unemployment of 1·7 in Australia, and 0·7 in Sweden, while statistics from this source showed an increase in unemployment of 2·0 in Canada and 6·8 in the United States when compared with the corresponding period of 1937.

Indices of employment computed from statistics obtained from the operation of social insurance schemes register improvement in employment conditions as follows: Czechoslovakia, 4·1; Germany, 5·5; Hungary, 8·3; Latvia, 12·7; Netherlands, 2·9, and Yugoslavia, 7·5. Statistics of employment obtained from this source showed declines of 6·4 in Belgium and 1·5 in Great Britain.

Returns from selected establishments for the quarterly period reflected a general improvement in most countries except the United States, where a decline in the index of employment of 21·5 was recorded and in Luxemburg where a decrease of 1·0 was registered.

The index of employment based on returns from selected establishments in Canada showed an improvement of 0·9 over the corresponding period of 1937. The improvement in other countries was indicated by increases as follows: Australia, 7·0; Estonia, 5·0; Finland, 4·4; France, 3·8; Italy, 10·0; Japan, 14·9; Norway, 1·0; Poland, 7·1; South Africa, 4·8; Sweden, 4·3, and Switzerland, 2·7.

NOTE.—*More recent and detailed statistics dealing with the employment situation in Canada are given in the article (four sections) "Employment and Unemployment in Canada in June, 1938," to be found elsewhere in this issue.*

Mining in Alberta and British Columbia in 1937

Alberta

According to the Annual Report of the Mines Branch of the Alberta Department of Lands and Mines, the output of coal produced from the mine to the province during 1937 was 5,551,682 tons with a valuation of $14,434,969.75, being a decrease of 144,693 tons from the output of 1936.

The disposition of coal during the year was as follows: 1,326,054 tons sold for consumption in the Province of Alberta; 1,855,392 tons sold for consumption in other Provinces of Canada; 41,328 tons sold for consumption in the United States; 2,028,389 tons to railroad companies for locomotive use; 25,402 tons used making briquettes; 99,537 tons used making coke; 145,967 tons used under colliery boilers; 6,022 tons used by colliery railroads; 48,501 tons put to stock; 35,797 tons put to waste. The above tonnages include coal lifted from stock and waste heaps, which is not included in the total output.

There were 303 mines in operation during the year, of which 27 were opened, 16 reopened, and 37 abandoned. In addition to the mines abandoned there were 10 mines temporarily closed, leaving 275 mines in operation as at December 31, 1937.

Labour and Employment.—During the year reviewed by the report, 484 persons were examined for certificates of competency as coal miners, of whom 425 were successful, making a total of 14,735 certificates issued to coal miners as at December 31, 1937. On December 31, 1937, there were 9,356 men employed in the mines of the Province, being a decrease of 600 men compared with the number at the end of 1936. The average number of persons employed below ground totalled 5,805 and the average number above ground, 2,031.

Accidents.—During the year there were 165 accidents above and under ground, 143 of the total occurring under ground, and 22 above ground. The total number of fatal accidents during 1937 was 20 as compared with 11 in 1936. There were also 72 "serious" accidents and 73 "slight" accidents during the year. It is shown in the report that 277,584 tons of coal were mined for each fatal accident.

In 1937 the ratio of accidents per million tons of coal mined and per thousand men employed was 29·72 tons and 21·06 tons respectively. "Haulage" was once again the greatest single factor in the cause of accidents, 40 accidents being attributed to this cause, while "fall of rock" accounted for 39 accidents, out of the total of 165. During the year accident prevention activities were continued and as in other years analysis of mine air and tests of rock-dust for silica content were carried out, as well as tests of mine air with gas detectors.

There were 26 prosecutions instituted under the Coal-mines Regulation Act, of which 1 was an operator, 3 officials, 14 miners, 1 driver, 3 machine runners, and 4 farmers, the latter four cases being withdrawn.

British Columbia

The annual report of the Minister of Mines, British Columbia, again records an appreciable increase in the value of mine production during the year 1937 in comparison with that of the previous year. The value of production in 1937 was $74,475,902, an increase of $20,393,935 over 1936. The report states that the increase is accounted for in the "abnormally high base-metal prices prevailing throughout the greater part of the year."

The total number of shipping-mines also increased in 1937 from 168 to 185, and those shipping over 100 tons increased from 70 to 113.

Employment, Wages and Salaries.—The report states that the number of men employed increased from 14,180 to 16,129, the greatest number employed in any year. Wages and salaries increased from $17,917,221 to $21,349,690, the greatest amount ever paid out in any year, the report states. Of the total number employed, 3,153 were in coal mines, 5,421 were engaged in lode-mining, 1,168 were employed in concentrators, 3,027 in smelters, 1,371 were engaged in placer-mining, 724 in quarries and pits, 327 in plants, and 938 were listed as being engaged in "miscellaneous" employment in connection with mining.

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

DURING the month of July four applications for the establishment of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act were received in the Department of Labour, as follows:—

(1) From 300 employees of the Canadian National Railways on the Montreal Wharf being checkers, freight handlers, coopers, etc., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The cause of the dispute was stated to be the employees' request for an increase of 12 cents in the hourly wage rate.

(2) From 350 employees of the Canadian Pacific Railway Company, at Montreal, being gang-foremen, checkers, electric fork lift truck operators, tractor operators, coopers, sealers, truckers and timekeepers, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The dispute relates to the request of the employees for an increase of 12 cents an hour in all hourly wage rates and a corresponding increase in monthly rates; an increase of five cents per hour in the differential for night work; and an increase of $20 per month in the pay of checkers employed during the closed season of navigation.

(3) From employees of the Ottawa Electric Railway Company being members of Division No. 279, Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America. The employees' request for an increase in wages equivalent, or nearly equivalent, to the reduction in wage values in 1931, together with their request for certain changes in working conditions, is stated to be the cause of the dispute. Three hundred and eighty-one employees are directly affected.

(4) From 45 employees of the Winnipeg Electric Company being foremen, troublemen and linemen on emergency truck, subforeman, linemen journeymen and apprentices, meter installers and helpers, meter repairers and helpers, and cable splicers, members of Locals 1037 and 435, International Brotherhood of Electrical Workers. The employees have been pressing for cancellation of all wage deductions, and have submitted to the company a proposed schedule which would leave 3 per cent of the present wage deductions in effect for the year May 1, 1938, to April 30, 1939, with complete restoration of wage rates for the next ensuing year.

Boards Established

Two Boards of Conciliation and Investigation were established by the Minister of Labour during July.

The first board will deal with a dispute between the Diamond Truck Company Limited, Montreal, P.Q., and its truck drivers, warehousemen, etc., members of the Automotive Transport Section of the Canadian Brotherhood of Railway Employees. Members of the board have been appointed as follows: on the nomination of the employer, Mr. N. Charbonneau, of Montreal; and on the employees' nomination, Mr. Clinton H. Dowd, of Ottawa. The application for a board in this matter was received during May (Labour Gazette, June, 1938, page 608).

The second board will deal with an application in relation to a dispute between the United Delivery Limited, Ottawa, Ont., and its truck drivers (Labour Gazette, June, 1938, page 608). Mr. Clinton H. Dowd, of Ottawa, has been appointed member thereof on the nomination of the employees concerned.

Agreement Effected

A settlement was reached on June 30 in the case of the dispute between the Canadian National Railways and its cartage service employees at Drummondville, St. Hyacinthe and Montreal, in Quebec, and Brantford, Guelph and London, in Ontario. An application for a Conciliation Board in this case had been received during May (Labour Gazette, June, 1938, page 608). The dispute related to the request of the 250 employees concerned, members of the Canadian Brotherhood of Railway Employees, for an agreement respecting wages and working conditions. Officials of the Department conferred with the respective parties to the dispute, and as a result of their mediation negotiations were entered into between the general manager of the company and a committee of the cartage service employees, an agreement being concluded effective July 1, 1938. Board procedure was accordingly rendered unnecessary.

Wage Increase for Winnipeg Civic Employees

During the winter months two Boards of Conciliation and Investigation dealt with disputes involving Winnipeg civic employees.

One board, under the chairmanship of Honourable Mr. Justice A. K. Dysart, dealt with five applications received from the following groups of employees:—

1. Water Works' Operators Union.

2. Water Works' (Diggers) Civic Employees Unit, One Big Union.
3. The Linemen and Underground Mechanical (Civic) Employees' Unit, One Big Union.
4. The Electrical and Mechanical Workers' Unit of the Federation of Civic Employees.
5. The Clerical Branch of the Federation of Civic Employees.

In addition, disputes involving certain classes of civic employees not coming within the direct scope of the Industrial Disputes Investigation Act were referred to this Board at the request of the employees in question and with the consent of the civic authorities. These additional groups were as follows:—

6. Parks Board employees.
7. City Police Force.
8. Various other classes of civic employees not coming within the direct scope of the Industrial Disputes Investigation Act, this group overlapping with No. 5 referred to above.

The report of the board, signed by the chairman and Mr. Marcus Hyman, the board member nominated by the employees, recommended that the wage rates of all classes of employees included in the reference, with the exception of the Police Force, should be increased 5 per cent, effective January 1, 1938. The city's nominee on the board, Mr. Travers Sweatman, dissented from this recommendation. The three members were unanimous in recommending a wage increase of 10 per cent, effective on the same date, for the employees of the Police Department.

The second board, under the chairmanship of Honourable E. A. McPherson, Chief Justice of the Court of King's Bench of Manitoba, was constituted on the application of the employees of the Winnipeg Hydro system being members of the Winnipeg, Pointe du Bois and Slave Falls Units of the Union of Hydro Electrical Workers. The report of this board, signed by the chairman and Mr. E. Ingles, the member nominated by the employees, recommended restoration as from January 1, 1938, of the balance of the wage reduction made in 1933, leaving in effect only the first reduction of 10 per cent (representing an increase in most cases of 7½ per cent in existing wage rates).

The recommendations of each board were accepted by the employees respectively concerned, with the proviso by some groups that the wage increase recommended be made retroactive to May 1, 1937. The City Council referred the matter to the Committee on Legislation and Reception, but owing to the difficult financial situation of the city the committee was unable to make a decision immediately. A sub-committee was subsequently appointed for the purpose of examining the possibilities of making a further partial restoration of wage rates previously in effect, and its report, dated June 24, contained recommendations as follows:—

1. That the present wages of civic employees be increased by 5 per cent as from June 1, 1938, subject to the following conditions:—

(*a*) That the new rate shall be no greater than 97·65 per cent of the base rate in respect of those employees whose present wage has been exempted, or partially exempted, from the first 10 per cent reduction made in 1932 on account of the $100 per month rule; and 87·88 per cent in respect of all other employees.

(*b*) That those whose rates have been set (or adjusted) since March 1, 1932, without any reference to or adjustment of the base rate, shall not receive any increase.

(*c*) That all cases who fail to receive an increase under the regulations set out in "(*a*)" and "(*b*)" as above be reported by the City Treasurer, with the necessary particulars, to the Committee on Legislation and Reception, who shall recommend to Council any adjustments which it thinks necessary in order to prevent any discrimination as a result of the present restoration. Your subcommittee has considered the cases of linemen, troublemen, cablemen and related groups, whose rates were adjusted to compensate for reductions in hours, and recommends that the 5 per cent increase apply to these groups.

(*d*) That all Boards and Commissions be notified that in future they must observe the Brittain Report classification and ratings (as amended from time to time) and the reductions therefrom currently in effect.

(*e*) That the Heads of Departments be advised that in future only in extraordinary cases will adjustments be made in wages and salaries at any time other than the first of the year.

It is estimated that approximately $65,000 will be required to pay the 5 per cent increase to General Employees of the City from June 1 to December 31, 1938, and that a further $30,000 will be required for the Utility Departments.

It is suggested that the Committee on Legislation and Reception deal just as

expeditiously as possible with the special cases being referred to it.

The report of the sub-committee was adopted by the City Council on June 27.

The employees of the Police Department, for whom the Dysart board had recommended a wage increase of 10 per cent, have accepted the 5 per cent increase under protest.

Quebec Central Railway and its Trainmen

The report of His Honour Judge Albert Constantineau as Commissioner to inquire into an industrial dispute involving the management of the Quebec Central Railway and its train service employees appeared in the December, 1937, issue of the Labour Gazette at page 1316.

The railway conductors and the trainmen for many years had been covered by one agreement regulating rates of pay and rules of service, negotiated on their behalf by the Brotherhood of Railroad Trainmen. That organization in December, 1935, applied to the railway for revision of the agreement, and was subsequently advised that a number of conductors had notified the company of their desire to withdraw from the existing contract and had requested a separate agreement to be negotiated by a committee of the Order of Railway Conductors. The management contended that it could not take part in any negotiations respecting a new agreement until the differences between the two groups of employees had been settled.

The Commissioner, in his report dated November 30, 1937, expressed the opinion that the conductors on the Quebec Central Railway had the right to negotiate a schedule separate and apart from the Brotherhood of Railroad Trainmen, provided the majority of them so desired, and that only those entitled to regular employment as conductors, and those who had worked as conductors at least 50 per cent of their time during the 12 months preceding the taking of the ballot, should be entitled to vote on the subject. He recommended that when the conductors satisfied the company that a majority of their members desired a separate schedule, they should be allowed to negotiate for the same whenever the railway found it proper and expedient to grant their request.

On January 17, 1938, the company proceeded by secret ballot to ascertain the will of the conductors. Before the ballots were opened, however, an injunction was issued at the instance of the chairman of the trainmen's committee (who was a conductor), with the Brotherhood of Railroad Trainmen and three railway conductors, members of the Order of Railway Conductors, *mis-en-cause*, restraining the company from proceeding with the vote. The case was set down for hearing before Hon. Mr. Justice White in the Quebec Superior Court on April 4, and continued until April 7. Judgment was rendered on May 20 dismissing the injunction, with costs. No appeal was entered and the company proceeded to open the seventeen ballots which had been received. Four ballots had not been returned. Sixteen employees voted in favour of the conductors' committee negotiating an agreement with the Quebec Central Railway Company covering the rates of pay and conditions governing the service of conductors, and one voted against.

The company was advised officially on June 17 by the chairman of the trainmen's committee that no further legal action in connection with the dispute was contemplated, and that the committee was prepared to enter into negotiations for a revised agreement covering rates of pay and rules of service for trainmen and yardmen. Separate contracts were subsequently negotiated by the company, one with the trainmen and yardmen and one with the conductors.

Report of Board in Dispute between Coal Operators in the Drumheller District and their Employees

The Board of Conciliation and Investigation established on April 14 to deal with a dispute between various coal operators in the Drumheller district, Alberta, and their employees being members of District 18, United Mine Workers of America, reported to the Minister of Labour during July.

The board was composed of Mr. H. A. Dyde, of Edmonton, chairman, appointed by the Minister in the absence of a joint recommendation from the other board members, Messrs. W. H. McLaws, K.C., and Patrick Conroy, both of Calgary, nominated by the employers and employees, respectively. The dispute related to wages and certain working conditions, about 2,000 miners being directly affected. The coal operators concerned in the dispute were the Alberta Block Coal Co., Ltd., Atlas Coal Co. Ltd., Brilliant Coal Co. Ltd., Elgin Coal Co. Ltd., Empire Collieries Ltd., Hy-Grade Coal Co. Ltd., Maple Leaf Minerals Ltd., Midland Coal Mining Co. Ltd., Monarch Coal Mining Co. Ltd., Murray Collieries Ltd., Newcastle Coal Co. Ltd., Red Deer Valley

Coal Co. Ltd., Rosedale Collieries Ltd., Star Mines Ltd. and Western Gem and Jewel Collieries Ltd.

The report of the board consists of findings and recommendations signed by the chairman, together with a statement by Mr. Conroy in which he joins with the chairman in his decisions and approves the same. Mr. McLaws submitted a minority report.

Report of Board

The chairman of the Board, Mr. Dyde, in his report dated July 5, 1938, states that the board held 12 sittings at Calgary, Drumheller and Edmonton, at which a large number of documents, statistics, plans and records were tendered by the parties, and a brief on a National Fuel Policy was presented by Mr. L. R. Lipsett, K.C. Mr. Dyde then sets down in a brief and summary form the course of events prior to and leading up to the present dispute, and a short general survey of the main features of the coal mining industry in the Drumheller district.

The field was opened up prior to the War of 1914-18 as a result of the construction of a railway into the area. During the war years, the district was under the control of an officer appointed by the Dominion Government, known as the Fuel Commissioner, who fixed not only the wage rate but also the price at which the coal was sold, and this state regulation of the industry extended to the year 1920.

As a result of the resumption of open competition and a general drop in prices, wage difficulties became acute and a Board of Conciliation and Investigation was established in 1922 under the chairmanship of Mr. W. E. Knowles. That Board recommended a reduction in the wage rate which was not acceptable, and there ensued a period of nearly three years, to 1925, during which strikes occurred at various times, and the industry was carried along from year to year by the means of temporary agreements. In June, 1925, the employers and the employees finally negotiated an agreement on the basis of a wage rate of $5.57 per day. This rate continued until 1932, when the matter of wages was again referred to a Board under the chairmanship of Mr. A. Macleod Sinclair, K.C. The Board at that time did not recommend a reduction, with the result that the recommendation was not accepted by the employers and in 1933 a new agreement was entered into between the parties on the basis of a rate of $5 per day. This condition prevailed until 1935, when the employees applied for another Board and requested an increase in the wage rate, and a conference to consider certain inequalities alleged to be existing in the industry. As a result, a Board of Conciliation and Investigation was established under the chairmanship of The Hon. Horace Harvey, Chief Justice of Alberta, and a 5 per cent increase in the wage rate was recommended by a majority of the Board.

The present Board has been established as a result of an application made by the Employers whose original request was for a minimum reduction in wage rates as follows:—

(*a*) Ten per cent in all day and contract rates.
(*b*) Twenty per cent in all dead work.
(*c*) Payment for bone in excess of 4 inches only.

A further request with reference to the incorporation of the Union was originally included in the employers' case, but the Board was informed at its first sittings that this matter was withdrawn.

In reply, the employees made certain requests as follows:—

(1) That the inequalities now existing, also conditions requiring to be adjusted, be considered in joint conference with a view to bringing about an amicable settlement to the end of consummating a uniform contract for the mines you represent.
(2) That all day wage rates and all contract rates, including coal, yardage, timber, and all other day work, be increased twenty percentum.
(3) That the minimum wage rate be adjusted to read Six Dollars and Forty-eight Cents ($6.48) in place of Five Dollars and Twenty-five Cents ($5.25).
(4) That all coal be paid for on the run-of-the-mine basis at the rate of 2,000 pounds to the ton.
(5) That where mechanical mining is being performed on a day wage basis, the rate for this classification shall be increased twenty percentum (20 per cent) over the basic miner's day wage rate.
(6) That all overtime shall be paid on the basis of time and one-half and double time for work performed on Sundays and holidays.
(7) That an annual two-weeks' holidays with pay be granted to all mine workers.
(8) That the work day shall be limited to six hours and the work week to five days.
(9) That no time be specified as to the term of contract, but that it be provided that either party may terminate an agreement on the 30th day of September of any year by giving at least one months' notice.

When it came time for the submission of evidence to the Board, it was found that Item No. 1 of the employees' request was considered by the employees to include a large number of inqualities, most of which had been submitted to the Board presided over by The Hon. Chief Justice Harvey. These inequalities number 41 in all. In addition, the employees argued vigorously that the phrase "Also conditions requiring to be adjusted" should be considered to include a dispute or disputes with regard to the general clauses in the contract. The Board was made aware of the fact that the employees considered these matters to be of equal importance with the wage rate itself, and while there was some hesitation, and in fact disagreement among the members of the Board as to whether the reference was intended to include all these various points, the majority of the Board finally decided to hear such evidence as might be submitted by the employees on the various points involved.

I should like to point out that, at an early stage in the sittings at Drumheller, I expressed the view that there had been apparently a recent tendency to regard a Board of Conciliation and Investigation as a judicial fact-finding body, and that an important interpretation of The Industrial Disputes Investigation Act, namely, that the Board was established for the purpose of conciliation, was perhaps not receiving the attention it merited.

In an endeavour to conform to the terms of the Act, especially Section 24, the Board adjourned for one afternoon during the sittings at Drumheller, and a round table conference was held with the members of the Board present. The attempt at settlement on such a basis was found to be ineffectual, and it became apparent that there was, at the time at least, very little hope of a compromise or settlement. The Board accordingly resumed its sittings. The conference however, was not entirely wasted effort, at any rate, insofar as it gave the members of the Board an opportunity of hearing informally an expression of opinion from various persons.

As a result of the evidence submitted to the Board, and without yet considering the various points raised before it, it would appear from the larger point of view that the industry in the Drumheller district is in a difficult position. The market for Drumheller coal is limited to parts of Alberta, Saskatchewan, and Manitoba, with relatively small shipments to British Columbia, and Ontario, and in the domestic field Drumheller coal must compete with coal from the Edmonton field in Alberta and the Estevan field in Saskatchewan. As a result of this limited market, the mines in the Drumheller district are forced into a position where the mines are able to operate for a limited length of time each year. The Board is of the opinion that this constitutes the central problem in connection with the Drumheller field and, without anticipating the final decision as to the points in dispute, the situation can perhaps most clearly be shown by referring to the evidence of one of the miners who was called to give evidence on behalf of the employees. This witness, who gave his evidence in a clear and reasonable manner, stated that he was a married man, with five children, and had worked every available working day in the season of 1937-1938 as a contract miner. He earned approximately $700, plus a further income from the Union, and found it insufficient to support himself and his family. When asked what he would require for himself and his family to live reasonably and without having to have recourse to relief, his estimate was $2.000. When the details of his earnings were examined, it was found that he had worked for a part of the season on contract work and had earned at such work $7.77 net per day. Had this man been able to work throughout the year at that rate of pay, he would have earned in the year almost exactly the total which he had set himself as being reasonable for the year. Nothing perhaps could make clearer the general difficulty under which operations in the Drumheller field are carried on, and this witness's evidence was rather striking confirmation of the fact that the real difficulty was that the *annual* income of an employee was not sufficient to give him reasonable subsistance. It should be pointed out that it was not argued that this witness was typical. His earnings were not as high as the earnings of a great many miners, nor were they as low as a great many others, but it was not suggested that his total earnings were at or near the average for all miners in the field. In fact, evidence was produced from the coal statistics for Canada to show that this witness's earnings were considerably lower than the average earnings in the field.

The Board also made what inquiries it could with regard to the relief situation in the Drumheller district. Many miners receive relief from Provincial Government sources during the off-season and some receive what is known as emergency relief at times even during the working season. The complaint was made by some of the miner witnesses that they were really working for wages on a relief scale, in that they received relief from the Provincial Government only after inquiry had been made as to the amount of their earnings for the previous mining season, with the result that the miner who had earned a larger amount received less relief, while the miner earning a smaller amount received more. The Provincial Government was, of course, not represented before the Board, and was not in any way a party to the dispute.

Evidence was also offered in this connection to the effect that the miners themselves regarded the work in the Drumheller field as seasonal. It appears that many miners obtain employment of one kind or another during the summer months. Some work on farms while others actually operate farms of their own. Some leave the Drumheller district altogether and seek work in other parts of the Province or of the Dominion, where they feel the chances for employment are greater than in Drumheller itself. The City of Drumheller cannot begin to absorb the miners who are idle during the summer, and farming operations in the immediate vicinity of Drumheller have been disappointing over a period of some years due to drought and low prices.

It now becomes necessary to deal with the specific requests submitted by the parties. It will be most convenient to deal first with the wage rate. The employers presented a well prepared case in support of their request for a reduction. The evidence submitted by them on which they based their argument may be summarized as follows:—

(*a*) The basic wage rate in the Drumheller field is now $5.25 per day as against $5.20 in Lethbridge, and $4.20 in Edmonton. A statement was made that a still lower rate was in force in Estevan, but as there was no actual evidence to confirm the statement I cannot accept it on the same basis as the other figures.

(*b*) That since 1925 the cost of living has declined more comparatively than the wage rate has been reduced, and that the sale price of coal has declined more proportionately than either.

(*c*) That the sales of Drumheller coal have declined over a period of years, while the sales from the competing fields of Edmonton and Estevan have increased.

(*d*) That the mines in the Drumheller field are actually operating at a loss.

A consolidated operating statement of the mines involved was filed as Exhibit No. 20. This statement was questioned to some extent by the representatives of the employees and, at the request of the Board, the operators sub-

mitted to the Board individual financial statements and copies of pay-rolls. From a perusal of these, the Board finds that the consolidated statement affords an accurate picture of conditions as they existed at the time the statements were made. The consolidated statement was made up from statements covering one year periods in all cases but one, although the actual dates to which the statements referred are not in all cases the same, due presumably to the variation in the fiscal years of the different companies. All the statements were for the fiscal period which included the mining season of 1936-37, and not for the mining season of 1937-38.

Exhibit No. 20 shows that coal sales in that period amounted to $2,921,065.10; the total payments in wages to miners apart from payments of salaries and officials amounted to $1,860,525.14; that payments to the Workmen's Compensation Board amounted to $100,925.47, and for actual cash expenses not including depletion or depreciation, $958,570.46. The actual cash position, therefore, shows an approximate balance, but when depletion and depreciation are charged at proper rates, and when some relatively small incidental revenues are taken into account, the statement shows a loss of $209,853.54 in the operations of the period. There has been no return on the capital invested which the evidence shows is approximately $5,364,000.

One at least of the witnesses, called by the employees, stated quite candidly that, in his opinion, the capital invested was entitled to some return.

(*e*) The evidence of one witness, a Mine Manager, who said that the loss the mines have suffered could not be passed on to the market, that each mine has received as much as could be expected under the circumstances, and that he thought a lower sales price was necessary to hold the market they now had, and that an increase would cause a loss in markets.

(*f*) That the employment in the Drumheller field is seasonal, and that there is no annual contract with the miners with the result that they, the miners, are free to seek and accept employment elsewhere in the summer season.

While the above items do not constitute the whole case, nor the only points raised on behalf of the employers, they show substantially the grounds for the employers' argument, which was pressed very vigorously before the Board, that there should be a reduction. Figures showing average wage rates and comparisons between the wages in the mining industry and in other industries were also supplied. The employers argued that, as a result of the excessively high wage scale maintained in the Drumheller field, Drumheller coal has been unable to meet competition from other fields, and that the decline in the output of coal and the loss of markets was attributable to such wage scale and to nothing else.

Had this been the only evidence, it would have been difficult for us to arrive at any conclusion other than a recommendation of a decrease in the scale of wages. There are, however, a number of other important factors which carry a great deal of weight. From the evidence submitted in part by the employers, it appears that the cost of living has increased from an index figure of $7.53 in 1935-6 to $8.38 in 1937-8 (Exhibit No. 7) for the cost per week in Alberta of a family of five of a list of twenty-nine staple foods. According to Exhibit No. 6 which was also filed by the employers, on the basis of an index figure of 100 for 1925-6, the cost of living index in 1935-6 was 66·4 and the corresponding figure for 1937-8 was shown as 73·9. The figures for Drumheller are slightly above the figures of the index in Exhibit No. 7 at both dates. In addition, a number of miners in their evidence gave figures as to their earnings. These range all the way from one who received $645 to one who received $1,060. The earnings of some of these witnesses included receipts from the Union. Some have been in receipt of relief and the statement was made that there were many miners in receipt of relief in the Drumheller area last year. Some miners receive employment in the mines during the summer, it being estimated that about 10 per cent of the whole number are thus employed. The Board also received an estimate of the number of employees who leave the field in the summer to seek summer employment elsewhere, and the statement was made that approximately 35 per cent of the employees leave Drumheller for this purpose. All the witnesses who were called stated directly or indirectly that they did not receive a sufficient income annually to support themselves and their families, and the fact that a large number receive relief seems conclusive that many of them at any rate are not receiving a sufficient income per annum from coal mining to provide a reasonable subsistence throughout the year. It was urged on the Board by the employers that there has never been an annual contract; that the men were free to accept other employment in the summer, and that in fact the industry in Drumheller should be regarded permanently as a seasonal one and wages fixed with regard to the daily wage rate only.

The argument that the industry is a seasonal one cuts both ways. While the summer is admittedly an active season in the labour field, and while it would apparently be possible for some of the miners to obtain gainful employment of one kind or another during the off season, it cannot in any case be a simple matter for a coal miner to move away from Drumheller for the summer period on the chance of finding work elsewhere. If he is a married man with a family and makes coal mining in the Drumheller field his main occupation, the practical difficulties involved in caring for his family during the summer while he seeks work under conditions which are generally known to be difficult, and to have been difficult for a number of years, are very great and I am of the opinion that sufficient allowance has not in the past been made for the difficulties thus created. This in itself might not be sufficient to warrant recommending an increase in the wage rate, but when it is coupled with the fact that there has been a definite increase in the cost of living since 1935, I am of the opinion that the wages should be brought more nearly in line with the living conditions of the employee. I find myself quite unable to agree with the proposal that a miner is justified in demanding from the employers a sufficiently high daily wage rate to bring him a sufficient annual income for all purposes, but it seems to me to be reasonable and fair that some compensation should be made at this time for the difficulties which arise as a result of the

seasonal nature of the individual miner's occupation, together with the increase in the cost of living which has occurred since 1935.

After a perusal of the pay-rolls and after hearing the evidence of some of the witnesses, I am also of the opinion that the miners receiving the lower rates of pay are the men who are having the most difficult time, and that if consideration is to be given to the employees on the ground that living costs have risen on the further ground that the seasonal occupation creates difficulties for the employees, these lower paid men are the ones who are entitled to the greater consideration.

I am of the opinion that the strength of the points brought out by the employees outweighs the admittedly strong case presented by the employers. For the reasons stated, I recommend that an increase of five per cent (5 per cent) in the wage rate be granted in all day and contract rates, subject, however, to the following conditions numbered (1) and (2).—

(1) The said recommendation does not extend in any case to timber rates, and the timber rates will be dealt with elsewhere in this report.

(2) In the case of men who, under the existing scale, are being paid at a rate less than $5, the increase recommended is ten per cent (10 per cent) instead of five per cent (5 per cent).

Having disposed of the question of the wage rate, with the exception of the timber rates, it is necessary to deal with the other points raised by the employees. Request No. 1, dealing with inequalities and conditions requiring to be adjusted, will be dealt with later on in this report.

Requests No. 2 and No. 3 have already been dealt with insofar as the wage rate is concerned, and will be dealt with further hereinafter insofar as timber rates are concerned.

Request No. 4, namely, that all coal be paid for on the run-of-mine basis at the rate of 2,000 pounds to the ton, has been considered by previous Boards and has been rejected. I am unable to come to any other conclusion and cannot recommend that such request be granted.

Request No. 5 will also be dealt with hereinafter.

Request No. 6 is that all overtime shall be paid on the basis of time and a half, and double time for work performed on Sundays and holidays. In view of the peculiar conditions existing in this field, and in view of the recommendations being made elsewhere in this report, I am unable to recommend the granting of such request. I recommend that the clause in the 1935 agreement wherein operators are requested to eliminate overtime and work on Sundays and holidays as far as possible should be continued.

I have reached the same conclusion with regard to Requests No. 7 and No. 8 referring to an annual two weeks' holiday and the limiting of the work-day and the work-week. From the humanitarian point of view, it cannot be said that present conditions in the Drumheller field are such that men are being worked beyond their endurance, and it would not be in the interest of the industry as a whole to make such a recommendation at the present time.

Respecting Request No. 9, I am of the opinion that the fairest recommendation from all points of view that no time be specified as to the termination of the contract, but that it may be terminated on the 31st day of March in any year by the giving of at least one month's notice. It seems to me, from the nature of the market and the general conditions, to be undesirable to fix the termination of the contract in September. The active season is about to begin in September and it seems desirable, so far as possible, to avoid major disputes at that time of year.

It is unecessary to set out in detail the complete list of inequalities submitted by the employees. They number 41 in all, and while some are of less importance than others, they are all apparently points which cause friction in the working out of an agreement between the parties. In fact, I am of the opinion that the existence of inequalities is as fruitful a source of trouble as the wage rate itself—perhaps even more so. On the other hand, and speaking in very general terms, it sems difficult for the Board to go into each one in detail with all the involved technical evidence which is required to deal with the matter fully. I am prepared to recommend that in cases where no actual finding or recommendation is made herein there should be set up a joint committee of practical men representative of both parties, for the purpose of devising ways and means of smoothing out those inequalities causing the greatest irritation, but that in the meantime those points not definitely dealt with in this report should be adjusted on the basis of there being no reduction in the earnings of the employees nor increase in the cost of production to the employers.

Inequality No. 1 is stated to be an inequality arising out of the absence of a uniform contract for the entire field. Insofar as this request is aimed at the differential which exists between the East Coulee field and the remainder of the Drumheller district, I am of the opinion that an absolutely uniform contract is not practicable, but that the inequalities should be reduced to some extent. I therefore recommend that the inequality known as the East Coulee Differential should be reduced from the present 10 cents in rooms and 20 cents in entries to 5 cents in rooms and 10 cents in entries. Insofar as this request relates to timber rates and insofar as it overlaps with the inequality No. 13, I am of the opinion that the timber rates in the Drumheller area are too high and I therefore recommend that the timber rates should be adjusted as follows:—

(*a*) Timber rates are excluded from the recommendation of a general increase in wages as aforesaid.

(*b*) The Drumheller rate should be reduced from 85 cents to 75 cents per set.

(*c*) All other timber rates should be fixed at 61 cents per set. This recommendation will mean an increase in the rate being paid at one of the mines.

The above recommendation does not eliminate the inequality in timber rates, but at least serves to bring about a greater uniformity than at present exists.

Regarding inequality No. 15, which is a request that jack props be paid for at the rate of 6 cents per lineal foot and that all extra pieces over two placed under a boom will constitute a jack prop and will be paid as such, my recommendation is that where jack props have to be put up they shall be paid for at the rate of 3 cents per lineal foot.

Inequality No. 18 is a request that machine picks be delivered to the machine and in the event of trouble where it becomes essential that machine men have to go and get the picks, the same to be paid at company time. My recommendation is that machine picks be delivered at the nearest deliverable point by having them taken in in empty mine cars.

Inequality No. 24 is a request that cars be delivered to and taken from the coal face by the Company; further, that all material be delivered to the coal face. I recommend that this request be granted.

Inequality No. 25 is a request that where a driver has to work two horses or two ponies, he be paid spike team drivers wages, regardless of whether he has to work them as a team or work them separately. I recommend that this request be granted.

Inequality No. 27 is a request that where there is enough water on the floor to make a driver wet, the driver be paid the allowance for working in water. I recommend that where the conditions are such that the driver gets wet, the driver shall be paid the allowance for working in water.

Inequality No. 29 is a request that in places less than 4 feet high, the difference between room and entry tonnage rates be paid. I recommend that in places less than 4 feet high, an additional 4 cents per ton be paid.

Inequality No. 33 is a request that where the long-wall system is in operation, men working in the wall will be changed periodically to allow every man a fair share of time in that part of the wall considered best to work in. I recommend that this request be granted.

With reference to the long-wall system of mining in general, evidence was given that in the change from the short-wall to the long-wall method, the miner on contract was at a disadvantage as in spite of the fact that he actually loaded more coal under the long-wall system, he would not earn the same amount of money. Other evidence was produced to show that in the long-wall system, the miner loading coal was performing work requiring less skill than in the other system, and that it was reasonable that his earnings should be less. The Board was also informed that this particular question had caused very great difficulty in other mining fields, and that in the United States a Joint Commission of representatives of employers and employees was engaged in considering the whole matter and had not come to a conclusion. While this Board does not wish to approve in advance of any conclusion which may be arrived at by such a Commission, it would seem to me that when such Commission brings in a recommendation, it should be at least a valuable guide in arriving at a solution of a similar problem in the Drumheller field. In the meantime, however, and until a decision is arrived at by the said Commission, I recommend that a small differential should be granted as a temporary expedient, such differential to be arrived at by mutual agreement between the parties.

The employers have requested the restoration of the 4-inch exemption in the "bone" clause and a reduction in the bone rate. A large number of examples were quoted to the Board by the employers, such examples being of the methods adopted in other contracts agreed to by the United Mine Workers of America in other jurisdictions. I would like to make a recommendation with regard to this point, but feel that recommendation adopting the request of the employers would not be a practicable one. The bases of the request of the employers are two in number, namely:—

(1) That a reasonable amount of cleaning is expected in any coal seam and is anticipated and provided for in the agreements when rates are made. No mine can afford or should be required to guarantee absolutely no impurities.
(2) Much of the impurity paid for by measurement below ground is loaded out and paid for twice, once by measurement below ground and again when weighed in the coal.

I feel that there ought to be a reasonable and practicable method of providing for what, in my opinion, is a reasonable request, and, if the parties themselves are unable to arrive at a more practicable solution, I recommend that the "bone rate" be reduced to eight and one-half cents (8½ cents) instead of 11 cents as at present.

Finally, with regard to the seniority clauses, the Board is informed that, since the start of the proceedings, the employers have proposed to grant a seniority rule "limited to classes and applying within classes only" and the Board is informed that the employers will accept such a rule, but that there is still difference of opinion as to who is to decide the competency of the employee. I recommend that the decision with regard to competency should be in the hands of the Mine Manager, as contended by the employers, with the proviso that the employees should have leave to appeal if they feel that such decision has been made fraudulently or wilfully or otherwise from improper motives.

In making the above recommendation, I am keenly aware of the fact that these recommendations will not be effective in solving the whole problem which presents itself in the Drumheller field. The question of wider markets, resulting as it inevitably would in an increase in the sale of coal and correspondingly in an increase in the man-days worked, is a matter on which it is impossible for this Board to make a recommendation. Commissions have held sittings in previous years with reference to the larger marketing situation and have found it difficult to make practical suggestions for the betterment of the industry as a whole. Enough evidence has been produced before this Board to convince me that a moderate scaling up or down of the wage rate will not provide a solution either for the employees or the employers. It is extremely difficult to see how an industry which is apparently under present circumstances limited to less than half a year's work in every year, can maintain a healthy and flourishing position. A great deal of the overhead expense of the operation of a mine goes on throughout the year, in which condition of course the mining industry is not different from most other industries. When, however, in addition to that, the productive period is reduced by virtue of a contracted market, the result spells trouble for both employers and employees. I wish to state quite frankly that, with the present recommendations, the wage rate has reached the highest level it can be expected to attain and it is with the greatest hesitation and in the face of very forceful facts

and arguments that I have recommended an increase.

As has been mentioned in an earlier part of this report, a brief was submitted to the Board covering the case for conserving the financial resources of Canada and improving Dominion-Provincial and inter-provincial relations, by means of a National Fuel Policy, which the Board was informed is in the same terms as a brief submitted to the Royal Commission on Dominion-Provincial relations on behalf of the Western Canada Fuel Association and other interests. Without dealing with the report in detail, the Board wishes to thank Mr. L. R. Lipsett, who presented the brief, and I would respectfully urge the representations contained in it be given careful consideration.

The Board wishes to express its thanks to the representatives of both parties to this dispute, namely, Messrs. L. Patrick, Jesse Gouge and C. C. Cook for the employers, and Messrs. Robert Livett and Angus J. Morrison for the employees, all of whim gave of their best efforts in assisting the Board to arrive at a conclusion, and the Board wishes to thank them not only for the clarity and effectiveness of the representations of their respective cases, but also for their courteousness during the sittings of the Board and throughout the proceedings generally.

Respectfully submitted,
(Sgd.) H. A. Dyde,
Chairman.

Calgary, Alberta,
July 5, 1938.

Mr Conroy's Concurrence in Chairman's Report

Accompanying Mr. Dyde's report is a statement, also bearing date of July 5, by Mr. Patrick Conroy, the board member nominated by the employees, in the terms following:—

Calgary, Alberta,
July 5, 1938.

Honourable Norman McL. Rogers,
Minister of Labour,
Ottawa, Ontario.

In joining with and approving of the award of Mr. H. A. Dyde, Chairman of the Board, my approval of his decisions is based upon the principle of granting an increase in wages rather than on the context of his award.

The sum total of the award only remotely commences to meet the requirements of the Employees, party to this controversy. They have sought reasonable increases in their wage scales and improvements in their working conditions, not with the view of submitting those as a whole solution to their problem of low earnings but rather as a step in that direction —this from a standpoint of annual earnings.

The contention of the Operators that mining in the Drumheller Valley is only a seasonal occupation and that earnings should be based upon such status is, in my opinion, not well-founded. The miners build their homes and raise their families from a conception that they are attached to the Coal Industry as a permanent occupation.

In addition, from an economic point of view, the assertion of the Operators that mining in Drumheller Valley is only a seasonal occupation is but relative. All other industries, and particularly the basic industry in this country—agriculture, might well be given the same classification. Yet there is no general disposition to conceive of other industries in the same light as that given by the Operators to the domestic industry. The latter is at one, in a varying degree, with all other industries committed to a maximum productive capacity and, in return for the investment of the Employees or their labour power, equally committed to a minimum return of earnings as purchasing power to consume the commodity produced.

Apart from the question of markets, which is not peculiar to the coal industry but may be more aggravated, this is the fundamental trouble with the outlook of the Coal Operators. Committed definitely to a successive deflationary policy, in so far as wages are concerned, and to which there is no apparent bottom, it must be obvious that taking this policy to its logical conclusion means nothing but a drying-up of the channels of purchasing power in the industry and subsequent paralysis thereof.

A forward step for the Coal Industry in the interests of both Employer and Employee would be a reversal of past and present policies of downward spirals in wages. This applies not only in Drumheller but in probably all fields of the Mining Industry. The present desire of intensifying competition at low wage levels should be substituted by co-operation of the Employers in all parts of the Industry and which would bring a degree of stability therein.

The question of markets, mentioned many times in evidence, is predicated on the essential co-operation and organization of the Employers in attempting to bring about a consolidation in the interests of a national asset that has to do with the employment of tens of thousands of workers and involving many more tens of thousands of their dependents, and inter-related channels of business.

As the Representative of the Employees, I cannot see that the policy of the Operators in seeking wage reductions is justified, either from a moral or yet an economic point of view. The fallacy of wage reductions has already been demonstrated by the Operators. They have received successive reductions in wages and are now again asking for still another, projecting the thought that a further wage reduction would save them from the effects of the previous ones and which they held out to the Mine Workers as a solution for their troubles. According to the Operators the position of the Industry has had nothing but bad effects from wage reductions since they now paint a ruinous picture after the successive wage reductions have been taken. In the face of this, wage reductions have not proved to be a solution but only an aggravation of this condition of the Industry and it would seem to be imperative that the Operators consolidate their own interests and attack the problem of markets and stability in the Industry from the standpoint of organization and logical exploitation of a national asset.

With these reservations, I wish to concur in principle in the award of the Chairman of the Board.

Yours respectfully,
(Signed) Patrick Conroy,
Employees' Representative.

62327—2½

Minority Report

Mr. W. H. McLaws, the board member nominated by the employers concerned in this dispute, submitted a minority report on July 9 dissenting from the recommendations of the other members of the board. As in the case of the chairman's report, he gives a brief account of the events leading up to the present dispute and sets forth the proposals of each party. Mr. McLaws continues as follows:

The Mine Operators, who are parties to the dispute, produced to the Board their financial statements for their last fiscal years, which showed that only one mine in the field was operating at a profit. They also produced a consolidated operating account prepared on the basis required by the Dominion Government for income tax purposes by a reputable Chartered Accountant, showing the operations of all the mines in the field during their last fiscal year. This disclosed that the operation of the mines had resulted in a loss of $209,853.54 for the year. The representatives of the union objected to any allowance being made for depreciation and depletion of the coal seams, but even if all such allowances were eliminated, and also eliminating all other revenues of the Mine Operators, the statement shows that the actual cash receipts and disbursements from the production of coal have been as follows:—

Aggregate net amount realized from the sale of coal		$2,921,065 10
Cash disbursements other than wages and compensation:		
Royalties	$110,608 73	
Timber	72,705 90	
Stable and Horses	21,473 18	
Power	82,632 69	
Lease and Surface Rentals	28,040 84	
Rentals	20,482 11	
Taxes	38,560 75	
Insurance	19,521 20	
Repairs and Maintenance Plant and Equipment and Spur Rental	176,104 27	
Demurrage Overloads and Underloads	3,319 94	
Switching and Bridge Tolls	18,490 80	
Salaries and Officials	148,996 51	
Office Expense	17,420 59	
Interest, Discount and Exchange	8,116 39	
Interest on Loans	32,064 80	
Advertising and Selling Expense	74,887 27	
Written Off Development Account	37,935 38	
Miscellaneous General Expense	18,959 83	
Directors fees including travelling expenses	1,434 80	
Bad Debts provision	4,823 42	
Legal Expense	3,960 85	
Travelling Expense	15,259 17	
		$ 955,999 42
		$1,965,065 68
Wages to Workmen	$1,860,525 14	
Workmen's Compensation Board	100,925 47	
		1,961,450 61

This left a balance of only $3,615.07 to provide for depreciation on plants costing over five millions of dollars, depletion of the coal reserves, and for return on the large investment of the Mine Operators. This amount, even if there is added to it the other revenues of the Mining Companies, is inadequate for the proper maintenance of the industry.

It was not disputed that the consolidated operating statement is correct, and a similar statement submitted to the 1935 Board by the same Chartered Accountant indicates that the loss suffered last year extended over the several years preceding, and the loss was not owing to any abnormal conditions existing in that year. No evidence was given of any means whereby the gross receipts of the industry could be increased, but evidence was given that the sale price of the coal could not be increased without the loss of markets. No item in the disbursements (other than wages to miners) was attacked or questioned. Evidence was given that the cost of management was low in comparison with other industries. There was no evidence whatever submitted to the Board to support the allegation of loss through price-cutting, and an Operator gave evidence that the best possible prices were being obtained.

This must, of necessity, dispose of the demand of the miners for an increase in their wages. *The industry, on this evidence, does not produce any moneys out of which any increase in miners' wages could possibly be paid.*

The miners are now receiving practically the entire net proceeds realized from the industry. Had the miners' wages, during the last fiscal year, been even one-half of one per cent higher, that small increase could not have been paid out of the industry—even although no allowance was made for proper depreciation necessary to protect the investment, or for a return to the Mine Operators on the capital invested.

It must be realized by any fair-minded person with any experience whatever in industrial and financial matters that if adequate provisions are not made for the protection of the capital necessarily invested in an industry, the industry cannot continue, but must face disaster. It must also be realized that the coal produced in this industry is produced by the joint efforts of the Mine Operators who have contributed the necessary capital, and the miners, who have contributed the necessary labour, and that there must be a fair division between the two of the net amount realized from their joint efforts, and that it is not only unfair but economically unsound that the miners take as wages the entire net proceeds, without making any allowance even for the protection of the industry and the capital necessary for its continuance, and without permitting any return on the capital invested.

The representatives of the Union did not attempt to oppose a reduction in the present wage scale on any grounds save only the contention that the miners are not now receiving a fair living wage. There was no conflict as to the amount the men are earning. The only conflict is whether or not the earnings are adequate. The evidence showed the average daily earnings of the men to be as follows:—

Company men	$5 03
Contract miners	7 46
Contract machine men	8 75

The average earnings are approximately $8 per day.

Evidence was given of the daily earnings of workmen in other industries in the Province

of Alberta, and this evidence was conclusive that the men employed in the Drumheller mines are paid a higher average daily wage than is paid in any other industry employing labour of a similar class.

Evidence was also given as to the earnings of miners employed to do similar work in other domestic coal fields. The daily base wage in the Edmonton field is $4.20 per day, as against $5.25 per day in Drumheller; that is, the Drumheller daily wage is 25 per cent higher than the Edmonton daily wage for the same work. The following is a comparison of the wages paid in the two fields:—

Occupation	Drumheller	Edmonton
Timberman	$5 25	$4 20
Cager	5 25	4 20
Tracklayer	5 25	4 20
Bratticeman	5 25	4 20
Company Miner	5 25	4 20
Driver, Spike Team	5 62	4 20
Motorman	5 25	3 99
Driver	5 25	3 99
Main and Tail Rope Rider	5 25	3 99
Timberman's Helper	4 41	3 62
Tracklayer's Helper	4 41	3 62
Mucker	4 41	3 36
Pumpman	4 41	3 36
Pusher	4 41	3 36
Unclassified Labour (inside)	4 41	3 36
Boys (inside)	2 75 to 3 85	2 62 to 3 15
Machineman	6 61	4 20
Blacksmith	5 46	4 20
Box Car Loader	4 86	4 20
Car Repairer	4 86	4 20
Hoistman	5 50	4 20
Unclassified Labour (outside)	4 20	3 20
Boys (outside)	2 42 to 3 30	2 10 to 2 62

The evidence was that there was a similar variation in contract rates, but particulars were not given. The wage scale in the Estevan field in Saskatchewan is considerably lower than Edmonton. The wage scale in the Lethbridge field is higher than Edmonton, but lower than Drumheller. *The evidence was conclusive that the miners employed in the Drumheller field are paid on a higher wage scale than miners employed in any other domestic coal field.* No evidence was given of the day wages in the fields producing steam coal, but there was evidence that conditions were so different that no comparison could be made. The miners called by the Union to give evidence admitted that the Drumheller daily wage was adequate. On this evidence it must be held that the Union has failed to establish that the Drumheller daily wage is not adequate or does not provide for a fair living wage. The evidence supports the contention of the Mine Operators that there should be such a reduction as to enable the Drumheller field to compete on a fair basis with the Edmonton field and the Estevan field, which are its principal competitors. There is no reason why Drumheller miners should demand more money for doing the same work that miners in the competing domestic coal fields do for much less money, especially when the condition of the Drumheller coal industry is taken into consideration.

Representatives of the Union are forced to base their contention that the miners are not now receiving a fair living wage, solely on the *annual* earnings. There is again no conflict in the evidence of what the miners receive. During the last year the aggregate wages paid amounted to $1,860,525.14 to 1,965 employees —an average of approximately $950. The Dominion statistics show that in the previous year the output of coal was larger, and the average wage was $1,124. The Union called ten miners to give evidence and stated they were typical of all the men employed in the field. Of these two were weighmen paid by the men; two worked for day wages—the lowest scale—and earned $857 and $645 respectively. The others were contract miners and their earnings were $1,047.44; $849.14; $747.49; $989.99 and $1,060, including Union fees. The contract machine men received the highest scale of wages, but no workmen of that class gave evidence. Summaries of the payrolls were produced which showed that large numbers receive from $1,000 to $2,000, and quite a few over $2,000. This confirms the Government statistics above referred to, if any confirmation is needed.

Evidence was given as to the annual earnings of other similar workmen employed in other industries in this Province, and *this evidence failed to show that the average annual earnings in any other industry in Alberta were in excess of the average annual earnings of the Drumheller miners.* The Drumheller miners receive, for less than 120 days' work during the six winter months, as much as other workmen receiving 45 cents per hour and working 44 hours per week and 50 weeks per year. The winter earnings, without allowing anything for summer earnings, are above the minimum earnings fixed by Government reports as a living wage. The Union has failed to establish that the Drumheller miners are not receiving a fair living wage, even when considered on an annual basis. The earnings of some of the men who do not work steadily or are at work short periods are below the average, but it is only the average, not either the highest or the lowest, earnings that can be taken into consideration in determining whether or not wages are adequate.

I have dealt with the earnings on an annual basis, but the evidence was that coal mining in Drumheller is only a seasonal occupation, and in that case the adequacy of the wages paid should be determined on the wages paid the workmen while engaged in that industry, and not on the earnings of the workmen during the seasons of the year when they are otherwise employed. The evidence was conclusive that the mines only operate during the six winter months, and that during the six summer months the miners are free to engage in other occupations. During the summer months about 10 per cent of the men obtain employment in caring for the mines. About one-third leave the coal field and obtain other employment, and what they earn is not included in the average annual earnings above set forth. The remainder stay idle in the valley during the entire six summer months. Of the ten miners who gave evidence for the Union, as typical miners, one obtained employment during the summer doing development work in the mines; another had done some farm work. The other eight remained idle all summer. One stated that he considered the mining industry owed him a living the entire year, and that he was not prepared to accept any other employment during the summer months. Another stated that he was a miner and did not want to engage in any work other than mining, and would not accept other employment. Others stated that

their homes were in Drumheller, and that they would have to go to other places to obtain summer employment and that they were unwilling to do so. No doubt the Drumheller miners cannot obtain during these summer months other employment paying $8 per day for less than seven hours' work, as that is more than any other industry pays for such labour, and that is largely the cause of their unwillingness to accept other employment. The ease with which they obtain Government relief during the summer is also a factor, as some of the miners who gave evidence expressed the view that increasing their earnings during the coal season by steady work only reduced the relief which they could obtain during the summer. Considering all the evidence it appears that nearly a third of the men do obtain other employment, and that most of those who do not obtain other employment during the summer months are unwilling to accept such other employment if offered, but could obtain other employment, at least during normal times, as they are free to accept such other employment during the six months of the year when such other employment is more easily obtained. Mining coal in Drumheller must therefore be classed as a seasonal occupation unless the miners are justified in refusing to accept other employment during the entire summer, and no reasonable person could accept that view. *The Union must be held to have completely failed in establishing that the Drumheller miners are not now receiving a fair living wage; in fact coal miners are now paid a higher wage than is paid for similar labour in any other industry in the Province, and Drumheller miners are paid higher wages than are paid in any other field producing domestic coal.*

Another matter which should receive consideration is that the Drumheller wage scale has an adverse effect on the Drumheller coal industry. Drumheller coal must be sold in competition with coal from the Edmonton field and from the Estevan field. Wages constitute about two-thirds of the total cost of production which, therefore, depends principally upon the wage scale. The cost of producing coal in Drumheller, and the price at which it can be placed on the market is, therefore, far above the corresponding prices in the two competing fields. The result has been that the Drumheller coal has been unable to maintain its position in the market. Exhibit No. 18 shows the percentage of the total domestic coal produced in Western Canada from the three fields. The percentage of the whole produced in Drumheller has decreased from 41·5 per cent at the end of 1930 to 35 per cent at the end of 1937, while the percentage produced in the Edmonton field during the same period increased from 12·1 per cent to 14·6 per cent, and in the Estevan field increased from 16·8 per cent to 28·4 per cent. Exhibit No. 17 shows that the sale of Drumheller coal in Alberta decreased from 307,690 tons in 1930 to 228,245 tons in 1937, and that during the same period the sale of Edmonton coal in the Province increased from 429,241 tons to 515,028 tons. Exhibit No. 15 shows that in the Province of Manitoba during the same period the sale of Drumheller coal decreased from 338,003 tons to 189,308 tons while the sale of Estevan coal increased from 230,412 tons to 475,649 tons. It appears that there is a direct relationship between the wages paid in the respective fields, and the quantity of coal sold from each field. The wage scale also appears to affect the workmen, as the Dominion statistics put in evidence show that during the past few years the man days worked in the Drumheller field have decreased 27 per cent while they have increased in the Edmonton field 11·8 per cent and in the Estevan field 15·4 per cent. The Union, by forcing higher wages in Drumheller, would, therefore, appear to be largely responsible for the decrease in the work available there. This also appears to largely account for the loss in operations shown by the Chartered Accountant's consolidated operating statement above referred to. The present wage scale at Drumheller is out of line with the variation in the prices realized from the sale of coal and the cost of living since 1925. Exhibit 6 shows that the wage scale now in force in Drumheller is 94·2 per cent of the scale in force in 1925, whereas the living costs during the same period have decreased to 73·9 per cent and the price realized from the sale of coal has decreased to 64·5 per cent.

On the grounds "that the wages now being paid are higher than the wages being paid in any other domestic coal field, and far in excess of the wages paid in the Edmonton and Estevan fields which are the principal competitors of the Drumheller field; (2) that the wages now being paid are higher than the wages paid in any other Alberta industry employing similar labour; (3) that coal mining at Drumheller is a seasonal occupation and that the miners' complaint of low annual earnings is owing to their unwillingness to accept other employment during the six summer months when the mines are closed; (4) that the miners are now receiving more than their fair and proper share of the net proceeds received from the sale of coal produced by the joint efforts of the miners and the Mine Operators; (5) that the Drumheller wage scale has been maintained since 1925 notwithstanding decreases in all other prices and costs; (6) that the excessive wage scale is endangering the industry by not leaving sufficient to provide for necessary allowance for depreciation, etc., and (7) is restricting its markets owing to excessive production costs and thus causing the conditions of which the miners complain," I recommend that the request of the Mine Operators for a reduction in the day wage and the contract rates be granted. After this reduction is made the daily wage scale at Drumheller will still be 15 per cent higher than the daily base wage in the competing Edmonton field, and the difference is even greater with respect to the Estevan competing field. The reduction will only be sufficient to provide for the proper allowances necessary for the continuation of the industry on a permanent basis. The industry will be continued solely for the benefit of the miners, and the reduction asked for will not allow the Mine Operators any return on their large capital investment of $5,364,000 unless there is some improvement in market conditions, of which there is no indication at present.

As the Chairman is recommending an increase in the wage scale, he has given me his report so that I could state herein the grounds on which I dissent. I have carefully studied his report in an effort to ascertain the grounds on which he bases his recommendation for an increase in the wage scale. He finds that "the industry in the Drumheller District is in a difficult position" and that "the consolidated statement affords an accurate picture of the conditions as they existed at the time the statements were made"—the season of 1936-37

—and after quoting from the consolidated operating statement the cash receipts and disbursements, practically the same as I have hereinbefore set forth, he finds "the actual cash position therefore shows an approximate balance, but when depletion and depreciation are charged at proper rates, and when some relatively small incidental revenues are taken into account, the statement shows a loss of $209,853.54 in the operations of the period. There has been no return on the capital investment which the evidence shows is approximately $5,364,000." He refers to the statement of one of the miners that "the capital invested was entitled to some return," and I take it he concurs in that statement. He refers to the case of a miner witness who had to support a family larger than the average (5 children who, with the two parents, made 7), and who had to receive Government relief, and he also states that that was not a typical case (so it can have no bearing), and that his annual earnings were below the average, and that while he worked he received $7.77 per day. He also finds that the miner's complaint is not with his daily wage, but with his annual earnings. His report is not quite definite with reference to the mining of domestic coal being "a seasonal occupation," but he does agree with my finding to the extent of saying—"I find myself quite unable to agree with the proposal that a miner is justified in demanding from the employer a sufficiently high daily wage to bring him a sufficient *annual* income for all purposes," which I take is substantially a finding that he considers it a seasonal occupation. The Chairman finds that the City of Drumheller and the vicinity cannot give employment to all of the miners during the summer months, owing to drought and low prices, and that in the case of a married man with a family there are practical difficulties involved in caring for his family during the summer while he seeks work, and I think the grounds on which his recommendation is based are the sentence following the above finding, which reads—"this in itself might not be sufficient to warrant recommending an increase in the wage rate, but when it is coupled with the fact that there has been a definite increase in the cost of living since 1935, I am of the opinion that the wages should be brought more nearly in line with the living conditions of the employee."

I cannot concur in the recommendation of the Chairman that the wage scale be increased because, in my opinion, he has failed to take into consideration sound economic principles which cannot be disregarded.

1. When it is proposed to raise the wage scale of miners already receiving wages higher than the wages paid in any other domestic coal field, and when it is admitted that the industry is in a difficult position, and that the cash receipts and disbursements now show an approximate balance without any allowance being made for depreciation or for any return on the capital investment, then the first question must be—how is the money for the proposed increase to be obtained? It admittedly cannot be paid out of the industry without some changes being made, and there is no evidence of any change that will produce the additional moneys that must be found if wages are raised. There was no evidence that any of the cash disbursements shown in the consolidated operating statement were unnecessary or could be eliminated or decreased. There was evidence that there had been some increase in the price of coal since the end of the fiscal years referred to in the consolidated operating statement, but the evidence also was that there had been a decrease in the output, and there was no evidence of any improvement in the net result of the operations. There is evidence that the present losses extended back to 1935. As stated in his report, there was evidence that the present loss could not be passed on to the market, and that an increase in price would cause a loss in market. There was no evidence to the contrary. The Chairman's report does not deal with this all-important question, and in my opinion this is in itself a complete answer to the request for an increase in the wage scale, because the evidence is that there is no source from which the additional loss resulting from increased wages can be met.

2. No doubt a married man with a family having to work away from home part of the year does involve some difficulties. However, that applies to all seasonal work. It applies equally to lumbermen, road workers, railway employees, merchant, marine, commercial travellers, and even to the executives of corporations. It even applied to members of the Board when they found it necessary to go to Drumheller to hear evidence. Such difficulties are well known to the workman when he decides to engage in a seasonal occupation, and it is not ground for a subsequent complaint. Coal mining at Drumheller always has been a seasonal occupation, and the miners were fully aware of that condition when they first sought employment there. Changes in the work ordinarily available the other half of the year should not add to the burden of the industry still able to give them employment.

3. It is admitted that the Drumheller coal industry is in a difficult position because it has been unable to maintain its market against the competition from the Edmonton field and the Estevan field. The evidence was that it was unable to maintain its markets because the cost of production was higher in Drumheller than in the competing fields, and that the reason of the higher cost of production is that the wages paid in the Drumheller field are higher than the wages paid in the competing fields for doing the same or similar work. This has also resulted in less man days' work. It is obvious that the industry at Drumheller cannot recover from its difficult position until it is able to compete with Edmonton and Estevan on a basis of equality, and recover its lost markets. A recommendation that the already excessive cost of production be further raised by further increasing the already high wage scale can only further aggravate the already difficult position.

4. The cost of living is only one of the considerations in determining whether or not a wage rate is fair. The cost of living varies from month to month. It would be impractical to vary wages from month to month with the cost of living. There must be stability in the price at which coal is sold, and there must therefore be some stability in the wage rate, particularly in a case such as this where the miners are receiving, as wages, the total net proceeds from the sale of the coal. There has admittedly been some increase in the cost of living since 1935, although there was no evidence bringing the comparison up to date, and it is well known that there has been a substanial decrease in wholesale prices since the beginning of the year. If wages are to be based solely on the cost of living there should be a substantial reduction as a reference

to Exhibits 6 and 7 will show that since 1925 the wage scale has been maintained with very little reduction, notwithstanding a very large reduction during the same period in the cost of living. The miners' wage scale in Drumheller has not, in the past, varied with the cost of living. In the face of these facts a temporary increase in the cost of living is not a sound ground for increasing the wage scale, particularly at a time when the cost of living is going down. Although the Union called several witnesses at Drumheller, no evidence was given with respect to increased cost of living, and while it is mentioned incidentally in the brief of the Union, the Union did not seriously rely on this to support the increase they requested, and the Board has not had the advantage of any arguments from the Mine Operators on this question, as the Mine Operators have every reason to believe that that question is not at issue.

5. The wage scale in any industry must be based on the average earnings. There will always be workmen in any industry who do not work full time, or who cannot command the higher rates. The miner witness referred to by the Chairman as earning approximately $700 worked only 85 days although the mines operate many more days than that in a year. He also stated, in answer to questions asked by me, that he had not attempted to obtain other employment during the remainder of the year as he was a miner and did not feel he was suited to other work and did not wish to leave his family. He stated he needed $2,000 a year, but no industry could pay that amount to a labourer for 85 days' work, and if he is unwilling to seek other employment for the remainder of the year the industry should not be penalized, nor should the industry be penalized if, owing to a temporary period of depression, he is unable to obtain other work. The Union attempted—and apparently were successful—to arouse sympathy for the workmen on the ground that their earnings were low, but it was stated, and not disputed, that it collected from these men $22,500 per annum, which does not appear to be consistent with that contention.

In addition to the above there are the grounds above stated for recommending a decrease in the wage scale which are also reasons why I dissent from an increase.

7. The recommendation for a special increase for Company men earning less than $5 per day, thereby changing the present relative scale of remuneration, was not asked for by either of the parties to this dispute, and neither of the parties had any opportunity of presenting arguments with respect thereto. There was no evidence given to support it. Sympathy for those receiving the lowest remuneration is natural, but it should always be recognized that the more capable workmen should be paid the higher wages, and I have every reason to believe that the variation in the daily wage of Company men is based on their respective capabilities. Any attempt by this Board to interfere without hearing any evidence and without giving the parties an opportunity to present arguments will tend, in my opinion, to create further dissention and dissatisfaction instead of conciliation.

The Chairman evidently realized that wages in Drumheller have been elevated to near the breaking point of the industry because he states that with his recommendation "the wage rate has reached the highest level it can be expected to attain." This is borne out by evidence that during the past year two of the larger mines closed down owing to trouble with the Union, and two others announced they would not open but were induced to do so by the Union agreeing to a reduction of the timber contract rate. It is also evident that the Chairman has doubts regarding his recommendation of an increased wage as he stated "it is with the greatest hesitation and in the face of very forceful facts and arguments that I have recommended an increase." That should be taken into consideration, when the parties come to negotiate an agreement.

The second request of the Mine Operators is for a decrease of 20 per cent for all dead work. The principal contention was with respect to the contract prices paid for timbering, and for handling bone. I believe we are all agreed that these contract prices were excessive. The only question before the Board was the reduction that should be recommended. The evidence was conclusive that under the expiring agreements contract miners are paid much more per hour for the time engaged in erecting timbers, and for the time engaged in handling bone, than for the same time engaged in producing coal. It appears reasonable, in the interest of the industry as a whole, that dead or unproductive work should not be more profitable to the miner than productive work. The reduction that should be made in the contract price should be such that the contract miner will be paid for the time engaged in erecting timbers and in handling bone as nearly as possible the same rate per hour as he receives for mining coal.

The time required for erecting sets of timbers varies in different parts of the field. Considering all the evidence I find the average time required for erecting a set of timbers in the mines in the vicinity of the City of Drumheller to be 35 minutes, and in East Coulee 25 minutes. Timbering is much easier in East Coulee owing to the floor and roof being better, and to the mines being dry. The rate at East Coulee should therefore be lower than the Drumheller rate. On the basis of the average earnings per hour of contract miners, the contract rate in Drumheller should be 70 cents and in East Coulee 55 cents, and I therefore recommend that the contract rate should be reduced to those amounts. The reduction will still leave the contract rates for timbering high in comparison with the Edmonton field, where the contract price under agreements with the same Union, for putting up similar sets of timbers, is 25 cents to 35 cents per set. The Union made a special agreement at the Rosedale and Star mines. There has been no change in conditions since those contracts were made and, while there were objections, there was no evidence of grounds for change, and the rates are still above Edmonton rates for the same or similar work.

The Union asked for a separate contract rate for erecting jack props. Under the existing contract the erection of jack props is included in the contract price for mining coal, the same as other incidental work, such as drilling shot holes, etc. If a separate contract rate is allowed for jack props there would have to be a corresponding reduction in the contract price for mining coal, or else the result of allowing a separate contract price for jack props would simply be increasing the contract price for mining coal by an indirect method. In the other competing domestic coal fields such as

Edmonton, jack props are included in the contract price for mining coal. I have already found that the contract price for mining coal is too high, and I cannot recommend that it be indirectly increased by a separate contract price for jack props.

My understanding of the Chairman's report is that he finds the existing timber rates to be too high, but while he recommends that the 85 cents rate be reduced to 75 cents, his other recommendations, including jack props, amount to a very substantial increase in the existing timber rates. The Chairman's report does not disclose the basis on which he bases his recommendation, and, not knowing the basis on which he has made the recommendation, I can only state that the evidence given before the Board was conclusive that there should be a substantial reduction in the contract rate for timbering, and I know of no evidence that would support the Chairman's recommendation, and I believe it is based on a misunderstanding of mining operations and conditions, and in this case the advice of an independent mining engineer would have been of value. I requested that an independent mining engineer be employed; the nominee of the Union strongly opposed it and the Chairman refused my request.

With respect to the contract rate for handling bone, the evidence was, in my opinion, conclusive that, if the Mine Operators' request for a 20 per cent reduction was granted, the miners would still be earning more per hour for the time engaged in handling bone than for the time engaged in mining coal, and that the 20 per cent reduction would not be sufficient to equalize these contract rates. Evidence was not given to show exactly what reduction would equalize the rates. I recommend that the present rate of 11 cents for handling bone be reduced to 8·8 cents.

The third request of the Mine Operators is that payment be made for bone in excess of four inches only. There are always some impurities in a coal seam, and the contract rate for mining coal includes separating from the coal a normal amount of such impurities. Where the amount of the impurities exceeds a normal amount, extra payment is made to the miners. That appears to be a universal practice at the present time throughout practically all domestic coal fields. It was formerly the practice in the Drumheller field to only pay extra when the bone or impurities exceeded four inches in thickness. Four inches was considered a normal amount of impurities. Witnesses called by the Union admitted that the Drumheller Mine Operators had been forced to pay the miners for all impurities without exception, by the miners intentionally loading into the mine cars an excessive amount of bone which could not all be removed on the picking tables, and which caused serious complaints from customers and injury to the industry. The evidence was that a considerable portion of this bone was, even under the present practice, loaded into the mine cars and weighed and paid for as coal, and after weighing removed by Company men at the picking tables. This amounts to from 2½ per cent to 3 per cent of the total tonnage. For this bone the Mine Operators pay twice. The Union has unquestionably forced upon the Mine Operators a most unfair agreement with respect to bone.

I therefore recommend that the request of the Mine Operators be granted, and that the contracts provide for payment for bone only when the impurities in the seam exceed four inches in width, and for the amount in excess of four inches.

The Chairman in his report finds that the restoration of the four inch exemption in the bone clause is not practical, no doubt because of the methods by which the miners forced the Operators to remove this exemption from the contract. To meet this I would recommend that the contract include a clause providing that loading an excessive amount of bone with the coal shall be grounds for immediate dismissal, and that in any mine where there is an increase in the percentage of bone loaded into the mine cars with the coal, the contract price for mining coal in that mine shall be reduced by a percentage equivalent to the increased percentage of bone.

Of the nine counter-requests made by the United Mine Workers of America, the second and third are requests for an increase in the wage scale, and that has already been dealt with. The fourth is a request for payment on run-of-mine basis. The sixth is a request for overtime. The seventh is a request for two weeks' holidays. The eighth is a request for a six-hour day and a five-day week. The ninth is a request for an alteration in the time when the contracts can be terminated. These requests have always been presented to previous Boards, and none of them were pressed by representatives of the Union, and no evidence was given to support any of them. I recommend that they be not considered for the reasons set forth by the Honourable Chief Justice Harvey as Chairman of the 1935 Conciliation Board.

The fifth request is for an increase in the day wage basis where mechanical mining is being performed. The evidence and argument in support of this request was that, where the long-wall system of mining was being tried out, miners who had previously been working under contract were now being paid the lower daily wage. The Union is unwilling that the men should load the coal on a contract basis because of uncertainty in the work. A conference is being held in an effort to devise a new form of contract. Other miners working in the same mine and doing work requiring greater skill are paid the same daily wage as the coal loaders who complain. Under these circumstances I cannot recommend any change in the present practice, but if a conference between the Operators and miners does result in a mutually satisfactory contract arrangement, it should be adopted.

This leaves only the first request which, in very general terms, asks that inequalities now existing be adjusted.

The Union asks that the agreements be made uniform in all respects in all mines in the field. It was admitted that conditions vary in the different mines, and also that different mining methods were used in different mines. These varying conditions and different methods require special provisions in the agreement. A uniform contract is not practicable.

There is particularly a wide difference between the mines in the vicinity of the City of Drumheller and the mines in the East Coulee portion of the Drumheller field. East Coulee mines the coal from an entirely different seam, and the mining conditions are much better as there is a better floor and a better roof and the mines are dry and are free from gas, whereas the mines in the vicinity of the City of Drumheller have considerable water and

gas, and have considerable trouble with both the floor and the roof. In addition the mines in the East Coulee field are much freer from impurities, and the coal is very easily mined. Company men, that is, men working for day wages, are paid the same in East Coulee, but the contract mining rates in East Coulee are 10 cents lower in rooms, and 20 cents lower in entries. The evidence was conclusive, and not disputed, that the average daily earnings of the contract men working in East Coulee at the lower contract rate are as high, if not higher, than the average daily earnings made by contract men in other parts of the field. There is little, if any, difference in the heating quality of the coal mined from the East Coulee seam, but coal from East Coulee does not ship as well, and as a result dealers have to handle a larger quantity of slack coal in each car, and consequently the East Coulee mines have to sell the lump coal to dealers at 25 cents per ton below the price received by mines in other parts of the field. The differential in the contract rates enables the East Coulee mines to meet this differential in the selling price of their coal to dealers, and the differential does not in any way prejudice the miners working in the East Coulee field. The only evidence given against the differential was that miners should be paid the same price for shovelling a ton of coal, no matter what the conditions, but it was obvious that it was easier to shovel coal in a dry mine, free from gas, and with a good floor and fewer timbers, than in mines in other parts of the field. I think we were all agreed that there should be a differential, and the only contention seriously advanced was that the differential was too great. There was, however, no evidence given to support this contention, and the undisputed evidence that the average daily earnings of the East Coulee miners were as high as the average daily earnings of miners in other parts of the field establishes the fairness of the present differential. I therefore recommend that no change be made in this differential.

The Chairman has recommended that the differential be reduced 50 per cent. He does not state on what grounds or on what evidence he recommends this. The absence of a transcript of the evidence is a serious detriment, but I feel quite positive that no evidence was given before the Board that would support the recommendation.

A long list of other so-called inequalities was attached to the brief of the Union. They all deal with minor disputes which had arisen in different mines. The agreement between the Operators and the Union contains machinery for adjusting all such disputes, and such disputes are from time to time referred to local arbitration. It is therefore my opinion that no recommendation should be made with respect to these, and I would adopt the recommendation of the Honourable Mr. Justice Harvey, as Chairman of the 1935 Board, that such disputes be adjusted between the parties on the basis of not increasing the cost of producing the coal, and of not decreasing the earnings of the miners.

Arguments were also presented before the Board with respect to the provisions of the general contract regarding seniority. I would recommend that provisions be included in the agreement for seniority in classes among men doing the same class of work, but not a rule of seniority whereby a workman doing one class of work might claim preference over the workman engaged in another and different class of work. It is, in my opinion, essential to the safety of the mines and of the workmen employed in the mines, that the Mine Manager should have the final decision as to the competence of any workman. The responsibility for the safety of the mines and the miners rests upon the Mine Manager, and it would be impossible for him to discharge that duty unless he had authority to decide on the competence of any workman he employed to do any particular work. I, however, think there should be protection against a Mine Manager discriminating against any workman for personal reasons, or for any improper reason. It was contended on behalf of the Union that where a miner is guilty of infractions of the Mines Act, such as taking matches into the mine, which would endanger not only the property but the lives of the miners, such miner should not be liable to be discharged, but that an information should be laid against him before a Magistrate, and that he should then be put back to work. Such a contention is so unreasonable and so dangerous that I would recommend that the contract contain special provisions that any miner committing any offence under the Mines Act which would tend to endanger the lives of other miners, should be subject to immediate dismissal.

There are some further observations I think I should make. The Board held its sessions at Drumheller. The Mines were closed, and according to the Union the miners were idle. I am quite sure that less than one per cent of the miners attended the sessions of the Board. That was not showing very much interest in proceedings in which it was alleged they were so vitally concerned. It raises a question as to the extent to which the United Mine Workers of America actually represent the Drumheller miners. The demand of the United Mine Workers of America for an increase at Drumheller is only one of similar demands for increases made by the United Mine Workers of America in every coal field in Alberta and British Columbia. The evidence before this Board was given principally by the heads of local units who receive a salary from the United Mine Workers of America, and were, therefore, naturally under their direction, and their evidence consisted largely of answering "yes" to statements in the form of questions. The United Mine Workers of America is an international organization, controlled outside of Canada, and it is well known that it is closely associated with the C.I.O., an organization against which the Ontario Government took action to protect its industries. The evidence was that, after the general decline in prices and wages following the war, Drumheller miners broke away from the United Mine Workers of America before a satisfactory contract basis was arrived at between the miners and the Mine Operators. Similar action may again be necessary.

Another observation is that the Mine Operators in the Drumheller field appear to be at a disadvantage through lack of organization, and in the absence of a uniform policy throughout the field. It appeared that many of the so-called inequalities which have caused dissatisfaction were owing to the absence of a uniform practice in all mines, and if that was corrected, a lot of the dissatisfaction would disappear. The Mine Operators also appear to be, to some extent, at cross-purposes. I think a closer organization of Mine Operators,

and a definite understanding between them, would make it easier to maintain mutually satisfactory arrangements with the miners.

In conclusion I recommend that the attention of the parties to this dispute be directed to the fact that neither this recommendation nor the recommendation of the Chairman is binding upon them. The Board was constituted and these recommendations made to assist the parties to the dispute in arriving at a mutually satisfactory adjustment of their differences. I have endeavoured to express the grounds on which I base the recommendations I have made. and on which I dissent from the recommendations of the Chairman, without criticizing either his report or his recommendations. I would urge upon the parties that, before any recommendation is accepted, they should carefully consider the grounds on which the recommendation is based, and satisfy themselves whether or not it is based on sound grounds. A recommendation not based on sound grounds cannot be of much value, and may lead to future difficulties. I would urge upon both parties that their interests in the industry are mutual, and that in arriving at an adjustment of their differences they should not lose sight of the fact that the first essential to both parties is to place the industry on a sound economic basis. The adjoining community of Wayne was, not long ago, an active mining centre—it is now referred to as the "ghost town." Two of the larger mines in Drumheller last year were closed and abandoned, not because coal was not available, but because of trouble between the Mine Operators and the Union. Two other of the larger mines had decided to close, but continued under a reduced timber contract, and if the recommendations of the Chairman with respect to timbering are enforced it would seem probable that they would not re-open. It would be a major disaster if the fate of Wayne was forced upon Drumheller because the Operators and the Union were unable to agree upon terms that will enable the industry to be continued on a sound economic basis.

Respectfully submitted,

(Signed) W. H. McLaws,

Member of Board of Conciliation and Investigation.

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1938

THE following table shows the number of disputes, workers involved and time loss for July, 1938, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in man working days
*July, 1938	15	1,423	10,435
*June, 1938	19	2,366	12,216
July, 1937	41	7,083	67,587

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The number of disputes, the number of workers involved and the time loss were all slightly lower than in June and very much lower than in July, 1937. None of the disputes caused very great time loss. The principal disputes were those involving hat workers at Guelph, Ont., lime plant workers at Blubber Bay, B.C., and restaurant employees at Toronto, Ont. In June most of the time loss was due to the lime plant strike at Blubber Bay and to strikes of sawmill workers at Fort Frances, Ont., and hosiery workers at Hamilton, Ont. In July, 1937, there were important disputes involving cotton factory workers at Cornwall, Ont., woollen mill workers at Peterborough, Ont. and gold miners at Wells, B.C.

Five disputes involving 423 workers were carried over from June and 10 disputes commenced during July. Of these fifteen disputes eleven were terminated during the month, five resulting in favour of the workers, one in favour of the employer, with compromise settlements in four cases, and one indefinite. At the end of July, therefore, there were four strikes and lockouts on record, namely: lime plant workers at Blubber Bay, B.C., restaurant employees at Toronto, Ont., greenhouse employees at Kitchener, Ont., and knitting factory workers at St. Catharines, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to seven such disputes, namely: motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; coastwise longshoremen, Vancouver, B.C., November 23, 1936, one employer; meat packing employees, Vancouver, B.C., December 29, 1936, one employer; beverage dispensers, Toronto, Ont., March 4, 1937, one employer; dairy employees, Toronto,

Ont., September 17, 1937, one employer; shoe factory workers, Perth, Ont., January 6, 1938, one employer; bakery employees, Hamilton, Ont., May 27, 1938, one employer; and cotton factory workers at St. Gregoire de Montmorency, P.Q., July 11, 1938, one employer. The last two disputes were added to the list this month.

The dispute involving cotton dress factory workers employed by one firm in Montreal, P.Q., commencing November 25, 1937, and the strike of dress factory workers (cutters) employed by three firms in Toronto, Ont., commencing January 21, 1938, which have been carried in the above list for some time, are reported by the unions involved to have been called off by July 1, and have consequently been removed from the list.

Disputes involving men on unemployment relief work who are not paid wages but receive subsistence or allowances for which work is performed or may be required are not included in the record, no relation of employer and employees being involved.

A dispute reported too late for inclusion in the July issue of the LABOUR GAZETTE involved thirty workers in the wire department of a steel mill at Sydney, N.S., who ceased work on June 6 in protest against the piece rates set. Work was resumed on June 8 pending adjustment of rates.

A minor dispute in Winnipeg, Man., involved four workers employed by a waste material dealer on July 20 for one day, an agreement with the Salvage Workers' Federal Labour Union with increased wages and reduced hours being secured.

A dispute involved over one hundred longshoremen at Point Edward on July 27, against dismissal of one of the men. The strike was not called by the union and the men resumed work in about an hour, the matter to be dealt with by the union.

The following paragraphs give particulars regarding certain disputes in addition to the information in the tabular statement.

Disputes in Progress Prior to July

SHOE FACTORY WORKERS, GALT, ONT.—As noted in the LABOUR GAZETTE for July, 1938, employees in one factory ceased work on June 22 when certain workers were dismissed following their refusal to undertake machine work in place of hand work, alleging a reduction in earnings would result from such change. The employees returned to work on July 9, the management agreeing to reinstate those who had been dismissed, satisfactory arrangements being made as to wage rates under the new system.

RESTAURANT EMPLOYEES, TORONTO, ONTARIO.—In connection with the strike noted in the July issue of the LABOUR GAZETTE of employees in three restaurants operated by one company, it was reported in the press toward the end of July that the Ontario Department of Labour had been asked to conciliate but a settlement was not reached, proposals of each of the parties being not acceptable to the other.

Disputes Commencing During July

GREENHOUSE EMPLOYEES, KITCHENER, ONT.—A number of employees in one establishment ceased work on July 25 against a reduction in weekly wages. Work was resumed on August 4 with weekly rates unchanged, hours being reduced from 54 per week to 50.

SHOE FACTORY WORKERS, PORT COLBORNE, ONT.—Employees of one establishment, members of the Canadian Shoe Workers Union, ceased work on July 11 alleging that work was being sent out to a non-union factory. Work was resumed after one day when negotiations resulted in a satisfactory settlement.

HAT FACTORY WORKERS, TORONTO, ONT.—Employees in one establishment, members of the United Hatters, Cap and Millinery Workers' International Union, ceased work on July 5 when demands for recognition of the union, an increase in piece-work rates and the 44-hour week were refused. An agreement with a shop committee had expired on July 1 and it was stated that the employer refused to negotiate with the union. Work was resumed on July 28 following conciliation by the Ontario Department of Labour. Arrangements for wage adjustments were made, hours to be 45 per week with overtime pay. It was reported that the union was to be recognized but the establishment was to be operated under open shop conditions.

TEXTILE FACTORY WORKERS, ST. GREGOIRE DE MONTMORENCY, P.Q.—A number of spinners and doffers on the night shift in one department in one establishment at St. Gregoire de Montmorency near Quebec City ceased work on July 11, followed on the next day by others, demanding increases in wages for the operation of new machines. It was claimed that the management had introduced machines requiring more work without increasing wage rates as a result of the provincial ordinance fixing minimum rates for textile factories. All departments of the factory were closed down on July 14. During negotiations between the management and employees some of the employees outside entered the office and two officials were struck. They were taken to the hospital, one being reported to be seriously injured. The intruders were ejected by the police. Later four men were arrested on charges of assault and remanded for trial. The National Catholic Federation of Textile Workers stated

that the strike was the result of the action of only a small minority of the 2,000 workers in the mill. On July 21 the mill was re-opened except for the night shift of 600 employees. It was stated that work for these would be stopped indefinitely. The dispute is included in the list of those not called off or reported as terminated by the employees affected.

Hat Factory Workers, Guelph, Ont.—Employees in one establishment members of the United Hatters, Cap and Millinery Workers' International Union ceased work on July 13, their demands for recognition of the union, higher wages, reduced hours and better working conditions being refused. It was stated that union workers had been dismissed from time to time, and their reinstatement was demanded. Press reports state that there were several clashes between pickets and the police when workers attempted to enter the plant and when trucks attempted to deliver goods to the plant. A meeting of the parties with the Crown Attorney did not result in a settlement. The strike was settled on July 27 as a result of conciliation by the Ontario Department of Labour. An agreement between the company and its union employees to be in effect until May 31, 1939, was signed providing for revision of wages, reduced hours and a shop committee to deal with matters affecting wages and working conditions. It was also provided that there would be no stoppage of work during the period of the agreement and that any disputes will be referred to a Board of Aribtration consisting of a representative of the company, a member of the committee and an official of the Ontario Department of Labour.

Stove Factory Workers (Enamellers), Guelph, Ont.—On July 25 employees in the enamelling department in one establishment ceased work, refusing to work with one of their number who had failed to pay union dues. The strikers were members of the International Moulders' Union which had an open shop agreement with the management. Work was resumed on July 29, when after discussion with the management, the employee

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1938*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(a) Strikes and Lockouts in progress prior to July, 1938.				
Manufacturing—				
Vegetable Foods—				
Bakery employees (bakers and helpers), Hamilton, Ont.	1	4	100	Commenced May 27, 1938; against reduction in wages and for renewal of union agreement; employment conditions no longer affected by July 31; in favour of employer.
Boots and Shoes—				
Shoe factory workers, Galt, Ont.	1	125	875	Commenced June 22, 1938; against discharge of workers following introduction of new system; terminated July 9, 1938; negotiations; compromise.
Textiles, Clothing, etc.—				
Hosiery factory workers, Hamilton, Ont.	1	118	236	Commenced June 1, 1938; for wage agreement and against bonus system; terminated July 4, 1938; negotiations; compromise: shop committee recognized and wages adjusted.
Non-Metallic Minerals—				
Lime plant employees, Blubber Bay, B.C.	1	111	2,700	Commenced June 2, 1938; *re* application of Conciliation Board (provincial) award; unterminated.
Service—				
Business, etc.—				
Restaurant employees, Toronto, Ont.	3	65	1,625	Commenced June 15; against discharge of workers alleged to be for union activity; unterminated.

(b) Strikes and Lockouts commencing during July, 1938.				
AGRICULTURE—				
Greenhouse employees, Kitchener, Ont.	1	10	60	Commenced July 25; against reduction in weekly wages; unterminated.
MANUFACTURING—				
Boots and Shoes—				
Shoe factory workers, Port Colborne, Ont.	1	450	450	Commenced July 11; against alleged practice of sending work to a non-union sub-contractor; terminated July 11; negotiations; compromise.
Textiles, Clothing, etc.—				
Hat factory workers, Toronto, Ont.	1	15	300	Commenced July 5; for union recognition and increased wages; terminated July 27; conciliation (provincial); compromise.
Textile factory workers, (cotton), St. Gregoire de Montmorency, P.Q.	1	100‡	900	Commenced July 11; for higher wage rates on new machines; terminated July 20; shift involved discontinued; indefinite.
Hat factory workers, Guelph, Ont.	1	250	2,750	Commenced July 13; for increased wages, reduced hours, recognition of union and reinstatement of workers; terminated July 27; conciliation (provincial); in favour of workers.
Knitting factory workers, St. Catharines, Ont.	1	54	54	Commenced July 30; alleged discrimination against two union members; unterminated.
Metal Products—				
Stove factory workers, Guelph, Ont.	1	50	250	Commenced July 25; refusal to work with defaulting member of union; terminated July 29; negotiations; union dues paid by worker concerned; in favour of workers.
CONSTRUCTION—				
Buildings, etc.—				
Carpenters, Vancouver, B.C.	3	50	100	Commenced July 20; against proposed reduction in wage rate; terminated July 21; conciliation (provincial); in favour of workers.
Building trades workers, painters and carpenters, Toronto, Ont.	3	11	10	Commenced July 22; for employment of union members only; terminated July 23; negotiations; in favour of workers.
TRADE—				
Waste material workers, Winnipeg, Man.	1	10	25	Commenced July 1; for union agreement with increased wages and reduced hours; terminated July 4; negotiations; in favour of workers.

* In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.
‡ 1,800 indirectly affected.

in arrears had agreed to pay up all dues and remain in good standing with the union.

CARPENTERS, VANCOUVER, B.C.—A number of carpenters, members of the United Brotherhood of Carpenters and Joiners of America and of the Amalgamated Building Workers of Canada, employees of two contracting firms engaged on three contracts, ceased work on

July 20 against a wage rate of 80 cents per hour instead of 90 cents previously paid by members of the contractors' association. The General Contractors' Association had notified the United Brotherhood of Carpenters and Joiners that 90 cents could no longer be paid as many union carpenters were working for much less and that 80 cents per hour would be paid on work where no wage schedule was specified. It was reported that a Conciliation Commissioner was appointed under the provisions of the Industrial Conciliation and Arbitration Act and that the men returned to work on July 22 while negotiations between the contractors and representatives of the unions were under way and pending the report of the Commissioner. This resulted in the establishment of a rate of 90 cents per hour on the jobs affected by the dispute, negotiations to be carried on as to the rate for work generally.

Waste Material Workers, Winnipeg, Man.—Employees in one establishment, members of the Salvage Workers Federal Union Number 106, affiliated with the Trades and Labour Congress, ceased work on July 1 to secure increased wages, reduced hours, and recognition of union with a signed agreement. Work was resumed on July 5 when an agreement was signed providing for wages from 20 cents to 30 cents per hour instead of 11 cents to 25 cents, and for nine hours per day, five and one-half days per week, instead of ten hours per day. A minor dispute in another establishment was similarly settled as stated elsewhere.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the Labour Gazette from month to month, bringing down to date that given in the March issue, in the review of Strikes and Lockouts in Canada and Other Countries, 1937. The latter included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

Great Britain and Northern Ireland

The number of disputes beginning during June was 65 and 27 were still in progress from the previous month, making a total of 92 in existence during the period, involving about 20,700 workers with a resultant time loss of approximately 175,000 man working days.

Of the 65 disputes beginning during June, 5 arose out of demands for increases in wages, 2 out of proposed wage reductions and 18 out of other wages questions; 2 arose out of questions as to working hours, 20 out of questions respecting the employment of particular classes or persons, 6 out of other questions respecting working arrangements and 9 on questions of trade union principle. One small dispute was due to sympathetic action and 2 disputes arose out of the issue of summonses to certain work people for breach of contract.

Final settlements were reached in 60 disputes, of which 12 were settled in favour of the workers, 39 were settled in favour of the employers and 9 resulted in compromises. In the case of 6 other disputes, work was resumed pending negotiations.

The strike of about 2,500 coal miners at a colliery in Kent, which began on May 1 in protest against the dismissal of 226 fellow workers (Labour Gazette, June, 1938, page 612) was terminated on June 25. The employers agreed to re-engage as many as possible of the workers (who had been discharged when a part of the colliery was closed) and to discuss with workers' representatives the case of any workers not ultimately absorbed.

On June 9, 3,000 colliery workers near Pontefract, Yorkshire, ceased work in protest against the dismissal of a group of their fellow employees when a section of the mine was closed. The strikers demanded the adoption of a work sharing system. On June 11, they resumed work unconditionally.

At another mine in the same district about 1,800 miners ceased work on June 9, in protest against their employer's action in prosecuting certain haulage hands who had been involved in stoppages of work without previous notice. On June 22, these strikers returned to work unconditionally.

Belgium

During the month of March, 1938, there were 24 strikes directly affecting 8,256 workers

and resulting in a time loss of 31,265 man working days. Of the 19 strikes terminated during the month, only one was settled in favour of the workers, five resulted in compromises and 13 were unsuccessful. Of the 24 strikes in progress during the month, 14 were in the coal mining industry.

During April there were 22 strikes in progress, directly affecting 5,392 workers and resulting in a time loss of 20,601 man working days. Of the 15 strikes settled during the month 8 resulted in compromises, 6 were settled in favour of the employers and one was settled in favour of the workers. During April, 12 of the 22 strikes in progress were in coal mining.

United States

Preliminary estimates of strikes in May, 1938, which as the Bureau of Labour Statistics points out, are based on "scattered information from newspapers and other sources and are subject to revision as more definite reports are received" show 260 strikes as beginning during the month, which with 140 unterminated at the end of April, made a total of 400 in progress during the month. The number of workers involved in these disputes was 100,000 and the resulting time loss was 1,000,000 man working days. The comparable figures for the previous month show that there were 352 strikes in progress, involving 80,000 workers with a time loss of 750,000 man working days.

NOTE.—Due to a typographical error in the July issue, the paragraph covering preliminary statistics for April was inserted above the heading "United States." This paragraph should be read as applying to the United States and not to Mexico.

On May 9, 1,450 employees of a firm manufacturing washing machines at Newton, Iowa, ceased work in protest against a 10 per cent wage cut. The workers were members of the United Electrical Radio and Machine Workers of America, an affiliate of the Committee for Industrial Organization. On July 8, the Governor of Iowa invoked a state law for mediation of labour disputes. The arbitration board, formed as a result of the governor's action, recommended that the employees return at their old wages pending negotiations between the union and the management. The management declined to accept this proposal.

On July 19, in order to avoid serious fighting between the strikers and workers engaged in a "back-to-work" movement, the Governor put the district under martial law and under this authority the National Guard closed the factory.

At about the same time a trial examiner of the National Labour Relations Board began a public hearing in Newton on union charges that the employer was guilty of "unfair labour practices." On July 31, the Governor ordered the National Guard to close the National Labour Relations Board hearings on the grounds that they were "a disturbing factor" and "might be delaying a settlement of the dispute." This action brought a protest from the main office of the National Labour Relations Board who contended that the Governor was attempting to subordinate "national to the State authorities in matters affecting national sovereignty." The board was allowed to reopen its hearings at Des Moines, 35 miles from the scene of the strike.

The company offered to re-employ the strikers, with the exception of 12 ringleaders, at a reduction in wages of from 10 to 15 per cent. While union officials disapproved of these terms they advised workers to return to work in order to protect their jobs. On August 4 most of the strikers returned under the protection of the National Guard.

According to *Social Security* for June-July, 1938, published by the American Association for Social Security, Inc., New York, benefit provisions of the unemployment insurance systems of Indiana and Mississippi became operative on April 1, 1938, making a total of 24 systems which began benefit payments this year. The states of Iowa, Michigan and South Carolina were added to this list on July 1, while Idaho will start to pay benefits in September and New Mexico and Oklahoma in December. With the exception of Illinois and Montana, where the benefit operations are scheduled to begin on July 1, 1939, all the other states will begin to accept claims for benefits on January 1, 1939.

Reports from Indiana reveal that by the middle of June a total of 75,000 unemployed had filed claims for benefits. By June 13, a total of 95,352 checks amounting to over $1,000,000 had been written by the state division, the average check, state officials reported, amounted to $11.16.

LABOUR LEGISLATION ENACTED BY THE PARLIAMENT OF CANADA, 1938

THE Dominion Parliament which met on January 27 and was prorogued on July 1 enacted several laws of labour interest including an Act to provide for the Registration of Shop Cards by Labour Unions, the National Housing Act to aid in the construction of houses for families with low income and Acts to establish a Board of Transport Commissioners, to aid in the relief of unemployment and agricultural distress and to assist municipalities in making self-liquidating improvements. The Civil Service Act was amended and also the Income War Tax Act. A Bill to amend the Lord's Day Act was introduced but withdrawn, and a Bill which also failed to pass would have added to the Criminal Code a section to prevent employers from refusing to employ or dismissing workers for union affiliation.

Registration of Shop Cards

The Shop Cards Registration Act, which is to come into force on proclamation, enables a trade union to register in the office of the Secretary of State any shop card which it has adopted as a design or emblem to indicate that the shop displaying it employs members of that union. Shop cards and union labels are devices for the same purpose, the former being used in shops where services are offered for sale and the latter being affixed to wares or merchandise produced by union labour.

An amendment in the Trade Mark and Design Act in 1927 provided for the protection through registration of both union labels and shop cards but when the Unfair Competition Act, 1932, was enacted to give effect to an international treaty for the protection of industrial property through trade marks, certain sections of the Trade Mark and Design Act were repealed and among them the provisions relating to shop cards.

No shop card registered by a trade union may be used by any other union or person. The Secretary of State may refuse to register a shop card if it is identical with or resembles one already registered, if it appears that it is calculated to mislead the public, or if, in the opinion of the Minister, the registration is on public grounds objectionable.

If the Minister refuses to register a shop card, an amendment made by the House of Commons allows an appeal to the Exchequer Court. Notice of appeal must be sent both to the Registrar of Shop Card and to other unions concerned in the decision within 60 days of the date on which the notice of the decision was sent to the applicant or such further time as the Court may allow. The Court may also require public notice by advertisement or otherwise and the appeal must be brought on for hearing within six months after notice is filed.

A union may authorize the use of any shop card registered by it and such authorization may be cancelled only on twelve months' notice unless it is otherwise specified in the agreement for its use. Any applicant who complies with the rules of the union is entitled to the use of the shop card, but no registered shop card may be assigned. Registered shop cards remain in force for 15 years and may be renewed for a similar period.

A labour union which has registered a shop card may petition for its cancellation which may be allowed by the Minister. The Exchequer Court may also on application direct cancellation of registration where the circumstances justify it and, on the information of the Attorney-General or at the suit of any person aggrieved by any omission or any entry made without sufficient cause make an order to vary it. The Court may refuse or grant leave to a proprietor of a registered shop card who applies to add to or alter it. The application for leave to appeal to the Exchequer Court must be made in the manner prescribed, and the Registrar must transmit to the Minister a copy of any order made. A certificate of registration of a shop card purporting to be signed by the Minister or the Registrar is to be received in court as *prima facie* evidence of the facts.

The Governor in Council is empowered to make regulations for carrying out the objects of the Act and in particular with respect to the form of register and entries to be kept concerning shop cards, form and contents of applications for registration and certificates of registration, as well as the fees for all services under the Act.

Unemployment Relief

The Unemployment and Agricultural Assistance Act follows in general the statute of 1937 with similar title and the Unemployment Relief and Assistance Act, 1936. Power is again vested in the Governor in Council to authorize the execution of such undertakings as he may determine to be in the best interest of Canada, continuing to give employment as far as practicable to relief recipients registered with the Employment Service of Canada in the Province in which the work is to be per-

formed. Where the Dominion is providing financial assistance contracts for undertakings under provincial jurisdiction are to be approved by the Dominion Minister of Labour and the work is to be supervised by a Dominion Government officer.

The Governor in Council may make agreements with any of the provinces for the alleviation of unemployment and agricultural distress. Provision is also made for continuation of commitments made and agreements entered into under the 1936 and 1937 Acts. No financial assistance is to be granted to any province unless it agrees to furnish such information and permit such examination and audit as the Dominion may deem necessary. The Governor in Council may also make agreements with corporations, partnerships or individuals engaged in industry respecting the expansion of industrial employment, and may make regulations necessary for the carrying out of the provisions of the Act. The Act will expire on March 31, 1939, except as regards the clause authorizing the renewal or consolidation of loans, advances or guarantees, but obligations incurred under the new Act may be discharged.

Provision is made for a report on the moneys expended or loaned, guarantees given and obligations contracted to be laid before Parliament within thirty days after the expiration of the Act, or, if Parliament is not then in session, to be published and made available for distribution by the Department of Labour.

Housing

The National Housing Act is divided into three parts: Part I which was proclaimed in effect from July 26, and which repeals the Dominion Housing Act, 1935, continues with amendments certain provisions of the latter Act to assist in the building of houses by loans to be made by the Minister of Finance and lending institutions or local authorities approved by the Government. Parts II and III became effective on the day of assent.

Part II is designed to give effect to the recommendation of the National Employment Commission for a scheme of low rental housing.

Part III deals with the building of houses by the owners for their own occupation and was stated by the Minister of Finance to be "a direct attack over the next three years on what is believed by many to be the major factor retarding house construction in this country" by authorizing the Minister of Finance, with the approval of the Governor in Council to pay on a house, the construction of which began between June 1, 1938, and December 31, 1940: 100 per cent of such taxes for the first year, 50 per cent for the second and 25 per cent for the third year on condition that the municipality if it owns lots suitable for residential purposes, must offer to sell a reasonable number at a maximum of $50 per lot to persons agreeing to begin building houses for their own use within a year. The cost of construction is not to exceed $4,000; the assessment must be reasonable and the owner must receive the full benefit of the taxes paid by the Minister. Municipalities are required to furnish the Minister with information as regards houses intended to be built under this part of the Act which does not apply to houses built under Part II of the Act.

Under Part II, the Minister of Finance up to March 31, 1940, or an earlier date fixed by the Governor in Council, may make loans up to an aggregate of $30,000,000 to local housing authorities, that is, to any municipality, society, corporation or commission having authority to build and manage houses, including apartment houses, under a scheme undertaken to provide "decent, safe and sanitary housing accommodation, including, incidental commercial space, to be leased to families of low income and which may be leased at less than the economic rental." The "economic rental of a family housing unit" is defined to mean rental at the rate of 9½ per cent per annum of the cost of construction plus an amount sufficient to pay that portion of the annual taxes levied by the municipality on the whole building which is attributable to the family housing unit. A "family of low income" means one receiving a total income which is less than five times the economic rental of a housing unit with sufficient accommodation for the family.

A corporation which is organized to construct and manage houses as a low-rental project in accordance with the Act and which limits the dividends that may be paid on capital stock and the rentals that may be charged for the houses is a local housing authority under the Act. Loans by the Dominion to such corporations may not exceed 80 per cent of the cost of construction or exceed an average of $2,400 for each family housing unit. In the case of other housing authorities, loans may not be more than 90 per cent of the cost or be greater than an average of $2,700 for each family housing unit. A limited-dividend-corporation is required to repay semi-annually 1⅞ per cent of the principal of the loan which bears interest at 1¾ per cent payable half-yearly; other authorities must repay semi-annually 2 per cent of the principal and interest at the rate of 2 per cent.

A local housing project must be approved by the municipality in which the houses are to be constructed and the municipality must agree not to levy taxes on these houses exceeding 1 per cent of the cost of the

property or on the income of the housing authority. The total loans made in any municipality may not exceed an amount proportionate to its population in relation to the total urban population of Canada. The Governor in Council is given power to make regulations laying down standards of construction and supervision during building and other matters necessary for carrying out the Act.

If the minimum rent made possible under this Part of the Act is too high for some families, the Minister may approve an agreement between the municipality or the provincial Government and the local housing authority under which the former undertakes to make additional contributions to a rent-reduction fund to be used by the local housing authority for the purpose of allowing further reductions in rent under conditions approved by the Minister, the local authority and the provincial or municipal government making the contributions.

Part I re-enacts with amendments the Dominion Housing Act of 1935.

Under the old Act the advance by the Minister was not to exceed 20 per cent of the cost of construction of the house or its appraised value, whichever was less; now the maximum advance is 25 per cent. The joint advance made by the Minister and lending institution or local authority is not to be less than 70 per cent or more than 80 per cent of the lending value of the house, except in the case of a single family dwelling constructed by the owner for his own use where the lending value does not exceed $2,500 the advance is not to be less than 50 per cent or more than 90 per cent of it. Provision is made for the Minister to pay losses sustained by the lending institution in certain cases up to a specified amount. Special protection is given for losses incurred through loans in small or remote communities. The aggregate amount of loans to be made and losses and expenses to be paid is not to exceed $20,000,000 less the amount of advances made under the 1935 Act. The former Act made no provision for payment of losses, but advances, salaries and expenses were not to exceed $10,000,000.

Construction Industry

Another new statute designed to provide work for the unemployed is the Municipal Improvements Assistance Act which authorize the Minister of Finance to make loans to any municipality, the aggregate not to exceed $30,000,000, for "constructing or making extension or improvements to or renewals of" a municipal waterworks system, gas plant, electric light system or other municipal project, provided that the project will increase the annual net revenue of the municipality sufficiently to pay the annual charges for interest on and amortization of the loan.

The conditions of the loan are: that the municipality must submit detailed financial estimates to show that the project will be self-liquidating, the work must be urgently needed and assist in the relief of unemployment, it must have the approval of the Lieutenant-Governor in Council of the province, and the Provincial Government must guarantee to the Government of Canada the payments for interest on and amortization of the loan. If a loan is for more than $200,000, it must not exceed the proportion of the sum of $30,000,000 which the population of the municipality bears to the population of Canada. Loans are to bear interest at 2 per cent. The municipalities must give security for the amount of any loan and may also be required to give a mortgage or charge on the project to be constructed.

Regulations issued under the Act are noted elsewhere in this issue of the Labour Gazette.

Transportation

The Transport Act, 1938, to come into force on proclamation, provides for a Board of Transport Commissioners for Canada with authority in respect of transport by rail, water and air to replace the Board of Railway Commissioners. A section added by the Senate sets out out that it shall be the duty of the Board to perform its functions "with the object of co-ordinating and harmonizing the operations of all carriers engaged in transport by railways, ships and aircraft."

Miscellaneous

The Civil Service Act was amended to stipulate that no appointment is to be made to a local position in a province and no employee may be transferred from one province to another without examination in English or French, whichever is the language of the majority of the persons with whom he is required to do business.

An amendment in the Income War Tax Act adds to the classes of income exempt from taxation, one-tenth of any lump sum payable by an employer for each of the first ten years after the establishment of an employees' superannuation or pension scheme.

Bills not Passed

A Bill to amend the Criminal Code which failed to reach a vote would have made it an indictable offence for any employer or his agent, whether a corporation, company or individual to refuse to employ or to dismiss from his employment any person on the ground that such person was a member of a trade union or of an association of employees formed for

62327—3½

the purpose of advancing their interests in a lawful manner and of protecting their conditions of work, or for any employer to seek by intimidation, threat of dismissal or by dismissal or by threatening or imposing any pecuniary penalty to prevent workmen from belonging to a trade union or association or to conspire or agree with any other employer or his agent to do any of these things. A maximum fine of $100 or three months' imprisonment was provided for any individual offender and $1,000 for a company or corporation violating the Act. These offences were similar to those set out in the draft Bill of the Trades and Labour Congress on the right of employees to organize.

A Bill to amend the Lord's Day Act by making corporation officials personally liable for its violation, passed the House of Commons with minor amendments, but was so altered by the Senate that the sponsor withdrew it on its return to the House of Commons. The Bill as introduced provided for the fining or imprisonment of "any person, being a director, an officer, a superintendent or an employee of a corporation, to whose directions or orders any employee is. . . bound to conform" who authorizes or directs an employee to violate the Act. On its return from the Senate the Bill contained no provisions for personal liability of officials, the section being amended only to increase the fine to be paid by the corporation for a second or subsequent offence, the minimum penalty remaining unchanged.

RECENT REGULATIONS UNDER LABOUR LEGISLATION

BELOW are summaries of the regulations issued under a recent Act of the Dominion Parliament to aid municipalities in stimulating the construction industry and of the revised regulations under the Alberta Industrial Standards Act. There is also a review of the existing regulations under the Ontario Apprenticeship Act.

Dominion Municipal Improvements Assistance Act, 1938

An Order in Council of July 20 approves regulations under this Act. Municipalities obtaining loans from the Dominion Government are required to enforce certain labour conditions on any projects carried out under the Act. All contracts for projects must contain the fair wages and hours clause inserted in contracts for Dominion public works. That is, hours of work are limited to eight a day and 44 a week and the wages paid must be those generally accepted as current for competent workmen in the district. No person other than a resident of Canada may be employed on such work and there may be no favouritism or discrimination in respect of employment by reason of race, religious views or political affiliations.

The regulations set out the form in which contracts and debentures as well as applications for loans should be made. If the Governor in Council approves of the application for the loan the Minister must forward to the municipality a copy of the agreement which the municipality executes and returns to the Minister in duplicate with a debenture or debentures in the form required.

Alberta Industrial Standards Act

An Order in Council of June 29 makes several changes in the regulations of June 9, 1936, (LABOUR GAZETTE, July, 1936, p. 663.) Instead of themselves fixing a minimum wage rate for employees handicapped by age or disability the Advisory Boards established under the Act now have power only to recommend to the Board of Industrial Relation a minimum rate for these classes; other changes made by the regulations are consequent on the replacing of the Commissioner of Labour by the Board of Industrial Relations. As before, every employer affected by any schedule must keep records with particulars concerning his employees and working conditions, and a new section applying to such places of business as one-man barber shops where the proprietor himself is the only workman provides that where there is no employer to keep records the responsibility falls on the person who performs the work, or if it be done by a partnership, on one of its members. Every Advisory Committee must now keep minutes of its meetings and furnish a copy of them to the Board of Industrial Relations.

Ontario Apprenticeship Act

The following is a summary of the regulations made under this Act. In 1932, general regulations laid down conditions for all trades and special trade regulations were applied to the trades covered by the Act, carpentry, bricklaying and masonry, painting and decorating, plastering, plumbing and steamfitting, sheet metal work, and electric wiring and installation (LABOUR GAZETTE, December, 1932, p. 1280). The general regulations were

replaced on June 17, 1936, and amended on January 16 and July 22, 1937. Regulations governing the building trades mentioned above were amended on May 28, 1938. In addition trade regulations have been issued for the two trades brought under the Act in 1936, motor vehicle repair trade, barbering and hairdressing establishments and barbering and hairdressing trade schools.

The general regulations set out the obligations of employer and apprentice under the apprenticeship contract. An apprentice is required to render faithful service, avoid damage and waste of the employer's tools and goods, furnish satisfactory reasons for absences from employment, attend regularly the classes in trade training and related subjects prescribed by the Ontario Industry and Labour Board and notify the Director of Apprenticeship or district inspector immediately when he ceases to be employed with the employer to whom he is indentured. For non-attendance at prescribed day classes he will lose his wages and for wilful failure to attend day or evening classes, where such failure could reasonably be avoided, the apprenticeship contract may be cancelled.

Every employer who is party to a contract of apprenticeship is obliged immediately to notify the director or district inspector when employing a minor or apprentice in any designated trade or making any change affecting the contract of apprenticeship, provide adequate trade training according to the facilities at his disposal and the character of the work, keep the apprentice employed as long as work is available, refrain from employing any person in a designated trade except a journeyman when one or more of his indentured apprentices in such trade are idle, pay the wages fixed in the contract and co-operate with the director or district inspector in the transfer of an apprentice. All changes in contracts must be approved by the Industry and Labour Board. The employer must also submit to the Board an annual report on the progress and conduct of the apprentice.

An application for registration as an apprentice must be made on a prescribed form and sent to the director or local inspector of the Department of Labour. A registered apprentice must be 16 years of age and have completed the work of senior fourth book of an elementary school or its equivalent. He may be required to produce a medical certificate or pass a medical examination. The first three months of apprenticeship are a probationary period during which either party may terminate the contract.

No minor may be employed in any of the building trades mentioned above or in the motor vehicle repair trade and no person may be employed in a barbering or hairdressing establishment for a longer period than three months without entering into a contract of apprenticeship. A minor, however, who has previously served three months at the trade with an employment record satisfactory to the director must be placed under contract within one month after date of commencement.

Triplicate copies of each apprenticeship contract must be forwarded by the employer to the director for the approval of the Industry and Labour Board and for registration. One copy is to be retained by the director, one returned to the employer and the other sent to the apprentice. When an apprentice is permanently transferred from one employer to another, the form of transfer attached to the apprenticeship contract is to be executed in triplicate and the transfer registered in the same manner as a new contract. Temporary transfers may be arranged by the local apprenticeship committees or the director but a permanent transfer must be approved by the Board. An apprentice must carry at all times the identification card furnished by the Board.

The period of apprenticeship, which is to be fixed in the contract, may with the Board's approval, be shortened by the employer where an apprentice has had previous experience in the trade. Where the employer fails to provide at least 32 weeks' employment in each year of the apprenticeship period, inclusive of time spent in day classes, the apprentice must complete this number of weeks of employment before being advanced to the next year. The Board may require that the period of apprenticeship be extended, where, in its opinion, the apprentice has not made sufficient progress. This extension may continue until evidence of competency is adduced or the Board terminates the contract without granting a certificate.

The hours of employment of apprentices are to be the same as those of journeymen engaged in the trade. Overtime may be worked but is not to be counted as part of the period of apprenticeship.

The minimum rates of wages for apprentices, which are to be set forth in trade regulations, are to be fixed by the Provincial Advisory Committee on the recommendation of the local trade apprenticeship committee and are subject to the approval of the Board. Where there is no local apprenticeship committee, the employer is to consult the Board and obtain its approval of the rates to be paid by him. An apprentice must be paid on an hourly basis according to the terms of his contract. The

rates provided in the apprenticeship contract may be revised on written application to the director. On receipt of such an application, the director must notify the parties concerned and convene a conference to hear their representations. Following such a hearing and with the approval of the Board, he may change the wage rates.

Minor disputes between an apprentice and his employer may be settled by the director or the local apprenticeship committee but those not of minor nature or involving a matter of policy must be referred to the Board.

Every apprentice who completes his apprenticeship and the school training prescribed to the satisfaction of the Board is to be granted a Certificate of Apprenticeship.

Building Trades

Wage rates for apprentices in the building trades were fixed for the first time by the amendment to the regulation governing these trades referred to above. This amendment provides that no apprenticeship contract may be approved for any of the building trades designated under the Act in which the rates are such that the apprentice will earn less than $6 per week during the first year; $8 per week during the second year; $12 per week during the third year; $16 per week during the fourth year. It is further stipulated that any decision of the Board regarding the interpretation of this provision is final.

Motor Vehicle Repair Trade

Regulations applying to the motor vehicle repair trade, which were approved by Order in Council on July 16, 1936, relate to persons engaged in the motor vehicle repair trade except gasoline or oil station attendants and persons employed solely as lubricators, polishers, washers, storage attendants, salesmen, tire repairers or in a clerical capacity.

Every motor vehicle repairer who, at the time such a trade became a designated trade under the Act, has had seven or more years' experience in the trade and whose qualifications are satisfactory to the Provincial Advisory Committee and every one who has had more than five and less than seven years' experience but who passes the prescribed examination or who has had more than two and less than five years' experience but who at the end of five years passes an examination prescribed by the Board must be granted a certificate of competency on the payment of the proper fee. If in the last case the motor vehicle repairer is unsuccessful, he may try such another examination at the end of one year.

A Certificate of Qualification must be renewed annually before the 31st day of December and where the holder fails to do this for three consecutive years he is obliged to take a new examination before his certificate can be reissued to him by the Board. The fee for an examination or for a certificate is one dollar. For impersonating another person at an examination or having some one impersonate him or for any improper practice in connection with the trade, the Board may cancel a certificate after giving notice to the holder and allowing 10 days for appeal.

Every certificate of qualification must be posted in the garage or workshop in which the holder is employed and the proprietor of every garage or business engaged in the motor vehicle repair trade must forward to the director any forms required.

Every person between the ages of 16 and 21 years entering the trade after the coming into force of these regulations must enter into a contract of apprenticeship for at least five years including the probationary period. Persons in the trade but with less than two years' experience at the time the trade was brought under the Act are also to be regarded as apprentices but the period of time spent in the trade is to be counted as part of the apprenticeship.

An apprentice who has attended a technical or vocational school, approved by the Board, and has specialized in a course of motor mechanics for at least two years and is certified by the school to that effect must be given credit for serving two years at the trade. For the purpose of determining the age of commencement of apprenticeship where an apprentice is over 21 years of age, time spent in a technical or vocational school may be calculated in the apprenticeship period.

No contract of apprenticeship may be approved which fixes a lower hourly wage than 13 cents during the first year, 17 cents during the second year, 21 cents during the third, 26 cents during the fourth or 34 cents during the fifth and subsequent years.

Subject to the approval of the Board, the proprietor of a garage engaged in the repair of motor vehicles may employ one apprentice where the employer is a mechanic or employs a mechanic, and may employ an additional apprentice for each additional mechanic employed. An apprentice, in this case, includes all motor vehicle repairers except mechanics but does not include an apprentice subject to a temporary transfer.

Barbering and Hairdressing Trades

Regulations for the barbering and hairdressing trades were approved by order in council

of January 16, 1937, and amended on May 28, 1938. "Hairdressing" includes all facial massage, manicuring, etc.

In addition to the rules governing certificates of qualification and examinations, it is provided that all persons carrying on the trade of barbering or hairdressing in premises other than barber or hairdressing shops and who are not holders of Certificates of Qualification for this trade must be registered with the Industry and Labour Board.

Any person who had been engaged as a barber or a hairdresser for three years or more when the Act was applied to the trade and whose qualifications are satisfactory, may be granted a certificate of qualification on payment of the prescribed fee. If his qualifications are not satisfactory to the Provincial Advisory Committee, it may require him to pass an examination subject to the approval of the Board. The fee for each examination may not be less than $1 or more than $5, as determined by the Board.

Any person holding a barber's certificate but not a hairdresser's certificate or vice versa may be permitted by the Provincial Advisory Committee to try an examination for the other trade without serving as an indentured apprentice.

Every person entering the barbering or hairdressing trade after the coming into force of these regulations or who has been in the trade less than three years at the time it became a designated one must enter an apprenticeship contract. The term of apprenticeship in the first case is five years including the probationary period; and in the second it is to be determined by the Advisory Committee. In the case of a person who has received training in a school or elsewhere prior to the commencement of his contract, the apprenticeship period may be shortened as the committee may determine.

Separate wage rates are fixed for apprentices in the barbering and hairdressing trades. A three months' probationary period without pay is permitted in both trades. For barbers, the minimum hourly rates set forth in an apprenticeship contract are 10 cents for the second three months, 15 cents for the second six months, 19 cents for the third six months, 22 cents for the fourth six months and for the third year 50 per cent of the total receipts taken in by the apprentice barber, but not less than 25 cents per hour.

For hairdressers, the minimum rates vary with the size of the municipality. In Toronto, Hamilton, London, Windsor and Ottawa the minimum is 10 cents per hour during the second three months, 15 cents during the second six months, 19 cents during the third six months, 22 cents during the fourth six months and 25 cents during the third year. In cities with a population of 10,000 to 50,000, apprentices may not be paid less than 8 cents per hour during the second three months, 12 cents during the second six months, 15 cents during the third six months, 18 cents during the fourth six months, and 22 cents during the third year. In municipalities with a population of less than 10,000, the minimum rate is one cent less than in cities until the third year when it is 19 cents an hour.

Every proprietor of a barbering or hairdressing shop may, with the approval of the Board, employ one apprentice and where the employer is a master barber or hairdresser or where he employs such a person, an additional apprentice may be hired for each additional five barbers or hairdressers employed.

An order in council of June 29, 1937, approved regulations, effective July 12, 1937, providing for the licensing of all schools professing to train persons for the barbering trade except barber shops training students pursuant to the Apprenticeship Act or schools or colleges subject to the jurisdiction of the Department of Education. Similar regulations applying to hairdressing trade schools came into force on September 1, 1937. Both sets of regulations fix maximum hours of instruction for students, state the sanitary conditions to be maintained in these establishments and provide for the examination of students who have completed the period of training required by the schools by a board of examiners appointed by the Provincial Advisory Committee.

No barbering or hairdressing school may be open to the public before 9 a.m. or after 6 p.m. or on a statutory holiday. In addition, barbering schools must be closed every Wednesday noon. A special permit may be granted to any licensed hairdresser school to operate for the convenience of students who can only attend evening classes. Every student in both classes of schools must be given one hour off for lunch during the day.

Instructors in barbering schools cannot be paid less than $20 per week but no minimum wage is fixed for instructors in hairdressing schools.

According to a press despatch, officials of the Consolidated Mining and Smelting Company of Canada Limited, announced recently that 1,988 shares of company stock would be distributed among employees of the plants at Trail, Rossland, and Kimberley. The shares to be distributed have a present-day value of approximately $120,000 it was stated.

FIRST CONFERENCE OF QUEBEC PROVINCIAL FEDERATION OF LABOUR

FEATURED by a representative attendance, the first conference of the Quebec Provincial Federation of Labour since it was chartered (in January, 1938) was held at St. Hyacinthe, P.Q., on July 16 and 17. Following the formal opening conducted by Mr. Ovila Bonnette, president of the St. Hyacinthe Trades and Labour Council, the remainder of the convention proceedings were under the direction of Mr. Raoul Trepannier, president of the provincial Federation.

Among the guest speakers were: Hon. Damien Bouchard, M.L.A., and Mayor of St. Hyacinthe; Mr. T. A. Fontaine, M.P. for St. Hyacinthe-Bagot; and Mr. Cyprien Miron, conciliation officer of the provincial Department of Labour, who brought the greetings of Hon. William Tremblay, provincial Minister of Labour.

At the first session, the delegates were also addressed by Mr. R. J. Tallon, secretary-treasurer of the Trades and Labour Congress of Canada, who congratulated the officers of the Federation on the success they had achieved.

The chairman of the Credentials Committee, Mr. Jack Cuppello, submitted a report stating that 187 delegates had presented their credentials and were found to be in order.

Secretary-Treasurer Mr. Gus. Francq presented the reported on legislative activities and the progress and work accomplished along organization lines, also the financial statement of the Federation.

In the discussion on the constitution, the focal point seemed to be the participation or non-participation of the Federation officers in politics. The clause of the constitution pertaining to this matter, which was adopted after considerable debate, was as follows:

"Article 15. Any officer of the Federation desiring to be a candidate in a federal, provincial or municipal election shall before doing so resign as an officer of this Federation; nor shall any officer be permitted to address a political meeting or lend his name or his title to any candidate."

Resolutions Adopted

The 69 resolutions submitted to the conference covered a wide range of social-labour subjects. Many of the resolutions dealt with recent provincial labour legislation, and criticism was directed against some of these measures, particularly Bills 19 and 20 amending the Fair Wage Act and the Act respecting Workmen's Wages; also Bill 88 providing for the incorporation of trade unions.

The conference registered its opposition to the competition of prison labour. It also instructed the Executive to institute an inquiry into the conditions of workers in the textile industry. Another adopted resolution sought the application of the 40-hour week.

The recommendations contained in a number of other resolutions were as follows:

Abolition of slum clearance and construction of workmen's dwellings.

Teaching of French and English in all primary schools.

Reduction in cost of radio licences.

Institution of a special tribunal for labour cases.

Establishment of a system of hospitalization and medical care.

Vacations with pay for all workers.

Labour representation on all government commissions and boards.

Abolition of the Legislative Council.

Granting of the franchise to women with equal civil and political rights.

Election of Officers

The election of officers resulted in acclamations for Mr. Raoul Trepannier as president, and Mr. Gus. Francq as secretary-treasurer. The General Vice-Presidents elected were: Messrs. J. A. D'Aoust, Hull; Omer Fleury, Quebec, and J. B. Arsenault, Three Rivers.

Regional Vice-Presidents were elected as follows: District of Montreal, Mr. Jack Cuppello; District of Quebec, Mr. J. Michael Walsh; District of Three Rivers, Mr. Emile Lajoie; District of St. Hyacinthe, Mr. O. Bonnette; District of Sherbrooke, Mr. W. M. John; District of Kenogami-Lake St. John, Mr. W. O. Brown; District of Hull-Aylmer, Mr. Fred Dickens.

According to a bulletin published by the Industrial Accident Prevention Associations (Ontario), information supplied by the Workmen's Compensation Board of Ontario indicates that during July there were 4,993 accidents reported to the Board, compared with 6,763 accidents reported in July, 1937. Of the accidents occurring in July 1938, 21 were fatal. Total awards for compensation and medical aid during July amounted to $406,680.21, compared with $423,203.32 expended in the same month of last year. Of this amount $82,309.06 was expended on medical aid.

WORKING HOURS LEGISLATION IN GERMANY

THE British *Ministry of Labour Gazette* for July contains a summary of the revised text of the German Working Hours Order, promulgated on April 30, 1938, but which takes effect on January 1, 1939, except in Austria where the date of operation will be subsequently determined. Apart from the exclusion of the working hours of children and young persons from the scope of the new Order its provisions do not differ in principle from the Order of July 26, 1934. The text of the regulation has been simplified and anomalies removed. Extracts from the summary of the recent Order, as given in British *Ministry of Labour Gazette*, follow:

Scope.—The provisions of the Order apply to male and female manual and non-manual workers of 18 years of age and over, and to all undertakings and institutions other than those engaged in agriculture, horticulture, forestry, hunting, cattle rearing, fishery and maritime and air transport (except ancillary shore and ground services) and undertakings of an industrial character ancillary to agricultural and forestry undertakings, if working solely on behalf of their primary undertakings. The working hours of the following classes of employed persons are outside the scope of the Order: officials, persons occupying managerial posts, other non-manual workers who are in control of at least 20 members of staff or whose yearly emoluments exceed the limit for compulsory pensions insurance (7,200 RM.), and qualified assistants in chemists' shops. The working time of adult workers in the bakery and confectionery industry and of the nursing staff in hospitals is to continue to be regulated by existing special enactments.

Normal Working Hours.—The normal working time is fixed in the Order at eight hours a day, exclusive of rest intervals. If the working time is regularly curtailed on certain days of the week, working time on other days in the same, the preceding or the following week may be correspondingly lengthened. An unequal distribution of the weekly working time is permissible also in undertakings in which, in the judgment of the Factory Inspectorate, such a distribution is required by the nature of the work. Time lost owing to works' and national or other public holidays may be made up by extensions of working time during five consecutive weeks. No rearrangement of working time may, however, involve employment for more than 10 hours on any day, except with the sanction of the Factory Inspectorate.

Extension of Working Hours.—(The Order sets forth the extensions to the normal working period in various types of work and the conditions under which they are sanctioned).

Rest Periods.—All workers must receive, at the end of the day's work, an uninterrupted rest period of at least 11 hours, or, in hotels and restaurants and the transport industry, 10 hours. Exceptions on grounds of necessity may be sanctioned by the Factory Inspectorate. Male workers employed for a period of more than six hours must be granted a rest interval of half-an-hour or two rest intervals each of a quarter-of-an-hour. The rest periods of women workers are subject to special regulation (*see* below). The working time of shift workers employed on continuous processes in three shifts of eight hours each must be broken by suitable short pauses, which are counted as part of the normal working time.

Emergencies.—The provisions of the Order respecting the limits of working hours and rest periods are not applicable to occasional work necessary in emergencies (especially when danger to raw materials, foodstuffs and other products is threatened), or to the work of a small proportion of the staff who must be employed on particular days on work necessary to prevent damage or loss.

Overtime Payment.—For work in excess of normal hours, other than preparatory or complementary work or work necessitated by accidents or other unavoidable disturbances, an increased rate of payment is prescribed (normally 25 per cent, above the usual wage rates, unless otherwise ordered by the competent authorities or agreed between the parties). Overtime rates are not applicable to extensions of normal hours sanctioned by collective labour regulations or the Factory Inspectorate, if such extended hours regularly include a considerable period of waiting for work. In industries which are regularly subject to considerable seasonal increases of activity, the Federal Minister of Labour may determine that the claim to overtime rates shall lapse in so far as the overtime is balanced by a curtailment of working time during the slack seasons.

Increased Protection for Female Workers.—The normal working hours of female workers of 18 years of age and over are the same as those of male workers of corresponding age. The employment of women is, however, forbidden in certain branches of activity, viz., underground work in mines, the transport and loading of mine products, work at coke ovens, and the transport of materials on building operations. The Federal Minister of Labour

may, moreover, forbid, or impose conditions upon, the employment of women on work involving special danger to health and morals. During pregnancy and lactation, women workers may at their own request be exempted from work in excess of normal hours. On preparatory and complementary work, women may not be employed for more than one additional hour a day. When the period of work exceeds 4½ hours, women workers must be granted rest pauses varying in total duration from 20 minutes to one hour according to the length of the working period, and they may not be employed for longer than 4½ consecutive hours without a rest pause.

Except in the transport industry, hotels and restaurants, hospitals, theatres, etc., female manual workers may not normally be employed between 8 p.m. and 6 a.m., or, in undertakings in which multiple shifts are worked, between 11 p.m. and 6 a.m.

The provisions regulating the working hours and rest periods of women may be modified, on general or particular grounds of necessity, by the Federal Minister of Labour or the Factory Inspectorate, and they are not applicable to occasional work during emergencies.

Closing of Shops.—Shops, other than chemists' shops, must be closed for business between 7 p.m. and 7 a.m. Market and railway platform stalls, hawkers, etc., are subject to similar restrictions. The closing hour of all shops, may, however, be deferred until 9 p.m. on 20 days in the year, to be specified by the local police, and food shops may open at 5 a.m. at all times.

General Provisions.—The Federal Minister of Labour may authorize exceptions additional to those provided in the Order, if urgently necessary in the public interest. Infractions of the provisions of the Order are punishable by fine or imprisonment. Undertakings which fail to comply with Orders curtailing working hours in dangerous occupations or restricting the employment of women may be temporarily closed by the Factory Inspectorate. The execution of the requirements of the Order is, in general, subject to the supervision of the Factory Inspectorate, the mining authorities, and, as regards the closing of shops, the local police.

Employees' Welfare Plans of Canadian Companies

Particulars have recently been received regarding employees' welfare plans of John Labatt Limited, and Phillips Electrical Works Limited.

Hospital Insurance Plan Adopted by John Labatt Limited

It was announced recently by Mr. John S. Labatt, president of John Labatt Limited, that the company would assume the cost of employees' hospital expenses. In a circular issued to all employees it was stated in part that "The burden of hospital expenses is, in many cases, a serious load for the individual to carry, and bills resulting from sickness may oftentimes take most of an individual's savings. Therefore, the company have pleasure in offering to all employees a plan of Hospital Insurance."

According to the plan each employee receives an allowance every day for which he is confined to any licensed hospital for sickness and off-the-job accidents, as well as certain indemnities for the use of operating rooms, anaesthetics, etc. The plan has been adopted without cost to the employees, and is supplementary to the contributory Group Life and Sickness and Accident Insurance Plans which have been in force for a number of years.

Pensions and Disability Plan of Phillips Electrical Works Limited

The Phillips Electrical Works Limited, with factories at Brockville and Montreal, has in operation a pensions and disability benefit plan which is non-contributory insofar as the employee is concerned and effects every employee whose service with the company has exceeded two years. Disability Pensions are payable in varying amounts according to earnings and length of service in all cases of sickness and non-compensable accident. In cases of compensable accident, employees receive the difference between their hourly rates and the rate paid by Workmen's Compensation. Any employee with twenty years' service may ask for pension on reaching the age of sixty; in the case of women, at age of fifty-five. Pensions payable are graded according to earnings and length of service, with a minimum of $15.00 and a maximum of $100.00 a month.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA, JUNE, 1938

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on July 1 was 10,791, the employees on their pay-rolls numbering 1,086,773 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for June was 1,876, having an aggregate membership of 221,003 persons, 13·5 per cent of whom were without employment on July 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from 70 centres in which the Employment Service of Canada is situated, showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

(1) Employment Situation at the Beginning of July, 1938, as reported by Employers

The industrial situation showed further improvement at the beginning of July according to data tabulated by the Dominion Bureau of Statistics. The reported increase in employment, however, was not equal to the average gain from June 1 to July 1 in the experience of other years since 1920, so that while the unadjusted index advanced from 111·9 in the preceding month to 113·5 at the beginning of July, there was a slight falling-off in the seasonally-adjusted index, which declined from 111·9 at June 1 to 111·3 at the date under review.

Statistics were received from 10,791 employers whose pay-rolls aggregated 1,086,773, compared with 1,072,123 at June 1. The number in employment was smaller than at July 1, 1937, when the reported additions to staffs had been substantially larger. However, activity at July 1, 1938, was with this exception greater than at the same date in other years since 1930.

The unadjusted indexes at July 1 in recent years of the record are as follows: 1938, 113·5; 1937, 119·1; 1936, 104·6; 1935, 99·5; 1934, 101·0; 1933, 84·5; 1932, 88·7; 1931, 103·8; 1930, 118·9; 1929, 124·7; 1928, 117·7 and 1927, 109·7.

Employment in manufacturing as a whole showed a slowing-up at the beginning of July. There were gains over June 1 in food, lumber, pulp and paper, beverage, clay, glass and stone and musical instrument factories and in electric light and power, but leather, rubber, tobacco, chemical, textile and iron and steel plants reported curtailment. The losses in textiles and iron and steel were seasonal in character, but they exceeded the average losses recorded at July 1 in the last seventeen years.

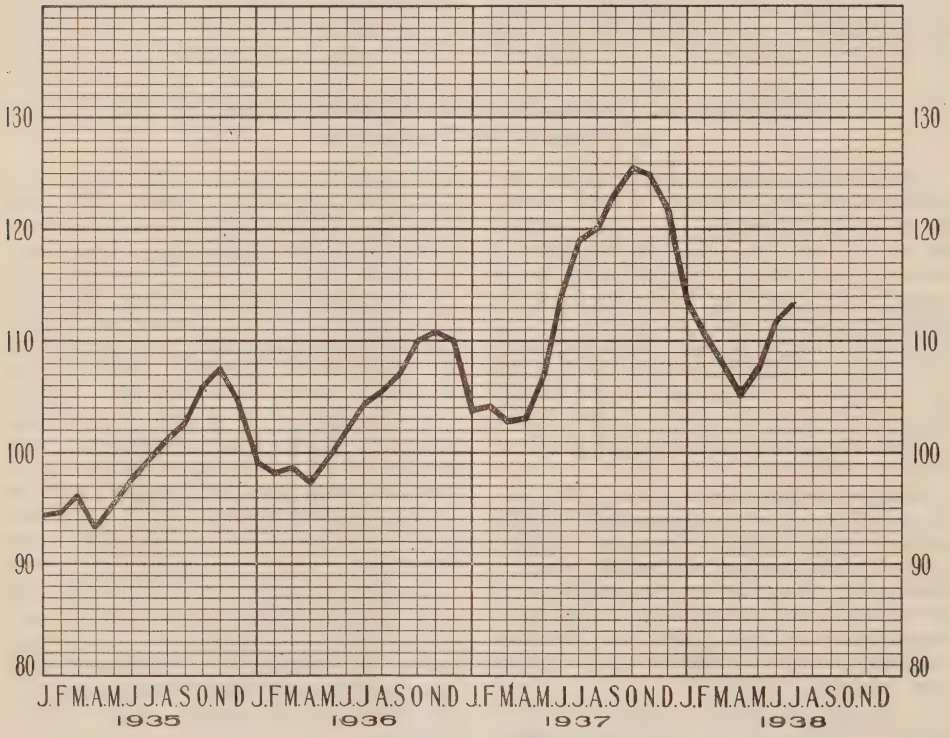
Among the non-manufacturing industries, mining (except of coal), communications, services, transportation, trade and construction and maintenance indicated substantial improvement; except in construction, the increase in each of these was equal to or slightly in excess of the average gain indicated at July 1 in the years, 1921-1937. On the other hand, there were seasonal losses in logging and coal-mining, while railway construction and maintenance also released employees.

The firms furnishing statements for July 1 of last year had numbered 10,271, and their employees had aggregated 1,134,318, an increase of approximately 45,700 over their June 1, 1937, staffs. Improvement had then been indicated in most of the main industrial groups.

Employment by Economic Areas

The trend was decidedly upward in all provinces except Quebec, where a moderate recession was indicated. Of the increases elsewhere recorded, those in the Maritime Provinces were proportionately greatest, although firms in Ontario reported numerically the largest increase. The index number of employment in Quebec was higher than at July 1,

1937, and other years of the record; in the Maritime Provinces, Ontario and British Columbia, activity was less than at the beginning of July of last summer, but greater than in other years since 1930, while in the Prairies industrial employment generally was quieter than July 1 of either 1936 or 1937, although it exceeded in volume that reported in the early summer of other years since 1931.



Maritime Provinces.—Statements were tabulated from 791 firms employing 85,302 workers, as against 81,107 in the preceding month. This increase, (in which the three provinces in this area shared), brought the index to 116·7 at July 1, 1938, when it was over 19 points lower than at the beginning of July in 1937; the gain over the preceding month had then been much larger. Highway construction reported the most pronounced improvement at the date under review, but there were also additions to staffs in lumber, vegetable food and pulp and paper mills, and in communications, railway and building construction and maintenance, services and trade. On the other hand, animal food, textile, chemical and iron and steel factories were slacker, the losses being partly seasonal in character; logging, coal-mining and transportation also showed curtailment.

The 723 employers in the Maritime Provinces whose returns were included in the employment survey for July 1, 1937, had reported 98,060 workers as compared with 88,038 in the preceding month.

Quebec.—Manufacturing, on the whole, showed curtailment in Quebec; increases in food, beverage, lumber, pulp and paper, electric light and power and some other classes were more than offset by reductions in leather, chemical, iron and steel and textile factories. In the non-manufacturing industries, mining, local transportation, building construction and services reported considerably heightened activity. On the other hand, steam railway operation, highway and railway construction and maintenance and logging released employees. The forces of the 2,654 co-operating employers aggregated 336,922 persons, compared with 338,655 at June 1, a decline of 1,733 workers or 0·5 per cent. This loss was

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

contra-seasonal in character, the trend in Quebec having been upward in thirteen of the preceding seventeen years for which data are available. Nevertheless, industrial activity in that province continued at a rather higher level than at July 1 of earlier years of the record. Standing at 119·9 at the latest date, the index was nearly two points higher than at July 1, 1937, when the 2,444 firms making returns had employed 328,614 persons, or some 12,400 more than in the preceding months.

Ontario.—Employment continued to increase in Ontario, where the 4,711 firms whose statistics were tabulated reported 445,081 employees, or 6,130 more than at June 1. The situation at July 1 in previous years has usually, though not invariably, shown improvement over the preceding month, the average change being a moderate increase; the gain noted at the date under review approximated the average, but was much smaller than that indicated at the same date in 1937, when the index was eight points higher. The gain at July 1, 1938, took place mainly in logging, transportation, construction, services and trade, while manufacturing was slacker. The largest losses in the last-named were in the iron and steel industries, but pulp and paper, tobacco and textile factories also released employees. On the other hand, additions to staffs were reported in the food, lumber and some other industries.

The 4,538 employers furnishing statistics for July 1, 1937, had reported 475,745 workers, as compared with 462,573 in the preceding month.

Prairie Provinces.—The most important expansion recorded in this area was in construction and maintenance work on the highways, but building construction, services, trade, transportation, communications, mining and manufacturing also showed gains; those in the last-named took place largely in the food and iron and steel groups. On the other hand, logging and coal-mining were seasonally slacker, and railway construction and maintenance provided work for a smaller number of men. Data were compiled from 1,512 employers with an aggregate staff of 127,076 persons at July 1, as against 123,512 in their last return. This gain of 3,564 men and women was not equal to the average increase at July 1 in the last seventeen years. The index, at 99·8 at the date under review, was a few points lower than that of 104·0 at July 1, 1937, when the 1,469 co-operating firms reported 132,494 employees, as compared with 126,535 at June 1, 1937.

British Columbia.—Continued advances were made in British Columbia, where a total working force of 92,392 persons was employed at the date under review by the 1,123 firms whose statistics were received, and who had 89,898 on their staffs at the beginning of June. Manufacturing, (particularly of food and lumber products) was seasonally busier at July 1, 1938, and mining, communications, transportation, building and highway construction also reported considerable improvement; services showed a moderate gain, while slight curtailment was indicated in trade, and logging camps released a large number of men, partly as a result of the bush-fire hazard. The employment situation was not so favourable as at the same date in 1937, but activity was at a higher level than at July 1 in the years, 1936-1931. The 1,097 establishments reporting for July 1, 1937, had employed 99,405 men and women, an increase of 4,095 over their staffs in the preceding month.

Table 1 gives index numbers by economic areas.

Employment by Cities

Six of the eight centres for which separate tabulations are made—Quebec, Toronto, Ottawa, Hamilton, Winnipeg and Vancouver—showed heightened activity, while the tendency was downward in Montreal and Windsor. The largest gains were in Vancouver. Except in Montreal and Quebec, employment in these cities was not so active as at July 1, 1937, and in Ottawa the index was also lower than at the beginning of July in 1936; with that exception, industrial activity at July 1, 1938, was at a higher level in the eight centres whose data are segregated than at the same date in the preceding five or six years.

Montreal.—Employment in Montreal showed a moderate falling-off, mainly in transportation and manufacturing; within the latter, leather, textile and iron and steel plants reported contractions, more than off-setting gains in food, beverage and some other factories. Construction and trade also recorded improvement. A combined working force of 162,089 men and women was indicated by the 1,530 co-operating employers, who had 163,767 workers at June 1. An increase had been noted at July 1, 1937, when 1,405 firms had reported a staff of 158,509; the index then was fractionally lower, standing at 105·5 as compared with 106·4 at the latest date.

Quebec.—An upward movement was reported in Quebec City, where statements were tabulated from 183 establishments with 14,832 employees, compared with 14,115 in the preceding month. Employment in trade, services and manufacturing advanced, while other industries showed little change on the whole. The index was higher than at the beginning of July, 1937, when a considerable

increase in employment had also been indicated by the 179 employers whose data were then received, and whose payrolls aggregated 14,204.

Toronto.—There was continued improvement in industrial activity in Toronto at July 1, when transportation, construction and trade were brisker. Little change on the whole, was shown in other divisions. The 1,606 firms furnishing data enlarged their staffs by 1,082 workers to 134,634 at the beginning of July. At the same date of last year, the 1,540 co-operating business concerns had increased their working forces by 949 persons, to 136,277; the July 1, 1937, index stood at 109·5, compared with 107·4 at the latest date.

Ottawa.—Statistics were received from 200 employers with 14,085 men and women on their paylists, or 84 more than in the preceding month. There were slight increases in manufacturing, transportation, construction and trade. A much larger gain had been indicated at July 1, 1937, when 204 firms had reported 15,249 employees. Employment then was brisker than at the date under review.

Hamilton.—There was an important advance in Hamilton, where 1,051 workers were added to the forces of the 298 establishments furnishing information, bringing them to 35,185 at the beginning of July, 1938. Manufacturing showed improvement, notably in the textile and iron and steel divisions, and building and trade also showed increased activity. For July 1 of last year, 289 returns were tabulated showing a combined working force of 37,478, as compared with 36,820 at June 1, 1937; activity was then at a higher level.

Windsor.—A decline of 2,351 was recorded in the staffs of the 188 co-operating employers, who had 17,590 men and women in their employ at the date under review; the loss took place mainly in the iron and steel industries, but construction was also quieter. The index was considerably lower than at July 1, 1937, when a much smaller contraction had been indicated; the payrolls of the 178 firms then furnishing data had included 20,458 employees.

Winnipeg.—Communications, transportation, construction and trade registered moderate advances, while little general change occurred in manufacturing. An aggregate working force of 40,913 persons was reported by the 494 firms making returns; this was 1,008 more than at June 1. The improvement noted at the same date of a year ago had involved a rather larger number of workers, and the index of employment then was higher, standing at 99·2, as compared with 95·2 at July 1, 1938. The reports tabulated at the beginning of July of last summer, numbering 482, had shown a staff of 42,525.

Vancouver.—The trend of employment in Vancouver continued favourable, according to information from 467 establishments employing 36,128 persons, as against 34,638 in the preceding month. There were increases in all groups except trade, which showed a falling-off; the gains in manufacturing (which took place mainly in food and lumber factories) were most pronounced. Expansion on a somewhat smaller scale had been recorded by the 450 concerns co-operating at July 1, 1937, whose employees had numbered 37,069. Employment was then in greater volume than at the latest date.

Index numbers by cities are given in Table 2.

Employment by Industries

Manufacturing.—Employment in manufacturing showed a slight decline at July 1, repeating the downward movement indicated in seven of the seventeen years for which data are available; improvement over June 1 was, however, recorded at July 1 in the remaining years since 1920, and the average change from June to July in this period has been a very slight increase. The 6,180 establishments making returns at the latest date reported 569,570 employees, as compared with 572,121 at June 1. The unadjusted index declined from 112·3 in the preceding month to 111·8 at July 1, 1938, and the seasonally-corrected index also showed a recession, from 110·2 at June 1, to 109·5 at the date under review. While the situation was not so favourable as in the early summer of last year, employment was brisker than at the beginning of July in earlier years since 1929.

An analysis of the data for July 1, 1938, shows pronounced improvement in the animal and vegetable food, lumber and pulp and paper groups, with smaller gains in the musical instrument, beverage, clay, glass and stone, electrical apparatus, non-metallic mineral product, miscellaneous manufacturing and electric light and power industries. On the other hand, fur, leather, rubber, tobacco, chemical, textile and iron and steel plants were slacker. The greatest losses were those of a seasonal character in the textile and iron and steel divisions, in both of which the decreases were unusually large for the time of year.

At July 1 in recent years, the unadjusted indexes in manufacturing are as follows:—1938, 111·8; 1937, 119·0; 1936, 104·7; 1935, 98·5; 1934, 93·8; 1933, 83·0; 1932, 85·4; 1931, 97·2; 1930, 111·3; 1929, 120·3; 1928, 113·1 and 1927, 106·8.

The manufacturers furnishing statistics at July 1, 1937, had numbered 5,977, and their employees had aggregated 604,936, which was an increase of 5,570 over the preceding month.

Animal Products, Edible.—Additions to staffs were recorded in this group, 822 persons being taken on by the 326 establishments making returns, which had 26,862 in their employ. Considerable improvement was noted in fish-canning in British Columbia, and there were also gains in dairies. The index at July 1, 1937, was slightly higher than at the date under review, when the indicated increase was on a rather smaller scale.

Leather and Products.—Statements were received from 307 manufacturers in this division, employing 21,158 workers, as compared with 21,544 in the preceding month. The bulk of this seasonal decrease took place in boot and shoe factories, and occurred mainly in Quebec. The general situation was not so favourable as that recorded at July 1 of last year, although a larger decline had then been reported.

Lumber and Products.—Rough and dressed lumber mills showed substantially heightened activity, and employment in furniture and container factories was also brisker. The general increase in the lumber group, however, was not so large as that noted at July 1, 1937, when the index stood at 99·4, as against 89·9 at July 1, 1938. A combined working force of 47,796 employees was reported by the 904 firms co-operating at the date under review; this was 1,947 more than at the beginning of June. All provinces except Saskatchewan shared in the upward movement, but the gains in Ontario and British Columbia were greatest.

Musical Instruments.—Employment in musical instrument works considerably increased at July 1; 35 manufacturers employed 1,509 persons, or 221 more than in the preceding month. The situation was not so favourable as at the beginning of July, 1937, although a smaller increase had then been noted.

Plant Products, Edible.—The resumption of operations in fruit and vegetable canneries caused an important advance, which greatly exceeded that registered at July 1 of a year ago, when the index was slightly lower. Returns were received from 517 manufacturers of vegetable foods, having 36,681 operatives, as against 33,797 in their last report. The improvement took place mainly in Ontario and British Columbia.

Pulp and Paper Products.—There was a moderate decline in printing and publishing houses, while pulp and paper mills were busier. The 621 co-operating employers in the Dominion reported 65,021 workers, compared with 64,164 at June 1. A larger gain had been indicated in the group as a whole at July 1, 1937; the index of employment was then seven points higher.

Rubber Products.—Curtailment was registered in rubber factories, in which employment was slacker than in the summer of last year. Statistics were tabulated from 52 firms with 12,219 employees at the date under review, as compared with 12,596 in the preceding month.

Textile Products.—A further and larger contraction was reported by the 1,138 co-operating textile manufacturers, who employed 100,476 workers, or 2,827 fewer than at the beginning of June. The greatest losses were in cotton, silk, headwear, knitting and garment and personal furnishing factories, and occurred mainly in Quebec. A somewhat smaller decline had been indicated at the corresponding date in 1937, and the level of employment was then higher than at the date under review. The decrease was seasonal in character, the tendency having been downward at July 1 in thirteen of the seventeen preceding years for which statistics are available.

Tobacco.—Employment in this division showed a falling-off, according to data from 46 establishments employing 8,033 persons, compared with 8,456 in the preceding month. A small gain had been noted at the same date last year, when the index was about three points higher.

Beverages.—Further improvement was noted in the beverage industries; 140 establishments reported 9,241 workers, an increase of 370 over their June 1 staffs. Activity in those industries was at a higher level than at the same date last summer.

Chemicals and Allied Products.—There was a decline in the personnel of chemical factories; 292 firms had 17,591 employees, compared with 18,224 at June 1. The Maritime Provinces and Quebec reported most of the reduction in staffs. A minor loss had been shown at the beginning of July, 1937, when the employment index was fractionally lower.

Clay, Glass and Stone Products.—Further improvement was indicated in building material plants, the 213 co-operating establishments enlarging their forces by 228 persons to 10,555 at the date under review. There were moderate gains in Ontario and the Western Provinces. The level of employment was not so high as at July 1 of a year ago, when the trend had also been upward.

Electric Light and Power.—An increase was registered in electric current plants, 98 of

which reported a combined working force of 16,983 persons, as against 16,197 at the beginning of June. The index was considerably higher than at the same date in 1937, when there had also been a gain.

Electrical Apparatus.—There was an increase of 176 in the staffs of the 126 manufacturers furnishing data, who had 18,692 employees at July 1. Firms in Ontario reported most of the improvement. The number engaged in the production of electrical apparatus was much smaller than at July 1 in the preceding year, when a larger advance had been made.

Iron and Steel.—The trend in iron and steel factories was seasonably downward; the losses were on a much greater scale than those indicated at July 1 of a year ago, when employment was much more active. Curtailment at the date under review was noted in nearly all the various groups of this industry, those in automobile, railway car and locomotive shops being most pronounced. Returns were compiled from 909 employers whose forces aggregated 130,838 workers, as against 137,063 in the preceding month.

Non-Ferrous Metal Products.—A further moderate decrease was registered in non-ferrous metal products; the 180 co-operating manufacturers employed 24,583 operatives, or 100 fewer than in the preceding month. A gain had been reported at the same date of last year, when the index was some five points higher.

Mineral Products.—Continued improvement was shown in this division, in which the index, at 160·0, was several points higher than in July, 1937. Statistics were received from 104 employers whose staffs rose from 13,273 at June 1, 1938, to 13,371 at July 1.

Logging

There was a further shrinkage in logging, 2,153 persons being laid-off from the staffs of the 338 reporting firms, who employed 24,838 at July 1. The losses occurred in Quebec

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100)

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
July 1, 1921	88·6	99·9	83·1	89·1	94·0	82·2

July 1	113·5	116·7	119·9	114·0	99·8	108·0
Relative Weight of Employment by Economic Areas as at July 1, 1938	100·0	7·8	31·0	41·0	11·7	8·5

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated city, to the total number of all employees reported in Canada by the firms making returns at the date under review.

and British Columbia; in the latter, they partly resulted from the closing of camps on account of bush-fires. Improvement had been noted at the same date in 1937, when the index of employment was decidedly higher.

Mining

Coal.—There was a small, seasonal decrease in employment in coal-mines, 104 of which employed 23,225 men, as compared with 23,415 in their last report. There were gains in British Columbia, while lowered activity was indicated in the Maritime and Prairie Provinces. A smaller decline had been noted at July 1 of last year; but the employment index was then slightly lower.

Metallic Ores.—Another advance was reported in metallic ore mines; statements were tabulated from 220 operators employing 39,046 persons, or 291 more than at June 1. Most of the improvement occurred in Quebec and British Columbia. The general index, at 318·4, was several points higher than at July 1, 1937.

Non-Metallic Minerals, other than Coal.—There was a further increase in the pay-rolls of the 105 co-operating non-metallic mineral mines, which employed 9,218 workers, or 540 more than in the preceding month. Employment was not so brisk as at the beginning of July a year ago, although a smaller gain had then been made.

Communications

Continued improvement was indicated in this group, according to the reporting companies and branches, which had 23,284 persons on their pay-rolls, compared with 22,637 at June 1. Employment on both telephones and telegraphs was in greater volume. A similar increase on the whole had been recorded at July 1, 1937, but the index in this division was then fractionally higher.

July 1	106·4	109·1	107·4	106·8	109·9	128·8	95·2	111·0
Relative Weight of Employment by Cities as at July 1, 1938	14·9	1·4	12·4	1·3	3·2	1·6	3·8	3·3

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns at the date under review.

Transportation

Street Railways and Cartage.—Activity in the local transportation group showed a gain, 251 firms having 27,471 workers in their employ, as against 26,149 in the preceding month. A smaller advance had been noted at the same date in 1937, when the index was slightly lower.

Steam Railways.—Statistics tabulated from 99 companies and divisional superintendents in the steam railway operation group showed that they employed 58,406 workers at the beginning of July, or 256 more than in the preceding month; improvement was shown in Ontario and the Western Provinces. Expansion on a greater scale had taken place at July 1 of last year, and employment was then above its level at the time of writing.

Shipping and Stevedoring.—There was a further increase in the number engaged in water transportation, 121 companies having enlarged their staffs by 158 employees, bringing them to 18,040 at July 1. The index stood at 98·6, compared with 100·6 at the beginning of July, 1937, when a much more pronounced gain had been recorded. At the date under review, there were moderate advances in Ontario and British Columbia.

Construction and Maintenance

Building.—Continued improvement in employment was noted in building construction, but the gain was not equal to that indicated at July 1, 1937, and activity in this group was then at a higher level. The 817 co-operating contractors employed 25,220 workers, as compared with 22,597 in the preceding month. Expansion was noted in all five economic areas, that in Quebec and Ontario being most pronounced.

Highways.—The number of men engaged on road construction and maintenance substantially increased at the date under review,

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(AVERAGE CALENDAR YEAR 1926=100)

——	All Industries	Manf.	Log.	Min.	Comm.	Trans.	Constr.	Serv.	Trade

Relative Weight of Employment by Industries as at July 1, 1938	100·0	52·4	2·3	6·6	2·1	9·6	13·7	2·8	10·5

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated industry, to the total number of all employees reported in Canada by the firms making returns at the date under review.

when the 414 employers furnishing data had 95,343 employees, or 10,509 more than at the beginning of June. There were considerable advances in all provinces, except Quebec, but those in the Maritimes and Ontario were greatest. Employment in this group was brisker than at July 1, 1937, although the gains then indicated were on a larger scale.

Railways.—A combined working force of 28,643 persons was reported by the 37 contractors and divisional superintendents whose statistics were tabulated, and who had 29,175 employees at June 1. The largest losses were in the Prairie Provinces. Important additions to staffs had been noted at July 1 a year ago, and the index then was over 18 points higher than that of 71·6 at the date under review.

Services

Continued expansion was shown in the service group, according to returns from 508 employers with 30,797 persons on their staffs, as compared with 28,474 in the preceding month. The opening of the summer-hotel season caused most of the improvement, which was more extensive than that reported at July 1, 1937; when employment was in less volume. The tendency at the date under review was favourable in all five economic areas, the largest increases being in Quebec and the Prairie Provinces.

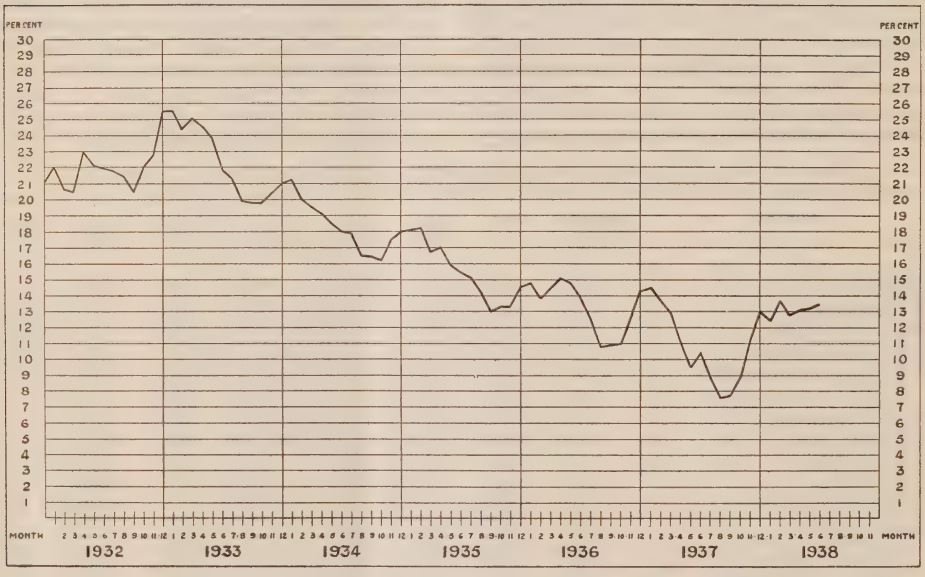
Trade

The trend of employment in wholesale and retail trade was upward, the gain in personnel in the latter, especially, being marked. Statements were tabulated from 1,512 firms having 113,672 employees, as against 112,265 at the beginning of June, 1938. Employment was in practically the same volume as at the same date last summer, when rather greater improvement had been indicated by the co-operating trading establishments.

Tables

Index numbers of employment by economic areas, leading cities and industries are shown in the accompanying tables, in which the columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada at the date under review.

Table IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (Average 1926=100)



Industries	[1]Relative Weight	July 1 1938	June 1 1938	July 1 1937	July 1 1936	July 1 1935	July 1 1934	July 1 1933

[1] For explanation of term "Relative Weight", see footnote to Table III.

(2) Unemployment in Trade Unions at the close of June, 1938

The term unemployment, as used in the following report, has reference to involuntary idleness due to economic causes. Persons who are engaged at work other than their own trades or who are idle due to illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with subsequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

There was little variation in the volume of unemployment recorded among local trade union members at the close of June from the preceding month, though the trend was toward lessened activity, the percentage of idleness standing at 13·5 in comparison with a percentage of 13·2 in May. This was apparent from the June returns received from a total of 1,876 labour organizations covering a membership of 221,003 persons, 29,941 of whom were without work on the last day of the month. Losses in employment were manifest also from June last year when the percentage of inactivity stood at 10·4. Conditions for Nova Scotia, Saskatchewan and Alberta members were nominally better during June than in the previous month. In New Brunswick and Manitoba, however, some falling off in employment was apparent, Quebec and British Columbia showing but minor declines in work afforded. Ontario unions recorded the same percentage of unemployment as in May. When contrasted with the returns for June last year New Brunswick members were considerably slacker during the month reviewed particularly in the iron and steel trades and in railway operation, while noteworthy curtailment was evident among Manitoba, British Columbia and Ontario unions, the majority of trades and industries in these provinces participating in the less favourable movement. Activity was also somewhat retarded in Quebec, Saskatchewan and Alberta. Nova Scotia unions alone showed improvement which was on a rather small scale.

A separate tabulation is made each month of unemployment affecting local trade union members in the largest city in each province with the exception of Prince Edward Island. Of these, Saint John members reported a considerable drop in work available during June from the preceding month and moderate contractions in activity were evident among Edmonton and Winnipeg members. The situation also declined in Halifax, Vancouver

and Toronto. Montreal unions, however, showed a better trend of activity though the variation from May was quite slight. Regina members maintained an unchanged percentage of idleness in the two months compared. Conditions in Saint John and Vancouver were decidedly less active during June than in the corresponding month a year ago, and in Toronto, Winnipeg and Edmonton important employment losses were recorded.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919	3·1	2·0	3·4	2·7	2·1	3·2	2·0	7·9	3·4

Halifax unions, however, showed more moderate recessions and slight declines were apparent in Montreal and Regina.

Accompanying this article is a chart which illustrates the trend of unemployment by months from January, 1932, to date. There was an almost imperceptible variation in the level of the curve during June from May, unemployment remaining in much the same volume during these two months. An upward tendency was reflected in the curve from June of last year, denoting increased idleness during the period surveyed.

The manufacturing industries showed a slight adverse change in conditions during June from the preceding month according to the returns compiled from 532 organizations with an aggregate membership of 83,159 persons. Of these, 13,898, or a percentage of 16·7, were without work on the last day of the month in contrast with 15·8 per cent of inactivity in May. Some falling off in employment was also apparent from June last year when 11·9 per cent of the members reported were idle. Hat, cap and glove workers were much quieter during June than in May, and activity for paper makers showed noteworthy curtailment. Declines in employment of less than one per cent were registered by brewery, iron and steel, and jewellery workers, printing tradesmen and bakers and confectioners. Of the gains which were of a largely offsetting nature, the most important were indicated by glass and garment workers, general labourers and meat cutters and butchers. None of these, however, were particularly outstanding. Employment advancement of slight degree was recorded also by cigar and tobacco, textile and carpet, leather and wood workers, and metal polishers. Fur workers reflected an unchanged situation from May. When a comparison is made with the returns for June a year ago wood, and hat, cap and glove workers reported heavy increases in unemployment during the month reviewed and paper makers and leather workers were considerably quieter. Iron and steel, and jewellery workers showed recessions of more moderate proportions and the situation declined slightly for textile and carpet, and garment workers, and bakers and confectioners. Fur and glass workers, however, indicated employment expansion on a large scale, and conditions were somewhat improved for meat cutters and butchers, cigar and tobacco, and brewery workers, general labourers, metal polishers and printing tradesmen.

Coal miners indicated a slightly better level of employment during June than in either the previous month or June a year ago,

11·8 per cent of the members being reported out of employment as compared with percentages of 13·4 in May and 14·1 in June, 1937. Reporting for June were 54 unions in the coal mining industry with a membership numbering 21,021 persons, 2,474 of whom were unemployed on the last day of the month. Unions in Nova Scotia and Alberta combined in effecting the more favourable employment movement noted in coal mining, as a whole, from May. In British Columbia, however, the tendency was toward retarded activity though the change was very slight. Contrasted with the returns for June, 1937, improved conditions were manifest in Nova Scotia coal areas which were in some small measure offset by the curtailment evident in Alberta and British Columbia. Some short time work continued to be reported among the miners during June.

Unemployment in the building and construction trades showed a minor increase during June from the preceding month, the percentage of idleness standing at 31·2 as compared with a percentage of 30·9 in May. This was apparent from the reports received from 208 associations including 22,530 members, 7,024 of whom were idle at the close of the month. Tile layers, lathers and roofers, and bridge and structural iron workers whose combined membership was rather small were much better engaged than in May, while among bricklayers, masons and plasterers noteworthy employment advances were shown. Fractional gains only were recorded by steam shovelmen, and plumbers and steamfitters. On the contrary, hod carriers and building labourers, and painters, decorators and paper hangers suffered substantial losses in activity, and employment declined slightly for carpenters and joiners, electrical workers, and granite and stone cutters. The situation in building and construction, as a whole, during June was also less favourable than in the corresponding month of 1937, when 24·6 per cent of the members reported were out of work. In this comparison steam shovelmen, carpenters and joiners, and bricklayers, masons and plasterers showed a large drop in the volume of work afforded and lesser declines were manifest by hod carriers and building labourers, and electrical workers. Granite and stone cutters, and tile layers, lathers and roofers, on the other hand, reflected a much higher level of employment than in June last year and important gains were shown by painters, decorators and paper hangers. Heightened activity, on a small scale, was evident among bridge and structural iron workers, and plumbers and steamfitters.

Conditions in the transportation industries varied very slightly during June from May though the trend was toward greater employment, the 833 unions making returns at the end of the month with a membership embracing 64,294 persons showing that 4,953, or a percentage of 7·7 were out of work as compared with a percentage of 7·9 in May. Employment recessions on a small scale, however were noted from June of last year when 5·2 per cent of inactivity was recorded. Steam railway employees, whose returns involved nearly 79 per cent of the entire group membership reported, and street and electric railway employees showed a fractional increase in work available from May which was counteracted in part by the slowing up in activity apparent in the navigation division and among teamsters and chauffeurs. In making a comparison with the returns for June, 1937, steam railway employees reported moderate curtailment in work afforded during the month under survey and in navigation and among teamsters and chauffeurs the trend of activity was downward. Street and electric railway employees, however, showed some slight improvement in conditions.

Adequate work was provided for all retail shop clerks reported at the close of June as was the case in both the preceding month and June a year ago. This was apparent from the returns compiled from 4 associations of these workers with an aggregate of 1,632 members.

An unchanged situation was reflected by civic employees during June from the preceding month, 0·5 per cent of idleness only being registered for each of these months. A fractional gain in activity was recorded from June last year when 0·8 per cent of the members reported were out of work. Forwarding reports for June this year were 80 associations of civic employees with a membership numbering 10,263 persons.

The 132 unions from which returns were compiled in the miscellaneous group of trades at the close of June involving a membership of 9,908 persons showed that 926 or a percentage of 9·3 were idle as compared with percentages of 7·5 in May and 6·7 in June last year. All groups reflected a lowering in the employment volume from May, hotel and restaurant employees, and stationary engineers and firemen showing moderate recessions while among theatre and stage employees, barbers and unclassified workers the situation declined slightly. When contrasting with the returns for June last year, hotel and restaurant employees were somewhat quieter during the month reviewed and retarded activity was evident among stationary engineers and firemen, theatre and stage em-

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month	Fishing	Lumbering and Logging	Mining	Manufacturing industries	Vegetable products	Pulp and paper products	Pulp and paper mill workers	Printing, publishing and lithographing	Electric current	Wood products	Fibres, textiles and textile products	Textile and carpet workers	Garment workers	Hat, cap and glove workers	Animal products	Iron and its products	Non-ferrous metals	Clay, glass and stone products	Mineral products	Miscellaneous manufacturing industries	Building and construction	Transportation	Shipping and stevedoring	Steam railway operation	Local transportation	Communication	Telegraph operation	Telephone operation	Trade (retail shop-clerks)	Services	Governmental	Miscellaneous	All occupations

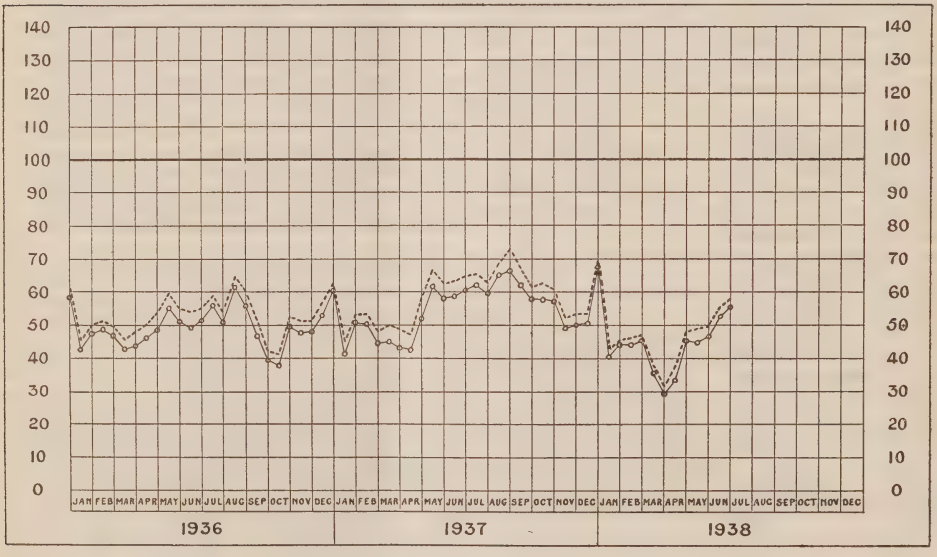
ployees and unclassified workers. Barbers indicated an unchanged level of activity from June, 1937.

The fishing industry was quite active during June according to the returns compiled from 3 locals with 632 members. Of these, only 4 or a percentage of 0·6 were idle as compared with a percentage of 0·8 in both the previous month and June, 1937.

Lumber workers and loggers showed a tendency toward retarded activity during June, the 594 members reported indicating that 37 or a percentage of 6·2 were out of work, in contrast with percentages of 4·9 in May and 1·6 in June last year.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1937, inclusive, and also the percentages of unemployment by provinces for June of each year from 1919 to 1935, inclusive, and for each month from June, 1936, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.



(3) Employment Office Reports for June, 1938

The volume of business transacted by the offices of the Employment Service of Canada for the month of June, 1938, as shown by the average daily placements effected, was nearly 18 per cent more than that of the previous month, but 2 per cent below that of the corresponding period a year ago. All industrial divisions, except logging and services, showed gains over May, the most substantial increases being noted in construction and maintenance and farming. A fairly large loss was recorded in services, but that in logging was nominal only. In comparison with June a year ago, declines were shown in logging, manufacturing, farming, construction and maintenance and services, while additional placements were registered in transportation, trade and mining, although the gains reported in the two last named groups were not very large.

The accompanying chart shows the trend of employment from January, 1936, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen from the graph that the curves of vacancies and placements in relation to applications showed a marked upward trend throughout the month, but at the close were still several points below the levels attained at the end of June, 1937. The ratio of vacancies to each 100 applications was 55·5 during the first half and 58·0 during the second half of June, 1938, in contrast with ratios of 63·2 and 64·7 during the corresponding periods of 1937. The ratios of placements to each 100 applications during the periods under review were 52·6 and 55·4, as compared

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ———— Vacancies - - - - - - - - - Placements o—o—o—o—o—o

with 58·5 and 60·3 during the corresponding month of 1937.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during June, 1938, was 1,340 as compared with 1,162 during the preceding month and with 1,401 in June a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,359, in comparison with 2,347 in May, 1938 and with 2,189 in June last year.

The average number of placements made daily by the offices of the Service during June, 1938, was 1,274, of which 798 were in regular employment and 476 in work of one week's duration or less, as compared with the total daily average of 1,083 during the preceding month. Placements in June a year ago averaged 1,300 daily consisting of 942 placements in regular and 358 in casual employment.

During the month of June, 1938, the offices of the Service referred 32,880 persons to positions and effected a total of 31,828 placements. Of these, the placements in regular employment were 19,951, of which 15,158 were of men and 4,793 of women, while placements in casual work totalled 11,877. The number of vacancies reported by employers was 23,169 for men and 10,316 for women, a total of 33,485, while applications for work numbered 58,975, of which 44,131 were from men and 14,844 from women. Reports for May, 1938, showed 29,033 positions available, 58,674 applications made and 27,063 placements effected, while in June, 1937, there were recorded 36,411 vacancies, 56,903 applications for work and 33,794 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1928, to date:

Year	Placements		
	Regular	Casual	Totals
1928	334,604	135,724	470,328
1929	260,747	137,620	398,367
1930	187,872	180,807	368,679
1931	175,632	295,876	471,508
1932	153,771	198,443	352,214
1933	170,576	181,521	352,097
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936	217,931	113,519	331,450
1937	275,300	114,236	389,536
1938 (6 months)	102,320	52,649	154,969

Nova Scotia

Employment opportunities, as indicated by orders received at Employment Offices in Nova Scotia during June, were nearly 21 per cent less than in the preceding month and nearly 22 per cent below the corresponding month of last year. There was a decrease also in placements of over 22 per cent when compared with May and of nearly 23 per cent in comparison with June, 1937. The decrease in placements from June of last year was due to a decline in the highway division of construction and maintenance. There was a small loss in logging, but gains in services and mining. Industrial divisions in which most of the placements were effected during the month were logging, 83, construction and maintenance, 334 and services, 552, of which 374 were of household workers. Placements in regular employment numbered 211 of men and 152 of women.

New Brunswick

There was a decrease of 18 per cent in the number of positions offered through Employment Offices in New Brunswick during June when compared with the preceding month and of over 12 per cent in comparison with the corresponding month of last year. Placements also were nearly 17 per cent less than in May and nearly 11 per cent below June, 1937. The decline in placements from June of last year was due to a decrease in logging. Small losses were also reported in manufacturing and services. The only group to show improvement was construction and maintenance, there being an increase in the highway division of this group. Industrial divisions in which most of the placements were effected during the month were logging, 63, construction and maintenance, 185 and services, 666, of which 506 were of household workers. During the month, 101 men and 105 women were placed in regular employment.

Quebec

There was a decline of over 8 per cent in the number of positions offered through Employment Offices in Quebec during June when compared with the preceding month, but a gain of over 27 per cent in comparison with the corresponding month of last year. Placements were nearly 7 per cent less than in May, but over 37 per cent above June, 1937. Substantial placement gains over June, 1937, were reported in transportation, construction and maintenance and services, and there was also a smaller increase in trade. The improvement shown in these groups, however, was slightly offset by moderate declines in

manufacturing and logging. Placements by industrial divisions included manufacturing, 252, farming, 204, transportation, 857, construction and maintenance, 3,432, trade, 227 and services, 2,771, of which 2,246 were of household workers. Placements in regular employment numbered 4,234 of men and 1,658 of women.

ONTARIO

Positions offered through Employment Offices in Ontario during June were over 26 per cent more than in the preceding month, but 30 per cent below the corresponding month of last year. There was an increase in placements of over 27 per cent when compared with May, but a decrease of nearly 26 per cent when compared with June, 1937. Except for nominal gains in trade and finance, all industrial divisions showed declines in placements when compared with June of last year. The most noteworthy reductions were in the highway division of construction and maintenance and in logging, but very substantial decreases were also reported in services, farming and manufacturing. Placements by industrial divisions included manufacturing, 573, logging, 735, farming, 2,167, construction and maintenance, 4,640, trade, 313 and services, 3,655, of which 2,286 were of household workers. There were 7,348 men and 1,456 women placed in regular employment.

MANITOBA

The demand for workers, as indicated by orders received at Employment Offices in Manitoba during June, was fractionally less favourable than in the preceding month and nearly 4 per cent below the corresponding month of last year. There was a decrease also in placements of nearly 1 per cent when compared with May, and of over 21 per cent in comparison with June, 1937. Placements in logging and construction and maintenance were considerably fewer than during June of last year, but in services they were higher. The changes in all other groups were quite small. Industrial divisions in which most of the placements were effected during the month were farming, 416, construction and maintenance, 214 and services, 724, of which 573 were of household workers. Placements in regular employment numbered 690 of men and 276 of women.

SASKATCHEWAN

Positions offered through Employment Offices in the Province of Saskatchewan during June were nearly 9 per cent more than in the preceding month, but 35 per cent below the corresponding month of last year. There was an increase of over 11 per cent in placements when compared with May, but a decline of nearly 35 per cent in comparison with June, 1937. With the exception of a moderate gain in mining, there were fewer placements made in all industrial groups than during June, 1937. The only important loss, however, was in the highway division of construction and maintenance. Placements by industrial divisions included farming, 343, mining, 68, construction and maintenance, 181 and services, 688, of which 474 were of household workers. There were 583 men and 378 women placed in regular employment.

ALBERTA

Orders received at Employment Offices in Alberta during June called for nearly 1 per cent more workers than in the preceding month and nearly 13 per cent more than during the corresponding month of last year. There was an increase also in placements of nearly 2 per cent when compared with May and of over 11 per cent in comparison with June, 1937. When comparing placements by industrial divisions with June of last year, gains were reported in farming, services and logging, the largest increases being in the two first named groups. Losses were reported in construction and maintenance, fishing, transportation and manufacturing, that in construction and maintenance being the largest. Industrial divisions in which most of the placements were effected during the month were manufacturing, 74, logging, 58, farming, 585, construction and maintenance, 498 and services, 595, of which 439 were of household workers. During the month, 1,081 men and 413 women were placed in regular employment.

BRITISH COLUMBIA

There was an increase of nearly 150 per cent in the number of positions offered through Employment Offices in British Columbia when compared with the preceding month and of 43 per cent in comparison with the corresponding month of last year. Placements also were nearly 152 per cent higher than in May and over 43 per cent above June, 1937. The increase in placements over June of last year was entirely due to highway construction, as a moderate gain in logging was offset by declines in services and farming. Trade also showed a small loss. Placements by industrial divisions included manufacturing, 64, logging, 307, farming, 231, mining, 89, construction and maintenance, 3,647 and services, 676, of which 470 were of household workers. There were 910 men and 355 women placed in regular employment.

Movement of Labour

During the month of June, 1938, the offices of the Employment Service of Canada made 19,951 placements in regular employment, 10,600 of which were of persons for whom the employment found was outside the immediate vicinity of the offices at which they were registered. Of the latter, 572 were granted the Employment Service reduced transportation rate, 558 going to centres within the same province as the despatching office and 14 to other provinces. The reduced transportation rate, which is 2·5 cents per mile with a minimum fare of $4, is granted by the railway company to bona fide applicants at the offices of the Employment Service who may wish to travel to distant employment for which no workers are available locally.

The movement of labour in Quebec during June originated at Hull and comprised the transfer of 3 bushmen to the Pembroke zone. Offices in Ontario issued 419 certificates for reduced transportation during June, 418 of which were provincial and one interprovincial. The latter was granted at North Toronto to a plasterer bound for the Rouyn zone. Provincially, the Port Arthur office transferred 311 bush workers, 22 building construction workers, 9 mine employees, one labourer and one laundry worker, and the Fort William office, 57 bush workers, one fireman, one blacksmith, and one domestic to various sections of their respective zones. From Sudbury, 2 hotel cooks were sent to Port Arthur, and 3 bush workers, one caretaker and one cook to centres within the district covered by the Sudbury office. Receiving certificates at Toronto 2 hotel porters and one auto mechanic went to North Bay, while from Timmins 2 mine workers were conveyed to Fort William. In addition, under the Dominion-Provincial Youth Training Plan 2 domestics secured certificates at the Oshawa office for transportation to Preston. The Winnipeg office was instrumental in the despatch of all persons travelling at the reduced rate from Manitoba centres during June. These were 24 in number, of whom 14 were destined to provincial situations and 10 outside the province. Within the province the transfers were entirely to the Winnipeg zone and included 9 farm hands, one farm domestic, 3 highway construction workers and one cook. The interprovincial movement comprised the transfer of 4 bush workers, 2 domestics, one highway construction labourer, one sawmill labourer, one hotel cook and one farm hand to centres in the Port Arthur zone. In Saskatchewan during June, one certificate was granted at the Regina office to a teacher proceeding to employment within the same zone. Reduced rate certificates were issued in Alberta during June to 117 persons travelling to centres within the province. At Edmonton, 73 Dominion Park employees, 8 mine workers, 6 fish company employees, 5 building construction workers, 5 transportation company employees, 4 teamsters, 3 bush workers, 3 labourers, 3 waitresses, one domestic, one cook and one garage mechanic secured certificates for transportation to employment at various points within the Edmonton zone. In addition from Edmonton, one sawmill engineer journeyed to Calgary. On certificates granted at Calgary one farm hand was carried to Drumheller, and 2 highway construction cooks to employment within the Calgary zone. Benefiting by the Employment Service reduced rate in British Columbia during June, 8 persons were transported to provincial employment. The Vancouver office was responsible for the despatch of 4 mine workers, 2 farm hands, and one farm housekeeper within its own zone, while from New Westminster one miner was shipped to Penticton.

Of the 572 persons who travelled at the Employment Service reduced transportation rate during June, 164 were carried by the Canadian National Railways, 399 by the Canadian Pacific Railway, 7 by the Pacific Great Western Railway, and 2 by the Temiskaming and Northern Ontario Railway.

(4) Building Permits issued in Canada during June, 1938

The value of the building represented by permits for construction taken out in 58 cities during June was $6,560,419; this was very slightly less than the May total of $6,576,296, but was higher by $554,461, or 9·2 per cent than in June, 1937, when the authorizations had amounted to $6,005,958.

The building authorized in the first six months of the present year was estimated to cost $25,781,207; this was a reduction from the aggregate of $28,056,942 reported in the period January-June, 1937, but the total exceeded that for the first six months of any other year since 1931. The half-yearly total in each of these seven years was substantially below the average of $57,507,332 recorded in the first six months of the years, 1920-1937. The wholesale prices of building materials have been lower in the first half of 1938 than in the same period of 1937; while the index was higher than in January-June of the preceding six years, it was below the average for the years since 1920.

Some 50 cities furnished detailed statistics for June, 1938, showing that they had issued nearly 540 permits for dwellings valued at approximately $2,000,000 and some 2,500 permits for other buildings, estimated to cost almost $4,000,000. In May, authority was given for the erection of about 660 dwellings and 3,000 other buildings, valued at approximately $2,250,000 and $3,800,000, respectively.

Prince Edward Island, Nova Scotia, Manitoba, Saskatchewan and Alberta recorded increases in the value of the building permits issued during June as compared with the preceding month, the largest gain of $639,635, or 279·2 per cent, taking place in Manitoba. The remaining provinces showed declines, that of $551,566, or 30·7 per cent, in British Columbia being most pronounced.

As compared with June, 1937, Nova Scotia, New Brunswick, Manitoba, Saskatchewan, Alberta and British Columbia registered increases, of which that in Manitoba was greatest, amounting to $510,797, or 142·7 per cent. In Prince Edward Island, Quebec and Ontario, there were reductions, the greatest, of $304,538, or 23·4 per cent, being in Quebec.

Of the four largest cities, Toronto recorded an increase in the value of the building represented by the permits taken out as compared with May, 1938, and June, 1937. Winnipeg showed an increase in the first, but a decrease in the second comparison; in Vancouver, on the other hand, there was a decline from the preceding month, but a gain as compared with the same month of last year, while in Montreal, the June total was smaller than in either May, 1938, or June, 1937. Among the other centres, the following showed improvement in each of these comparisons; Halifax, Sydney, Fredericton, Moncton, Fort William, Guelph, Kingston, Niagara Falls, Peterborough, Stratford, St. Thomas, Sarnia, St. Boniface, Regina, Edmonton, Medicine Hat and Prince Rupert.

The following table gives the value of the building authorized by 58 cities during June and in the first six months of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The average index numbers of wholesale prices of building materials in the first six months of the same years are also given.

Year	Value of permits issued in June	Value of permits issued in first six months	Indexes of value of permits issued in first six months (1926=100)	Average indexes of wholesale prices of building materials in first six months (1926 average=100)
	$	$		
1938	6,560,419	25,781,207	32·7	90·5
1937	6,005,958	28,056,942	35·6	94·9
1936	4,656,689	18,322,884	23·3	84·4
1935	5,104,855	24,640,511	33·8	81·2
1934	2,411,460	10,411,377	13·2	82·8
1933	3,589,204	10,315,899	13·1	78·9
1932	5,028,324	24,341,044	30·9	76·8
1931	8,593,958	58,950,508	74·8	83·5
1930	18,621,487	85,413,985	108·4	95·0
1929	27,816,592	124,609,267	158·2	99·2
1928	22,751,960	102,036,987	129·6	95·9
1927	18,363,239	80,842,719	102·6	96·0
1926	18,718,050	78,760,419	100·0	101·0
1925	14,915,884	65,899,717	83·7	103·1
1924	13,967,006	60,674,154	77·0	110·8
1923	14,286,252	73,047,496	92·7	111·4
1922	17,052,582	71,281,674	90·5	108·0
1921	14,240,934	55,771,684	70·7	132·0
1920	14,113,794	61,754,710	78·4	144·5

The value of the building represented by the construction permits issued by 58 cities was 8·1 per cent lower than in 1937, but it was higher than in the same period in other years since 1931. As already stated, the aggregate for January-June in each of the last seven years has been decidedly lower than in any other year since 1920, being also much below the eighteen-years' average. As compared with 1937, there has been a decline of 4·4 points in the index number of wholesale prices of building materials, the mean for the first half of 1938 being also below the average for the period, 1920-1937.

Provincial Totals of Building Permits Issued by 58 Cities in First Half-Year, 1934-1938

Provinces	1938	1937	1936	1935	1934
	$	$	$	$	$
Prince Edward Island	38,310	101,140	70,600	96,325	47,100
Nova Scotia	849,348	827,709	597,255	324,295	374,600
New Brunswick	360,456	287,433	85,011	141,017	210,740
Quebec	4,740,274	5,418,604	3,894,008	5,873,941	2,462,677
Ontario	10,297,441	13,901,771	7,883,866	12,678,819	5,094,136
Manitoba	1,517,750	1,058,013	664,830	2,355,065	348,986
Saskatchewan	308,439	469,005	238,832	233,030	209,840
Alberta	1,787,502	923,590	1,095,038	1,162,981	585,785
British Columbia	5,881,687	5,069,677	3,095,038	1,775,038	1,077,513
Canada	25,781,207	28,056,942	18,322,884	24,640,511	10,411,377

The provincial totals for the first six months in the years, 1934-1938, are shown in the table on page 919. The aggregates in Nova Scotia, New Brunswick, Manitoba, Alberta and British Columbia were higher in 1938 than in 1937; those in Nova Scotia, New Brunswick, Alberta value those reported in the same period of and British Columbia were also greater than in 1936, 1935, 1934 or 1933, while in Quebec and Ontario, the authorizations during the first six months of the present year exceeded in 1936, 1934 or 1933, but were lower than in 1937 or 1935. In Saskatchewan, the 1938 total exceeded that for 1934, 1935 or 1936, although it was below the 1937 aggregate for the half-year.

The following table shows the January-June aggregates for the four leading cities in the last five years:—

City	1938	1937	1936	1935	1934
	$	$	$	$	$
Montreal	3,200,564	3,923,810	2,297,855	4,421,415	1,607,905
Toronto	3,793,723	4,219,755	3,166,190	5,315,395	2,523,471
Winnipeg	763,350	963,400	618,100	2,262,450	298,100
Vancouver	4,684,760	4,377,055	3,050,825	1,331,880	700,094
Total	12,442,397	13,484,020	9,134,970	13,331,140	5,129,570

Except in Vancouver, the estimated value of the building represented by the permits granted in these cities during the first six months of 1938 was smaller than that for the same period in 1937. The aggregate in each of these centres was greater than in January-June of 1936 or 1934, but only in Vancouver did it exceed the 1935 figure. Approximately 48

[1] Report not received in time for tabulation.

per cent of the total value of the building permits issued by the 58 cities in the months January-June of the present year was reported by the four largest centres, practically the same proportion as in 1937.

The table on page 920 gives the value of the building permits issued by 58 cities during May and June, 1938, and June, 1937. The 35 cities for which records are available since 1910 are marked thus "x".

EMPLOYMENT CONDITIONS AT THE END OF JULY, 1938

Reports of Superintendents of the Employment Service

THE employment situation at the end of July was reported by the superintendents of the Employment Service to be as follows:—

Continuous rain in the Maritime Provinces threatened to destroy growing crops and in some cases had done so, but recent fine weather had counteracted in a measure the damage sustained. Grain was ripening slowly but the hay crop was heavy and garden produce abundant. Some activity prevailed in pulpwood cutting and peeling and numerous lumber shipments were made overseas. Fishing was fair. Coal mines in the New Glasgow area operated from three to six days per week, while those in Cape Breton and vicinity worked from three to five days. Some idleness was reported in the iron and steel group and at Saint John operations in nearly all manufacturing plants were below normal. Elsewhere, however, business was steady. All buildings under construction were progressing favourably and a large number of men found employment on the highways. Tourist travel was heavy and freight traffic good. Trade was rather quiet. The usual number of requests for household workers was received by the Women's Division and placements were made accordingly.

Considerable improvement was noted in farming in the Province of Quebec and harvest prospects were excellent. Logging was very quiet and no men were being taken on in this industry, with the exception of a few fire fighters in the district about Val d'Or. Active mines were operating at full capacity, but prospecting was nil and the production of minerals in the Eastern Townships had decreased considerably. Manufacturing centres reported as follows: Chicoutimi and La Tuque —pulp and paper mills slack, but aluminium and sash and door factories very busy; Hull and Matane—all factories active; Montreal—manufacturing in general, dull; Quebec City—leather normal, but clothing quiet; Rouyn—level of activity below that of last year; Sherbrooke—metal industries reduction in personnel, and production likewise lowered in cotton, woollen and silk mills; Three Rivers—all factories slack. Building construction recorded improvement throughout the province and many men also were hired for highway work. Transportation, both freight and passenger, by rail, motor and water was heavy, except at Three Rivers, where harbour work was affected by the depression in the paper industry. Trade was somewhat less favourable. In the Women's Division the season was rather poor, due to the fact that many regular employers had left the cities for the summer months. There was also a decline in the requests for hotel and restaurant employees, although many registered applicants were available.

Farm orders in Ontario were numerous, particularly for experienced men and a number of casual workers was sent out for harvesting, in addition to those hired by the month. In the Niagara Falls and St. Catharines' zones cherries and plums were nearly all picked and early peaches would be ready in the near future. There was little demand for pulp cutters, but sawmill staffs continued at a high level. Mining was quiet. Manufacturing in almost all lines was below par; a number of firms were closed for vacation. Fruit and vegetable canneries, however, were busy preparing for the season's activities. Building construction recorded improvement and skilled building mechanics were fairly well employed. Highway construction also afforded work for a number of men. Transportation was more active, especially at Fort William, where hundreds of freight cars were leaving the Lake Head for Western points, in readiness for the grain haul. In the Women's Division regular placements continued steady in household service, although casual work was slow, owing to the summer season. There were, however, few openings for women in other fields of work at the present time.

A keener demand prevailed for harvest help in the Prairie Provinces, as warm dry weather was rapidly maturing the crops. Heavy damage from rust and grasshoppers was reported in some localities, although the demand for help, even in those districts, remained fairly good. Logging and mining were quiet. Manufacturing was somewhat better. Building construction was more active and highway construction afforded a fair amount of employment in the rural communities. Trade was fair. Suitable applicants

were difficult to obtain for both country and town positions listed in the Women's Division of household service.

Farming in British Columbia was quiet. Logging operations suffered serious curtailment due to fire hazard and saw and shingle mills were running on short shifts. Mining was slack. A little more work was available for men in building construction, and highway construction continued, a start having been made at Vancouver on the new Pacific highway. Some workers also were called to fight forest fires in different parts of the province. New Westminster and Prince Rupert reported the waterfronts busy, but Vancouver, quiet. At Prince Rupert, drydocks and shipyards were slack, but at Victoria, conditions were much better than they had been for some time previous. Placements in the Women's Division of household service were fewer in number. At Penticton, orders for domestic help were difficult to fill, as a number of women had found work in packing houses and canneries.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

THE British *Ministry of Labour Gazette*, July, 1938, summarized the employment situation as follows:—

It is estimated that at June 13, 1938, the number of insured persons, aged 16-64, in employment in Great Britain, exclusive of persons within the agricultural scheme, was approximately 11,333,000. This was 42,000 less than at May 16, 1938. On a comparable basis there was a decrease of about 326,000 as compared with June 21, 1937.

Among persons, aged 16-64, insured under the general scheme of unemployment insurance (including the special schemes for the banking and insurance industries), the percentage unemployed in Great Britain and Northern Ireland at June 13, 1938, was 13·4 compared with 13·0 at May 16, 1938. For persons aged 16-64 insured under the agricultural scheme the percentages were 5·3 at June 13, 1938, and 6·6 at May 16, 1938. For both schemes combined the percentage unemployed at June 13, 1938, was 13·0 as compared with 12·7 at May 16, 1938. On a comparable basis, there was an increase at June 13, 1938, as compared with June 21, 1937, of about 3·7 in the percentage unemployed among persons within the general scheme, and of about 3·5 among persons within the agricultural scheme. For the two schemes combined there was an increase of about 3·6 between these dates.

At June 13, 1938, the numbers of unemployed persons on the registers of Employment Exchanges in Great Britain were 1,268,566 wholly unemployed, 468,756 temporarily stopped, and 65,590 normally in casual employment, making a total of 1,802,912; this was 24,107 more than at May 16, 1938. This increase was mainly accounted for by temporary stoppages, due partly to local holidays on the day of the count and partly to extensions of the Whitsun holiday. On a comparable basis there was an increase of about 500,000 as compared with June 21, 1937, in the total number of persons on the registers.

The total of 1,802,912 persons on the registers at June 13, 1938, included 1,073,755 persons with claims admitted for insurance benefit, 530,763 with applications authorized for unemployment allowances, 50,800 persons with applications for insurance benefit or unemployment allowances under consideration, and 147,594 other persons of whom 32,962 were juveniles under 16 years of age.

In Great Britain and Northern Ireland the total number of persons on the registers of Employment Exchanges at June 13, 1938, was 1,894,548 as compared with 1,868,760 at May 16, 1938. On a comparable basis there was an increase at June 13, 1938, of about 526,000 as compared with June 21, 1937.

United States

On July 22, Miss Frances Perkins, Secretary of Labour, announced that there had been a further decline of about 100,000 in non-agricultural employment in June, due primarily to reductions in factory working forces. In other major lines of activity employment was reported as stable except for seasonal changes.

The following paragraphs taken from the official press release indicate the employment situation in the United States was as follows:

The estimated decline of 100,000 workers in private industry and regular government work was smaller than the reductions which occurred in April and in May. These figures do not take account of workers in agriculture or on Works Progress Administration projects and other Federal emergency projects.

In manufacturing, it is estimated that about 140,000 wage earners were laid off between mid-May and mid-June, a reduction of 2·2 per cent. Factory pay rolls were reduced by 3·2 per cent, or approximately $4,500,000 a

week. Ordinarily factory employment and pay rolls decline by about 1 per cent from May to June. Since June 1937, when factories were operating near peak levels for the recovery movement, the number of wage earners in factories has been reduced by one-fourth, and weekly pay rolls by 35 per cent.

The most marked declines in manufacturing employment were again reported by the heavy industries, in particular, machinery, steel products, automobiles, and railroad repair shops. The durable goods industries as a group reduced employment by 3·7 per cent from May, while the nondurable goods industries reported a decline of 1 per cent. In this group of industries there were greater-than-seasonal increases in the manufacture of foods, tobacco, and woollen textiles. Since last year at this time, the durable goods industries have laid off one-third of their workers and the nondurable goods industries about one-sixth.

Employment changes were small in the nonmanufacturing industries, for the most part. Class I railroads reported a net addition of 9,200 men, because of increased maintenance work. This is the first increase since July 1937. Mining employment was generally curtailed, except for anthracite mines, which added 4,500 men. About 10,000 bituminous miners and 4,000 metal miners were laid off, as business slackened. Retail and wholesale firms reduced their staffs by 14,000 and 5,000, respectively, largely because of seasonal declines in sales, and year-round hotels had 6,000 fewer employees. Public utility companies as a group reported little change; telephone companies reduced their forces by 2,000 employees, while light and power companies added 2,000.

Private building contractors had about the same number of men at work as in May, although a small increase is usual. Public construction financed by Federal funds expanded, however, with an estimated net addition of 45,000 workers in the construction industry as a whole, including road work. As a result of expanded building activity in June, employment in certain manufacturing industries supplying building materials, notably mill work, cast-iron pipe, plumbers' supplies, cement, and marble and granite, added some employees in June.

Most of the larger industrial States of the East and North reported smaller employment in June, including Michigan, Massachusetts, New York, and Pennsylvania. Among the industries contributing to the decline were automobiles, steel, machinery, shoes, and certain textile and clothing industries.

Eighteen States reported employment gains. In Oregon, Washington, and California, the improvement represented mainly the seasonal hiring of workers by canneries; in North and South Carolina the gain was largely in cotton mills.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR PERIOD APRIL TO JUNE, 1938

EMPLOYMENT conditions, as indicated by the work of the Employment Service of Canada during the quarter April to June, 1938, were less favourable than those reported during the corresponding quarter of 1937, as there was a decline of nearly 15 per cent in vacancies offered and of over 13 per cent in placements effected in regular and casual employment. This was chiefly due to a very heavy loss in logging, followed by other declines of marked proportions in construction and maintenance, manufacturing and farming. Services also recorded a fairly large decrease, but that in trade and in mining was nominal only. The only gain was in transportation and this was of moderate proportions. All provinces, except New Brunswick and Quebec, registered fewer vacancies and placements than were recorded in the corresponding quarter of last year, the heaviest decline being shown in Ontario. The gain registered in Quebec was noteworthy, but that in New Brunswick was quite small. The accompanying table gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various provinces during the period April to June, 1938.

From the chart on page ** which accompanies the article on the work of the Employment Offices for the month of June, it will be seen that the trend of the curves of vacancies and placements in relation to applications followed a sharp upward course throughout the quarter, but at the close of the period the level of vacancies was about 7 points and that of placements 5 points below the levels recorded at the end of June, 1937. During the period April to June, 1938, there was a ratio of 49·7 vacancies and 46·4 placements for each 100 applications for employment, as compared with 60·2 vacancies and 55·2 placements during the corresponding period a year ago.

The average number of positions offered daily during the quarter under review was 1,184, of applications registered, 2,383, and of placements effected, 1,106, in contrast with the daily average of 1,350 vacancies, 2,245

applications and 1,240 placements in regular and casual employment during the same quarter of 1937.

During the three months April to June, 1938, the offices reported that they had made 85,429 references of persons to positions and had effected a total of 81,780 placements, of which 52,207 were in regular employment and 29,573 in casual work. Of the placements in regular employment, 38,479 were of men and 13,728 of women. A comparison with the corresponding period of 1937, shows that 94,234 placements were then made, of which 65,655 were in regular employment and 28,579

in casual work. Applications for employment during the period under review were received from 130,292 men and 45,995 women, a total of 176,287, in contrast with the registration of 170,562 during the same period of 1937. Employers notified the Service during the quarter April to June, 1938, of 87,590 vacancies, of which 55,488 were for men and 32,102 for women, as compared with 102,595 opportunities for work offered during the corresponding period a year ago. In another section of this issue will be found a report in detail of the transactions of the Employment Offices for the month of June, 1938.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor the full text of which appeared in the LABOUR GAZETTE for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and resasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the provincial Minimum Wages Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wages scales of the respective provinces.

As respects contracts for buildings and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, were superseded in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight Hour Day Act, 1930." This Act, however, has now in turn been superseded by "The Fair Wages and Hours of Labour Act, 1935," which came into force on May 1, 1936. The clause relating to wages and hours in the last named statute is in the terms following:—

"All persons in the employ of the contractor, subcontractor, or any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages;

"The working hours of persons while so employed shall not exceed eight hours per day or forty-four hours per week except in such special cases as the Governor in Council may otherwise provide, or except in case of emergency as may be approved by the Minister."

The new Act like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not appear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by federal grant in the form of contribution, subsidy, loan, advance or guarantee.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules known as fair wages schedules, are thereupon included by the department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment, the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted

in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Orders in Council, it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any dispute which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts have recently been executed by the Government of Canada:

GROUP "A" CONTRACTS

(1) Works of Construction, Remodelling, Repair or Demolition

NOTE: The labour conditions of each of the contracts noted under this heading, besides stipulating working hours of 8 per day and 44 per week, provide that: "Where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work," and also specify that the rates of wages set out therein are *minimum* rates only and that "nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation."

Department of Fisheries

Construction of a dwelling at Grand Lake Ponds, Wellington Station, Halifax Co., N.S. Name of contractor, Mr. R. K. Steeves, Fletcher's Crossing, Wellington Station, N.S. Date of contract, July 2, 1938. Amount of contract, $7,428. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 70
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 35
Carpenters	0 50
Cement and concrete mixer operators: Gas. or electric	0 40
Plasterers	0 70
Plasterers' helpers (mixing and tempering material)	0 35
Electricians (inside wiremen)	0 55
Plumbers and steamfitters	0 55
Sheet metal workers	0 55
Painters and glaziers	0 50
Labourers	0 30
Driver, horse and cart	0 45
Driver, team and wagon	0 55
Drivers	0 30
Motor truck driver	0 35
Motor truck driver and truck:	
1 to 2 tons	1 35
3 tons	1 85
Watchman	0 25

Department of National Defence

Contract for dredging and an extension to the concrete apron at the Royal Canadian Air Force Station, Trenton, Ont. Name of contractors, Frontenac Construction Co., Ltd., Toronto, Ont. Date of contract, July 11, 1938. Amount of contract, approximately $35,468. The dredging contract contained the General Fair Wages Clause, and the con-

struction contract included a fair wages schedule as follows:—

	Per hour
Blacksmith	$0 60
Blacksmiths' helpers	0 45
	Per day
Divers (full day's pay to be allowed whether employed full or part time)	$14 00
Divers' tenders (full day's pay to be allowed whether employed full or part time)	$5 00
	Per hour
Drivers	0 40
Driver, team and wagon	0 75
Labourers	0 40
Motor truck driver	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Powder men	0 50
Carpenters	0 70
Cement finishers	0 60
Cement and concrete mixer operators: gas	0 50
Steam shovel operators	0 90
Steam shovel firemen	0 55
Watchman	0 35

Repointing stonework and brickwork on a portion of the exterior walls of the Armoury at Saint John, N.B. Name of contractor, Mr. Michael Connell, Saint John, N.B. Date of contract, July 12, 1938. Amount of contract, $1,250. A fair wages schedule was included in the contract as follows:—

	Per hour
Bricklayers	$0 90
Bricklayers' helpers (mixing and tempering mortar)	0 45
Carpenters	0 60
Labourers	0 40

Construction of a radio building at Fort Resolution, N.W.T. Name of contractor, Mr. William Brown, Edmonton, Alta. Date of contract, July 13, 1938. Amount of contract, $11,998. A fair wages schedule was inserted in the contract as follows:—

	Per hour
Asbestos insulation workers	$0 85
Blacksmiths	0 70
Blacksmiths' helpers	0 50
Carpenters	0 85
($0.90 per hour from July 1st, 1938)	
Electricians	0 85
Firemen, stationary	0 50
Labourers	0 45
Lathers, metal	0 90
Lathers, wood	0 75
Painters and glaziers	0 75
Plasterers	0 90
Plasterers' helpers (mixing and tempering material)	0 55
Plumbers and steamfitters	0 95
Plumbers and steamfitters' helpers (all men assigned to help tradesmen)	0 50
Roofers, felt and gravel	0 50
Sheet metal workers	0 75
Watchman	0 40

NOTE.—Workmen hired locally are to receive 25 per cent in excess of the rates specified in this schedule.

The contractor shall provide free transportation, sleeping accommodation and meals for all persons taken to the work from outside points, and the full hourly rate of their classification shall be paid while travelling to the work. The same conditions shall apply on the outgoing trip provided, however, that the workman does not voluntarily leave the work before its completion. The contractor shall provide board and lodging and may make a deduction of 80 cents per day for this service in each instance where the workman receives a full day's pay. When work is not available due to circumstances over which the workman has no control no deduction for board and lodging shall be made. The same conditions shall apply to teams taken in from outside points, except that no deduction shall be made for board.

Should any person taken to the work from an outside point at the expense of the contractor leave the work of his own accord within a period of 30 days the contractor may deduct from wages due such person the actual expense of the inbound trip, provided, however, that the supervising Government engineer agrees that such person is attempting to take an unfair advantage of the contractor.

Construction of a Receiving Station and an addition to the Men's Living Quarters at Fort Smith, N.W.T. Name of contractor, Mr. William Brown, Edmonton, Alta. Date of contract, July 13, 1938. Amount of contract, $12,400. A fair wages schedule was included in the contract as follows:—

	Per hour
Asbestos insulation workers	0 85
Blacksmiths	0 70
Blacksmiths' helpers	0 50
Carpenters	0 85
Electricians	0 85
Firemen, stationary	0 50
Labourers	0 45

Machinists	0 70
Motor truck driver	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Ornamental iron workers	0 75
Painters & glaziers	0 65
Plasterers	0 90
Plasterers' helpers (mixing and tempering material)	0 45
Plumbers and steamfitters	0 80
Plumbers and steamfitters' helpers (all men assigned to help tradesmen)	0 45
Roofers, felt and gravel	0 45
Rodmen, reinforced steel	0 50
Sheet metal workers	0 65
Shovel operators, gas.	1 12½
Steam shovel engineers	1 12½
Steam shovel cranemen	0 90
Steam shovel firemen	0 74⅛
Stonecutters	0 80
Structural steel workers	1 12½
Welders on steel erection	1 12½
Watchman	0 40

Construction of a Torpedo Sub Depot at H.M.C. Dockyard, Esquimalt, B.C. Name of contractors, Messrs. Luney Bros., Ltd., Victoria, B.C. Date of contract, July 19, 1938. Amount of contract, $34,260. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$1 00
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 50
Carpenters and joiners:	
Up to and including Aug. 31, 1938	0 75
On and after Sept. 1, 1938	0 80
Cement finishers	0 60
Cement and concrete mixer operator:	
Steam	0 70
Gas. or electric	0 60
Driver, horse and cart	0 60
Driver, team and wagon	0 85
Drivers	0 45
Electricians	0 75
Engineers, operating, steam:	
Single drum	0 70
Double drum	0 90
Hoist operators	0 60
Labourers	0 45
Lathers, metal	0 70
Lathers, wood	0 65

	Per hour
Linoleum layers	0 65
Marble setters	1 00
Marble setters' helpers (all men assigned to help tradesmen)	0 50
Mastic floor spreaders and layers	0 85
Mastic floor rubbers and finishers	0 60
Mastic floor kettlemen	0 60
Mastic floor labourers	0 50
Motor truck drivers	0 50
Motor truck driver and truck:	
1 to 2 tons	1 50
3 tons	2 00
4 tons	2 50
5 tons	3 00
Ornamental iron workers	0 75
Painters—spray	0 75
Painters and glaziers	0 65
Plasterers	0 90
Plasterers' helpers (mixing and tempering material)	0 50
Plumbers and steamfitters	0 80
Plumbers' and steamfitters' helpers (all men assigned to help tradesmen)	0 50
Roofers, composition	0 55
Roofers, felt and gravel—patent	0 50
Roofers, sheet metal	0 70
Roofers, shingles (wood, asbestos)	0 70
Sheet metal workers	0 70
Stonecutters	0 80
Structural steel workers	1 12½
Terrazzo layers	0 75
Terrazzo finishers and helpers	0 60
Terrazzo labourers	0 50
Tile setters	1 00
Tile setters' helpers (all men assigned to help tradesmen)	0 50
Welders on steel erection	1 12½
Watchman	0 45

Construction of a Boom Defence Building at H.M.C. Dockyard, Esquimalt, B.C. Name of contractors, Parfitt Bros., Ltd., Victoria, B.C. Date of contract, July 21, 1938. Amount of contract, $47,557. The preceding fair wages schedule was also included in this contract.

Clearing and grubbing a portion of the Royal Canadian Air Force Aerodrome, Truro, N.S. Name of contractors, Municipal Spraying and Contracting Ltd., Halifax, N.S. Date of contract, July 26, 1938. Amount of contract, $68,400. A fair wages schedule was included in the contract as follows:—

	Per hour
Axemen	$0 40
Blacksmiths	0 55
Blacksmits' helpers	0 40

Home Improvement Loans

According to statistics issued by the Department of Finance, the total number of Home Improvement Loans reported by the lending institutions to June 30, 1938, in cities and towns of Canada with a population of 5,000 and upward was 32,164, amounting in value to $13,214,005.60.

In cities of 40,000 and over, 17,766 loans were made amounting to $6,984,743.07; in cities of 20,000 to 40,000 a total of 3,585 loans were made, totalling $1,404,532.02; in communities of 10,000 to 20,000 population 4,963 loans were made amounting to $2,293,764.03; while in towns of 5,000 to 10,000 a total of 5,850 loans amounting to $2,530,966.48 were made.

The Department has been notified that Mr. R. H. MacKay has recently been appointed Deputy Minister of Labour for the Province of Nova Scotia, replacing Mr. E. B. Paul who has resigned.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

INDUSTRIAL agreements and schedules of wages and working conditions received in the Department are outlined in the Labour Gazette from month to month. It is not always possible because of limitation of space to include all agreements received each month. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of employers and workers are also included. Verbally accepted agreements are so indicated.

Manufacturing: Textiles and Clothing

Toronto, Ontario.—Merchant Tailors' Association of Toronto and The Journeymen Tailors' Union of America, Local 132.

The agreement came into effect May 1, 1937, and was amended May 1, 1938. It is to continue in effect to May 1, 1939.

Only union members to be employed, if available.

Hours: 44 per week.

Overtime: time and one-half; work on holidays, double time.

Wages: a schedule of piece work wage rates forms part of the agreement.

Employers who give out work to contractors to register same with the union and no work to be given to other than registered contractors, and there shall be no sub-contracting. The contractor to provide a sanitary workshop and employ union help only. Except for work so given out to registered contractors, all work to be done on the employer's premises where a sanitary workshop must be furnished.

Work to be divided as equally as possible in slack seasons.

Provision is made for arbitration of any disputes or grievances.

Winnipeg, Manitoba.—Certain Manufacturers of Overalls, Shirts, Pants, Sport Apparel, Etc. and The United Garment Workers of America (Local 35).

Agreement to be in effect from January 1, 1938, to December 31, 1938.

Only union members to be employed and no discrimination to be shown employees on account of union activity

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: time and one-quarter; work on legal holidays, time and one-half.

Wages are according to a piece work schedule which is reported to be a 5 per cent increase over the rates in effect previously.

No temporary help may be employed unless there is a full week's work for the permanent employees. All temporary help to be paid the piece worker's average wage plus 10 per cent.

During the slack seasons, work to be divided as equally as possible.

Provision is made for arbitration of disputes.

Vancouver, B.C.—Certain Ladies' Cloak and Suit Manufacturers and The International Ladies' Garment Workers Union (Local 602).

Agreement to be in effect from June 25, 1937, to June 25, 1939.

Only union members to be employed. In each shop, a shop chairman to be elected who will negotiate with the employer for the adjustment of disputes or grievances.

Overtime not permitted until all union members are employed, and then limited to one hour per day for four days a week and must be paid at time and one-half.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Wages: minimum wage for cutters, $35 per week, lining cutters $18 per week. Increases in wages of from 10 to 15 per cent were provided for all week workers covered by the agreement. Piece work wage rate for certain operations are also included in the agreement and other piece work prices are to be settled between the employer and the union.

No new apprentices to be engaged until all unemployed union members are employed, and then only with the consent of the union.

During slack season, work to be divided as equally as possible.

Manufacturing: Pulp and Paper

Sheet Harbour, N.S.—A Certain Pulp Manufacturing Company and The International Pulp, Sulphite and Paper Mill Workers (Local 301).

Agreement to be in effect from September 1, 1937, to May 1, 1938, and thereafter from year to year, subject to notice. The agreement was renewed from May 1, 1938, to April 30, 1939, and thereafter from year to year subject to notice, with minor changes.

Any employee who is now a member or who later becomes a member must maintain his union membership and when hiring new employees union members to be given preference; any others employed to become union members.

Hours: 8 per day for tour workers, day workers and maintenance workers, but additional hours may be worked in cases of emergency.

Overtime: "Overtime at the rate of time and one-half the established rate will be paid for all work performed on Sunday and holidays, provided however, that no overtime shall be paid: (1) to tour workers substituting for one another beyond their regular eight-hour shift nor in case of unnecessary absences; (2) to day workers or maintenance workers unless and until they have worked ten hours, in any one day, excepting Sundays and holidays." Holidays are: Good Friday, Dominion Day, Labour Day and Christmas Day.

Wages per hour: grindermen 45 cents; wet machinemen 41, 45 and 48 cents; balermen 45 cents; pulp storage 34, 35 and 37 cents; wood pickers 37 cents; bale weighers 37 cents; grinder foreman 45 and 52 cents; oilers and cleaners 49 and 52 cents; electricians 67, 69 and 84 cents; carpenters 47 and 62 cents; mechanics 37, 50 and 56 cents; barkermen 37 cents; boom men 37 cents; slashermen 34 cents; wood fore-

man 44 cents; storekeeper 40 cents; truck drivers 40 cents. The classification of switchboard operators at 50 cents was added in the May 1, 1938, amendment as well as the provision that truck drivers' licences be paid by the company on renewal January 1, 1939.

Disputes to be taken up by the adjustment committee of the union with the company and later, if necessary, by the international president of the union with the company president. If they cannot agree, the matter will be referred to an arbitration board. If the representative of the company and the representative of the union cannot agree on an impartial chairman, the premier or acting premier of the province of Nova Scotia will be asked to appoint one. The decision of the arbitration board to be final and binding.

OTTAWA, ONTARIO.—A CERTAIN PAPER MANUFACTURING COMPANY AND THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS (LOCAL 34) AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS (LOCAL 73) AND THE INTERNATIONAL ASSOCIATION OF MACHINISTS

Agreement to be in effect from May 1, 1938, to May 1, 1939, and thereafter from year to year, subject to notice.

The Company recognizes the unions as bargaining agencies for their membership. Every employee, as a condition of employment, is to maintain his union membership and any new employees must join one of these unions. All other considerations being equal, preference in choosing new employees is to be given to union members.

Hours: for other than tour workers, 8½ hours from Monday to Friday and 6¾ hours on Saturday, a 48-hour week.

Overtime: for other than tour workers, time and one-half.

Wages per hour: wood yard and conveyor workers, 40 to 50 cents; pulp handling—tractor operators 45½ and 47½ cents, labourers 40 cents; riggers—labourers 43 cents; clean-up crew—labourers 40 cents; locomotive—engineer 57½ cents, brakemen and track foreman 45½ cents, labourers 40 cents; wood room—foreman 54 cents, knife grinder and chippermen 46 cents, chip loft 42½ cents, others 41 cents; sulphite mill—millwright 67½ cents, millwright helper 47½ cents, cooks 74 cents, acid maker and wet room stock runner 59½ cents; oiler and blow pits, etc. 56 cents, others 41 to 44 cents; groundwood mills—foreman 65 cents, repairman 48½ cents, grinder men 47 cents, others 40 to 43 cents; paper mill beater room—beater engineers 83 cents, coreman and size man 49½ cents, beater men, mixer men and saveall men 45 cents, cleaner 43½ cents, others 40 cents; paper mill machineroom—tour foreman $1.34 and $1.40, machine tenders $1.03 to $1.15, back tenders 87 to 99 cents, winder men 76 to 80 cents, fourth hands 56 to 60 cents, fifth hands 55 to 59 cents, oilers 44 and 47 cents, basement oiler 41½ and 43½ cents; paper mill finishing room—shipping scale 56½ cents, scale man 51 cents, finishers and truckers 44½ cents, cleaner and sample boy 40 cents; paper mill cutter room—rewinder man 70 cents, rewinder helper 47½ cents, cutter man 58½ cents, finishers, loaders and sheet lifter 44½ cents, sheet girls and sheet boys 30½ cents; board mill beater room—colour man 55 cents, beater man 42 cents, others 40 and 42½ cents; board mill machine room—machine tender 90 cents, back tender 76 cents, third hand 66 cents, fourth hand 50 cents, fifth hand 47 cents, clothing man 53½ cents, others 40 to 47 cents; board mill finishing room—car checker 45½ cents, finishers 42 cents, others 41 cents; mechanical department—machinists 67 to 80 cents, roll grinder and fitter 72 cents, helpers 45½ to 56½ cents, welder 68 cents, welder helper 45½ cents; paper mill millwrights—56½ to 61 cents, helpers 45½ cents; blacksmiths 56½ cents and 61 cents, helpers 45½ and 46½ cents; pipefitters—56½ to 61 cents, helpers 45½ cents, pipe machine 59 cents; board mill millwrights—millwrights 56½ to 61 cents, helpers 45½ cents; painters—45½ and 47½ cents; steam department—turbine operator 64 cents, firemen 48 to 55 cents, turbine helpers 43 cents, bricklayer 68½ cents, steamfitter 61 cents, engine fitter 61 cents, engine helper 43½ cents, labourers 40 cents; electrical department—electrician 63½ and 66 cents, helpers 45½ cents, operators 55 cents, motor tenders 47 cents; control department—groundwood testers 42 cents, paper testers 44 cents; watchmen $3.20 and $3.50 per day; stores—truck drivers 42 to 47½ cents, store man's helper 40 cents.

Meetings to be held monthly if possible between representatives of the company and the union to discuss matters of mutual interest. Disputes and grievances which cannot be settled by the local union with the management, will be taken up by the international president of the union or his representative with the company, and if this fails, the matter will be referred to a joint arbitration board whose decision will be final and binding.

OTTAWA, ONTARIO.—A CERTAIN MANUFACTURER OF PAPER BAGS, ETC. AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS (LOCAL 245).

Agreement to be in effect from November 20, 1937, to April 30, 1938, and thereafter from year to year subject to notice.

Preference in employment to be given to union members. Permanent employees are expected to maintain membership in the union.

Wages per hour: printing department—composing room 38 and 49½ cents, pressmen 31, 36, 50 and 55 cents, feeder 31 cents, rewinder 28 and 30 cents; finishing department—bundlers 31 to 44 cents, pressmen 23 to 26 cents, label boys 23 cents, general works 23 and 30 cents; machine shop—machinists 59 to 69 cents, machinists' helper 34 and 36 cents; cardboard box department—press feeder 26 cents, make ready 44 cents; shipping department—truckers 35 and 37 cents, shipper 34 cents, rewinder 37 and 42½ cents, general labour 26 to 36½ cents, waxed operator 23 and 34 cents, roll wrappers 26 cents, sheet cutter 23 cents, press cutter 26 and 37 cents, embossing machine 23 cents; specialty department—operators 31 to 55 cents, machine tender 25 to 31 cents; wax machines department—operator 53 cents, helper 34 cents; cups department—operating 30 to 38 cents, machine tender 23 and 32 cents.

A mutual interest board to be formed to discuss matters of employees' welfare, safety, etc.

Disputes which cannot be settled by the management and the local union, will be referred to the vice-president of the company and the international president of the union, and then if necessary to a joint arbitration board whose decision will be final and binding.

Construction: Buildings and Structures

CANADIAN AUTOMATIC SPRINKLER ASSOCIATION AND THE UNITED ASSOCIATION OF PLUMBERS, STEAMFITTERS AND SPRINKLER FITTERS (CANADIAN AUTOMATIC SPRINKLER FITTERS UNION, No. 379).

This agreement covers the installation of automatic sprinkler systems or systems used for fire extinguishing purposes, throughout Canada.

The agreement came into effect May 1, 1932, and was summarized in the LABOUR GAZETTE, May, 1932, page 611. It continues from year to year subject to notice. In 1933, the wage rate for journeymen sprinkler fitters was reduced from 85 to 75 cents per hour, but in October, 1937, the 85 cent rate was restored and the agreement continues from year to year, subject to notice of change by either party.

CERTAIN ELEVATOR MANUFACTURERS AND THE INTERNATIONAL UNION OF ELEVATOR CONSTRUCTORS (LOCALS NOS. 101 AT QUEBEC, 89 AT MONTREAL, 96 AT OTTAWA, 50 AT TORONTO, 90 AT HAMILTON, 102 AT WINNIPEG AND 82 AT VANCOUVER).

This agreement, which came into effect October 1, 1934, to remain in effect to September 30, 1939, with addenda in 1934 and October, 1936, which provide for a 10 per cent reduction in wage rates for mechanics engaged on contract elevator maintenance and partial maintenance work.

Hours are 44 per week except in any city where five of the seven principal building trades work a five day week when elevator constructors will also work only a five day week, though service or emergency work may still be done at regular rates on Saturday morning.

Overtime: double time for all overtime including Saturday afternoons, Sundays and legal holidays.

Wages are computed by the average wage rate of the five highest of seven named building trades. The local unions who have reported their wage rates at June 1, 1938 are: local 101 of Quebec City reports elevator constructors at Quebec and Saint John, N.B. 75 cents, elevator constructors at Halifax 85 cents, mechanics on repair and service work at Quebec, Saint John and Halifax 67½ cents, mechanic's helper on construction work 53 cents at Quebec and Saint John, 60 cents at Halifax, mechanic's helper on service work at Quebec, Saint John and Halifax 49 cents; local 96 of Ottawa reports 85 cents for mechanics on construction work, 76½ cents on repair and service work and 59½ and 53 cents respectively for mechanics' helpers; local 50 of Toronto reports a rate of 98 cents for mechanics and 68 cents for helpers; local 90 of Hamilton reports 85 cents for mechanics and 60 cents for helpers at Hamilton, Kitchener, London and St. Catharines.

HALIFAX, N.S.—CONSTRUCTIVE MECHANICAL TRADES EXCHANGE, INC. AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, No. 83.

The terms of this agreement which came into effect the day it was made effective under the Industrial Standards Act (July 30, 1938) are summarized on page 947 of this issue.

62327—6½

HALIFAX, N.S.—CONSTRUCTIVE MECHANICAL TRADES EXCHANGE AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 56.

Agreement to be in effect from June 1, 1938 to April 30, 1939 and thereafter from year to year, subject to notice.

The terms of this agreement relating to hours, overtime and wages are the same as made binding under the Industrial Standards Act and summarized on page 947 of this issue.

Apprentices to serve five years. Not more than one apprentice to each three journeymen employed.

A joint conference board to be formed which shall meet when necessary to deal with matters submitted for their consideration. Any dispute which cannot be settled by this board will be referred to the general office of the international association and no strike or lockout to occur until the general office has rendered a decision.

KINGSTON, ONTARIO.—CERTAIN CONTRACTORS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL 249.

Agreement to be in effect from May 2, 1938 to April 30, 1939.

Only union members to be employed.

Hours: 8 per day, 4 on Saturdays, a 44 hour week.

Overtime: time and one-half to midnight; double time thereafter; work on Sundays and six specified holidays, double time.

Wages for journeymen carpenters: 80 cents per hour.

Wages and conditions for apprentices to be as stipulated by the Ontario Apprenticeship Board.

TORONTO, ONTARIO.—THE CONTRACTING PLASTERERS' SECTION OF THE BUILDERS' EXCHANGE AND THE LATHERS' INTERNATIONAL UNION, No. 97.

Agreement to be in effect from March 31, 1938 to March 1, 1939, and thereafter from year to year, subject to notice.

Only union members to be employed and the union agrees to give preference to the contractors parties to the agreement when supplying men and also agree that no union member will work for less than the wage rate of the agreement.

Hours: 8 per day from Monday to Friday, a 40 hour week. No union member to work over 40 hours in any one week, including overtime. Employees required to set hangers in connection with the pouring of concrete on Saturdays may do so and will be paid straight time for the morning and time and one half for Saturday afternoon and evening. When necessary to have two or three shifts daily, those working on the second and third shift to be paid time and one seventh.

Overtime: time and one-half, work on Saturdays, Sundays and eight specified holidays, double time.

Minimum wage rate: 75 cents per hour for all nail on lathng on wood furring, 90 cents for all other lathing, such as metal furring, tie-on simplex, tri-seal, etc. Foremen must be union members and be paid $1 per day over the regular rate.

For work outside the "metropolitan area of the city of Toronto," transportation to be

paid by the employer and travelling time not exceeding 8 hours per day.

A joint arbitration committee to be formed who shall meet on request and whose decision will be binding on both parties.

TORONTO, ONTARIO.—CONTRACTING PLASTERERS SECTION OF THE BUILDERS EXCHANGE AND THE HOD CARRIERS, BUILDING AND COMMON LABOURERS' UNION, NO. 781 (PLASTERERS' LABOURERS).

Agreement to be in effect from March 1, 1938, to March 1, 1939, and thereafter from year to year, subject to notice.

Only union members to be employed, if available. Employers will accept orders for union dues when signed by the members affected.

Hours: when necessary to work two or more shifts daily, such shifts to be not more than 8 hours between 1 a.m. Monday and 8 a.m. Saturday, and for the second or third shifts time and one-seventh to be paid.

Overtime: time and one-half, but overtime only to be paid while attending plasterers who are on overtime.

Minimum wage rate for plasterers' labourers: 60 cents per hour and no union members will work for less.

A joint arbitration committee to be formed for the settlement of any disputes.

TORONTO, ONTARIO.—CERTAIN FIRMS AND THE INTERNATIONAL HOD CARRIERS, BUILDING AND COMMON LABOURERS' UNION, LOCAL 756 (WRECKERS).

Agreement to be in effect from March 1, 1938, to March 1, 1939. Any proposed changes must be submitted 30 days before expiration date.

Only union members to be employed for all general work in connection with the wrecking business.

Hours: 8 per day, Saturday 6 hours. Whenever there is any need of special work, 9 hours may be worked at the regular rate.

Overtime: all work over 9 hours in any day, to be paid at time and one-half.

Each firm agrees that a shop steward be selected at a shop meeting of their employees and any complaints which the firm may have as to the carrying out of the agreement or as to any individual worker will be taken up by the shop steward with the workers concerned or with a union representative, if necessary.

TORONTO, ONTARIO.—TORONTO AND DISTRICT SOCIETY OF DOMESTIC AND SANITARY ENGINEERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL NO. 46.

Agreement to be in effect from May 26, 1938, to March 1, 1939, and thereafter from year to year subject to notice.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, September, 1936, page 830 and August, 1935, page 776, with these exceptions:

All overtime work of an emergency repair nature where life may be endangered or property damaged, to be done at regular wage rates up to two hours, and if the work takes less than one hour and it is necessary to call the worker from his home, he will be paid travelling time to and from his home.

Minimum wage rate: for journeymen plumbers and steamfitters: 90 cents per hour to June 1, 1938 (which is the same as the previous agreement) and $1 per hour thereafter; for junior mechanics 65 cents per hour (an increase of 5 cents).

TORONTO, ONTARIO.—CUT STONE CONTRACTORS' SECTION OF THE BUILDERS' EXCHANGE AND CONSTRUCTION ASSOCIATION AND THE TORONTO LOCAL UNION OF THE JOURNEYMEN STONE CUTTERS' ASSOCIATION.

Agreement to be in effect from May 1, 1938, to April 30, 1939, and thereafter from year to year, subject to notice.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, July, 1932, page 819, July, 1933, page 733, and September, 1936, page 830, with this exception:

The wage rate for journeymen stonecutters is increased from 87½ to 95 cents per hour.

WINNIPEG, MANITOBA.—GENERAL CONTRACTORS' SECTION OF THE WINNIPEG BUILDERS' EXCHANGE AND THE BRICKLAYERS' AND MASONS' INTERNATIONAL UNION, NO. 1 OF MANITOBA.

Agreement to be in effect from May 1, 1938, to April 30, 1939.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, September, 1937, page 1032, with these exceptions:

Wages for bricklayers and masons: $1.10 per hour (an increase of 5 cents per hour).

Men hired in Winnipeg and sent to jobs out of town to have their transportation paid to and from the job and 15 cents per hour extra over the prevailing rate for bricklayers and masons in the locality where the work is being done, to cover cost of board, lodging and other expenses.

REGINA, SASK.—REGINA BUILDERS' EXCHANGE AND THE BRICKLAYERS', MASONS' AND PLASTERERS' INTERNATIONAL UNION, LOCAL NO. 1, SASKATCHEWAN (BRICKLAYERS AND MASONS).

Agreement to be in effect from March 1, 1938, to March 1, 1939.

This agreement is the same as the one previously in effect and summarized in the LABOUR GAZETTE, November, 1937, page 1270, and July, 1935, page 693.

Wages per hour for journeymen bricklayers and stone-masons continue at $1.10 per hour, with a 44-hour week.

VANCOUVER, B.C.—CERTAIN SANITARY AND HEATING ENGINEERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL NO. 170.

Agreement to be in effect from July, 1938, to January 31, 1940, and thereafter from year to year, subject to notice.

Only union members to be employed, if available.

Hours: 8 per day from Monday to Friday inclusive, a 40-hour week, but for emergency work, forced construction jobs or jobbing work, work may be done on Saturday mornings at regular rates.

Overtime: time and one-half for overtime, including work on Saturdays (except as provided above for Saturday morning); work on Sundays and seven specified holidays, double time. In case it is necessary to work more than one 8-hour shift per day on any job, 8 hours' pay for 7 hours' work.

Minimum wage rates: journeymen plumbers and steamfitters, $1 per hour, helpers 50 cents;

junior plumbers and steamfitters who do not come under the Apprenticeship Act to be paid $6 per day, with increase of 50 cents per day each six months.

For work out of town, journeymen to have their board and transportation paid by the employer and travelling time up to 8 hours per day.

Apprentices to be employed in accordance with the provincial Apprenticeship Act, one apprentice allowed each shop employing one journeyman plumber and one additional apprentice for each additional five journeymen.

A joint conference board to be formed for the settlement of disputes. If this board cannot settle a dispute, no action to be taken until the matter has been referred to the international head office of the union for a decision.

Collective Labour Agreements Act, Quebec

The following agreements and amendments to agreements have recently been made obligatory by Orders in Council and are summarized in the next article:—

Men's and Boys' Hat and Cap Industry, Montreal (amendment).

Building Trades, Three Rivers.

Building Trades, Montreal.

Barbers and Hairdressers, Montreal (amendment).

Industrial Standards Acts

The following schedules have recently been made binding by Orders in Council and are noted in the article on page 947 of this issue:—

Nova Scotia

Carpenters, Halifax and Dartmouth.
Plasterers, Halifax and Dartmouth.
Plumbers, Halifax and Dartmouth.

Ontario

Loggers, Timmins.
Barbers, Toronto.

Saskatchewan

Carpenters, Regina.
Hairdressers, etc., Regina.

Alberta

Welding Industry, Calgary.
Lathers, Calgary.
Plumbers, Calgary.
Structural Steel Workers, Edmonton.
Taxi and Bus Drivers, Banff.

COLLECTIVE LABOUR AGREEMENTS ACT, QUEBEC

Recent Proceedings under the Act

THE Collective Labour Agreements Act which was assented to March 18, 1938, amends the Act respecting Workmen's Wages, 1937, by changing the title of the Act and by certain other changes which are summarized in the May issue of the Labour Gazette, page 503. Agreements and regulations under the Act respecting Workmen's Wages and under the original Act, "The Collective Labour Agreements Extension Act, 1934," continue in effect for the period for which they were made or have been renewed or amended. Under the Collective Labour Agreements Act, any party to a collective agreement made between the representatives of an association of employees and the representatives of an association of employers or one or more employers may apply to the Lieutenant-Governor in Council through the provincial Minister of Labour to have those terms of such agreements which govern wages, hours of labour, apprenticeship, classification of operations, determination of classes of employers and employees and all such provisions as the Lieutenant-Governor in Council may deem in conformity with the spirit of the Act, made obligatory on all employers and employees in the trade, industry, commerce or occupation within the district determined in the agreement. Notice of such application is published, and thirty days is then allowed for filing of objections and the Minister may hold an inquiry. After this period, if the Minister considers that the terms of the agreement "have acquired a preponderant significance and importance" and that it is advisable, with due regard to economic conditions, an Order in Council may be passed granting the application, and making the provisions of the agreement obligatory from the date of publication of the Order in Council in the *Quebec Official Gazette* or its provisions may be made retroactive for a period not exceeding four months. The Order in Council may be amended or revoked at any time by the Lieutenant-Governor in Council and such amendment or revocation must be published in the *Quebec Official Gazette*. Unless otherwise stipulated, these agreements do not apply to provincial government departments or services or to work done by a third party for the provincial government under a contract providing for a scale of minimum wages. A joint committee must be formed by the parties to an agreement made obligatory under this Act and the Minister may add to such committee representatives nominated by employers and employees not parties to the

agreement. The committee is to make its own by-laws and when these are approved by Order in Council and published in the *Quebec Official Gazette*, the committee is constituted a corporation. A joint committee may require certificates of competency from workers within the scope of the agreement in towns of 5,000 or more, and such by-law must be approved by Order in Council and published in the *Quebec Official Gazette*. Proceedings under the Collective Labour Agreements Extension Act were summarized in the LABOUR GAZETTE from June, 1934, to July, 1937. Proceedings under the Workmen's Wages Act were noted in the issues from July, 1937, to April, 1938. Proceedings under the Collective Labour Agreements Act are noted in the issues beginning May, 1938.

Recent proceedings under the Act include: the extension by Orders in Council of agreements affecting building trades at Three Rivers and Montreal; the amendment by Orders in Council of agreements affecting the men's and boys' hat and cap industry at Montreal, barbers and hairdressers at Montreal; the cancellation by Order in Council of the agreement affecting the building industry of Victoriaville. Requests for the extension of new agreements affecting the bakery, retail trade and hotel industries at Magog and the jewellery industry in the Quebec district were published in the *Quebec Official Gazette*, July 16, embroidery workers at Montreal in the issue of July 23 and bakers at Granby in the issue of July 30. In addition, Orders in Council were published in the July 9 issue of the *Quebec Official Gazette* approving the constitution and by-laws of certain joint committees, and in the July 30 issue requiring competency certificates in the shoe repairing trade in Montreal.

Manufacturing: Textiles, Clothing, Etc.

MEN'S HAT AND CAP WORKERS, MONTREAL AND DISTRICT AND HULL.—An Order in Council approved July 2 and published in the *Quebec Official Gazette*, July 9, amends a previous Order in Council (LABOUR GAZETTE, January, 1938, page 102).

The industrial jurisdiction as set forth in this amendment covers all manufacturers producing as a main industry or as an addition to their main industry all manner of men's and boys' hats, caps and headwear for children of either sex.

The territorial jurisdiction is defined as the Island of Montreal and territory within fifty miles of its limits as well as the city of Hull.

The amendment also gives definitions of certain trades.

Construction: Buildings and Structures

BUILDING TRADES, THREE RIVERS.—An Order in Council approved July 2, and published in the *Quebec Official Gazette*, July 9, makes obligatory the terms of an agreement between certain contractors and L'Union Nationale Catholique des Charpentiers-menuisiers, Inc. des Trois Rivières, (the National Catholic Union of Carpenters and Joiners, Incorporated of Three Rivers), L'Union Nationale Catholique des Journaliers, Inc. (The National Catholic Union of Labourers, Inc.), L'Union National Catholique des Electriciens, Inc. des Trois Rivières (the National Catholic Union of Electricians, Inc. of Three Rivers), L'Union Nationale Catholique des Mecaniciens de Machines Fixés Inc. des Trois Rivières (the National Catholic Union of Stationary Engineers, Inc. of Three Rivers), L'Union Nationale Catholique des Peintres Inc., des Trois Rivières, (the National Catholic Union of Painters, Inc. of Three Rivers) and L'Union National Catholique des Briqueteurs, Plâtriers et Maçons, Inc. des Trois Rivières (the National Catholic Union of Bricklayers, Plasterers and Masons, Inc. of Three Rivers).

The Order in Council is to be in effect from July 9, 1938, to July 8, 1939 and will automatically renew itself unless all the parties thereto wish to repeal or modify it. This Order in Council replaces those previously in effect and summarized in the LABOUR GAZETTE, January, 1935, page 26 and May, 1935, page 421.

The territorial jurisdiction consists of the city of Three Rivers. (The previous order in Council had included in addition, several neighbouring counties).

The industrial jurisdiction of the present Order in Council comprises all building, repairing, maintenance, demolishing works and transportation of immoveables and buildings and works pertaining to roads, bridges, dams, streets, wharfs, sidewalks, earth, supporting walls, sewers, viaducts, tunnels, wells, boats, canals, locks, parks, playgrounds, aqueducts, gas, electric or telephone lines, fences and every other work having any connection with these. Repair works the cost of which is $2,000 or less are exempt. The pulp and paper industry is also exempt.

Hours: 8 per day.

Overtime: time and one-half after 8 hours per day. No work on Sundays, Catholic holidays, Good Friday, St. John Baptist's Day and Labour Day except when permission is granted by the Labour Inspection Service for which days, double time will be paid.

MINIMUM HOURLY WAGE RATES

	Wage per hour
Bricklayers	$0 70
Masons	0 70
Plasterers	0 70
Carpenters-Joiners	0 55
Painters	0 50
Painters, spraying machines	0 60
Labourers (non-qualified workers)	0 40

	Wage per hour
Electricians	0 50
Stationary enginemen	0 50
Enginemen—mixers	0 45
Enginemen—compressors	0 45
Enginemen—hoists	0 55
Millwrights	0 60
Machinists	0 60
Blacksmiths	0 60
Marble, terazzo, celanite, tile and mosaic setters	0 60
Lathers—metal	0 45
Lathers—wood	0 50
Lathers—wood	3 00*
Joint pointers, cement finishers	0 50
Plaster pourers	0 40

Truck drivers	0 40
Carters (two-horse vehicle)	0 60
Carters (one-horse vehicle)	0 50
Horse drivers	0 35
Sprinkler fitters	0 85
Structural iron erectors	0 75

*Per thousand.

(These are increases of 5 cents or more per hour for some trades, and no change for other trades.)

Permanent employees engaged in the maintenance of churches, colleges, hospitals, etc. may be paid 20 per cent less than the above rates.

No employer shall have the right to employ more than: one apprentice per five journeymen bricklayers, masons, or plasterers, one apprentice for each journeyman electrician, nor more than one apprentice per three journeymen of the other trades covered by the agreement.

The term of apprenticeship for electricians is four years at rates ranging from 15 cents per hour in the first year to 35 cents per hour in the fourth year. In the other trades covered by the Order in Council the term of apprenticeship is three years, with wage rates ranging from 15 cents to 40 cents in the case of bricklayers, masons or plasterers and from 15 cents to 35 cents in other trades.

Building Trades, Montreal and District.—An Order in Council approved July 2, and published in the *Quebec Official Gazette*, July 9, and a correction published in the issue of July 30, makes obligatory the terms of an agreement between the Builders Exchange, Incorporated, and Le Conseil des Syndicats des Métiers de la Construction de Montréal (the Building Trades Council of Montreal) and the Building and Construction Trades Council of Montreal and Vicinity.

This Order in Council replaces previous Orders (Labour Gazette, June, 1937, page 693 with amendments in September, page 1034 and December, page 1387) but does not cover as wide a territory as the previous agreement which covered the whole of the Island of Montreal and fourteen neighbouring counties.

The Order in Council is to be in effect from May 1, 1938, to March 31, 1939 and shall continue in force after that date for another period of thirty days, pending the adoption of an Order in Council that will replace the present one.

The territorial jurisdiction is divided into two zones: zone I, the cities of Montreal, Verdun, Westmount, Outremont and the municipalities or towns of Hampstead, Montreal-East, Montreal West and Mount Royal; zone II the municipality of Lachine.

The professional and industrial jurisdiction comprises all engineering works, public building construction, including landscape work (with the exception of maintenance landscape work) and works of installation, rebuilding, maintenance and demolishing of public buildings. Repair works whose cost does not exceed $2,000 are exempt, as are agricultural enterprises and earthworks in cemeteries.

Hours: For skilled workers: 8 per day, 4 on Saturdays, a 44 hour week with the exception of landscape workmen, shovel operators, team drivers and general trucking, carters and hauling employees who may operate on a 55 hour week basis without daily limitation of hours; mastic floor layers may work an hour a day extra at the regular rate when their employers deem it necessary. Hours for labourers: 9 per day, 5 on Saturday, a 50 hour week.

Overtime: any work done in excess of daily limits shall be paid at the rate of time and one half; work on seven specified holidays, double time.

Minimum Hourly Wages

	Wages per hour Zone I	Zone II
Asbestos coverers	$0 60	$0 50
Bricklayers	0 80	0 70
Caulkers (construction)	0 45	0 45

Terazzo layers	0 60	0 50

	Wages per hour Zone I	Zone II
Men charged with machines for the polishing of terrazzo:		
Dry polishing	0 50	0 50
Water polishing	0 45	0 45
Sprinkler fitters	0 85	0 85
Tile setters	0 70	0 65
Shovel operators (steam, gas or electricity): per week	40 00	30 00
Erectors of structural iron (all categories except painters)	0 75	0 75
Boiler makers	0 75	0 75
Night watchmen: per week	15 00	15 00
General trucking, cartage and hauling	0 30	0 30
Horse drivers	0 30	0 30
Riggers	0 50	0 50
Timekeepers and material checkers, per week	18 00	16 00
Concrete metal brace erector	0 55	0 50

(For zone I, the wage rates are the same as in effect under the last Order in Council, except for sprinkler fitters who received an increase of 10 cents per hour in accordance with their union agreement which covers Canada, and except that a number of additional classes have been added to the wage schedule. The city of Lachine now comprising zone II was included in zone I in the previous Order in Council.)

Workers hired in zone I and working in zone II shall receive the wages established in zone I.

Contractors who do not employ qualified workers but themselves perform work covered by the agreement shall receive an hourly rate of wages at least 25 per cent more than the regular rate for the trade. In the plumbing trade the rate for such contractors shall be $1 per hour.

Permanent maintenance men working in churches, colleges, convents, hospitals, etc., to be paid $22 in zone I and $19.80 in zone II for journeymen, and $15.40 in zone I and $13.20 in zone II for labourers.

Maintenance men in public or office buildings, dwellings, hotels, manufacturing establishments and stores shall be paid $24.20 in zone I, $19.80 in zone II for journeymen, and $17.60 in zone I and $15.40 in zone II for labourers.

Hours for maintenance men: 48 per week, and overtime to be paid at regular hourly rates for the trade concerned.

If a maintenance man is lodged or fed in the employer's establishment, $3 per room per month and a maximum of 25 cents per meal may be deducted.

Apprentices: An employer shall have the right to hire one apprentice in one or more trades for each ten journeymen in the trade for which the apprentice is appointed, but this section does not apply to the plumbing, heating and electricity industries.

The period of apprenticeship is four years in most trades, three years in some other trades and two years in the structural steel industry.

Rates of wages paid to apprentices shall be based on the minimum wages paid to qualified workers as follows: for trades requiring four years of apprenticeship from 30 per cent of journeyman's wage during first year to 75 per cent during fourth year; for trades requiring three years of apprenticeship, from 45 per cent during first year to 75 per cent during third year; for the structural steel industry, 50 per cent during first year and 75 per cent during second year; for the plumbing industry, (including the installation of heating and automatic sprinkling systems) the minimum hourly rate for apprentices is from 25 cents per hour in zone I and 20 cents in zone II during first year to 40 and 35 cents during fourth year; landscape apprentices to be paid 30 cents per hour in zone I and 25 cents in zone II during first two years of apprenticeship and 5 cents per hour higher during third and fourth year of apprenticeship.

Service: Business and Personal

BARBERS AND HAIRDRESSERS, MONTREAL.—An Order in Council approved July 2 and published in the *Quebec Official Gazette*, July 9, extends the period of a previous Order in Council (LABOUR GAZETTE, July, 1935, page 631, October, 1935, page 953 and January, 1936, page 89) after June 29, 1938, until a new decree is adopted, but for a period not to exceed three months.

Joint Committees

The constitution and by-laws of the joint committees set up under the following agreements were approved by Orders in Council and published in the July 9, issue of the *Quebec Official Gazette*:

Longshoremen (coastal navigation) Montreal.
Barbers and hairdressers, Missiquoi County.
Shoe repairers, Montreal.
Automobile garages and service stations, Montreal.
Men and Boy's Cap Industry, Montreal.
Dairy Industry, Quebec.

Certificate of Competency

The certificate of competency was made obligatory by Order in Council as noted in the *Quebec Official Gazette*, July 30, for the following trade:

Shoe repairing trade, Montreal.

Honourable Michael Dwyer, Nova Scotia Minister of Mines and Labour, announced recently that Mr. Arthur Petrie of Dominion, N.S., had been appointed a member of the Workmen's Compensation Board of Nova Scotia. Mr. Petrie's appointment fills the position vacated by Mr. John T. Joy of Halifax, who resigned a few months ago.

At the convention of the Canadian Nurses' Association held recently in Halifax reports and discussions of the conference strongly supported the proposal of an eight-hour day for nurses.

INDUSTRIAL STANDARDS ACTS

Schedules of Wages and Hours Recently Approved by Provincial Orders in Council in Nova Scotia, Ontario, Saskatchewan and Alberta

IN four provinces—Ontario, Alberta, Nova Scotia and Saskatchewan—legislation provides that, following a petition from representatives of employers or employees in any industry, the Provincial Minister charged with the administration of the Act may himself, or through a government official delegated by him, call a conference of representatives of employers and employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council on all employers and employees in the industry in the zone designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to assist in carrying out the provisions of the Act and the regulations. The administration and enforcement of the Act is placed in Ontario under the Industry and Labour Board, assisted by industrial standards officers; in Alberta under the Board of Industrial Relations; in Nova Scotia under the Minister of Labour who may appoint inspectors; in Saskatchewan under the Commissioner of Labour and Public Welfare. Reviews of these Acts and amendments have been published in the Labour Gazette, as follows: Ontario, in the issues of June, 1935, page 530, May, 1936, page 410, May, 1937, page 505, and May, 1938, page 501; Alberta, in June, 1935, page 504, June, 1936, page 501, June, 1937, page 640, and June, 1938, page 633; Nova Scotia, in June, 1936, page 604; Saskatchewan, in the issue of June, 1937, page 635, and May, 1938, page 507.

Nova Scotia

Construction: Buildings and Structures

Carpenters, Halifax and Dartmouth.—An Order in Council, dated July 7, and published in *The Royal Gazette*, July 20, makes binding the terms of a schedule of wages and hours in the carpentry industry in the city of Halifax and the town of Dartmouth from July 30, 1938, to April 30, 1939, and thereafter from year to year subject to notice of change being given by either the employers or the employees. (The previous schedule was summarized in the Labour Gazette, September, 1936, page 832.)

Hours: 8 per day, 4 on Saturdays, a 44-hour week, to be worked between 8 a.m. and 5 p.m., except Saturdays when hours are 8 a.m. to 12 noon. When necessary to work two or more shifts in a day, the men employed between 5 p.m. and 8 a.m. to be paid at the rate of 8 hours' pay for 7 hours' work.

Overtime: time and one-half for first four hours; thereafter double time. Work on Sundays and on ten specified holidays, double time.

Minimum wage rate: 65 cents per hour (an increase of 5 cents over the rate of the previous schedule) and no carpenter shall work for less. A special minimum rate may be established by the advisory committee for handicapped workers.

Plasterers, Halifax and Dartmouth.—An Order in Council dated July 7 and published in *The Royal Gazette*, July 20, makes binding the terms of a schedule governing the plastering and cement finishing industry in the city of Halifax and the town of Dartmouth from July 30, 1938, to April 30, 1939, and thereafter from year to year, subject to notice of change from either the employers or the employees.

The terms of this schedule are similar to those summarized above for carpenters at Halifax and Dartmouth, with this exception:—

Minimum wage rate for plasterers and cement finishers: 75 cents per hour, and no plasterer shall work for less.

Plumbers, Halifax and Dartmouth.—An Order in Council, dated July 7, and published in *The Royal Gazette*, July 20, makes binding the terms of a schedule governing the plumbing industry in the city of Halifax and town of Dartmouth from July 30, 1938, to April 30, 1939, and thereafter from year to year subject to notice of change from either the employers or the employees. (The previous schedule was summarized in the Labour Gazette, September, 1936, page 832.)

Hours: 8 per day, 4 on Saturdays, a 44-hour week to be worked between 8 a.m. and 5 p.m. except Saturday when hours are from 8 a.m. to 12 noon.

Overtime: time and one-half until 10 p.m.; thereafter and all work on Sundays and nine specified holidays, double time.

Minimum wages for certified plumbers and steamfitters: 85 cents per hour (an increase of 10 cents per hour over the rate of the previous schedule).

Men sent by a firm to work out of Halifax, to have their fare and board paid and travelling time up to 5 p.m.

Ontario

Logging

LOGGERS, TIMMINS.—An Order in Council, dated June 24, and published in *The Ontario Gazette*, July 2, makes binding the terms of a schedule of wages and hours in the logging industry which includes: cutting pulp, cutting timber, saw logs, peeling, skidding, river driving, tie making, loading, cutting of piling, maintenance of men in camps, cooking, etc.

The schedule is to be in effect from July 12, 1938, to June 1, 1939, in the Timmins zone.

The terms of this schedule are the same as that for loggers in the Port Arthur Forestry Division, which was summarized in the LABOUR GAZETTE, May, page 579. (The previous schedule for loggers at Timmins was summarized in the LABOUR GAZETTE, December, 1937, page 1389.)

Service: Business and Personal

BARBERS, TORONTO.—An Order in Council, dated July 13, and published in *The Ontario Gazette*, July 23, continues in effect "during pleasure," the same schedule as was summarized in the LABOUR GAZETTE, July, 1937, page 816.

Saskatchewan

Construction: Buildings and Structures

CARPENTERS, REGINA.—An Order in Council, dated July 5 and published in *The Saskatchewan Gazette*, July 15, makes binding the terms of a schedule governing the carpentry industry in the city of Regina and within ten miles of it from July 15, 1938 "during pleasure."

The terms of this schedule are similar to the one previously in effect and summarized in the LABOUR GAZETTE, July, 1937, page 817, continuing the 44-hour week and the 75 cent per hour wage rate for journeymen carpenters.

A wage schedule for apprentices is now included with rates varying from 35 cents per hour during first year to 65 cents during fourth year.

Service: Business and Personal

HAIRDRESSERS, ETC., REGINA.—Orders in Council, dated July 5, and published in *The Saskatchewan Gazette*, July 15, cancel the previous Order in Council for this trade (LABOUR GAZETTE, February, 1938, page 216) and make binding the terms of a new schedule for the "beauty culture" industry from July 25, 1938 "during pleasure."

Hours and overtime: regular hours, 45 per week, but overtime to the extent of five hours may be worked in any one week. Shops and schools may be open from 9 a.m. to 6 p.m., except Saturday or the day before a holiday when the shops may remain open until 8 p.m.

No work on Sundays, on nine specified holidays, nor on Wednesday afternoon except Wednesday of the week in which a holiday occurs.

Minimum wages for employees in the beauty culture industry: those given full time employment, $13 per week of 45 hours, plus 30 cents per hour for all time in excess thereof, or 40 per cent of all charges for permanent waves and for dyes performed by the employee and 60 per cent of all charges for other work, whichever is greater; for those given part time or casual employment, 30 cents per hour or the same percentages of charges for work done by the employee as above, whichever is greater; for instructors employed in a beauty culture school, $18 per week of 45 hours and 50 cents per hour for hours in excess thereof. The scale of minimum charges for work performed in the industry is included in the schedule and also maximum charges for services which may be charged in a beauty culture school.

No deduction may be made from minimum wages for materials supplied or operating expenses of any kind.

Alberta

Manufacturing: Metal Products

WELDING INDUSTRY, CALGARY.—An Order in Council, dated June 16, and published in *The Alberta Gazette*, June 30, makes binding the terms of a schedule of wages and hours for all electric arc welding, oxy-acetylene gas welding; cutting or burning (except automotive work) performed by any welder or burner, carried on by any welding shop, welding contractor, sub-contractor, owner or any other person, firm or corporation who employs a man or men to perform electric arc welding, oxy-acetylene gas welding, cutting or burning in the city of Calgary.

The Order in Council to be in effect from July 15, 1938, to July 14, 1939.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: time and one-half for first six hours; thereafter and all work on Sundays and on six specified holidays, double time.

Minimum hourly wages for welders: holders of first class Alberta proficiency certificates 70 cents; holders of second class Alberta proficiency certificates 60 cents; holders of third class Alberta proficiency certificates 50 cents.

All work outside the city to be "country" work and to be governed by the same wages and working conditions as in the city. Welders engaged in Calgary and sent out of town to have their board, lodging and transportation provided by the employer.

Any employer paying a higher rate of wages than the above or operating with a lesser number of hours than 44 per week may not increase the hours nor decrease the wage rates.

Construction: Buildings and Structures

Wood and Metal Lathers, Calgary.—An Order in Council, dated July 27, and published in the *Alberta Gazette*, July 30, makes binding the terms of a schedule of wages and hours governing the wood and metal lathing industry in the city of Calgary and within 25 miles of the Calgary post office, from August 9, 1938, to August 8, 1939.

The terms of the schedule are the same as the one previously in effect and summarized in the Labour Gazette, August, 1937, page 924, with a 40-hour week and wage rates of 90 cents for metal lathers and 75 cents for wood lathers.

Plumbers, Calgary.—An Order in Council, dated June 10, and published in *The Alberta Gazette*, June 30, makes binding the terms of a schedule governing the plumbing and steamfitting industry in the city of Calgary and surrounding district, from July 15, 1938, to July 14, 1939.

The terms of this schedule are similar to those of the schedules previously in effect and summarized in the Labour Gazette, June, 1937, page 697 and April, 1936, page 373.

The minimum wage rate is unchanged at 95 cents per hour with a 40-hour week.

Structural Steel Workers, Edmonton.—An Order in Council, dated June 16, and published in *The Alberta Gazette*, June 30, makes binding in the city of Edmonton and within 20 miles of the post office the terms of a schedule of wages and hours for structural steel workers engaged on erection work but does not include shop work.

The Order in Council to be in effect from July 15, 1938, to July 14, 1939.

Hours: 8 per day, 4 on Saturdays, a 44-hour week. If required to work on night shifts, 8 hours' pay for 7 hours' work.

Overtime: time and one-half. Work on Sundays and six specified holidays, double time.

Minimum wage rate for structural steel workers: 95 cents per hour.

A bona fide contractor allowed one apprentice for each five steel workers customarily employed for the greater part of the season.

Wage for apprentices: 60 cents per hour.

Men engaged in the city of Edmonton and sent to work out of town to have their transportation paid both ways.

The advisory committee to determine and define the classification and requirements of the different types of work.

Transportation and Public Utilities: Local Transportation

Taxi and Bus Drivers, Banff.—An Order in Council, dated June 16, and published in *The Alberta Gazette*, June 30, makes binding the terms of a schedule of wages and hours for the taxi livery and bus transportation industry in the Banff National Park, from July 15, 1938, to September 30, 1938.

Hours for all regularly employed chauffeurs, 12 consecutive hours per day, less a one-hour rest period, for seven days a week for a period not exceeding three consecutive weeks. Days of rest to be provided on a basis of one day in seven. Hours of work to be computed from the posted time of starting a shift.

Wages: regularly employed chauffeurs to be paid a guaranteed sum of $14 per week of 66 working hours plus a bonus to drivers of touring cars of 4 cents per mile and to bus drivers of 5 cents per mile for all mileage in excess of 350 miles in such week. Temporary chauffeurs to be paid minimum rates *pro rata* of the above; they may not be employed for fewer than four hours per day and the minimum rate for such temporary employment is 40 cents per hour.

The advisory committee to determine and define the classification of work, monetary responsibility of chauffeurs, etc.

Plans for Rating Employees

The National Industrial Conference Board, Inc., New York, has published another in its serious of studies in personnel policy (No. 8) entitled "Plans for Rating Employees".

The report is based upon information received from 94 companies in the United States, employing 618,127 persons, that have formal plans for the periodic rating of employees. The report indicates that 47, or 50 per cent of the companies have had formal rating plans for 10 years or less, although 11 companies have had rating experience for 20 years or more. It is shown by the report that most companies make periodic appraisals of employees in the lower position levels of wage earners and clerical workers, but over one-half of the firms rate foremen and supervisors and nearly one-third rate executives. Approximately 73·2 per cent of the total reported employment is periodically appraised by management.

In 73, or 77·7 per cent of the companies, ratings are made once or twice annually although new employees are frequently appraised at shorter intervals. Seventeen per cent of the companies reported that employees were rated more often than twice a year. In 82, or 87·2 per cent of the total companies, employees know that they are periodically appraised and 63 firms permit employees to challenge the ratings.

The report states that most of the 17 companies having labour agreements as well as many others without union contracts, find that a rating plan is helpful in adjusting grievances which arise when ability is considered as one factor of seniority. It is also stated that the practice of rating is a definite aid to management in promoting fairness and better understanding in regard to many of the decisions which affect the status and progress of employees.

The report is divided into 4 main sections under the following headings: Introduction, Fundamentals of Employee Rating; The Rating Form and Current Practices and Policies in Rating Procedures. A bibliography is also included in the report along with specimen rating sheets.

PRICES, RETAIL AND WHOLESALE IN CANADA, JULY, 1938

Cost of Living, Prices of Staple Articles and Index Numbers

IN retail prices the cost of a weekly family budget of staple foods, fuel and lighting, and rent in July was little changed from the previous month while the Dominion Bureau of Statistics weekly index number of wholesale prices declined due in large part to lower prices for grains.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of retail prices in sixty-nine cities was $8.57 at the beginning of July as compared with $8.56 for June; $8.56 for July, 1937; $7.97 for July, 1936; $6.67 for March, 1933 (the low point in recent years; and $10.91 for July, 1930. The most important changes during the month were an advance in the cost of eggs and a decrease in the cost of butter. Fresh pork, bacon and potatoes also cost slightly more than in the previous month while veal, mutton, milk, flour and sugar were lower. Including the cost of fuel and rent with that of foods the total budget cost $17.45 at the beginning of July as compared with $17.43 for June; $17.24 for July, 1937; $16.51 for July, 1936; $15.48 for July, 1933; $21.26 for July, 1930; $20.67 for July, 1922; $26.92 for July, 1920 (the post war peak); and $14.17 for July, 1914. Both fuel and rent were practically unchanged in July as compared with June.

In wholesale prices the Dominion Bureau of Statistics weekly index number on the base of 1926 as 100 declined about 2½ per cent during the month, the figures being 78 for the week ended July 29 and 79·9 for the week ended July 1. The latest figures available on a monthly basis are for June when the index number was 80·1 as compared with 87·5 for July, 1937; 74·3 for July, 1936; 63·5 for February, 1933 (the low point in recent years); 97·2 for July, 1929; 98·7 for July, 1922; 164·3 for May, 1920 (the post war peak); and 64·4 for July, 1914. In the classification according to chief component materials, the Vegetable Products group, recorded the largest decline, six per cent, due mainly to lower prices for grains. The Iron and Its Products group was three per cent lower influenced by lower prices for pig iron and rolling mill products, wire and nails. All the other principal groups recorded slight declines also with the exception of Non-Ferrous Metals which advanced due mainly to higher prices for copper.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of July of seventy-two staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 8½%; Clothing, 18½%; Sundries, 20%.

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL, AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost or the quantities of different foods required for an average family

†The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

‡For the week ended July 29, 1938; monthly figures not yet available.

*Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

(*Continued from page 950*)

from month to month, from city to city, etc. The price of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rate for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amount due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which figures were available when the publication of retail prices statistics was begun, that is for January, 1910, in the LABOUR GAZETTE for February, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no

allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

Index Numbers of Changes in the Cost of Living

The table of index numbers of changes in the cost of living (page 950), based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number of rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and cost of the various items from 1913 to 1926 weighted according to the importance of each item in workingmen's family expenditure and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

Retail Prices

Beef prices were little changed in the average during the month, increases in the eastern provinces being offset by slightly lower prices in the prairie provinces and British Columbia. Mutton declined from an average price of 25·8 cents per pound in June to 24·7 in July. Fresh pork and bacon were higher in many localities, the former being up in the average from 24·8 cents per pound in June to 26·2 cents and the latter from 33·1 cents per pound to 34·2 cents. Eggs were higher in most localities. The Dominion average price for fresh grades being up from 27·9 cents per dozen to 31 cents. Milk was fractionally lower at 10·8 cents per quart. Creamery butter was about 1½ cents per pound lower at 30 cents per pound. Flour again averaged fractionally lower at 4·1 cents per pound. Potatoes averaged 98 cents for 90 pounds in July as compared with 93·4 cents in June and $1.44 in July, 1937. Granulated sugar was slightly lower at 6·4 cents per pound. Changes in the prices of coal and coke were slight.

Following are the prices per ton reported for Welsh coal, "cobbles" and "French nut": Halifax $15.50; Charlottetown $14; Moncton $16; Saint John $13; Quebec $14; Three Rivers $15 and $14; Sherbrooke $14.75; St. Hyacinthe $14.50; Thetford Mines $16.75; Montreal $14.75 and $15; Ottawa $16; Kingston $15; Belleville $15.50; Peterborough $16.75; Oshawa $15; Toronto $15; St. Catharines $15.50 and $15; Hamilton $14.50 and $14; Brantford $16.25; Galt $16; St. Thomas $16; Cobalt $19; Timmins $18.50; Port Arthur $17.25; Fort William $17.25; Winnipeg $20.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to recent changes in prices in Great Britain and other countries. Tables giving the official and certain other index numbers of cost of living, wholesale and retail prices in Great Britain and several of the principal commercial and industrial countries appeared in the July issue of the Labour Gazette.

Great Britain and Northern Ireland

Wholesale Prices.—The Board of Trade index number on the base 1930=100, was 100·7 for June as compared with 102·0 for May, a decrease of 1·3 per cent for the month. Food prices declined 1·0 per cent while the prices of industrial materials and manufactures declined 1·4 per cent. As compared with the corresponding figure for 1937 the index of prices of all articles for June, 1938, declined 9·0 per cent.

The Statist index number on the base 1867-1877=100, was 91·4 at the end of June showing no change from the figure for the end of May in the "all commodities" index. The upward movement of prices in the mineral and textile groups was exactly offset by the fall in the prices of foodstuffs, coal and sundry materials. As compared with the general index for June, 1937, which stood at 104·7, this month's index showed a decline of 12·7 per cent.

Cost of Living.—The Ministry of Labour's index number on the base July, 1914=100, was 159 at the first of July as compared with 155 at the first of June. The index for food prices was 146 as compared with 138 the previous month. The increase of 5·8 per cent in the food index was mainly due to the displacement of old potatoes by the new crop, at exceptionally high prices owing to the effects of late

frosts and drought, and to increases in the price of milk also attributable to the effects of the drought. The index for fuel and lighting materials showed an increase of about 5 per cent while the indexes of prices of clothing, rent and sundries were unchanged.

Eire

COST OF LIVING.—The cost of living index number of the Department of Industry and Commerce, on the base July, 1914=100, was 171 at mid-May as compared with 173 at mid-February, a decrease of 1·2 per cent for the quarter. The index for food prices declined from 159 to 156, or 1·9 per cent due mainly to seasonal decreases in the prices of milk and eggs though these were offset to some extent by an increase in the price of creamery butter.

France

WHOLESALE PRICES.—The General Statistical Office index number, on the base 1914=100, was 653 for June as compared with 643 for May, an increase of 1·6 per cent for the month. Food prices increased 1·1 per cent during the period while prices of industrial materials increased 1·9 per cent. The index based on gold currency, 1914=100, was 56 for June as compared with 55 for May.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office on the base 1913=100, was 105·6 for June, as compared with 105·4 for May. The index of prices of agricultural products increased 0·2 per cent during the month, while that for raw materials and semi-manufactured goods increased 0·3 per cent and that for manufactured goods remained unchanged.

COST OF LIVING.—The official index number on the base 1913-1914=100, was 126·0 for June as compared with 125·9 for May. Clothing prices increased 0·8 per cent, food prices increased 0·2 per cent and prices of sundries increased 0·1 per cent. The prices of heat and lighting materials decreased 0·8 per cent, while rents were unchanged.

India

WHOLESALE PRICES.—The index number of the Labour Office, Government of Bombay, on the base July, 1914=100, was 101 for April as compared with 100 for March. The index of prices of all foods was 100 as compared with 97 for the previous month while the index for non-foods was 101 as compared with 102 for March.

COST OF LIVING.—The official index number of the working class cost of living at Bombay, on the base, July, 1933, to June, 1934=100, was 104 for May, as compared with 105 for April. During the month the prices of food and fuel and light declined 0·9 per cent each. The other groups making up the index were unchanged.

United States

WHOLESALE PRICES.—The Bureau of Labour Statistics index number on the base 1926=100, was 78·1 for May as compared with 78·7 for April, a decrease of 0·8 per cent for the month, reaching the lowest point since December, 1934. With the exception of the metals and metal products group which increased very slightly, all groups making up the index contributed to the decline. Prices of the textile products and farm products group declined 1·6 per cent and 1·3 per cent respectively, while the seven other groups declined less than one per cent. The index for all commodities was 10·6 per cent lower than that for May, 1937.

COST OF LIVING.—The index number of the Industrial Conference Board on the base 1923 =100, was 86·7 for June as compared with 86·5 for May. During the month food prices increased 1·4 per cent, while prices of clothing, rent and sundries decreased 0·8 per cent, 0·3 per cent and 0·1 per cent respectively and prices of fuel and lighting materials were unchanged.

The Dominion Bureau of Statistics has published an Advance Report on the Fisheries of Canada, 1937. According to this pamphlet the amount of capital invested in the vessels, boats, nets, piers and wharves, etc., used in the primary operations of catching and landing the fish is recorded for the year 1937 as being $26,768,979, of which $21,882,937 is credited to the sea fisheries and $4,886,042 to the inland fisheries.

The value of production of the commercial fisheries of Canada in 1937, amounted to $38,-976,294, compared with $39,165,055 in 1936.

The number of men employed in fishing during the year reviewed, was 69,967 compared with 71,935 in 1936. The number for 1937 is distributed by provinces as follows: Prince Edward Island, 3,310; Nova Scotia, 18,088; New Brunswick, 13,920; Quebec, 11,385; Ontario, 4,440; Manitoba, 3,824; Saskatchewan, 1,388; Alberta, 2,391; Yukon, 37; and British Columbia, 11,184.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1938

The number of fatal industrial accidents (including fatalities from industrial diseases reported with fatal accidents by workmen's compensation boards, etc; as well as fatalities to persons incidental to the pursuit of their occupations) which were recorded in the Department as occurring during the second quarter of 1938 was 264, there being 80 in April, 93 in May and 91 in June.

The report for the first quarter of 1938, showing 239 fatalities, was given in the Labour Gazette, May, 1938, page 594. In the second quarter of 1937, 284 fatal accidents were recorded (Labour Gazette, August, 1937, page 936).

The supplementary lists of accident not reported in time for inclusion in the reports covering the periods in which they occurred, contain 11 fatalities for the first quarter of 1938 and 8 fatalities for 1937.

In this series of reports it is the custom to record industrial accidents under the dates of their occurrence and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the Provincial Workmen's Compensation Boards, from the Board of Railway Commissioners of Canada, from certain other official sources and from the correspondents of the Labour Gazette. Information as to accidents is also secured from newspapers.

Classified by groups of industries the fatalities occurring during the second quarter of 1938 were as follows: agriculture, 30; logging, 48; fishing and trapping, 7; mining, non-ferrous smelting and quarrying, 46; manufacturing, 33; construction, 34; electric light and power, 5; transportation and public utilities, 38; trade, 7; service, 16.

Of the mining accidents, 37 were in "metalliferous mining," 8 in "coal mining," and 1 in "non-metallic mineral mining and quarrying, n.e.s."

Of the accidents in manufacturing, 2 were in "vegetable foods, drink and tobacco," 1 in "animal foods," 8 in "saw and planing mill products," 2 in "wood products," 5 in "pulp, paper and paper products," 6 in "iron, steel and products," 2 in "non-ferrous metal products," 3 in "non-metallic mineral products," 3 in "chemical and allied products," and 1 in "miscellaneous products."

In construction there were 19 fatalities in "buildings and structures," 1 in "railway," 2 in "shipbuilding," 11 in "highway and bridge," and 1 in "miscellaneous construction."

In transportation and public utilities there were 14 fatalities in "steam railways," 2 in "street and electric railways," 5 in "water transportation," 3 in "air transportation," 10 in "local and highway transportation," 3 in

"storage," and 1 in "telegraphs and telephones."

In trade there were 4 fatalities in "wholesale," and 3 in "retail."

Of the fatalities in service, 12 were in "public administration," 1 in "recreational," 1 in "laundering, dyeing and cleaning," 1 in "custom and repair," and 1 in "personal, domestic and business."

There was no serious disaster resulting in the loss of a very large number of lives during the period under review. Accidents involving the loss of two or more lives were as follows:

Four men, engaged in the construction of an oratory at Montreal, were killed on June 3, when a hoist in which they were descending crashed about 150 feet to the ground, when the supports of a cross-beam holding the hoist cables at the top of the dome gave way and the cables slipped off.

On April 18, two log drivers lost their lives in a premature explosion while blasting an ice jam, near Notre Dame de Pontmain, Quebec; and another two loggers were crushed under a tractor on June 10, at Howe Sound, British Columbia.

Three fishermen were killed in an explosion of the gasoline tank of their vessel, off Gore Bay, Ontario, on April 21.

When a clutch slipped and a mine cage dropped 800 feet, two miners were killed at Beardmore, Ontario, on April 20. Three miners lost their lives when lightning caused a premature dynamite explosion near Val d'Or, Quebec, on May 30. Another two miners were killed in a premature dynamite explosion at Frood, Ontario, on May 26. Two coal miners were drowned from a boat, near Minto, New Brunswick, on May 24.

Two shipping employees at a paper mill, in Hawkesbury, Ontario, were crushed to death under bales of paper falling from a pile, on May 23.

When a bridge collapsed under a truck laden with a tractor, a truck driver and his helper were drowned near Amos, Quebec, on June 8.

On May 16, an engineer, a fireman and a trainman were killed in a derailment, near Schreiber, Ontario.

A truck driver and a helper were killed in a collision of two trucks at Peace River, Alberta, on May 31.

Supplementary Lists of Accidents

A supplementary list of accidents occurring during the first quarter of 1938 has been compiled which contains 11 fatalities, of which 5 were in logging, 1 in mining, nonferrous smelting and quarrying, 2 in manufacturing, 2 in transportation and public utilities, and 1 in trade. Two of these accidents occurred in January, 2 in February and 7 in March.

A further supplementary list of accidents occurring in 1937 has been made. This includes 8 fatalities, of which 1 was in logging, 1 in construction, 5 in transportation and public utilities, and 1 in trade. One of these accidents occurred in January, 1 in August, 1 in September, 2 in October, 2 in November, and 1 in December.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Damages and Injunction Against Picketing Granted in Manitoba

In June, Mr. Justice Taylor, of the Manitoba Court of King's Bench, gave judgment for the plaintiff theatre owner, awarding damages for $1,000 and costs and a permanent injunction restraining picketing by the defendants. The facts of the case as set out in the judgment show that the trouble arose from a dispute between rival unions. From February until August 31, 1937, the plaintiff employed as a projectionist in his motion picture theatre a member of the All-Canadian Congress of Labour. A written agreement between the union and the plaintiff provided that the former should supply for a definite term one or more projectionists as required. On July 26 the All-Canadian Congress gave notice they wished to terminate the agreement from September 1. Subsequently, the plaintiff and a few other operators of motion picture houses entered into agreements with the One Big Union for a supply of projectionists from September 1 until the end of June, 1940. After this agreement was made, the projectionist in the Park Theatre, owned by the plaintiff, was continued in his employment until about October 7 but when the O.B.U. was unable to persuade him to join their union, he was discharged and an O.B.U. operator employed.

The defendants, who were officers of the All-Canadian Congress or of the International Alliance of Theatrical Stage Employees and Motion Picture Machine Operators, acting together began to picket the plaintiff's theatre. Signs carried by the pickets read "Park Theatre does not employ International Union operators" or "Park Theatre does not employ All-Canadian Congress Union operators." Placards of the second kind were carried

only on the second and third nights, afterwards the International Alliance placards were carried until an interim injunction was obtained restraining the picketing of the premises. There was evidence to show that the words "International" and "All-Canadian Congress" on the placards were printed in small type and it was suggested that they were intentionally made that way so as to give to those who read them the impression that the Park Theatre did not employ union operators and some evidence was tendered that the placards had that effect. Handbills were distributed by the defendants among the employees of the Canadian National Railway shops in the district served by the plaintiff theatre. These handbills said "Park Theatre does not employ International Union operators."

Mr. Justice Taylor stated:—

The picketing was done peacefully. Any disturbance which resulted was, in my opinion, caused by others—members of rival organizations who attempted to stop it. The men actually engaged in picketing took reasonable precautions to assure that their picketing was done as quietly and inoffensively as possible. I cannot find that they either invited or took part in the disturbance which resulted from the picketing.....

The object of picketing and distributing handbills is not in any doubt. The matter was dealt with very frankly by the defendant Foster in his evidence. The defendants supposed by this means they could bring sufficient pressure to bear upon the plaintiff through the patrons of the theatre to compel him to discharge this O.B.U. employee and engage one of theirs.

The evidence is that as a result of the picketing and distribution of handbills the business of the plaintiff's has suffered serious loss thereby, particularly in the reduction of receipts, and to some extent, in the expenditure of moneys in different ways in an endeavour to regain his lost customers or attract new ones.

The information contained on the I.A. placards and on the handbills was moreover untrue. The O.B.U. operator in the plaintiff's theatre was at the time the picketing took place a member in good standing in the I.A., to the extent that his membership had never been cancelled or terminated. He had, it is true, joined another and rival labour organization, so that the I.A. did not consider him then to be a member of their organization, and had made an abortive attempt to expel him. It is not necessary to go into these details because I must conclude as a fact that his membership in the I.A. had not been terminated, although doubtless the I.A. would have refused to renew his membership ticket on its expiration. I think this untruthful information was not published maliciously and that the defendants just took the attitude that the projectionist employee was no longer a member of their union because he had joined another. In that, however, they were wrong.

I think the case comes clearly within the law laid down by the Court of Appeal in *Allied Amusements v. Reaney et al*, and *Kershaw Theatres Ltd., v. Reaney et al.* (Labour Gazette, November, 1937, p. 1291.) *Bessler v. Matthews et al*, June, 1938.

Wages Allowed in Quebec Action Increased on Appeal

The Quebec Court of King's Bench has allowed, in part, the appeal of the Joint Committee for the Building Trades for the County of Sherbrooke, etc., against a judgment of Mr. Justice White which was noted in the Labour Gazette, April, 1938, p. 468.

Acting on behalf of two men employed by the defendant, Ross-Biron Electric Company of Sherbrooke, the Joint Committee had claimed an amount equal to the difference between the wages received by the two men and the electrician's rate of 50 cents fixed by the agreement, which had been made binding under the Collective Labour Agreements Act for the building industry in Sherbrooke, together with the amount due as liquidated damages for violation of the agreement, that is 20 per cent of the wage claim, plus the statutory levy of one-half of one per cent of the defendant's payroll for the enforcement of the agreement. The defendant had offered to pay the amount he considered due to the one workman plus the liquidated damages and the statutory levy amounting in all to $138.03. As to the other workman, the defendant denied that he was a qualified electrician and that he was entitled to the hourly rate of 50 cents. The Superior Court agreed with this contention.

The Court of King's Bench, however, while agreeing with the judgment of the Superior Court on the merits of the case held that there had been an error in the calculation of the sums due to the two men. The workman, Rolfe, though not entitled to be paid at the electrician's rate was to be paid 30 cents an hour whereas for the month of January he had received only 25 cents an hour and in the case of the other man a somewhat higher amount was also due. The defendant was, therefore, ordered to pay the additional sums adjudged proper with interest, together with the costs of the appeal. *Joint Committee relating to the Building Trades for the Counties of Sherbrooke, etc., v. Ross-Biron Electric Ltd.* Quebec Court of King's Bench, May 31, 1938.

VOLUME 39] SEPTEMBER, 1938 [NUMBER 9

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada at the beginning of August showed a contraction, according to statements tabulated by the Dominion Bureau of Statistics from 10,829 firms in all lines of industry except agriculture, fishing, hunting and highly specialized business. They employed 1,073,302 workers, compared with 1,088,266 at July 1. The index, based on the 1926 average as 100, fell from 113·5 in the preceding month to 112·1 at August 1, when it was nearly eight points lower than at August 1, 1937. The experience of the years since 1920 indicates that employment usually, though not invariably, gains at the beginning of August, there being on the average, a fractional increase in the index; the seasonally adjusted index therefore also declined at August 1, standing at 109·1, compared with 111·3 in the preceding month.

As already stated, the unadjusted index (based on the average in the calendar year 1926 as 100) stood at 112·1 at August 1, 1938, compared with 113·5 at July 1, while at August 1 of recent years, the index was as follows:—1937, 120·0; 1936, 105·6; 1935, 101·1; 1934, 99·9; 1933, 87·1; 1932, 86·3; 1931, 105·2; 1930, 118·8; 1929, 127·8; 1928, 119·3 and 1927, 110·5.

Unemployment in Trade Unions.—At the beginning of August, 1938, the percentage of unemployment reported by local trade unions stood at 14·0, as compared with percentages of 13·5 at the beginning of July, 1938, and 8·9 at the beginning of August, 1937. The percentage for August was based on the reports compiled from 1,835 labour organizations, with an aggregate of 218,428 members, 30,651 of whom were without employment.

Employment Office Reports.—Reports received by the Department of Labour from the offices of the Employment Service of Canada showed only a fractional gain in the volume of business transacted in July, 1938, when compared with that of the preceding month, but a decrease from that of July, 1937, this computation being based on the average number of placements recorded daily at the offices of the Employment Service throughout Canada. A very marked gain in farming more than offset losses shown in all other divisions under the first comparison, while construction and maintenance and logging were largely responsible for the decline reported under the second. During July, 1938, there were listed 33,246 vacancies, 59,987 applications for work, and 31,867 placements in regular and casual employment.

Prices.—In retail prices the cost per week of a family budget of staple foods, fuel and lighting and rent was $17.70 at the beginning of August as compared with $17.45 for July; $17.48 for August, 1937; $16.72 for August, 1936; $15.41 for June, 1933 (the low point in recent years); and $21.90 for August, 1929. The increase in August was due mainly to the increased cost of foods. In wholesale prices the weekly index numbers calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 declined week by week during August being 74·6 for the week ended September 2 as compared with 78·0 for the week ended July 29. The decline during the month was due mainly to decreases in the vegetable products group particularly in the price of wheat. On a monthly basis the index number was 78·6 for July as compared with 85·6 for August, 1937; 76·2 for August, 1936; 63·5 for February, 1933 (the low point in recent years); and 98·4 for August, 1929.

Business Statistics.—The table on page 966 gives the latest information available reflecting industrial conditions in Canada. The index of the physical volume of business was slightly higher in July than in June following a decline since April. It was about 14 per cent lower than in July, 1937. Of the principal groups used in the construction of this index number and after adjustments for seasonal variations mineral production was about 9 per cent higher than in the previous month there being increases in certain of the factors used as indicators of the volume of production namely in the exports of copper, nickel,

*Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

†For the week ended September 2, 1938.

(1) Calculated from yields of Ontario bonds. (2) For group figures see articles elsewhere in this issue.

(3) Adjusted for number of business days and seasonal variations. (4) Figures for end of previous month.

(5) Figures for four weeks ending August 27, 1938, and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending August 13, July 16 and June 18, 1938; August 14, July 17. and June 19 1937. (7) MacLean's Building Review. (8) Index numbers are adjusted when necessary for seasonal variation.

zinc and asbestos and in the imports of bauxite. The manufacturing group showed a small decline as compared with the previous month there being decreases in the factors used as indicators of the volume of manufacture of foodstuffs, tobacco products, and iron and steel products. The construction group was slightly higher in the same comparison as were also electric power output, trade employment, car loadings, and exports. Information available for August shows important increase in the number of cars of revenue freight loaded as compared with July. It was, however, considerably lower than in August, 1937. The index numbers of wholesale prices and of employment were lower in both comparisons while the quantity of sugar manufactured was higher.

Strikes and Lockouts.—The number of strikes and lockouts during August was 19, involving 2,083 workers with a time loss of 14,308 man working days as compared with 15 disputes involving 1,423 workers with a time loss of 10,435 man working days during July. The principal disputes during the month involved lime plant workers at Blubber Bay, B.C., and restaurant employees at Toronto, Ont., both of which were carried over from July, and knitting factory workers at St. Catharines, Ont., foundry workers at Windsor, Ont., and car plant workers at Trenton, N.S. In July most of the time loss was due to strikes involving hat factory workers at Guelph, Ont., lime plant workers at Blubber Bay, B.C., and restaurant employees at Toronto, Ont. In August, 1937, most of the time loss was due to strikes of textile factory workers in Quebec and Ontario, foundry and shipyard workers at Sorel, P.Q., and lumber workers in New Brunswick. The total number of disputes in August, 1937, was 43, involving 18,556 workers with a time loss of 296,676 man working days. Of the nineteen disputes recorded in August, 1938, eleven were terminated during the month, one resulting in favour of the employer concerned, four in favour of the workers involved, while compromise settlements were reached in five cases and the result of one was recorded as indefinite. Eight disputes involving 1,221 workers were recorded as unterminated at the end of August. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or definitely declared terminated by the unions involved.

Industrial Disputes Investigation Act

During the month three Boards of Conciliation and Investigation were established by the Minister of Labour under the Industrial Disputes Investigation Act.

The constitution of two other Boards were completed, and two applications for Boards were withdrawn.

These proceedings under the Act are summarized on page 974.

Commencement of Cost of Living Survey in Canada

A survey of family living expenditures in Canada including nutrition and the quantities and cost of all items entering into the family budget, is being commenced in September. This is being undertaken in conformity with a recommendation of the Conference of British Commonwealth Statisticians—held at Ottawa in 1935—that surveys should be made in each country of the Commonwealth where cost of living enquiries had not been recently conducted. (Labour Gazette, December 1935, page 1107). Such action was in accord with a resolution of the Conference of Official Labour Statisticians, convened by the International Labour Office at Geneva in 1926 (Labour Gazette, November, 1926, page 1119).

The object of these surveys is to provide adequate information as to actual standards of living, income, expenditure, and living conditions of families representative of large homogeneous sections of the population and to provide weights for the calculation of cost of living index numbers.

Since 1910 the Department of Labour has collected and published in the Labour Gazette statistics of the retail prices of staple foods, fuel, rent, etc., in the cities and principal industrial centres throughout Canada. This information was secured by the resident correspondents of the Labour Gazette. (Since 1920 the Dominion Bureau of Statistics has collected data as to retail prices in the various cities and forwarded the figures to the department of Labour for compilation and publication in the Labour Gazette).

The cost of a weekly family budget of foods, fuel and light and house rents has been calculated to indicate the rise and fall in retail prices and in the cost of living, and not to show the cost of a minimum or any other standard of living. Subsequently, in 1919, figures as to the cost of clothing and items in miscellaneous expenditures were secured, and a cost of living index number was constructed. This, too, has been published as a regular feature in the Labour Gazette. As no official cost of living survey on a national scale had been made, the quantities and weights used in the calculation were necessarily arbitrary, being based on information

from miscellaneous sources. The index number was therefore tentative pending a country-wide survey.

A survey of this nature has been urged upon the Government from time to time by labour organizations, particularly in recent years.

In 1937 there was established an interdepartmental committee consisting of representatives of the Departments of Health, Agriculture, and Labour, and of the National Research Council and the Dominion Bureau of Statistics with the Dominion Statistician as Chairman.

This Committee considered the action necessary to carry out the recommendations of the Commonwealth Conference, and drew up a plan for the survey. Subsequently, in 1938, arrangements were completed for the commencement of this survey and funds were voted for this purpose at the 1938 session of Parliament. Accordingly, the inquiry is to be made by the Dominion Bureau of Statistics. Field agents of the Bureau will visit typical families of wage-earners and low-salaried workers throughout the country to secure the information as to family expenditures, etc. All agents of the Bureau will be sworn to secrecy as to the information, and it is the hope of the survey authorities that this effort will result in the obtaining of information of great social value.

Statistics of Material Aid Recipients for July

The number of fully employable persons receiving non-agricultural material aid had dropped to 132,000 in July, according to early figures from the national registration of the Department. This was a decrease of over 17 per cent from July 1937. In that month there were 159,576 persons in this category. A decrease of 4·6 per cent from the total for June this year is indicated by the figures.

Registration figures issued on September 10 by the Honourable Norman McL. Rogers, Minister of Labour, showed that approximately 498,000 persons were receiving non-agricultural material aid in July. When this total is compared with the corresponding month of 1937, a decrease of nearly 12 per cent is shown. As compared with June, 1938, the decrease is 4.5 per cent. This category includes totally unemployable, partially employable and fully employable, together with all dependents of family heads.

The figures show that 79,000 farmers (resident farm operators) who, together with their dependents, accounted for a farm population of 352,000 across the country, were reported as receiving agricultural material aid for subsistence. This figure was a decrease of 4 per cent from June, 1938, but an increase of 53.5 per cent over July, 1937. Of this Dominion total, 310,000 were in the Province of Saskatchewan, still reflecting the effects of the drought situation in that Province in 1937. While the Saskatchewan total showed a drop of over 3 per cent from the previous month, it still showed an increase of 79 per cent from July, 1937.

The grand total of all classes of persons on material and agricultural aid in July this year was approximately 850,000, a decrease of 4·3 per cent from June and an increase of 7 per cent from July of the year before. As stated, persons on non-agricultural material aid included in this grand total had decreased by nearly 12 per cent in the year while persons on agricultural aid had increased by 53.5 per cent from July, 1937.

Labour Day Messages of Canadian Labour Leaders

Appraising the social and economic situation in Canada from the viewpoint of organized labour, the Labour Day messages of Canadian labour leaders indicate the trends of thought in the labour movement and the new objectives to be sought. Featuring practically all statements is the emphasis placed upon the maintenance of democratic fundamentals in the social structure.

Mr. P. M. Draper, president of the Trades and Labour Congress of Canada, regarded the economic outlook in Canada "as more hopeful" with the prospect of better crops benefiting both the farmer and the industrial employee. He considered, however, that until unemployment had been further reduced, "governments must be looked to to provide a volume of extra work which will compensate for the lag in industry."

Industrial relations he regarded as good, and that "in the main, Canadians, both employers and employees, have a way of adjusting differences as to working conditions which assists industry to operate smoothly." He regretted that while seven of the provinces have enacted legislation recognizing the right of the workers to organize, Ontario and Prince Edward Island have not yet done so. Concluding his reference to this matter Mr. Draper stated: "There is no better way to give the workers a feeling of proper security, a sense of fair treatment, and in the end to ensure good industrial relations, than by safeguarding the right to join a union. It is to be hoped that the remaining two provinces will fall into line and adopt such legislation at the next session of their Legislatures."

In the sphere of international relationships, the Trades and Labour Congress president warned that dictatorships breed wars and urged that "it behooves us as workers and Canadians to be fixed in our determination not to give away our liberties to any 'ism' and to turn a deaf ear to any plea except that of constitutional democracy."

Mr. A. R. Mosher, president of the All-Canadian Congress of Labour made direct reference to the problem of national unity and declared:

"There is evident throughout Canada today a conflict not only of jurisdiction but of viewpoint between the Federal Government and several provincial Governments. Whatever the causes of this divergence may be, it is a serious menace to the people of this country, and some way must be found to develop the spirit of tolerance and co-operation upon which alone the bases of a great nation can be established. Economic interests, political ambitions, differences of race and language must not be permitted to split Canada into competitive and selfish groups, and any individual who associates himself with disruptive efforts, in the interest of province or party, is an enemy of our people, and must be treated as such.

"It is admittedly no easy task to weld together nine provinces spread across nearly four thousand miles from ocean to ocean, but it can and must be done. The national interests so far transcend provincial interests that they must always have prior consideration..."

In the field of social legislation, Mr. Mosher asserted that "Canada lags far behind many other countries, not because our people are less intelligent, or less humanitarian, but because of a disposition to emphasize jurisdictional rights, or retain prerogatives, when the conditions which may have justified them no longer exist. Modern industry demands national supervision and regulation; social legislation, to be equitable and properly administered, must be on a national scale, and whatever obstacle remains in the way of progess along these lines must be removed."

Mr. Alfred Charpentier, President of the Confederation of Catholic Workers of Canada, in a brief message declared in part that the "freedom of labour to-day is inconceivable without the workers' freedom to discuss their working conditions." He urged that "all Catholic organized workers pursue courageously their task of Christian emancipation."

Mr. W. T. Burford, secretary-treasurer of the Canadian Federation of Labour, stated that in broad terms the aim of the labour movement was "the ending of poverty by any and every means which will not end liberty also." Continuing he observed: "Yet there has been a tendency for the workers' organizations to espouse panaceas which would sacrifice liberty for fancied security. The political experiments that have been watched in other countries in recent years are having the effect of bringing the labour movement back to fundamentals. Although some groups cling to prescriptions for social and economic salvation which involve the regimentation of everything and everybody, the Canadian workers' love of liberty is asserting itself. Many are asking themselves how they could get back across the chasm if the green pastures on the other side were not as advertised."

Mr. W. L. Best, Vice-president and National Legislative Representative of the Brotherhood of Locomotive Firemen and Enginemen, presented a comprehensive re-appraisal of the Labour Movement and recounted some of the tasks which have confronted it, together with the social and economic changes which have taken place during the past four and a half decades and their resultant effect in shaping modern civilization.

In particular, Mr. Best emphasized the scientific improvement in industrial machinery and the technological changes which have entirely revolutionized the means of production. "Quite logically," he observed, "this increased machine productivity has created an ever growing problem of technological unemployment." Noting that "many tragic inhumanities had resulted from the social and economic conditions of our modern civilization," Mr. Best declared: "No longer should we permit the conquest of scientific industrial advancement to blind our national vision to the vital importance of ensuring to the human element in industry an equitable share of the profits therefrom, thereby recognizing human values by greater economic security for all our people."

Hon. Norman Hipel Appointed Minister of Labour for Ontario

Announcement was made on September 3rd of the appointment of the Hon. Norman O. Hipel as Minister of Labour for the Province of Ontario to succeed the late Hon. M. M. MacBride. (Since the the death of the latter on June 5, the labour portfolio was taken over temporarily by the Hon. Peter Heenan, Minister of Lands and Forests).

The new Minister of Labour has represented Waterloo South in the Legislature since October 29, 1930 when he was elected in a by-election. He was re-elected in the 1934 and 1937 general elections. He was first

appointed Speaker of the Legislature at the 1935 session and was honored with a second term in that office.

Hon. Mr. Hipel was born near Preston 48 years ago. At the age of 16 years he entered upon the carpentry trade, and in 1923 he established at Preston the construction firm of N. P. Hipel Ltd., builders of barns and skating rinks. Prior to commencing his political career, Hon. Mr. Hipel ably served the municipality of Preston in a succession of posts being Alderman in 1921, Reeve and Finance Controller in 1922, Mayor in 1923 and 1924, and Deputy Reeve in 1925.

Conventions of Labour Organizations

As this issue of the Labour Gazette goes to press two labour organizations are holding their annual conventions.

The Trades and Labour Congress of Canada began its fifty-fourth annual convention on September 12, meeting at Niagara Falls, Ontario.

On September 11, the seventeenth annual convention of the Confederation of Catholic Workers of Canada, Inc., commenced its sessions, at Thetford Mines, P.Q.

Summaries of the convention proceedings of these two labour bodies will be given in the October issue of the LABOUR GAZETTE.

Registration of Union Shop Cards

By proclamation in the *Canada Gazette* of August 13, the Shop Cards Registration Act was announced as in effect from September 1. This legislation, which was reviewed in the August issue of the LABOUR GAZETTE (page 891) enables a trade union to register in the office of the Secretary of State any shop card which it has adopted as a design to indicate that the shop displaying it employs members of that union.

Conference of Canadian Institute of Economics and Politics

Labour organization was one of the subjects on the program of the seventh session of the Canadian Institute of Economics and Politics at Lake Couchiching between August 6 and 19. The Institute is conducted under the auspices of the Young Men's Christian Associations and the program arranged by a committee under the chairmanship of Sir Robert Falconer.

The general topic for the convention was Problems of Canadian Unity and these were discussed from various points of view: racial, religious, geographical, industrial and educational and in relation to foreign policy. Three special problems were considered: Dominion-Provincial Relations, Labour and Unionization and the Rehabilitation of Agriculture. At the morning sessions, addresses were given on various aspects of the subject and in the evening there was an open forum on the papers given.

The sessions on labour organization were presided over by Professor J. Finkelman of the Law Faculty of the University of Toronto who introduced the subject by posing certain questions arising from relations between employers and employed, such as the form of labour organization, by industry or by craft, international or national; the part played by employees' representation plans; the method of bargaining, whether individual or collective, the settlement of disputes relating to collective bargaining and union recognition and the responsibility to the community of both employers and employed. An outline of the history of trade unionism in Great Britain, the United States and Canada was given by Miss Margaret Mackintosh of the Dominion Department of Labour with a view to showing the causes of the present diversity in the Canadian labour movement. Mr. B. Laskin of the Law Faculty of the University of Toronto gave a paper on the Legal Status of Trade Unions and Freedom of Association in Canada.

On the second day, four trade unionists presented the point of view of their organizations. Mr. John W. Bruce, Canadian representative of the United Association of Plumbers, Gasfitters and Steam-fitters, spoke on the international unions as represented in the United States by the American Federation of Labour and in Canada by the Trades and Labour Congress. Mr. Allan Haywood of the United Mine Workers of America spoke on behalf of the Committee for Industrial Organization. Both Mr. Bruce and Mr. Haywood represented international unions but, broadly speaking, the former was the spokesman for craft unionism and the latter for industrial unionism. The national unions were represented by Mr. A. R. Mosher, president of the All-Canadian Congress of Labour, and Mr. A. Charpentier, President of the Confederation of Catholic Workers of Canada.

At another session, the employer's side was put forward by Mr. J. S. Willis of Canada Packers, Ltd., who described the employees' representation plan of his Company, Mr. H. P. MacKechnie of Tip Top Tailors, Ltd., and Mr. Warren K. Cook of Toronto, both of whom spoke of the twenty years' experience in collective bargaining between the Associated Clothing Manufacturers and the Amalgamated Clothing Workers of America. Mr. Harold Perkins of the Toronto Builders' Exchange made a statement covering the relations between the Exchange and the unions in the building trades which have worked under collective agreements for many years.

The operation of the United States National Labour Relations Act was the subject of an interesting paper by Mr. Philip G. Phillips, Regional Director of the Board for parts of Ohio, West Virginia and Kentucky.

The papers given at the Institute will be published in abridged form. The volume is expected to be available within a few months and may be obtained from the Secretary at 40 College Street, Toronto. The address given by Miss Mackintosh on Trade Unionism will be issued in mimeograph form by the Department of Labour within the next few weeks.

"Training Canada's Young Unemployed"

The Department of Labour has just published a booklet entitled *Training Canada's Young Unemployed.*

The booklet outlines the objectives of the Dominion-Provincial Youth Training Program, and contains many interesting facts and figures concerning the operation of the scheme, the development of which has been closely followed in the LABOUR GAZETTE (August 1938, page 863; June 1938, page 616; April 1937, page 414, and June 1937, page 596).

In a foreword, the Minister of Labour, Hon. Norman McL. Rogers states in part:

"The brief experience which we have had has shown the importance of local interest and co-operation if Youth Training projects are to succeed. Co-operation is, in fact, the key-note of the Youth Training Program. It was co-operation of the Dominion and provinces which brought the program into being. Co-operation of numerous welfare organizations, service clubs, trades and labour councils and other bodies, has assisted in its progress. In many communities the generous co-operation of individuals has enabled projects under the program to go on successfully. I am aware that lacking this, they might have failed. This co-operative spirit can be shown not only during the initiation and progress of courses under the Youth Training Program, but also in assisting those who have received training to obtain employment."

Copies of this booklet may be obtained on application to the Department of Labour.

Bulletins of Industrial Relations Section of Queen's University

The Industrial Relations Section of Queen's University, organized in October 1937, (LABOUR GAZETTE, October 1937, page 1056) has recently published the first two bulletins in a series of surveys on existing practices in Canada in this particular sphere of employer-employee relationships.

Bulletin No. 1 is entitled *Industrial Retirement Plans in Canada* and deals comprehensively with the various aspects of the subject. (Employees' retirement schemes and other welfare plans have assumed an increasing importance in industrial relations, and as such the plans of Canadian companies have been reviewed in detail from time to time in the LABOUR GAZETTE.) As pointed out in the preface the survey seeks to answer the following questions: (a) What are the motives behind the establishment of industrial retirement plans? (b) To what extent, and in which industries, have they been adopted in Canada? (c) What are the provisions of these plans? (d) On the basis of Canadian experience, what are the necessary and desirable provisions? (e) What types of plans are being adopted, and how rapidly?

Bulletin No. 2 is entitled *The Right to Organize.* The bulletin deals with Canadian legislation in its various aspects and compares provincial enactments according to: definition of terms, legalization of collective bargaining, unlawful restrictions and conditions, preservation of certain rights of employer, and returns by trade unions or associations to governments.

A comparison is also made of the United States National Labor Relations Act with Provincial Legislation respecting the right of employees to organize and bargain collectively.

Canada Year Book, 1938

The Dominion Bureau of Statistics announced recently that the 1938 edition of the Canada Year Book, published by authorization of the Hon. W. D. Euler, Minister of Trade and Commerce, was available for distribution.

The Canada Year Book is the official statistical annual of the Dominion, and reviews Canada's natural resources and their development, the history of the country, its institutions, demography, the different branches of production, trade, transportation, finance, education, etc.—in brief as comprehensive a study as possible within the limits of a single volume of the social and economic conditions in the Dominion.

The 1938 Canada Year Book extends to almost 1,200 pages, dealing with all phases of national life and more especially with those susceptible of statistical measurement. A statistical summary of the progress of Canada is included in the introductory matter. This gives a picture in figures of the remarkable progress which the country has made since the first census of the Dominion was taken in 1871.

One of the special features this year is an article dealing with the Prairie Farm Rehabilitation Program inaugurated by the Dominion Government to alleviate the conditions

brought about by the incidence of the recent agricultural crisis in the West, and to provide for permanent improvements in areas suffering from drought and soil-drifting.

In the chapter entitled *Labour and Wages,* a summary review is given of Labour Legislation in Canada as well as an extended treatment of Mothers' Allowances by provinces.

Persons requiring the Canada Year Book may obtain it from the King's Printer, Ottawa, as long as the supply lasts, at the price of $1.50, which covers merely the cost of paper, printing and binding. By a special concession, a limited number of paper-bound copies have been set aside for ministers of religion, bona fide students and school teachers, who may obtain copies at the nominal price of 50 cents each.

Introduction of Social Security in New Zealand

From time to time the LABOUR GAZETTE has contained references to the operation of non-contributory pensions administered by the New Zealand Department of Pensions and also to the system of family allowances in that Dominion.

In the April 1938 issue at page 373, the proposals of the New Zealand government for a system of national health insurance and superannuation were summarized.

Following the report of a National Health and Superannuation Committee on the proposals of the government to establish a national health and superannuation service, a social security bill has been introduced in the Parliament of New Zealand.

According to a Canadian Press-Reuters despatch from Wellington, the bill provides that ultimately all persons at 60 will be eligible to receive a pension of 30 shillings ($7.50) weekly. Other provisions of the bill include disablement, sickness and unemployment benefits. The proposed scheme also covers free hospital and medical treatment for all persons, and a special section provides for maternity attention and maintenance in hospital for a period of 14 days.

The bill provides that a married couple, both aged 60 or more, will be entitled to £3 ($15) per week while receiving not more than £1 each from other sources. If their income from other than the pension exceeds £1, their joint pension will be reduced so that their total income does not exceed £4 weekly.

It is stipulated that a married person whose spouse is less than 60 years of age may receive a pension of 30 shillings weekly, provided the pensioner's other income does not exceed 50 shillings.

The scheme, as set forth in the bill, applies to all persons more than 16 years of age and will be financed by an annual registration fee of £1 and a charge of one shilling to the pound on all salaries and wages.

Ratification by Canada of I.L.O. Draft Conventions

Under date of June 30 the instruments of ratification of two Conventions of the International Labour Conference affecting seamen were formally deposited on behalf of the Government of Canada at the Secretariat of the League of Nations in Geneva. This action was taken pursuant to authority which had been given on June 4th by Orders in Council which were passed on the recommendation of the Minister of External Affairs (the Prime Minister) and the Minister of Labour.

The two Conventions in question concern: (1) the Marking of the Weight on Heavy Packages Transported by Vessels (1929), which provides that "Any package or object of one metric ton or more gross weight consigned within the territory of any Member which ratifies this Convention for transport by sea or inland waterway shall have had its gross weight plainly and durably marked upon it on the outside before it is loaded on a ship or vessel"; and (2) Seamen's Articles of Agreement (1926), which is applicable to all sea-going vessels registered in the country of any member ratifying the Convention, and to the owners, masters and seamen of such vessels, subject to certain specified exceptions. It contains a variety of provisions respecting the articles of agreement entered into between the shipowner or his representatives and the seamen, the manner in which these articles shall be executed, the particulars to be contained therein respecting the conditions of his employment, the mode and causes by which the agreement shall be terminated, the circumstances in which a seaman may be discharged or may demand his discharge, and other cognate matters.

The provisions of the Convention concerning the Marking of the Weight on Heavy Packages transported by Vessels is embodied in Section 468 of The Canada Shipping Act, 1934, and of the Convention concerning Seamen's Articles of Agreement in Sections 163-169 inclusive.

Baking Industry (Hours of Work) Act in Great Britain

Restriction of night work in the baking industry in Great Britain is provided by the Baking Industry (Hours of Work) Act, 1938, which received Royal Assent on July 13, but which does not come into effect until 1940. The British *Ministry of Labour Gazette* summarizes this enactment as follows:—

Subject to the provisions of this Act, no person is to be employed in any factory in the manufacture of bread or flour confectionery, or in any other work incidental thereto, between 11 p.m. and 5 a.m. To this there are three "special exceptions," of which one may be selected by the occupier of the factory, certain requirements being complied with.

The first "special exception" permits an employee to work between 11 p.m. and 5 a.m. on not more than five nights a week; the second "special exception" permits an employee to work between 11 p.m. on Friday and 5 a.m. on Saturday and allows work to begin at 4 a.m. instead of 5 a.m. on other days; the third "special exception" permits an employee to work between 11 p.m. and 5 a.m. in not more than one-half of the weeks in a specified period.

The Secretary of State is empowered to modify or to grant exemption from restrictions imposed by the Act.

The Act does not apply to employment in biscuit factories; and it does not apply to Northern Ireland.

Report of Commission on Industrial Relations in Great Britain

The Commission appointed by President Roosevelt to study industrial relations in Great Britain has made its report, a copy of which has been received in the Department as this issue of the Labour Gazette was being prepared for press.

The Commission, whose personnel represented industrial, labour, educational and governmental interests, was appointed by President Roosevelt on June 22 to make an impartial inquiry into labour-employer relations as they exist in Great Britain.

The report comprehensively reviews the structure of industrial relations in the United Kingdom, dealing with the subject in four main sections, and it emphasizes the importance of collective bargaining, in its widespread acceptance, as a deterrent of industrial strife.

In order to accord the report the extended review which its importance merits, the findings of the Commission will be given prominence in the Labour Gazette for October.

The Worker's Standard of Living

Under the above title the International Labour Office has published a preliminary report representing the first stage of an enquiry into the subject, undertaken in collaboration with the Economic and Financial Organization of the League of Nations in pursuance of a resolution adopted by the Assembly in October 1937.

This resolution invited the Economic and Financial Organization, in collaboration with the International Labour Office, to undertake an examination of measures of a national or international character for raising the standard of living, the first stage of this enquiry being limited to a preliminary investigation, if necessary with the help of experts, in order that the next Assembly may be enabled to devote further attention to this question.

The present report, as stated above, is preliminary in character, and is intended mainly to outline the problem and to indicate lines for further study. The first task has been to clarify what is meant by standards of living and what are some of the determinant factors in the workers' standard of living. This is the subject matter of Chapter 1 in which these determinants are examined and their interrelations discussed. In Chapter 11 a survey is made of the materials available in different countries concerning these factors, and attention is directed to the methods of describing and evaluating them. In the same chapter are considered some of the problems involved in comparing living standards at different periods aid between countries. In order to give an approximative picture of actual living conditions in various parts of the world and to illustrate the use in specific instances of the types of material outlined in Chapter II, data are presented in Chapter III regarding income and levels of living in four widely different countries, namely, the United States, Poland, India and Japan.

Finally, in Chapter IV the discussion of the preceding chapters is reviewed briefly and a summary made of the evidence presented of low levels of living. At the same time, some of the more important lines of further investigation of the subject are indicated.

In a summary of the finance, trade and industries of New Zealand for the quarter and year ended March 31, 1938, the Department of Industries and Commerce, New Zealand reports that in March, 1938 there was a total of 6,695 registered unemployed males. Of this total 2,874 were "on sustenance awaiting placement," 2,735 were "on rationed relief work," and 1,086 were reported as being "registered but not receiving relief."

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

THREE Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were established by the Minister of Labour during August as follows:—

(1) On August 12 a Board was established to deal with a dispute respecting wages and working conditions between the Ottawa Electric Railway Company and approximately 380 employees being members of Division 279, Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America. An application in this matter had been received during July (LABOUR GAZETTE, August, 1938, page 869). The members of the board are His Honour Judge J. T. Mulcahy, of Pembroke, Ont., chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other board members, Colonel A. W. Beament, K.C., of Ottawa, Ont., nominated by the company, and Mr. Hal. J. Burns, also of Ottawa, nominated by the employees.

(2) A Conciliation Board was also established on August 12 to deal with a dispute between the Winnipeg Electric Company and certain of its employees being foremen, troublemen and linemen on emergency truck, sub-foremen, linemen journeymen and apprentices, meter installers and helpers, meter repairers and helpers, and cable splicers, members of Locals 1037 and 435, International Brotherhood of Electrical Workers. An application in regard to this case was received during July (LABOUR GAZETTE, August, 1938, page 869). The board is composed of Honourable E. A. McPherson, Chief Justice of the Court of King's Bench, Winnipeg, Man., chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other board members, Mr. W. C. Hamilton, K.C., of Winnipeg, nominated by the company, and Mr. Fred Keeley, also of Winnipeg, nominated by the employees.

(3) On August 29 a Conciliation Board was established to deal jointly with two applications which had been received from certain employees of the Canadian National Railways and Canadian Pacific Railway Company, respectively (LABOUR GAZETTE, August, 1938, page 869). The employees concerned, 650 in number, are checkers, freight-handlers, coopers, etc., employed on the Montreal Wharf, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The following board members have been appointed: Mr. George S. Currie, of Montreal, P.Q., nominated by the employers, and Mr. Tom Moore, of Ottawa, nominated by the employees. Messrs. Currie and Moore have been requested to confer looking to a joint recommendation for third member who will be chairman of the Board.

The personnel of the Board established during July to deal with a dispute between the Diamond Truck Company Limited, Montreal, P.Q., and its truck drivers, warehousemen, etc., members of the Automotive Transport Section of the Canadian Brotherhood of Railway Employees, was completed on August 18 by the appointment of Mr. Charlemagne Rodier, K.C., of Montreal, as third member and chairman. The appointment was made by the Minister of Labour in the absence of a joint recommendation from the other board members, Messrs. Charbonneau and Clinton H. Dowd.

The constitution of a Board of Conciliation and Investigation in connection with a dispute involving the United Delivery Limited, of Ottawa, and its truck drivers and helpers (LABOUR GAZETTE, August, 1938, page 869) was also completed during August, the membership of the Board being as follows: Mr. Eric F. J. Hanna, chairman, appointed on the joint recommendation of the other members, Mr. Walter F. Schroeder, of Ottawa, named by the company, and Mr. Clinton H. Dowd, of Hull, P.Q., named by the employees.

Applications Withdrawn

Two applications under the Industrial Disputes Investigation Act submitted by truck drivers, warehousemen, checkers, loaders, mechanics and helpers in the employ of the Adams Cartage and Storage Company and the Weaver Cartage Company, respectively, were withdrawn early in September by the applicants, agreements having been concluded between each employer and his employees through the mediation of officers of the Department of Labour.

Occupational Distribution of Unemployed Workers in United States

Further analysis of the data collected in the 1937 Unemployment Census has indicated the industrial and occupational distribution of the 7,845,016 persons in the United States who registered as totally unemployed or as emergency workers (workers on relief projects).

The general occupational classifications of male unemployed, as shown by the Census, were as follows: unskilled workers, 2,177,150; semi-skilled workers, 1,158,309; skilled workers, 972,878; clerks and similar categories, 491,397; farmers, 165,712; proprietors, managers and officials (not including farmers), 90,703; professional persons, 130,633.

According to these figures, unskilled workers constitute 42 per cent of all male workers unemployed, whereas the figures of the Bureau of the Census showed that, in 1930, only 27 per cent of all male workers were classified as unskilled. Groups included in the "unskilled" classification are farm labourers, servant classes, and "other labourers" such as factory, construction and general labourers.

A similar high ratio of unemployment among the relatively unskilled is shown in the tabulations concerning women registrants. Of these (excluding new workers without job experience), 35·1 were semi-skilled, 29·3 per cent were clerks and kindred workers, and 23·9 per cent were in the servant classes. These three major groups accounted for 88·3 per cent of the unemployed female workers in this Census, as compared with only 74·3 per cent of all female workers in 1930.

"This evidence of a very high ratio of unemployment among the unskilled emphasizes a real national problem," the Administrator of the Census, Mr. Biggers, declared. "If, as is indicated, the developments in industry call for workmen of higher skill, the obvious demand is to give more attention to proper vocational training so that the nation may be able to utilize more easily these unemployed workmen."

Classification by Industries

Further data released by the Administrator showed that 2,486,479 of those registered as totally unemployed or as emergency workers were formerly customarily employed in manufacturing and mechanical industries. Some 763,538 were reported as unemployed in the building industry alone, not including persons in related but independent industries, such as the manufacture of building materials; 408,737 registrants had been employed in the iron and steel industry; 209,177 in the textile mill group of industries; 179,012 in the cloth-making industries; 167,547 on steam railroads; and 81,997 in truck, transfer and cab companies.

In the general trade group, wholesale and retail trade (excluding automobiles) was the usual industry of 478,446 of those registered. Of the 698,749 unemployed persons classified in domestic and personal service, 271,666 had been in hotels, restaurants, boarding-houses, etc.; 49,662 in laundries and dyeing and cleaning establishments, and 377,461 in other domestic and personal services.

Statistics Under Dominion Housing Act

The Honourable Charles A. Dunning, Minister of Finance, recently announced results under the Dominion Housing Act up to the end of the Government's fiscal year, March 31, 1938.

The figures for March represented a new high record in operations under the Act. In that month, which is a time of the year when building operations are normally only beginning to get under way, loans to the amount of $1,189,679 and providing housing accommodation for 328 families were approved. During the same month last year the corresponding figures were $506,658 in loans approved and 116 in family units provided. Consequently, the figures for March, 1938, represent an increase of 134 per cent in the amount of money loaned and 182 per cent in the number of family units provided.

Under the Housing Act to March 31, 1938, over $15,000,000 has been loaned, providing housing accommodation for 3,590 families in 170 communities throughout the Dominion.

The average loan per family unit for March was $3,627 and the average loan per unit for the entire period of operation now stands at $4,184. One year ago the average loan per family unit was $4,711. During March, 95 units were financed by loans of $3,000 or less per family unit.

Lending was especially active during March in the province of British Columbia where 93 units were financed in the amount of $260,060. This brings the total amount loaned in British Columbia under the Act up to $1,522,361 and provides for 507 family units.

T. K. Liddell, chief conciliation officer for the British Ministry of Labour was appointed recently to make a survey of labour conditions in Newfoundland.

Due to depressed conditions in the fishing and forest industries of Newfoundland, more than 50,000 persons out of a total population of 290,000 were estimated to be on relief two months ago.

STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1938

THE following table shows the number of disputes, workers involved and time loss for August, 1938, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in man working days
*August, 1938	19	2,083	14,308
*July, 1938	15	1,423	10,435
August, 1937	43	18,556	296,676

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The number of disputes, the number of workers involved and the time loss were all higher than in July but very much lower than in August, 1937. None of the disputes caused very great time loss. The principal disputes were those involving lime plant workers at Blubber Bay, B.C., restaurant employees at Toronto, Ont., knitting factory workers, St. Catharines, Ont., foundry workers at Windsor, Ont., and car plant employees at Trenton, N.S. In July most of the time loss was due to strikes involving hat factory workers at Guelph, Ont., lime plant workers at Blubber Bay, B.C., and restaurant employees at Toronto, Ont. In August, 1937, the time loss was very great, exceeding that in any month since July, 1935. Most of the time loss was due to strikes of cotton factory workers in Ontario and Quebec, woollen factory workers at Peterborough, Ont., foundry and shipyard workers at Sorel, P.Q., and lumber workers in the Miramichi Valley in New Brunswick.

Five disputes, involving 252 workers, were carried over from July and fourteen disputes commenced during August. Of these nineteen disputes, eleven were terminated during the month, one resulting in favour of the employer concerned and four in favour of the workers involved while compromise settlements were reached in five cases and the result of one was recorded as indefinite. At the end of August, therefore, there were eight strikes and lockouts on record, namely: knitting factory workers, St. Catharines, Ont., photo engravers, Montreal, P.Q., lime plant workers, Blubber Bay, B.C., restaurant employees, Toronto, Ont., coal miners, Rosedale, Alta., coal miners, Florence, N.S., clothing factory workers, Newmarket, Ont., and foundry workers, Windsor, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to eight such disputes, namely: motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; coastwise longshoremen, Vancouver, B.C., November 23, 1936, several employers; meat packing employees, Vancouver, B.C., December 29, 1936, one employer; beverage dispensers, Toronto, Ont., March 4, 1937, one employer; dairy employees, Toronto, Ont., September 17, 1937, one employer; shoe factory workers, Perth, Ont., January 6, 1938, one employer; bakery employees, Hamilton, Ont., May 27, 1938, one employer; and cotton factory workers at St. Gregoire de Montmorency, P.Q., July 11, 1938, one employer.

Disputes involving men on unemployment relief work who are not paid wages but receive subsistance or allowances for which work is performed or may be required are not included in the record, no relation of employer and employees being involved.

A minor dispute at Fort William, Ont., on July 30, reported too late for inclusion in the August issue of the LABOUR GAZETTE, involved thirty to fifty truck drivers operating their own trucks, members of the Truckers' Federal Labour Union, alleging unfair distribution of the work. Those involved in the dispute were reported to have occupied the premises of a contractor with their trucks from Saturday evening until Monday morning, August 1, when they were ordered to vacate by the police. A settlement was reached, as a result of conciliation by the Mayor, providing that the trucks would be engaged through the provincial employment office.

A minor dispute at Goderich, Ont., is reported to have involved about thirty longshoremen for a short time on August 22, in a demand for an increase in wages. A number of those involved were immediately paid off and the remainder returned to work.

A minor dispute was reported in the press to have involved a number of men engaged in loading a cargo of pulpwood at Bathurst, N.B. Particulars as to this dispute have not been received but it appears that the men demanded equal wages for all handling the wood. The stoppage occurred during the afternoon of August 25 and work was resumed the following morning.

A stoppage of work by two hundred painters in Toronto, Ont., for one day on August 30 has been reported. The Brotherhood of Painters, Decorators and Paperhangers of America had signed a closed shop agreement with the Toronto Hebrew Painters' Association and desired to secure agreements with certain independent master painters. The stoppage was to induce the latter to sign agreements, otherwise it was stated that their jobs would be picketed. A number, therefore, signed agreements with the union.

A dispute at North Sydney, N.S., involved a number of longshoremen, members of the International Longshoremen's Association, who refused to work with members of the crew of a boat on August 5 in unloading a cargo of salt. An appeal was made to the municipal authorities and unloading of the cargo commenced next day, four longshoremen and three members of the crew being employed.

A minor dispute involved fifteen workers in a hat factory at Toronto, Ont., for three hours on August 18. The dispute appears to have been as to the employment of certain workers disciplined by the union, the shop being operated under a union agreement. Work was resumed pending the return of an official of the company.

A strike of workers in one men's clothing establishment at Longueuil, P.Q., for one day, August 30, was reported to the Department too late for inclusion in the statistical table. The strike involved only ninety out of one hundred employees and was against a reduction in wages. The employees were not members of a union but on asking the Amalgamated Clothing Workers of America to organize them were advised to resume work and enter into negotiations for a settlement. Work was resumed on the next day, August 31.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

Disputes in progress prior to August

Knitting Factory Workers, St. Catharines, Ont.—As noted in the Labour Gazette for August employees in a department of one establishment, members of the Canadian Full Fashioned Hosiery Workers' Association, ceased work on July 30 demanding a change in the system of payment providing for increases in wages, reduced hours and changes in working conditions. Discrimination against two employees was also alleged. It was reported early in the month that an officer of the Ontario Department of Labour investigated the dispute but a settlement was not reached. The dispute was reported as unterminated at the end of the month.

Photo Engravers, Montreal, P.Q.—A number of employees of one establishment, members of the International Photo Engravers' Union of North America, ceased work on July 30 demanding a reduction in hours of work to forty per week from forty-eight to fifty-four per week prior to the stoppage. Information was not received in time for inclusion in the August issue of the Labour Gazette. The union had reached agreements providing for the forty hour week with other photo engraving firms. During negotiations which preceded the strike the company offered to reduce the hours to forty-four per week. A settlement had not been reported by the end of the month.

Disputes Commencing during August

Mercury Miners, etc., Bridge River, B.C.—A number of miners and other camp employees at one mine ceased work on August 18 against a reduction in wages of the miners. The other employees ceased work in support of the miners. It was reported that the men had been replaced within a few days at the new wage scale and that mining operations were resumed. It appears that the wages were changed from the local scale for gold miners to a scale based on wages for base metal mines with periodical adjustments according to the price of mercury.

Hat Factory Workers, Toronto, Ont.—Employees in one establishment, members of the United Hatters, Cap and Millinery Workers' Union ceased work on August 19, their demand for recognition of the union having been refused. It was reported that the company had refused to negotiate with union representatives and tried to form a company union. Work was resumed on August 23 following conciliation by the Ontario Department of Labour. An agreement between the company and its union employees to be in effect until June 15, 1939, was signed providing for a shop committee to deal with matters affecting wages and working conditions. It was also provided that there would be no stoppage of work during the period of the agreement and that disputes would be referred to a Board of Arbitration consisting of a representative of the company, a member of the committee and an official of the Ontario Department of Labour.

FOUNDRY WORKERS (AUTOMOBILE PARTS), WINDSOR, ONT.—A number of employees in one establishment, members of the International Union of United Automobile Workers of America, ceased work on August 3, their demands for a closed shop union agreement and adjustment of wages having been refused. A complaint was also made as to the alleged discharge of union members. An agreement in settlement of a strike in this plant in 1937 recognizing a shop committee of employees and providing for wages increases and reduced hours expired on July 31, 1938, and toward the end of July the company notified its employees that there would be no change in hours or in basic wages rates during the next twelve months. There were conflicting reports as to the number involved in the strike and as to the extent to which the plant was in operation. There was a clash between several pickets and employees not on strike resulting in one picket being convicted of assault. A settlement of the dispute was not reached at the end of the month.

IRON AND STEEL FACTORY WORKERS (SCREWS, BOLTS AND WIRE), OWEN SOUND, ONT.—Employees in one establishment, members of the Metal Workers Union affiliated with the All Canadian Congress of Labour, ceased work on August 16 demanding increased wages, reduced hours and holidays with pay. Following conciliation by the Ontario Department of Labour a settlement was reached on August 24 and work was resumed the next day. An agreement covering wages and working conditions was signed between the company and a committee of employees. Increases in wages were provided for but holidays with pay and reduced hours of work were not secured.

FOUNDRY WORKERS (STOVES AND FARM IMPLEMENTS), MONTMAGNY, P.Q.—Employees of one establishment, members of the National Catholic Union of Foundry Workers, ceased work on August 19, demanding recognition of the union and wage increases up to twenty-five per cent. In the negotiations which preceded the strike the company agreed to recognize the union and give increases in wages if the business of the company was satisfactory after September 1. Following conciliation by the Quebec Department of Labour an agreement was signed on August 20, the Company recognizing the union and granting increases in wages of five and seven per cent effective September 1.

FACTORY WORKERS (STORE FIXTURES, SHOW CASES, ETC.), DUNDAS, ONT.—A number of employees, members of the Upholsterers, Furniture, Carpet, Linoleum and Awning Workers International Union, in one establishment manufacturing store fixtures, show cases, etc., ceased work on August 24 demanding an

STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1938*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(a) Strikes and Lockouts in progress prior to August, 1938				
AGRICULTURE—				
Greenhouse employees, Kitchener, Ont.	1	10	30	Commenced July 25, 1938; against reduction in weekly wages; terminated Aug. 3, 1938; conciliation (municipal); in favour of workers.
MANUFACTURING—				
Textiles, Clothing, Etc.—				
Knitting factory workers, St. Catharines, Ont.	1	54	1,458	Commenced July 30, 1938; alleged discrimination against two union members and for increased wages and reduced hours; unterminated.
Printing and Publishing—				
Photo engravers, Montreal, P.Q.	1	12	324	Commenced July 30, 1938; for reduced hours; unterminated.
Non-Metallic Minerals—				
Lime plant workers, Blubber Bay, B.C.	1	111	2,700	Commenced June 2, 1938; *re* application of Conciliation Board (provincial) award; unterminated.
SERVICE—				
Business, Etc.—				
Restaurant employees, Toronto, Ont.	3	65	1,700	Commenced June 15, 1938; against discharge of workers alleged to be for union activity; unterminated.

STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1938*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(b) Strikes and Lockouts commencing during August, 1938				
MINING, ETC.—				
Mercury miners, Bridge River, B.C.	1	12	36	Commenced Aug. 18; against change in wage basis involving a reduction; terminated Aug. 20; replacement; in favour of employer.
Coal miners, Rosedale, Alta.	1	115	690	Commenced Aug. 24; for wage adjustment for helpers; unterminated.
Coal miners, Florence, N.S.	1	700	700	Commenced Aug. 31; against employment of a worker from a neighboring colliery; unterminated.
MANUFACTURING—				
Textiles, Clothing, Etc.—				
Clothing factory workers (dressmakers), Newmarket, Ont.	1	14	350	Commenced Aug. 3; alleged violation of agreement when plant moved; unterminated.
Hat factory workers, Toronto, Ont.	1	82	246	Commenced Aug. 19; for recognition of union; terminated Aug. 22; conciliation (provincial); compromise.
Metal Products—				
Foundry workers, (automobile parts), Windsor, Ont.	1	150	3,600	Commenced Aug. 3; for closed shop union agreement, adjustment of wage rates and against discharge of union workers; unterminated.
Iron and steel factory workers (bolts, etc.), Owen Sound, Ont.	1	71	568	Commenced Aug. 16; for increased wages, reduced hours and holidays with pay; terminated Aug. 24; conciliation (provincial); compromise.
Car plant workers, Trenton, N.S.	1	103	1,200	Commenced Aug. 18; for adjustment of wages piece rates; plant closed Aug. 31; indefinite.
Foundry workers (stoves and farm implements), Montmagny, P.Q.	1	116	116	Commenced Aug. 19; for recognition of union and increased wages; terminated Aug. 20; conciliation (provincial); compromise.
Miscellaneous Wood Products—				
Furniture factory workers (show cases, etc.), Dundas, Ont.	1	59	236	Commenced Aug. 24; for increased wages and union agreement; terminated Aug. 27; negotiations; compromise.
CONSTRUCTION—				
Highway—				
Labourers, Desaulniers, P.Q.	1	15	15	Commenced Aug. 4; for employment of local workers; terminated Aug. 4; conciliation (provincial); in favour of workers.
Labourers, truck drivers, etc., Nantel, P.Q.	1	300	300	Commenced Aug. 15; for employment of local workers; terminated Aug. 15; conciliation (provincial); compromise.
TRANSPORTATION—				
Local—				
Cartage company employees, Montreal, P.Q.	1	90	27	Commenced Aug. 2; for recognition of union, increased wages, etc.; terminated Aug. 2; negotiations; in favour of workers.
SERVICE—				
Business, Etc.—				
Tavern employees, Montreal, P.Q.	1	4	12	Commenced Aug. 4; against dismissal of worker and reduction in hours; terminated Aug. 6; negotiations; in favour of workers.

*In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

increase in wages. It was reported in the press that the company had refused to accept an agreement proposed by the union. Work was resumed on August 29 following negotiations between the company and a committee of its employees and an agreement was signed providing for increased wages, a forty-four hour week and for the appointment of a shop committee to consult with the management.

LABOURERS, ETC., (HIGHWAY CONSTRUCTION), NANTEL, P.Q.—Employees of one contractor ceased work on August 15 in protest against the alleged replacement of local men by others from outside the district. Work was resumed the next day following conciliation by the local member of the provincial legislature, and by an official of the Quebec Department of Highways. The contractor agreed to replace outsiders except key men by local labour.

CARTAGE COMPANY EMPLOYEES, MONTREAL, P.Q.—A number of employees of one trucking company, members of the International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers of America, ceased work on August 2 demanding increased wages, recognition of union and seniority rights. Work was resumed the same day after negotiations, the company signing an agreement granting union recognition and an increase in the rates of wages with provision for time and one-half for overtime and double time for Sunday work.

TAVERN EMPLOYEES, MONTREAL, P.Q. — Employees in a tavern, members of the Hotel and Restaurant Employees' International Alliance and Bartenders' International League, ceased work on August 4 in protest against the dismissal of a worker and against a reduction in the working hours of another. Work was resumed after negotiations, the proprietor agreeing to reinstate the workers under the same conditions as prevailed before the dispute and to pay the wages for the time lost.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the March issue, in the review of Strikes and Lockouts in Canada and Other Countries, 1937. The latter included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the figures are not for relatively recent dates. Statistics given in the annual review and in the monthly articles are taken as far as possible from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

Great Britain and Northern Ireland

The number of strikes beginning during July was 43 and 20 were still in progress from the previous month, making a total of 63 in progress during the month, involving about 20,000 workers with a resultant time loss of approximately 80,000 man working days.

Of the 43 disputes beginning in July, 11 arose out of demands for increases in wages, 2 out of proposed wage reductions and 9 were over other wage questions; 7 arose out of questions respecting the employment of particular classes or persons, 8 over other questions respecting working arrangements and 6 over questions of trade union principle.

Final settlements reached during July, numbered 38. Of these, 12 were settled in favour of the workers, 15 were settled in favour of the employers and 11 resulted in compromises. In the case of 9 other disputes work was resumed pending negotiations.

The strike which involved the largest number of workers during July, occurred in various districts in South Wales and Monmouthshire on July 11, when 9,700 colliery workers ceased work in protest against having to work with non-unionists. Work was resumed the same day when the non-unionists agreed to join the union.

A strike of colliery workers at Stirling in which 570 workers were directly involved and 111 workers indirectly involved which began on January 24 for the reinstatement of a worker who had been suspended was settled on July 7 and work was resumed on July 12. The Ministry of Labour does not report the details of the settlement but reports that an amicable settlement was effected.

A strike of 450 glaziers and wall lining fixers which began on April 25 at London over a dispute respecting travelling allowances and other working conditions was also reported as having been amicably settled on July 26.

A strike of 400 furniture trade operatives at Walthamstow which arose on June 13 over the alleged victimization of trade union members, following a demand for a reduction in hours and other improvements in working

conditions was terminated on July 18. The settlement which was effected provided for the gradual reinstatement of employees who had ceased work on June 13 and for a 47 hour working week.

A press despatch states that on August 18, 1,400 miners, members of the North Staffordshire Miners' Association went on strike at the Sneyd Collieries when the employer announced a deduction of 2½ per cent for dirt on each full wagon load of coal. The union claimed this action would mean a reduction in wages for some miners. On August 11, the miners unanimously refused to accept a modified offer by the owners. No further information is available at present.

Claiming the company had failed to keep a promise to increase wages, employees in one section of the Austin airplane factory at Birmingham, according to a press report, walked out on August 29 with the result that the whole plant was forced to suspend operations, 6,000 workers being affected. All went back to work on September 7, pending negotiations. No information has yet been received as to the result of these negotiations.

Belgium

The monthly labour review of Belgium reports 11 strikes as beginning in June which with 5 unterminated at end of May made a total of 16 strikes in existence during the month. These disputes involved 3,242 workers and caused a time loss of 21,570 man working days. As for results, 3 were compromises, 4 were in favour of employer, and the remainder were unterminated.

France

From press despatches it is learned a serious situation developed in industry in France owing to a continued dispute in Marseilles between 7,000 dockworkers and employers over the 40-hour week, which threatened to involve union workers throughout France. The trouble started about July 16, when the dockworkers refused to work nights and Sundays until the rate of pay for time over 40 hours per week was settled.

An arbitrator appointed by the government made his award on August 14 declaring the dockers to be legally wrong, as the situation was provided for in the collective contracts in force. A conference was called by the Minister of Labour for August 17 but a settlement was not reached. Ships were then unloaded by soldiers, and shipping on the Mediterranean was re-arranged.

On September 3, some 14,000 textile workers at Amiens ceased work and took possession of 24 mills, in protest against government decrees under the 40-hour week law, permitting 48 hours in various industries, which had resulted in the resignation of two ministers. The Ministry of Labour was able to have all but 2,500 strikers return to work but only temporarily, as all the employees walked out again demanding that the premier respect the social laws or resign. No further information is at hand regarding the outcome of this strike.

United States

Preliminary estimates of strikes in June, 1938, which are based on "scattered information from newspapers and other sources and are subject to revision as more definite reports are received" show 200 strikes, as beginning during the month, which with 155 unterminated at the end of May, made a total of 355 in progress during the month. The number of workers involved in these disputes was 80,000 and the resulting time loss was 825,000 man working days. The comparable figures for the previous month show that there were 386 strikes in progress, involving 100,000 workers with a time loss of 1,025,000 man working days.

The Chicago North Shore and Milwaukee Railroad (an interurban electric line) suspended operations on August 16 when its 1,300 employees members of Division 400, Amalgamated Association of Street and Electric Railway and Motor Coach Employees of America, refused to accept a 15 per cent wage reduction and voted to strike. The Company is in federal receivership and ordered the pay cut which was approved by a Federal Court on the ground that the company lacked the necessary cash and revenue to meet expenses. A union jurisdictional fight complicated matters and federal conciliators were unable to avert a strike but they immediately began new conferences to work out an agreement to permit operation of the line until a final settlement was reached The union asked for proof before an arbitrator that the company was unable to maintain wage scales. Mortgage bondholders sought a state order to compel the company to resume operations.

On August 26, all wholesale grocery establishments as well as some other warehouses in San Francisco were closed as the result of refusal of C.I.O. union warehousemen to unload a freight car allegedly loaded by strikebreakers employed by a variety chain store warehouse. About 1,200 warehousemen were directly involved. The employers contend that employees should handle all freight regardless of origin. By August 20, according to press reports, 153 warehouses were closed. No further information has been received regarding this strike.

At Philadelphia 1,000 taxi cab drivers went on strike demanding a guaranteed minimum wage of $30 a week and 50 per cent of gross receipts. The old contract guaranteed $18 per week with 45 per cent of gross weekly receipts. The strike was called by the Taxicab Drivers' Union of the A. F. of L; and remains unterminated at time of writing.

OLD AGE AND BLIND PENSIONERS IN CANADA

Financial and Statistical Summary as at June 30, 1938

IN the accompanying tables, which have been prepared by the Department of Finance, information is given concerning the Old Age Pensions Act and the amendment to that Act providing for the payment of pensions to blind persons.

Old Age Pensions

In the first of the tables appearing with this article, particulars are given dealing with operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, Chapter 156; as amended by Statutes of 1931, Chapter 42), and under the various provincial concurrent acts, as at June 30, 1938. (The text of the Old Age Pensions Act was given in the LABOUR GAZETTE for April, 1927, page 375 and the new regulations were reviewed in the issue for March, 1938, pages 286-288).

The Act made provision for the establishment of a Dominion-provincial pensions system to be effective in such provinces as might enact and give effect to special legislation for this purpose. All the provinces are now participating.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and over who is not in receipt of an income of as much as $365 a year and who has resided in Canada for 20 years, and in the province in which the application is made for the five years immediately preceding the date of the proposed commencement of pension. The Act also provides that an applicant must not have assigned or transferred property for the purpose of qualifying for a pension. Indians, as defined by the Indian Act, are not eligible to receive old age pensions.

The maximum amount of pension payable under the Act is $240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to reduction by the amount, if any, that their private income exceeds $125 a year.

Under the provisions of the Act as it was first passed, the Department of Labour of

Dominion Government contributions from inception of amendment to Old Age Pensions Act	$90,871 59	$2,348 11	$116,610 63	$9,220 82	$309,153 67

NOTE.—Payments for quarterly period ended June 30, 1938, include amounts paid from inception of amendment to the Act

Canada (then the administering Department) paid quarterly to each province one-half of the net sum paid by the provincial pension authority during the preceding three months. At the 1931 session of the Dominion Parliament, however, the Act was amended, the amount of the Dominion contribution being increased from fifty to seventy-five per cent of the net sum.

In order to avoid duplication of departmental activities and to secure centralization of responsibility in carrying out the provisions of the Act, which involves accounting control and supervision, the administration of the Old Age Pensions Act was by Order in Council dated March 1, 1935, transferred to the Department of Finance from April 1, 1935.

Pensions for the Blind

An amendment to the Old Age Pensions Act, assented to on March 31, 1937, (LABOUR GAZETTE, May, 1937, page 503) provides for the payment of pensions to blind persons who have attained the age of 40 years and have fulfilled other conditions set forth in the Act. Such persons must be so incapacitated by blindness as to be unable to perform any work for which eyesight is essential, and must not be in receipt of a pension or allowance in respect of blindness under the Pension Act or the War Veterans' Allowance Act.

The maximum pension payable to a blind person, whether married or unmarried, is $240 per annum. The amount a blind pensioner may earn without having his pension reduced is $200 a year, if single, and $400 if married to a spouse who is not receiving a pension in respect of blindness under the Act. The maximum pension is reduced, however, to $120 per annum in the case of a blind person who marries another blind person.

Under agreements negotiated between the Dominion and the provinces, the Dominion contributes 75 per cent of the cost of pensions to blind persons, the provinces assuming the remainder of the cost of such pensions.

Regulations governing the payment of pensions to the blind were published in the *Canada Gazette*, of August 28, 1937.

The accompanying tabular statistics indicate the extent of operations under this amendment to the Old Age Pensions Act.

Home Improvement Loans

According to figures issued by the Department of Finance, Home Improvement Loans numbering 48,918, and amounting to $19,477,480.15 in value were reported as at August 31, 1938. This report shows an increase of 2,737 in the number of loans and $1,232,638.29 in the amount over the figures reported to July 23, 1938.

Provincially, an increase of 1,313 loans amounting to $613,598.13 was registered in Ontario bringing the grand total for that province to 21,766 loans valued at $8,867,914.03. Quebec showed an increase of 467 loans totalling $265,236.44 making a total of 7,576 loans valued at $3,803,253.60. British Columbia registered an increase of 259 loans for $76,968.33, bringing the grand total for that province to 5,272 loans amounting to $1,672,586.50.

RECENT REGULATIONS UNDER PROVINCIAL LABOUR LEGISLATION

RECENT regulations in Ontario provide for the protection of persons working in compressed air, open tunnels and caissons. In Quebec the Order of the Fair Wage Board applying to the silk textile industry has been re-issued with a number of changes.

Ontario Department of Labour Act

Regulations under this Act approved by Order in Council on June 24 replace regulations of August 31, 1926, applying to persons working in compressed air and regulations of August 19, 1931, respecting persons working in tunnels and open caissons.

In the new Order, separate regulations are provided for the different types of workers covered but the general provisions for both classes are identical with each other and with the sections of the old Order applying to tunnel and open caisson work which set forth the responsibility of the employer and the powers of the inspector and Minister of Labour. (LABOUR GAZETTE, November, 1931, p. 1215).

The special regulations applying only to persons working in compressed air, with the exception of a new provision for hoisting engineers, are similar to those which came into force September 1, 1926, and are generally similar to the British Columbia and Quebec regulations.

The maximum working time is limited according to the pressure and varies from two four-hour shifts with a half-hour rest interval in the open air for any pressure exceeding normal up to 22 pounds per square inch to two three-quarter hour shifts with a five-hour rest interval, when pressure is between 45 and 50 pounds. Any rest intervals taken in conjunction with a meal period may not be less than one hour.

Any person employed in compressed air, before returning to normal air, must be permitted to pass through an intermediate lock where the air pressure is gradually reduced at a prescribed rate. The employer is required to keep records of the time spent by his employees in compressed air, the rate of decompression and any untoward symptoms exhibited by any worker on coming out from pressure.

Locks and working chambers must be equipped and pressure gauges installed according to the regulations and a competent man put in charge of the valves and gauges regulating and indicating the pressure in the working chamber. He may not be employed for more than nine hours in any 24 and in caisson work may not operate more than two separate air lines.

Facilities must be provided for washing and for changing clothes. A sufficient amount of fresh air, free from objectionable material is to be supplied at all times. Hot coffee and sugar must be supplied at the end of shifts and during rest periods.

One or more physicians must be employed to examine men before they may be employed in compressed air and if a workman is absent from employment for ten or more successive days, he must undergo a medical examination before resuming work. Any person who has been employed continuously in compressed air for two months, must be re-examined and declared fit to engage in such work. Records must be kept by the employer of examinations with full information regarding the person examined. Such records are to be open for inspection and the records of the physician and the employer must be in duplicate and one copy forwarded monthly to the Ontario Department of Health.

There must be a medical lock in connection with all work in compressed air when the maximum pressure exceeds 17 pounds. It must be equipped as prescribed close to a first-aid room and under the control of a physician.

Employees must be furnished with identification badges indicating the location of the medical lock and in case of emergency an ambulance driver is to remove the patient to the medical lock, not to a hospital. Adequate medical service is to be available whenever work in air under pressure is in progress, the service to be intensified as pressure is increased.

Every tunnel having a hoisting engine must have one or more hoisting engineers who hold certificates for the work and except in emergencies only such a person may run such hoisting machine. Where the hoisting engineer is required to have charge of and operate both the hoist and adjacent air compressor, he must be provided with an assistant. Where material is hoisted in caissons or tunnels where construction is done under compressed air, all hoisting must be done by a hoisting engineer holding a hoisting engineer's certificate.

Little change has been made in the regulations for the protection of persons working in tunnels and open caissons. They are similar to the Quebec regulations of February 22, 1935. The Ontario regulations have been extended to apply to workers in coffer dams

and crib works in accordance with an amendment of 1938 in the Department of Labour Act authorizing regulations governing such employees. Hoisting engineers are required to have certificates and provision is made for regulating the number of men that may ride in any cage, skip or bucket. Other safety provisions relate to hoisting ropes, cages, stairways, ladders, signals, ventilation, sanitation, lighting and telephone system.

Quebec Fair Wage Act

An Order of August 9 under this Act revises Order No. 5 in force since February 12, 1938, applying to all employees in the silk textile industry except those covered by agreements made obligatory under the Collective Labour Agreements Act or engaged in the manufacture of silk velvet or fabrics not more than 12 inches wide. (Labour Gazette, March, 1938, p. 294). The revised order became effective on August 13 and is to remain in force until October 1, 1938, when it will be renewed for six months unless a decision to the contrary is issued by the Board or by the Lieutenant-Governor in Council. The chief provisions are summarized below.

Order 5 merely provided for an increase of 4 cents per hour over the rates paid during the first two weeks of December, 1937. The revised Order establishes both average and minimum hourly rates for 19 categories of workmen. All wage-earners in an establishment must be divided into groups. Every worker in each group whether paid by the piece or the hour must be paid the minimum fixed and the average hourly rate paid for each hour of work must not be less than the average specified in the Order for that category. If in one group, in any two weeks' period, the average hourly rate falls below the average fixed by the Order and if, at the end of the next two weeks, the deficiency is not made up, the employer must make up the difference and divide it among the workers in the group in proportion to their earnings.

With the exception of the classes noted below the rates apply to a week of 50 hours and a day or night of not more than 10 hours. For firemen, watchmen and pumpmen, those employed at spinner twisting in yarn throwing departments, maintenance men and those engaged in converting, the rates apply to 72, 60, 55 and 50 hours a week respectively with no limit on daily hours. Time worked in excess of these hours is overtime and must be paid for at the regular rate increased by 5 per cent. Night work between 6 p.m. and 6 a.m. must also be paid for at this rate except in the case of office workers and persons hired by the week or longer period.

Persons employed in continuous operations on the three shift-system in cellulose acetate processes and in processes incidental thereto may not work more than an average of 50 hours per week in three consecutive weeks. Days off are to be arranged by agreement between employer and employees; hours of work per shift or per week are not limited and overtime is payable for time in excess of 168 hours in any three consecutive weeks.

As stipulated in the Industrial and Commercial Establishments Act, except in cases of "force majeure" or where permission is obtained from the Inspector, no female or youth under 18 years of age may be employed for more than 55 hours a week. Order No. 5 fixes a maximum week for males over 18 years at 72 hours.

The minimum rates vary from an average of 18 cents and a minimum of 16 cents per hour for inexperienced employees in circular hosiery knitting to an average of 71 cents and a minimum of 56 cents for printing rollers.

Apprentices in throwing departments, warping and preparing, weaving, cloth rooms, maintenance divisions, printing, engraving, dyeing, finishing and converting must not exceed 5 per cent of the employees in each class. The apprenticeship period except for printing and engraving, is not to exceed ten months, during which time the apprentice must be paid at least 16 cents per hour.

In printing departments, roller apprentices must start at not less than 31 cents per hour and are entitled to an increase of 5 cents per hour for each year for four years. The minimum rate for apprentices in engraving work is 26 cents per hour and for roller turners 24 cents. These rates are to be increased yearly for four years by 3 cents an hour for sketch makers and 2 cents an hour for plate cutters, bench hands, roller turners and etchers.

The Fair Wage Board, by resolution, may require the installation of meters (pick clocks) and limit the number of looms per operator. Pending action on the latter point, the number of looms in use in each establishment up to February 12, 1938, may not be increased without the approval of the Board as to number and wage rates for each case.

No deduction may be made from wages except as authorized by the Board in the case of a written or tacit agreement between the employer and employee when benefits are paid to the latter for sickness or pressing needs, life insurance and pension fund premiums, medical schemes, rent for dwellings owned by the employer and for fuel or necessary foodstuffs bought by the employer to give employees the benefit of lower prices

Any of these deductions may be prohibited by the Board or their authorization cancelled.

Rates for all piece work must be posted in a conspicuous place in the department concerned within ten days after the day of coming into force of this order.

Certain provisions of Order No. 4 (LABOUR GAZETTE, May, 1938, p. 513) apply to the workers covered by Order 5 as revised. These include payment for time spent at the disposal of the employer, a weekly rest day, payment of wages in currency except in certain cases where cheques are permissable, placing wages in an envelope with the employee's name, the hours worked and the amount of his wages written on it and other general provisions.

Year-Book of Labour Statistics

The third (1938) issue, as an independent volume, of the Year-Book of Labour Statistics has just been published by the International Labour Office. As last year, the work is presented in bilingual form, both the French and English versions appearing in the same volume.

The scope and general arrangement of the tables are much the same as in the previous issue, but additions and improvements have been made. In the section on population, the tables have been brought up to date by the addition of data on gainfully occupied population which have become available since the last issue and a new table has been added on the age distribution of the occupied population. In the section on employment and unemployment, several new series have been added. In the section on hours of work, a new table has been added, giving for recent years the statistics of normal hours of work in different industries and occupations. In the section on wages, a new table has been added on wages in coal mining, and the table on wages in agriculture, dropped last year, has been reinstated. In the table on wages by industry, several new series and countries have been added. In the section on family budgets, figures for additional enquiries have been added, but the table on distribution of food expenditure has been omitted. The appendix on economic statistics communicated by the Economic Intelligence Service of the League of Nations has been enlarged.

The tables given are divided into eight sections dealing with the following subjects: population; employment and unemployment; hours of work; wages; cost of living and retail prices; workers' family budgets; migration; and industrial disputes. The appendix contains tables of world indices of economic activity, index tables of industrial production, index numbers of wholesale prices, exchange rates, and value of currencies as a percentage of their gold parity in 1929. After a list of principal sources, the volume concludes with a synopsis showing the countries included in the different tables of the volume.

Migration for Settlement

Unter the title of *Technical and Financial International Co-operation with regard to Migration for Settlement,* the International Labour Office has just published the main documents concerning the work of the Conference of Experts on International Technical and Financial Co-operation with regard to Migration for Settlement, which was held in Geneva from February 28 to March 7, 1938.

The first part of the present volume consists of a report prepared by the International Labour Office. The second part is divided into two sections, the first section containing a detailed record of the general discussion and the report adopted by the Conference being reproduced in the second section. The conclusions and the resolution included in the latter are given again at the end of the report for the convenience of the reader.

Of the three appendices at the end of the volume, the first includes a list of delegates to the Conference, the second gives the list of points which served as the basis of the discussion on special problems arising from the question on the agenda, while the third contains documentary information submitted by certain delegations.

LABOUR LEGISLATION IN NEW BRUNSWICK IN 1938

At the last session of the New Brunswick legislature which opened on February 24 and closed on April 14 several measures of labour interest were enacted, including the Labour and Industrial Relations Act dealing with fair wages, freedom of association, collective bargaining and the settlement of industrial disputes, new Acts providing for incorporation of co-operative associations and for the issue of debentures to pay the cost of unemployment relief, in Saint John, and amendments in laws concerning workmen's compensation, regulation of mines, wages in forest operations, woodmen's liens, and school attendance.

The Labour and Industrial Relations Act

The Labour and Industrial Relations Act (Labour Gazette, May, 1938, page 475) repeals the Fair Wage Act of 1936 but reenacts most of its provisions. The new statute also deals with freedom of association, collective bargaining and the settlement of industrial disputes.

The sections dealing with freedom of association follow to a certain extent the lines of the draft Bill of the Trades and Labour Congress. Legislation based on this Bill was enacted in Alberta, British Columbia and Nova Scotia in 1937. These sections, which form Part II of the Act, declare that "the right of employers and employees to organize in associations, trade unions or other groups for any lawful purpose is hereby recognized" and that it is lawful for employees to bargain collectively with their employers and to conduct such bargaining through their representatives elected by a majority vote of the employees affected. A provision added during passage through the Legislature allows employees to bargain through officers of the organization to which the majority of such employees belong. The Act makes it unlawful for any person to insert or continue in a written or verbal contract any condition seeking to restrain any employer or employee from exercising his rights under the Act. Nothing in the Act is to interfere with the employer's right to suspend, lay off, or discharge an employee for proper and sufficient cause.

An amendment to the original bill provides a maximum fine of $100 or 30 days' imprisonment for "any employer who by threat of dismissal or loss of position or employment, or by actual dismissal or loss of position or employment, or any person who by any act or threat calculated to intimidate, seeks or attempts to induce or compel any person (a) to join or refrain from joining or belonging to any organization, or (b) to work or abstain from working or seeking employment".

Every organization of employers or employees and every branch or local of such organization must file with the Minister in charge of carrying out the Act, a copy of its constitution, rules and by-laws containing a complete statement of its objects and purposes, a list of the names and addresses of its officers, and a financial statement. By a provision added during passage through the House, however, such returns are to be filed only when required by the Minister. The clause in the original bill requiring organizations to furnish members, on application, with copies of statements and information free, was replaced by a provision that members must be permitted to inspect financial records and take copies of them. The original bill fixed a maximum penalty of $100 for each day and part of day that an officer of any organization failed to comply with these provisions. This penalty was reduced to $10 per day but the maximum imprisonment of 30 days in default of payment remains unchanged.

The Act also provides that the treasurer or other officer having the custody of the funds or property of an organization shall account to the members at a meeting of the organization, when required to do so by the rules, for all moneys received and disbursed by him since the last accounting and shall have such account audited by an auditor appointed at a meeting of the organization. When required by the members such treasurer or officer must hand over to a person or persons designated by the organization the balance due by him, and all securities, books, documents and property of the organization in his custody. If such treasurer or other officer refuses to hand over the property the organization, through the person designated by its members, may sue him therefor. A similar provision applying to trade unions is included in the Trade Union Act of Nova Scotia passed in 1937.

The sections of the Act relating to investigation and conciliation of labour disputes are generally similar to the corresponding sections of the Industrial Conciliation and Arbitration Act of British Columbia, and apply to any dispute between an employer and a majority of all his employees, or a majority of his employees in any separate plant or department. Where a dispute exists either party may apply to the Minister for appointment of a Conciliation Commissioner who, if the Minister considers the dispute a proper one

for reference, must be appointed within seven days of receipt of the application. The British Columbia Act allows only three days. Under both Acts the Minister may appoint a Commissioner of his own initiative if he deems it advisable, and may refer to him any other dispute of a similar kind between any other employer and his employees. The application by employers or employees for appointment of a Conciliation Commissioner in New Brunswick is to be accompanied by a declaration of the belief of the declarants that, failing an adjustment, a lockout or strike will ensue. Regulations are laid down concerning the form and contents of the application as well as rules regarding the signing. The Commissioner is required to make inquiries, hear representations and seek to arrive at an amicable settlement. He must report to the Minister within 15 days or such further time as may be agreed upon by the parties or fixed by the Minister. The British Columbia Act allows 14 days within which to make the report.

If the Commissioner has been unable to effect a settlement the Minister is required to refer the case forthwith to a Board of Conciliation but unless otherwise ordered by the Minister such reference is only to be made when the dispute affects 30 or more employees. In New Brunswick the term "Board of Conciliation" is used instead of "Board of Arbitration" as in British Columbia but in neither province are the parties to the dispute required to accept the report of the Board. In both provinces the Board is made up of one representative of the employers, one of employees and the third, who is to be the chairman, nominated by the members so chosen. If within a given period either party fails to appoint a representative the Minister must make the appointment on their behalf. The New Brunswick Act stipulates not only, as in British Columbia, that the Board members shall be British subjects, but that they must also be residents of the province. Under both acts members of a board are required to take an oath of secrecy with regard to evidence submitted to the Board. The New Brunswick Act provides that the Board may, with the consent of the Minister, employ experts to examine books or records or to advise it upon any technical or other matter. As in British Columbia a board may call for or accept such evidence as it thinks fit whether strictly legal evidence or not. In both provinces the chairman and one other member constitute a quorum. The Board is to hear evidence and summon witnesses and any party to the dispute may be represented before it by not more than three persons. A maximum fine of $200 or imprisonment for 60 days is provided for obstructing work of the Board.

After making full inquiry, and in any event not later than 20 days after appointment or such further time as is allowed by the Minister, the Board is required to submit its report and recommendations. The British Columbia Act allows only 14 days within which to report. No recommendations are to conflict with any Provincial statutes. In New Brunswick as in British Columbia the question of acceptance or rejection of the board's report is to be submitted to a separate vote of employers and employees and the voting is to be by secret ballot. In New Brunswick the Minister may direct the manner in which the vote is to be taken; in British Columbia he may supervise the taking of it. In both provinces exemption from the provisions of the Act is granted where there is an agreement between an employer and an organization of employees for arbitration of disputes, but in British Columbia such agreement must have the written approval of the Minister. The Commissioner and Board members serve without remuneration.

Under the New Brunswick statute strikes and lockouts are prohibited unless the dispute has been referred to a Board of Conciliation and the parties have voted to accept or reject the recommendations of the board or unless the matters in dispute have been dealt with and an order made by the Fair Wage Board. The British Columbia Act prohibits a strike or lockout during the period between application for a Conciliation Commissioner and 14 days after the date fixed for the vote. In both provinces an exception is made where there is an agreement between an employer and an organization of employees for arbitration of disputes and the dispute has been dealt with thereunder. The penalty in New Brunswick for an employer declaring a lockout or employees declaring a strike contrary to the Act is a maximum fine of $100 and $10 respectively per day or part of day that the condition exists. As originally introduced the bill provided a $20 per day penalty for employees. For both imprisonment up to 30 days may be imposed in default of payment. In British Columbia the employer is liable to a maximum fine of $500 but this provision does not apply to the employee. This maximum fine of $500 is also fixed in British Columbia for any breach of the provisions for which no other penalty is provided. New Brunswick sets a minimum fine of $500 and maximum of $1,000, with three to six months' imprisonment in default of payment, for instigating or aiding in a strike or lockout in contravention of the Act.

Sections of the Act dealing with regulation of wages and working conditions provide, as did the Fair Wage Act, 1936, for the appointment of a Fair Wage Officer to hear complaints and investigate the wages, hours and conditions of labour prevailing in any trade, industry or business. A new clause enables the Fair Wage Officer to appoint some person to conduct such investigation for him. Where it appears that the wages, hours or conditions of labour in any trade are inadequate or unfair the Fair Wage Officer may call a conference of representatives of employers and workers to attempt to adjust the conditions. The conference is to submit to the Minister a written report of its proceedings and conclusions. The Minister may refer the report to the Fair Wage Board for which provision is made as under the 1937 amendment to the Fair Wage Act. The Board is to be appointed by the Lieutenant-Governor in Council and to consist of five members, two of whom are to represent employers and two employees, with a disinterested person as chairman. Members of the Board are to hold office during pleasure and to serve without remuneration. Whether an investigation or a conference has been held or not the Board may, as under the Fair Wage Act, make orders establishing fair rates of wages, and maximum hours, and fix overtime rates. The new Act adds authority to fix time or times for payment of wages in any trade. It also allows the Chairman or an authorized member to act for the Board.

Different orders may be made for different trades when conditions warrant it. A new provision requires the employer to file with the Fair Wage Officer, within ten days of mailing of a demand, or such further time as is allowed, a statement setting forth information concerning the names and addresses of employees, their ages, duties, hours of work, rate of wages and any agreement concerning wages, hours or working conditions or other similar information that may be required. Every employer must now keep posted on his premises copies of orders of the Board. To the former section providing for a penalty payable by the employer of $100 for each employee affected when an Order of the Board is contravened, as well as the balance of wages due him, is added a provision for imprisonment up to 30 days for default of payment. New sections fix the same fine and imprisonment for attempts to compel an employer or employee to refrain from lodging a complaint or taking part in an investigation; also for hindering or obstructing an Officer, the Board or a member of it in the discharge of duties under the Act.

The provision in the British Columbia Act that no proceeding shall be deemed invalid by reason of any defect of form or any technical irregularity is also in the New Brunswick Act. The latter further provides that if in the opinion of a Board of Conciliation or the Fair Wage Board any party has used the provisions of the Act to unjustly maintain a condition of affairs such party shall be liable to a maximum penalty of $100 or 30 days' imprisonment in default of payment. The same penalty is provided for any offence where no other penalty is fixed. The Governor in Council is given power to make regulations, including imposition of small penalties for violation of the Act or regulations. The Bill as introduced provided for the coming into effect immediately on publication in the Gazette of rules and regulations under the Act. However, the Act as passed makes them effective seven days after publication.

Workmen's Compensation Act

Several amendments were made in the Workmen's Compensation Act. The operation of radio broadcasting stations was brought within the scope of Part I. The section providing that Part I of the Act shall apply to certain specified industries and employment incidental thereto or immediately connected therewith, was amended to give the Board power to decide which employments are incidental to or immediately connected with any industry. The clause exempting from the operation of the Act persons employed casually and otherwise than for the purposes of the industry was amended to make it clear that both these classes are included in the exemption.

A new section adds to the board's juridiction power to determine whether any person is an employer and whether any operation, undertaking or employment is an industry. The section enumerating matters concerning which the Board has exclusive jurisdiction was amended to include the question whether an injury has arisen out of or in the course of an employment within the scope of the Act. The section providing for an appeal to the Supreme Court from any final decision of the Board upon any question of law or jurisdiction was replaced by new provisions allowing such appeal on like questions from any order, ruling or decision of the Board. Formerly such appeal might be taken only by permission of a Judge of that Court given on a petition presented within 15 days after notice of the decision, but now the party affected may apply to the Board, within 30 days after notice, for a statement of the facts, which is to be provided within 10 days. If the statement is not satisfactory an additional statement must be furnished. Within ten days of receiving the statement, which constitutes the record on appeal, the party must apply to a Judge of

the Supreme Court for determination as to whether a question of jurisdiction or law is involved. If an order is granted the appeal is to be brought by notice served on the chairman or vice chairman of the Board within ten days. Rules of procedure on appeal are laid down, and it is provided that no costs are to be awarded.

The section providing for payments in case of permanent partial disability on a scale to be established by the Board and proportioned on the diminution of earning capacity and the degree of disfigurement has been amended to state that payments are to be made "during the lifetime of the workman". The maximum of $2,500 to be paid in any such case has been made an aggregate maximum sum. The section requiring employers to report accidents to the Board was amended to require such report of any accident "which may entitle the workman or his dependants to compensation or medical aid" instead of as formerly those "by which the workman is disabled from earning full wages". To the Board's power to rearrange, transfer or exclude any industries from the operation of the Act is added power to re-admit any industry so excluded.

A new section provides for the filing with the Board by every person, when so required, of a verified statement of the names and addresses of his employees, the nature of his business, the duties performed by his employees, particulars of wages and period of employment and such other information as may be specified. A maximum penalty of $500 is fixed for non-compliance within 15 days or for making false statement.

Forest Operations Commission Act

An amendment to the New Brunswick Forest Operations Commission Act, which is retroactive to April 2, 1937, passed the House as introduced. Formerly wage scales were fixed by the Commission not later than March 15 of each year and were effective for 12 months from April 1 and binding on employers and employees. The amendment gives the Commission power to set wage scales at any time, for any period fixed, and to "suspend, cancel, vary or revive any wage scale established by it."

Early Closing of Barber Shops

An Act to provide for Early Closing of Barber Shops in the city of Saint John empowers the City Council, upon petition signed by not less than two-thirds of the barbers doing business or employed in barber shops in the city, to pass a by-law requiring that during the whole or any part or parts of the year all barber shops in the city shall be closed between such hour or hours after 12 o'clock noon of any day and 5 o'clock a.m. of the following day and during the whole of any holiday. A minimum penalty of $10 with a maximum of $40 is fixed for breach of such a by-law, with a maximum term of imprisonment of two months in default of payment of fine.

An amendment to the Woodmen's Lien Act extends its application to groups in the lumber industry not previously covered. Formerly giving only to woodmen working for wages a lien for such wages on logs cut, it now includes in those benefitting thereby "any person employed in any capacity in or about a sawmill where lumber of any description is sawn or manufactured," the lien to be on sawn lumber as well as logs, subject to claims of the Crown, The Farm Settlement Board or the Workmen's Compensation Board, an owner's claim for stumpage or a claim for streams, improvements or booms. A further amendment gives claims of the Farm Settlement Board and the Workmen's Compensation Board, precedence over liens on logs and timber. Formerly only claims of the Crown had such precedence. Where the lien is for piece work it is to cover the amount due the contractor where he shows that he has already paid workers, not exceeding two in number, to help him.

The Mining Act

The Mining Act was amended to provide for the appointment of deputy inspectors of mines and also of a Board of examiners for any mining district to examine applicants for miners' certificates. The Board is to consist of the Deputy-Inspector of the district, who is to be chairman, and two other persons who have had practical experience in coal mining in New Brunswick and hold miners' certificates.

From September 1, 1938, no person may have charge of a working face unless he has been employed in some capacity underground for at least one year and holds a certificate from a Board of Examiners appointed under the Act or is the holder of a coal miner's certificate from an official Mining Board in Canada or the British Isles. The minimum age for such employment remains unchanged at 18 years. Formerly a person might have charge of a working face if he held a certificate signed by a well-known coal operator that he had had at least six months' experience at the "face" and had been found capable.

It is now laid down that no explosives may be taken into a mine except in a secure case or cannister containing not more than six pounds, and detonators are not to be carried in the same container with explosives. All

roads or ways affording access to a long wall face must be complete to within 25 feet of the working face and a sufficient supply of suitable mine timber is to be constantly kept in the most convenient place underground in each mine. An inspector may enter a mine and make an inspection at any time, but without obstructing the working, and may by written order to the owner, agent or manager require the discontinuance or remedying of any practice or condition which endangers the safety of the workers. If the order is not complied with within a reasonable time the inspector may require the persons employed to cease work. Any person violating the above provision or obstructing an inspector in the execution of his duty or failing to furnish him with the necessary means of making an inspection is liable to a fine not exceeding $20 and costs for each day on which the offence continues and on failure to pay such fine and costs to imprisonment for not more than one month.

A new provision requires the names of all wheelers employed in a mine to be entered on the pay-roll and such wheelers to be paid in the same manner as other workmen.

Co-operatives

An Act to Provide for the Incorporation of Co-operative Associations is similar to Acts in Nova Scotia, Prince Edward Island, Quebec, Ontario, Saskatchewan and Alberta. The Act provides that ten or more residents of New Brunswick 21 years of age or over may apply for incorporation of a co-operative marketing association or consumers' co-operative society.

Miscellaneous

An Act to authorize the Municipality of the City and County of Saint John to issue debentures, enables that municipality to make one or more issues of debentures, not exceeding in all $75,000, for the purpose of repaying a bank loan incurred in 1937 for unemployment relief.

An amendment to the Schools Act as it relates to the town of Campbellton provides that, in so far as the provisions of the Schools Act relate to that town, every child between the ages of six and 16 years shall attend school during all the days and hours that the public schools are in session, unless it is shown to the satisfaction of the Board of School Trustees that the bodily or mental condition of such child is such as to prevent attendance. The Board may, by resolution, suspend the operation of the amending Act during any certain school days.

A Bill which failed to pass would have empowered the Council of the Municipality of Queens to make by-laws for charging a licence fee to persons, not residents or ratepayers of the County, who engaged in any manual labour or employment other than farm labour in the County.

On April 14, 1938, the following Resolution was adopted.

WHEREAS by an Order of the Privy Council of Canada dated the 14th day of August, 1937, a Royal Commission was appointed for the purpose, as therein stated, of providing "for a re-examination of the economic and financial basis of Confederation and of the distribution of legislative powers in the light of the economic and social developments of the last seventy years" and by the said Order particular instructions were given to the Commissioners "to examine the constitutional allocation of revenue sources and governmental burdens to the Dominion and Provincial Governments, the past results of such allocation and its suitability to present conditions and the conditions that are likely to prevail in the future" and the said Commissioners were further directed "to determine the ability of the Dominion and Provincial Governments to discharge their governmental responsibilities within the framework of the present allocation of public functions and powers, or on the basis of some form of reallocation thereof"; and

WHEREAS the Commissioners are now conducting their investigations and in due course in accordance with their instructions will apparently "express what in their opinion, subject to the retention of the distribution of legislative powers essential to a proper carrying out of the federal system in harmony with national needs and the promotion of national unity, will best effect a balanced relationship between the financial powers and the obligations and functions of each governing body and conduce to a more efficient, independent and economical discharge of government responsibilities in Canada"; and

WHEREAS since the appointment of said Commissioners the Dominion Government has proposed to the Provinces in Canada that they agree to an amendment of the British North America Act whereby their legislative jurisdiction over unemployment insurance would be transferred to the Parliament of Canada; and

WHEREAS the question of unemployment insurance and the most economical and efficient method of its administration is, as well as social services generally, within the scope of the inquiry being conducted by the said Commissioners and in view of the withholding by certain Provinces of their consent to the proposed transfer of jurisdiction no interest would be prejudiced by allowing such question to rest until the said Commissioners shall have completed their investigations and submitted their report.

BE IT THEREFORE RESOLVED that in the opinion of this House the Government of this Province should respectfully urge upon the Government of Canada the advisability of deferring further consideration of the said proposal until the report of the said Commissioners is available, when the whole field of social services and any re-allocation of legislative powers in respect thereof may be given fuller study and consideration in the light of the findings and recommendations of the said Commissioners.

WORKERS' EDUCATIONAL ASSOCIATION OF CANADA

Summary of Annual Report and Convention Proceedings

ON August 27, the annual convention of the Workers' Educational Association of Canada was held in Oshawa, Ontario.

In his annual report to the convention, Mr. Drummond Wren, General Secretary of the Association, stated that the work of the organization had become "truly national in scope" and had "in some measure, bridged the gap between academic workers' education and education of a practical nature designed to meet the problems with which labour is confronted.

The report gives in detail the work conducted during the year by the organization which included the regular tutorial classes and other activities in which the association has been engaged during the past. Reference is made to "the new efforts that have been made, and the projects which have been carried on as a result of the policy decided upon by this Convention as its last meeting." Among these are "the extension of study circles, the national radio broadcast, the development of our W.E.A. Centre, the direction of trade union educational projects, and additional projects coming under the headings—Visual Education and Group Leadership Training. Recently, in discussing the progress the Association was making, with a prominent adult educationist from the United States, who has always kept in close contact with the W.E.A., he remarked that the W.E.A. is now really a national movement even though it has been so only on paper until a short time ago."

Statistics of the number of classes conducted by the association during 1937-38 and the net enrolment compared with the figures for 1936-37 indicate an important advance in membership and activities during the year. In the 1937-38 session there were 37 associations, 59 classes and a net enrolment of 2,655, compared with 29 associations, 44 classes and a net enrolment of 2,194 during the session 1936-37.

Referring to the work of the study circles during the year the report states: "In addition to the one course in Consumers' Co-operation, used by study circles, the Convention last year authorized the preparation of five other courses for the same purpose: (1) Trade Unionism (2) Organizing the Consumer (3) Psychology (4) Economics and (5) Parliamentary Procedure. Of these, the first three have been prepared fully; Parliamentary Procedure has been prepared sketchily; and for lack of a proper plan for the course, Economics has not been proceeded with. In the course of the year, a demand for study material, dealing with the Credit Union, had arisen as a result of the cumulation of co-operative propaganda which is steadily increasing. Material for a course in Political Science had been prepared previously for the Agricola Study Clubs. This material was bound into mimeographed booklets and, together with a series of fourteen bulletins, makes an excellent course in this subject." ...."Each of the subjects in the courses mentioned above is not only an introduction to a more intensive study of such courses but awakens a desire for information that may be obtained in other subjects. This means that we shall be compelled, as long as the material we are providing proves of sufficient interest, to be continuously preparing more advanced courses as well as courses of greater diversity. For instance, as a result of the beginning that has been made with the Trade Union course, there arose a demand for further material dealing with the trade union in action. This will concern itself with bulletins on such subjects as 'The Legal Right to Collective Bargaining and How to Obtain That Right,' 'The Bargaining Committee's Job and How It Should Go About It,' 'Strikes—their nature and purpose and their intelligent use as an effective weapon,' 'Grievance Adjustments' and etc."

The report also states that the "problem of making contact with the great numbers who are taking no part in educational work has been given earnest consideration by your Directors." In this respect the report refers to the planned activities of the Visual Education Committee in regard to the preparation of films on economic and labour problems. Reference is also made to the use of the radio by the Association during its 1937-38 session and the forthcoming series on "Labour Relations" was outlined.

Resolutions Adopted

The resolutions adopted at the Convention were based on the annual report of the General Secretary and those submitted by the Resolutions Committee.

The Convention adopted a resolution authorizing the President of the Association to name a committee of three persons "to draw up a set of recommendations for conducting W.E.A. study groups." Other resolutions concurred in "the importance attached to the field of Visual Education as brought out by the secretary's report and supported his

suggestion that this should be amplified and adopted as facilities warrant the expansion of this service"; expressed appreciation for the co-operation received from the Canadian Broadcasting Corporation in presenting the Workers' Educational discussions "and hoping that such co-operation continues in the future;" setting up a Workers' Education Trade Union Committee to specialize in the particular needs of the trade unions which have affiliated with the association on a per capita basis for educational purposes; etc.

Resolutions submitted by the Resolutions Committee and adopted by the Convention dealt with the appointment of a representative of organized labour to the Board of Directors of the W.E.A.; recommended the establishment of a course in "Civic and Municipal Administration"; recommending that the General Secretary seek the affiliation of the Trades and Labour Congress and that that organization appoint "a delegate to act on the Board of Directors of the W.E.A.", etc. etc.

WORKMEN'S COMPENSATION IN ONTARIO, 1937

THE annual report of the Workmen's Compensation Board of Ontario for the year 1937, indicates that during the year reviewed there were 70,582 accidents reported to the Board as compared with 61,382 in 1936 and 58,546 in 1935. It is stated in the report that this increase in the number of accidents is owing to increased employment in 1937. These figures include accidents not serious enough to involve the payment of either compensation or medical aid and for which no claim was made and others for which claims were made but which were not allowed by the Board. At the close of the year there were 1,687 claims in assembly as compared with 1,375 at the end of 1936, notice of the accident having been given but reports necessary to deal with the case not yet having been received.

The total benefits awarded during the year amounted to $6,129,960.55 as compared with $5,643,798.79 during 1936 and $5,314,112.87 during 1935. Of the total benefits awarded, $4,878,-112.08 was for compensation and $1,251,848.47 was for medical aid. It is stated in the report that total benefits awarded from the commencement of the Act (January 1, 1915) to January, 1938, amounted to $122,336,886.80 and the total number of accidents reported during the same period was 1,253,323. Of the total benefits awarded during 1937, $3,837,-588.62 was for compensation and $1,251,848.47 for medical aid in Schedule 1 industries, while in Schedule 2 industries compensation amounted to $576,799.19 and in Crown cases to $463,724.27. In Schedule 2 and Crown cases medical aid is provided directly by the employer and no figures for medical aid are given in the report concerning such cases.

Assessments.—The report states that during 1937 a new method of assessment was adopted on the recommendation of employers' group associations, by which an employer could be called upon (based upon the accident cost ratio of the last completed year) to pay as high as double the preferred rate. After a year's experience with this method of assessment it has been found that in many instances some modification was requested. It is stated that it is proposed to give careful consideration to the problem of preferential assessment with a view to making the plan "more equitable and consistent in its operations".

Assessments in all classes in Schedule 1, collected, and estimated to be collected during 1937, amounted to $6,778,602.04 as compared with a total of $6,379,129.19 for 1936. The average rate of assessment for all classes in Schedule 1 being estimated at $1.39 for each $100 of payroll for 1937 as compared with $1.50 for 1936.

Employers in Schedule 2 industries are assessed their share of the expense of administration, amounting in the year reviewed to $23.159.11 as compared with $26,616.04 in 1936 and $22.800.86 in 1935. Proportionate to the amount of compensation awarded, administration expenses in Schedule 2 and Crown cases were 4.9 per cent in 1937 as compared with 5.80 per cent in 1936 and 8.07 per cent in 1935.

Compensation.—Compensation awarded in Schedule 1 industries during the year, including an estimate of what is still to be awarded for accidents happening during the year and for adjustment of prior years' accidents, amounted to $4,631,962.26; medical aid including an estimate for what is outstanding, amounted to $1,290,958.75; administration expenses for Schedule 1, including $12,930.31 for mine rescue work amounted to $336,437.36, and $164,000 was paid to employers' safety associations. The total expenditures and charges for the year amounted to $6,423,358.37, while the provisional surplus for the year was $1,230,338.03. The balance forwarded from prior years was a surplus of $3,238,087.86, which, added to the surplus for the year, less the carry-over for prior years' claims, amounting to $833,636.68, leaves a net provisional surplus of $3,634,789.21 at December 31, 1937.

The total amount of compensation awarded in Schedule 2 industries and Crown cases during 1937 was $1,040,523.46. Of this amount, $219,502.16 was for workmen of municipal corporations; $216,024.38 for steam railroads; $8,479.81 for electric railways; $126,868.71 for navigation companies; $2,540.02 for express and sleeping-car companies; $2,967.05 for telephone and telegraph companies; and $417.06 for all other industries in Schedule 2; $289,481.68 for Dominion Crown Cases and $174,242.59 for Provincial Crown Cases. Of the total amount awarded, $636,992.71 was for pensions in pension cases, and $403,530.75 was for compensation in non-pension cases.

Administration.—The report shows that the gross administration expenses of the Board during 1937 were $396,397.37, including an amount for special statistical services for which refunds totalling $10,000 were received, making the total administration expenses $386,397.37, as compared with $377,326.11 in 1936. The employers pay the whole of the expenses of administration of the Act, the amount being divided according to the number of accidents handled among Schedule 1 (Accident and Silicosis Funds) Schedule 2 and Dominion and Provincial Crown cases.

The total administration expenses for 1937, less expenses of supervising work in connection with silicosis, rehabilitation and mine rescue stations and handling claims for silicosis, were 6.11 per cent of benefits awarded, being 6.35 per cent of benefits awarded in Schedule 1 and 4.94 per cent in Schedule 2 and Crown cases.

Of the total administration expenses the amount charged to the Silicosis Account was $10,391.72; to the Rehabilitation Clinic, $1,000; to Mine Rescue Work, $615.73; and to Schedule 1 employers, $323,038.70; to Schedule 2, $23,159.11; to Dominion Crown cases, $18,388.06, and to Provincial Crown cases, $9,804.05.

Safety Associations.—During 1937 a total of $164,000 was paid to Safety Associations, an increase of $12,556.25 over the amount paid in 1936.

The safety or accident prevention associations are organizations of employers established under the authority of the Workmen's Compensation Act by the employers in 20 out of the 24 classes of industry. These associations are under the management of the employers, but their expenses are paid by the Board out of the accident fund account.

Of the total amount paid to these safety or accident prevention associations, $24,500 was paid to the Lumbermen's Safety Association, $13,500 to the Ontario Pulp and Paper Makers' Safety Association, $11,500 to Class 5 Accident Prevention Association, $110,000 to the Industrial Accident Prevention Associations, and $4,500 to the Electrical Employers' Association of Ontario. Payment for mine rescue work in 1937 amounted to $12,930.31 and for rehabilitation clinics, $10,152.13.

Funds.—The report also gives details concerning the financial standing of the various funds established under the Act.

Schedule 1 funds, known and referred to in the Act as the "Accident Fund" comprise, (in addition to current funds out of which temporary payments of compensation, medical aid, and administration expenses are paid) the Pension Fund, Disaster Reserve, and Compensation Deferred. The standing of the Accident Fund at December 31, 1937, showed a balance of $4,508,590.16 in assets over liabilities. The balance was made up as follows: Disaster Reserve, $229,649.75, standing to the credit of the classes $3,634,789.21 and $644,151.20 in reserve for depreciation of securities.

The balance in the Pension Fund at the end of the year reviewed was $22,275,818.13.

The Disaster Reserve Fund which is set aside to meet any unforeseen disaster or other circumstance which might unduly burden the employers in any class of industry showed a balance at the end of 1937 of $229,649.75.

The funds included under Compensation Deferred comprise compensation moneys held at interest for claimants in Schedule 1, payment being deferred to a future time by reason of the claimant being a minor or for other reasons.

At the beginning of the year the amount on hand was $36,967.17; deferred awards during the year amounted to $36,444.43, and $576.70 interest was added during the year; the payments during the year amounted to $29,899.45, of which $28,963.61 was for principal and $935.84 for interest, leaving a balance of $44,088.85.

As usual, the report also contains detailed information concerning operations during 1936, which was not available when the report for that year was made. This section of the report gives the final financial statement for Schedule 1 industries for 1936, estimates of the adjustments of assessments and of the outstanding compensation and medical aid having to be used in the provisional statement given in the 1936 report. Statistical information is also given regarding the accidents happening during 1936, their causes, the nature of the injuries suffered, the number, time loss, total and average cost of the different classes of cases, and the age, wage, nationality, and marital condition of the injured workmen.

FAIR WAGE SCHEDULE FOR PUBLIC AND CERTAIN PRIVATE CONSTRUCTION WORKS IN MANITOBA

UNDER the authority of section 11 of the Fair Wage Act of Manitoba, 1916 (Consolidated Amendments, 1924, chapter 99—as amended, 1934, chapter 13; 1935, chapter 17; 1937-38, chapter 15) the provincial Minister of Public Works has approved a schedule effective June 15, 1938, establishing the minimum rate per hour and the maximum working hours applicable on public works for building construction under contract and on private works as described in the Act.

"Private Works," as defined by the Act "means the building, construction, remodelling, demolition, or the repairing at a cost of all work done irrespective of the number of contracts made exceeding one hundred dollars, of any building or construction work within the Greater Winnipeg Water District or any city or town which has a population exceeding two thousand, or any other portion of the Province to which the provisions of this Act are extended by the Lieutenant-Governor in Council, but shall not include work which is done on property by or under the immediate direction and control of the owner, tenant or occupant thereof if no more than three men are employed in addition to the regular maintenance staff, if any, and if such work be not undertaken with a view to sale or rental of the property and shall not include work which is done by a maintenance man, or men, employed by the month."

The public work to which this schedule applies is that authorized by the Minister for the execution of which a contract has, or contracts have been entered into between the Minister and an employer, consisting of construction, remodelling, demolition or the repairing or painting of buildings in Manitoba, and, or, highway, road, bridge or drainage construction work, when a contract has been entered into, and when done outside the "Greater Winnipeg Water District Area."

Fair Wage Schedule

The following schedule shall apply from and after June 15, 1938, on "Public Works" and on "Private Work."

Occupation	Greater Winnipeg Water District Area for Private Work, and for Govt. Work, Wpg. and radius of 30 miles	Other than Greater Winnipeg Area (applies to private work when population exceeds 2,000)	Max'm Hours per week
	Minimum rate per hour		
Asbestos Workers—			
(a) Journeymen			
(b) Improvers			
Asphalters—			
(a) Finishers and Rakers	$ .75	$ .75	44
Blacksmiths	.60	.60	44
Bricklayers			
Helpers—	.544	.52½	44
(a) Continuously employed at mixing and tempering mortar	.65	.60	44
(b) Attending on or at scaffold	1.10	.90	44
Bridge and Structural Steel and Iron Workers			
Carpenters	.50	.42½	48
Cement Finishers (In warehouse or large floor area jobs)	.45	.37½	48
Electrical Workers (Inside wiremen, licensed journeymen)	.85	.85	44
Apprentices indentured for a four-year period shall be paid in accordance with the following classification—	.85	.70	44
First Year	.60	.55	48
Second Year			
Third Year			
Fourth Year	.85	.75	44
Providing that these rates for apprentices shall be changed to agree with any rates which may be fixed, at a later date, by agreement.	.25	Nil	44
	.30	Nil	44
	.40	Nil	44
	.75	Nil	44
Labourers—			
(a) Skilled	.45	.37½	48
(b) Unskilled	.40	.32½	48

Occupation	Greater Winnipeg Water District Area for Private Work, and for Govt. Work, Wpg. and radius of 30 miles	Other than Greater Winnipeg Area (applies to private work when population exceeds 2,000)	Max'm Hours per week
	Minimum rate per hour		
Lathers (Metal, Wood)—			
(a) Metal Lathers	.75	.70	44
(b) Wood Lathers	.70	.65	44
(Wood lathers—work may be paid for on a square yard basis at not less than 6c per square yard)	.60	.55	48
Linoleum Floor Layers	.60	.55	48
Marble Setters	1.05	.90	44
(a) Helpers (all men assigned to help tradesmen)	.50	.42½	48
Mastic Floor Spreaders and Layers	.85	.85	48
Mastic Floor Rubbers and Finishers	.55	.55	48
Mastic Floor Kettlemen	.45	.45	48
Mosaic and Tile Setters	1.05	.90	44
(a) Helpers (all men assigned to help tradesmen)	.50	.42½	48
Operating Engineers and Firemen on Construction—			
Class "A": Engineers in charge of hoisting engines of three drums or more operating any type of machine, or operating trenching machines, clamshells or orange peels, regardless of capacity; or operating steam shovels or draglines of one yard capacity or over, or operating drop hammer pile drivers; in all cases irrespective of motive power	.95	.75	48
Class "B": Engineers in charge of hoisting engines having only two drums or of single drum used in handling building material; or steam shovels and draglines not specified in "A" hereof; irrespective of motive power	.90	.70	48
Class "C": Engineers in charge of any steam operating machine not specified in "A" or "B" hereof; or in charge of a steam boiler if the operation of same necessitates a licensed engineer under the provisions of "The Steam Boiler Act;" or air compressor delivering air for the operating of rivetting guns on steel erection work, or pumps in caissons, or concrete mixers of over ½ yard capacity, irrespective of motive power	.80	.65	48
Class "D": Men firing boilers of machines classified in "A," "B," or "C" hereof or assisting engineers in charge of same	.55	.45	48
Class "E": Operators of gas or electric engines for machines not otherwise specified in "A," "B" or "C" hereof of a type usually operated by skilled labourers	.45	.37½	48
Painters, Decorators, Paperhangers and Glaziers	.70	.65	44
Plasterers	1.10	.90	44
(a) Helpers (continuously employed at mixing and tempering material including the making of putty and operation of machinery	.50	.42½	48
Plumbers	.95	.80	44
(a) Helpers (all men assigned to help tradesmen)	.50	.42½	48
Reinforcing Steel Rodmen; when specially hired for, or when exclusively occupied on such work for a longer period than 16 consecutive hours on the work of bending, placing, tieing and similar skilled work in connection with reinforcing steel work	.50	Nil	44
Roofers (Felt and gravel)—			
(a) Man in charge	.60	.55	48
(b) Roofers	.45	.37½	48
Sheet Metal Workers	.70	.65	44

Occupation	Greater Winnipeg Water District Area for Private Work, and for Govt. Work, Wpg. and radius of 30 miles	Other than Greater Winnipeg Area (applies to private work when population exceeds 2,000)	Max'm Hours per week
	Minimum rate per hour		
Steamfitters	.95	.80	44
(a) Helpers (all men assigned to help tradesmen)	.50	.42½	48
Stonecutters	.90	.80	44
Stonemasons	1.05	.90	44
(a) Helpers—			
(1) Continuously employed at mixing and tempering mortar	.50	.42½	48
(2) Attending on or at scaffold	.45	.37½	48
(a) Teamsters	.40	Nil	54
(b) Teamsters with teams (if employed on the construction or demolition of the building by the owner, contractor or sub-contractor)	.80	Nil	54
Terrazo Workers—			
(a) Layers	.70	.67½	44
(b) Machine Rubbers (while so engaged only)	.50	.47½	48
(c) Helpers (all men assigned to the trade other than the above)	.45	.37½	48
Timber Men and Crib Men working on grain elevators or bridges doing the "crib work" on grain elevators or rough timber work on bridges (such men shall be restricted to the use of hammers, saws, axes and augers)	.60	.50	48
Truck Drivers	.45	.40	48

Rule—All men hired in Winnipeg to go into the country to work on buildings shall be paid the City schedule rate, excepting where other definite agreements are made.

Attention is called to the fact that Winnipeg Contractors have agreed with tradesmen that 40 hours per week only shall be worked during the months of July and August, 1938.

PUBLIC ROAD AND BRIDGE WORKS

The following schedule shall apply from and after June 15th, 1938, on "public works" outside the Greater Winnipeg Water District Area in all parts of Manitoba for highway, road, bridge or drainage construction work where a contract has been entered into by the Honourable Minister of Public Works.

Occupation	Minimum Rate per Hour	Maximum Hours per Week
Labourers	$ .30	48
Teamsters	.30	48
Teamster and two horse team	.55	48
Teamster and four horse team	.80	48
Grader and Tractor Operators (excepting permanent municipal employees)	.60	48
Truck Drivers (regardless of basis for payment for truck)	.40	48
Combined Rate—Truck and Driver when paid by the hour—		
Capable of hauling not more than 1½ tons or 1 cubic yard	1.25	48
Capable of hauling not more than 3 tons or 2 cubic yards	1.35	48
Capable of hauling not more than 4 tons or 3 cubic yards	1.75	48
Larger trucks capable of hauling over 4 tons or 3 cubic yards	2.25	48
Combined Rate—Truck and Driver when paid at a unit rate per mile: If a rate per yard mile or per ton mile is the basis for payment, the minimum rate shall be fixed by the Chief Engineer of the Good Roads Branch of the Public Works Department for each contract or job, which rate shall be based on the Departmental schedule.		
Timber Men: timber work where use of hammers, saws, axes and augers only are required	.50	48

NOTE:—Men occupied on subsistence work projects such as Forestry Work, the Pas-Mafeking Highway, Grassmere Drain and similar undertakings—not less than the Minimum Wage Rate set by the Minimum Wage Board.

LABOUR AND INDUSTRY IN MANITOBA

Annual Report of Bureau of Labour

THE Manitoba Department of Labour has issued recently the annual report of its Bureau of Labour and Fires Prevention Branch, reviewing administration activities for the fiscal year May 1, 1936 to April 30, 1937. Prior to 1936, this report was published by the Manitoba Department of Public Works but with the coming into effect on July 6, 1934, of the Department of Labour Act, the new Department has administered industrial legislation and has issued its own reports, the present being the third since it commenced to function. The provincial Department of Labour is now responsible for the administration of the following enactments: The Bureau of Labour Act; the Manitoba Factories Act; the Bake Shops Act; the Shops Regulation Act; the Minimum Wage Act; the Elevator and Hoist Act; the Steam Boiler and Pressure Vessel Act; the Building Trades Protection Act; the Public Buildings Act; the Fair Wage Act; the Electricians License Act; the Public Amusements Act (The licensing of Cinema Projectionists); the One Day of Rest in Seven Act; the Fires Prevention Act; the Strikes and Lockouts Prevention Act (assented to April 17th, 1937).

The administration of the above Acts entailed close supervision by an inspection service, and the number of inspections and the Orders issued in regard to each Act are summarized in tabular statistics. These indicate that during the fiscal year 1936-37, there was a total of 18,738 inspections and 6,634 Orders issued as compared with 16,311 inspections and 6,078 Orders in the previous year.

In the following table the number of inspections and Orders under each Act during the year are summarized:

SUMMARY OF INSPECTIONS AND ORDERS BY THE BUREAU OF LABOUR FROM MAY 1, 1936 TO APRIL 30, 1937

Statute	Number of Inspections	Number of Orders
The Manitoba Factories Act ..	1,222	801
The Bake Shops Act..	47	25
The Minimum Wage Act.. ..	5,935	1,738
The Elevator and Hoist Act..	4,361	1,553
The Steam Boiler and Pressure Plant Act..	3,826	1,281
The Building Trades Protection Act..	1,065	336
The Public Buildings Act	175	157
The Electricians License Act..	303	56
The Public Amusements Act, (re the licensing of Cinema Projectionists)..	267	82
The One Day of Rest in Seven Act..	75	52
The Fair Wage Act..	699	158
The Fires Prevention Act.. ..	763	395
Total..	18,738	6,634

Accident Prevention.—The Department's accident prevention Branch (established in June 1935) has developed a system of collecting accident statistics as a major factor in the education of the public regarding accident hazards. Accident statistics are compiled under four groups, viz., Industrial, Traffic, Home and General. In the last two categories, accident statistics are collected from various sources—press reports, coroners' reports and the Vital Statistics Department but these do not constitute a complete record. In the case of Industrial and Traffic accidents, however, the record is as complete and accurate as possible as the reporting of such accidents is compulsory. "In so far as fatalities are concerned", it is pointed out "the records are accurate under all headings, there being adequate means of obtaining these figures." In printing a "comprehensive picture of the accident toll in Manitoba" under all four classifications, the summaries indicate several noteworthy features.

Industrial accidents in 1936-37 showed 1,363 persons sustained injuries and 36 accidents were fatal, while the figures for the previous year were 1,260 and 23, respectively. These statistics also indicated in 1935 (the latest for which the records were completed) there was one death for every $2,075,309.00 of the industrial payroll.

Traffic accidents in 1936-37, accounted for 1,630 persons injured and 52 fatalities as compared with 1,164 and 51, respectively in 1935-36. In dealing with this type of accident, the report observes (in recording the government "Safety Lane" tests conducted at various centres in the province) that "over 50 per cent of the cars did not come up to the reasonable requirements for safety in this test, and as all of these tests were made on cars voluntarily submitted to it by their owners, it indicates that we have quite a serious condition in Manitoba in so far as the safety equipment of motor vehicles is concerned."

Home accidents in 1936-37 were responsible for 61 fatalities—a total greater than that for industrial accidents and traffic accidents. There was no record for the number of non-fatal home accidents. For the previous year, however, the statistical summary under "Home Accidents" records the situation thus: "Injuries, 78; fatalities, 38." According to these figures, the proportion of fatalities to injuries in home accidents was approximately fifty per cent.

Under the heading "General Accidents", the fatalities in 1936-37 numbered 147 as compared with 94 in 1935-36.

The total number of deaths from accidents in 1936-37 was 296 as compared with 206 in the previous year.

The report details the various phases of educational work undertaken during the year in the cause of accident prevention and in making the public "accident conscious". Through the medium of the newspapers, radio, schools, motion pictures, factories and associations, the fundamentals of safety were impressed upon the public.

In addition, industrial safety was promoted through the medium of first aid instruction, "it having been proved conclusively that those persons to whom First Aid has been taught are less subject to accidents and invariably become safety minded and spread this influence throughout the workshops where they are engaged."

In all, there were fourteen classes in which 182 lectures were given to 256 employees engaged in a wide variety of industrial occupations.

Steam Boiler and Pressure Plants.—The administration of the "Steamer Boiler and Pressure Plant Act" involved a total of 1,281 inspections, and resulted in a revenue from fees as follows: For inspection of steam plants, $10,146.45; air tanks, $986; refrigeration plants, $871; registration of designs for boilers was productive of fees amounting to $139.

The Board of Examiners for steam engineers issued a total of 1,149 certificates and renewals to engineers during the year, the fees for which totalled $2,350.15.

Fair Wage Act.—The Fair Wage Board held 17 meetings in connection with the revision of the schedule. There were 699 inspections made and 158 orders issued.

Twenty-nine wage claims were adjusted involving the collection of $926.69.

Licensing of Workmen.—The Board of Examiners under the Electricians' License Act issued 253 journeymen licenses and 93 contractors' licenses during the year, the total fees collected (including examinations) amounting to $3,075.00.

Under the "Public Amusements Act" (re licensing of cinema projectionists) 26 candidates were examined of whom 19 were successful. Fees collected for examination amounted to $72; for licenses, $510; and for apprentice licenses, $20. Fees received for dry cleaning licenses totalled $595; for spotters licenses, $11, and for agency permits, $3.

Fees received for licenses to sell or deliver fuel oil amounted to $200, and for licenses to install and service fuel oil burners, $75.

General Complaints.—During the year under review 519 complaints under the several Acts administered by the Bureau were received and adjusted. These were: Minimum Wage Act, 499; Electricians' License Act, 15; One Day Rest in Seven Act, 5.

Overtime.—During the year the Bureau issued 160 permits to work overtime and 13 for legal holidays. Of the 160 overtime permits, 70 were issued to laundries, dry cleaning and dyeing establishments, and 35 to establishments manufacturing garments, ladies wear, cloaks, etc.

Minimum Wage Act

Included in the annual report of the Bureau is that of the Minimum Wage Board. The first paragraphs in the Board's report deal with minimum wage orders issued within the period under review (these have already been reviewed in various issues of the Labour Gazette). During the year, 22 prosecutions were made by the Bureau for violations of Orders on regulations. These concerned the following occupations: cleaners and dyers—one case; hotels and restaurants—five cases; retail stores—one case; general employees—five cases; furriers (female employees)—ten cases.

In addition, 480 claims for wages were adjusted and collections effected. Of these, 196 concerned female employees and 284 male employees. The total amount collected on these wage adjustments for men and women was $9,084.25.

The number of inspections throughout the province under all regulations governing the employment of female workers totalled 3,033. These resulted in 362 orders respecting wages; 290 concerning hours; 2 dealing with conditions of work; and 158 in regard to other regulations.

In addition, there were 2,899 inspections carried out in the province under regulations governing the employment of male workers. These resulted in a total of 926 orders, of which number 632 were in regard to wages.

LEGISLATION IN GREAT BRITAIN PROVIDING FOR HOLIDAYS WITH PAY

THE progressive steps leading to the introduction of "Holidays With Pay" legislation in Great Britain have been dealt with in recent issues of the LABOUR GAZETTE (October, 1937, page 1105—appointment of Government Committee and commencement of inquiry; April, 1938, page 370—provision of holidays in collective labour agreements; June, 1938, page 653—report and recommendation of Committee; August, 1938, page 864—introduction of legislation).

The next phase in the development of this social legislation was the enactment of the "Holidays With Pay Act, 1938" which, after amendment, received Royal Assent on July 29.

In the main, the recommendations of the Committee were given effect in the legislation, *i.e.*, that Trade Boards and Agricultural Wages Committees be empowered to provide holidays with pay and enabling the machinery of the Ministry of Labour to be used in the administration of holiday schemes. The Committee had also recommended that legislation should be introduced at any early date providing domestic servants with holidays with pay, but in his statement in the House of Commons (as summarized in the British *Ministry of Labour Gazette*) the Minister of Labour indicated that the Government did not think it would be opportune to include such a provision in the proposed Bill. As regards a recommendation which the Committee had made to the effect that, after an interim period during which every possible effort should be made to extend the provision of holidays with pay through the medium of the collective bargaining machinery in industry, general legislation providing for holidays with pay should be introduced, the Minister stated that the Government intended to give consideration in due course to such legislation if circumstances were such as to make it necessary, but that at the present ime it was not possible to forecast the nature of the legislation which would be required. Meanwhile, as the Government attached special importance to the recommendations for encouraging voluntary agreements for holidays with pay and for stimulating the co-ordination of industrial, educational, transport, lodging and other holiday arrangements which were essential if workers were to be expected to take proper advantage of their holidays, he was appointing a standing inter-departmental Committee to consider the problems which arose and to co-ordinate Government action. He also stated that he was setting up a special branch in the Ministry of Labour to deal with these problems.

SUMMARY OF THE PROVISIONS OF THE ACT

A summary of the new Act appears in the August issue of the British *Ministry of Labour Gazette* from which the following paragraphs have been extracted:

New Powers of Wage-Regulating Authorities in respect of Holidays with Pay.—The first three Sections of the Act carry out the recommendations of the Amulree Committee that Trade Boards and Agricultural Wages Committees in England and Wales and in Scotland should be empowered to provide for holidays with pay for the workers for whom they prescribe minimum wages. In addition similar powers are given to the Road Haulage Central Wages Board set up under the Road Haulage Wages Act, which received the Royal Assent on July 13 of this year. The inclusion of the Road Haulage Central Wages Board in the Act follows the recommendation of the Committee that any statutory bodies for the regulation of minimum wages set up under new legislation should be given the same powers in respect of holidays with pay as the Trade Boards.

Section 1 of the Act gives the wage-regulating authorities mentioned power to direct that any workers for whom they are fixing or have fixed minimum rates of wages or statutory remuneration shall be entitled to be allowed holidays. These holidays shall be of such duration, subject to certain limitations, as the authority may direct, and the direction may also contain provisions as to the times at which and the circumstances in which such holidays shall be allowed. The first of the limitations on the duration of the holiday is that it must be related to the duration of the period for which the employer who is required to allow the holiday has employed the worker or has engaged to employ him. The second limitation, which does not apply to directions made by the Road Haulage Central Wages Board, is that the holidays to which workers are to be entitled shall not exceed one week in any period of twelve months, "week" meaning in the case of workers coming under the Agricultural Wages Committees seven days, and in the case of workers coming under Trade Boards a normal working week. A third limitation applies only to directions given by the Agricultural Wages Committees. These may not provide for holidays of continuous periods exceeding three consecutive days. All holidays allowed to a worker under any direction shall, unless the direction otherwise provides, be in addition to any other statutory

holidays to which he may be entitled, e.g. under the Factories or the Shops Acts. The penalty for any contravention by an employer of a requirement to allow a worker a holiday shall be a fine not exceeding £20.

Section 1 of the Act having given the authorities power to provide for the granting of holidays, Section 2 ensures that all such holidays shall be holidays with pay. Whenever one of the authorities uses its power to make a direction providing for holidays, it "shall make provision for securing that the workers shall receive pay in respect of the period of the holiday." The necessary power to fix "holiday remuneration," as it is called in the Act, is accordingly granted to Trade Boards and Agricultural Wages Committees, the Road Haulage Central Wages Board having already been granted such powers by the Road Haulage Wages Act. Section 2 also provides that the holiday remuneration shall both accrue and become payable at the times and subject to the condition laid down by the authorities.

Section 3 provides that the procedure in connection with directions and rates shall be that set out in the Trade Boards Acts and the Agricultural Wages Acts according as the wage regulating authority is a Trade Board or an Agricultural Wages Committee. The procedure in connection with directions given by the Road Haulage Central Wages Board is that laid down in the Road Haulage Wages Act, 1938. The appropriate Minister is given regulation-making powers which enable him to apply for the purposes of the Holidays with Pay Act, with or without modification, any provisions of the Trade Boards Acts, the Road Haulage Wages Act or the Agricultural Wages Acts.

Power of Minister of Labour to assist Holiday Schemes.—Section 4 of the Act provides that on a joint application made by an organization representing employers and an organization representing workers in an industry, or a branch of an industry, the Minister may in accordance with ararngements made by him with the consent of the Treasury assist the administration of any scheme for securing holidays with pay by attaching officers of the Ministry and in any other way he thinks fit. In particular the arrangements made may provide for the Minister to make to the workers the holiday payments due under the scheme. Where this is done the arrangements shall also provide for both the sums paid out and any expenses attributable to the scheme to be repaid to the Minister.

Miscellaneous Provisions.—Section 5 contains definitions of certain terms used in the Act, which, under Section 6 may be cited as the Holidays with Pay Act, 1938, and is not to extend to Northern Ireland.

Holidays With Pay in European Countries

Among the countries of Europe that now have legislation providing holidays with pay are France, Belgium, Sweden and Denmark. Annual paid holidays of up to twelve days' duration for practically all workers have been made obligatory in Denmark by an Act dated April 13, 1938, and in Sweden by an Act dated June 17, 1938.

Holidays with pay in France and Belgium have been in effect under legislation dated from 1936. In both countries amendments were made to the existing legislation this year by which the general scope was broadened.

HOLIDAYS WITH PAY IN THE UNITED STATES

THE August 1938 issue of the *Monthly Labor Review* published by the United States Department of Labor, contains an article prepared by Frances Jones and Dorothy Smith of the Bureau of Labor Statistics, Division of Wages, Hours and Working Conditions, dealing with the extent of holidays with pay during 1937 in the industries of the United States.

In an introduction to the review, reference is made to the increasing adoption by American industry of the principle of holidays with pay, it being stated that more than one-quarter of the 19,842 manufacturing plants recently surveyed by the Bureau of Labor Statistics had a policy of vacations with pay for wage-earners. The plants with a vacation policy represented 43·3 per cent, or 1,693,152 of the 3,912,019 wage-earners in the manufacturing establishments covered.

Referring to the rapidity of the extension of the principle of holidays with pay, it is stated that almost 40 per cent of the plants which gave vacations to wage-earners in 1937 reported that year as the first in which the plans became effective.

As a result of the survey, which was conducted by means of a mail questionnaire, approximately 90,000 firms were canvassed. Usable replies were received from about 80 per cent of the plants so covered representing approximately one-half of all wage-earners. It is stated that "this heavy proportion of replies to a mail questionnaire is indicative

of the widespread interest which has been aroused in the subject of paid vacations in industry."

Conclusions reached as a result of this survey show that the vast majority of salaried employees have the privilege of annual vacations with pay. Approximately 95 per cent of the 700,000 salaried workers included in the survey received holidays with pay. It is stated, however, that notwithstanding this high proportion of salaried employees receiving holidays with pay more than one-fifth of the establishments, to whom the questionnaire was sent, do not yet give their salaried workers paid vacations, and in some industries the proportion is even higher.

Paid Vacations by Industries

It was indicated that wage-earners in 1937 were given annual vacations with pay, though to a widely variable extent, in virtually all industries. "Only about 1 per cent of the wage-earners in coal mining were affected. On the other hand, more than 98 per cent were granted paid vacations in two divisions of the chemical industry, namely the manufacture of druggists' preparations and petroleum refining. Of 102 industry classifications studied, 22 industries had paid-vacation plans for at least three-fourths of their wage-earners, 42 for more than one-half, 63 for more than one-fourth, 82 for more than one-tenth, and 15 for less than 5 per cent.

"In terms of the proportion of wage-earners that worked under paid-vacation plans, the chemical, food, rubber, and machinery industries, which were pioneers in this movement, were still among the leaders in 1937. The crude-petroleum-producing industry, in which vacations became common in 1920-29, is now crowding the chemical group (which includes petroleum refineries) for leadership. The iron and steel industry now ranks third, having forced rubber into fourth place when steel plants adopted paid-vacation plans en masse in 1936-37. The food, machinery, and non-ferrous metals groups rank fifth, sixth, and seventh, respectively, and complete the list of industry groups in which as many as one-half of the wage-earners come under paid-vacation provisions."

Sketching the historical development of holidays with pay in the United States, the report gives the background in the following paragraphs.

Paid vacations for wage-earners are a development of the twentieth century. It is true that a few American companies were pioneers in this movement prior to that time, first giving vacations to their older employees and later extending the practice to all employees. The Bureau's survey disclosed 32 plants of 24 companies which reported such early plans, the majority being in the food and chemical industries. An additional 44 manufacturing plants, likewise concentrated in the chemical and food industries, reported plans begun in the first decade of the twentieth century.

For the decade 1910-19, the Bureau sample shows 240 manufacturing plants which adopted this policy, as well as a few companies in the mining industries. Once more the chemical and food industries were in the foreground. Noticeable also was the gain in the machinery group, particularly in electrical machinery, and among the larger rubber companies. During this decade, vacations with pay were also adopted by 3 mining, 7 petroleum, and 8 laundry companies.

The impetus given by the World War to the interest in the subject of labor relations is reflected in the extension of wage-earner paid-vacation plans during 1920-29, when they appeared in practically all of the major industrial groups. Almost twice as many plans were adopted in that decade as had existed previously. Large gains were again made in electrical machinery, food, and chemicals, and plans became fairly numerous in printing, rubber products, crude-petroleum producing, and laundries and dry-cleaning establishments. It was also during this decade that vacation provisions began to appear in union agreements.

The movement toward paid vacations for wage-earners received a temporary setback by the prolonged depression of 1930-34. Some plans were suspended, but a significant number of plants (365 shown in this survey) adopted new plans during that period. Since 1934, however, the number of plants and wage-earners working under paid-vacation plans has tripled. The steel industry accelerated the movement when the major companies announced a general application of vacations with pay in the spring of 1936. During that and the following year, annual vacations with pay were extended to an estimated 2,000,000 wage-earners in manufacturing and mining industries. Approximately 70 per cent of the plans which reported paid-vacation plans in the Bureau's survey had inaugurated these plans during the 1930-37 period, and about 40 per cent gave vacations for the first time in 1937.

According to an announcement made recently by Hon. Michael Dwyer, Nova Scotia Minister of Labour, Mr. F. L. Milner, K.C., chairman of the Workmen's Compensation Board has resigned on completion of his 10-year term of office.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA, JULY, 1938

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on August 1 was 10,829, the employees on their pay-rolls numbering 1,073,302 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for July was 1,835, having an aggregate membership of 218,428 persons, 14·0 per cent of whom were without employment on August 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from 70 centres in which the Employment Service of Canada is situated, showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

(1) The Employment Situation at the Beginning of August, 1938, as Reported by Employers

There was a decline in industrial employment at the beginning of August, according to statements tabulated by the Dominion Bureau of Statistics from 10,829 firms, whose payrolls aggregated 1,073,302 persons, as compared with 1,088,266 at July 1. The experience of the years, 1921-1937, shows that employment has usually though not invariably gained at the beginning of August, there being, on the average, a fractional increase in the index. The falling-off at the latest date was therefore contra-seasonal; the crude index number, based on the 1926 average as 100, fell from 113·5 in the preceding month to 112·1 at August 1, while the seasonally-adjusted index declined from 111·3 at July 1 to 109·1 at the date under review.

Heightened activity was noted at the beginning of August in metallic ore mining, communications, steam railway transportation, shipping and stevedoring, building and highway construction and wholesale trade. On the other hand, retail trade, railway construction and maintenance, local transportation, coal-mining, logging and manufacturing were slacker. Within the last-named, the greatest losses were of a seasonal character in textiles and iron and steel, while improvement was indicated in the food, leather, lumber and some other groups. The curtailment in logging was on an exceptionally large scale, decreases resulting from the fire situation in British Columbia augmenting seasonal contractions in the more easterly provinces.

As already stated, the unadjusted employment index, calculated on the 1926 average as 100, stood at 112·1 at the beginning of August, 1938, compared with 113·5 at July 1, while at August 1 in recent years, the crude index has been as follows: 1937, 120·0; 1936, 105·6; 1935, 101·1; 1934, 99·9; 1933, 87·1; 1932, 86·3; 1931, 105·2; 1930, 118·8; 1929, 127·8; 1928, 119·3 and 1927, 110·5.

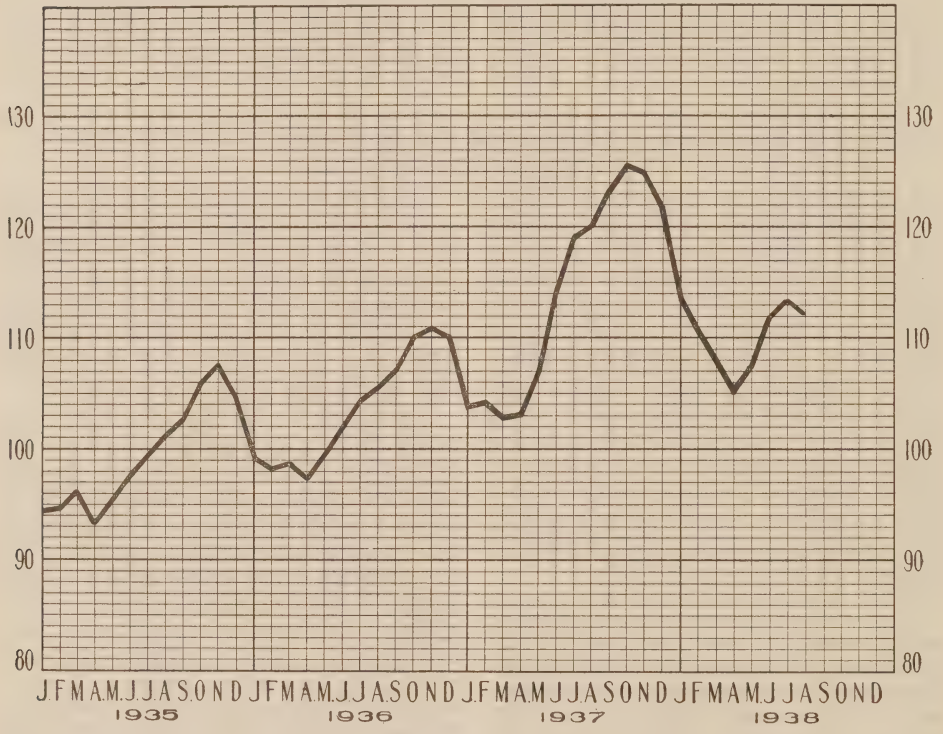
For August 1, 1937, 10,320 firms had reported an aggregate payroll of 1,143,109 persons, while in the preceding month they had had 1,134,466 employees. The gain then had occurred mainly in communications, construction and maintenance and services, while manufacturing, steam railway operation, retail trade and coal-mining had reduced employment.

Employment by Economic Areas

Activity increased in New Brunswick, Manitoba, Saskatchewan and Alberta, while there were reductions in personnel in Prince Edward Island, Nova Scotia, Quebec, Ontario and British Columbia, those in Ontario being most pronounced. The situation generally was not so favourable as at the same date last summer; in the Maritime Provinces as a unit and British Columbia, the index numbers were also very slightly lower than at August 1, 1936, but elsewhere employment was rather more active, and was, in all five economic areas, at a higher level than at midsummer of earlier years since 1931.

Maritime Provinces.—Statements were tabulated from 786 firms in the Maritime Provinces employing 82,391 persons, 2,971 fewer than in the preceding month. Coal-mining, logging, highway work and manufacturing showed curtailment, while other industries reported little general change. Within the manufacturing group, the largest decline occurred in iron and steel; lumber mills also released some employees, and fish-canneries were seasonally slacker, but improvement was noted in the pulp and paper group. The general index, at 112·6, was many points lower than at the same date in 1937, when the trend had also been downward; as already mentioned, it was slightly lower than at August 1, 1936, but was higher than at the beginning of August in any other year since 1930.

The 726 employers in the Maritime Provinces whose returns were included in the employment survey for August 1, 1937, had reported 97,043 workers, as compared with 97,950 in the preceding month.



Quebec.—Further losses were reported in Quebec, according to returns from 2,672 establishments with 331,407 workers, as against 337,223 at July 1. The level of employment was rather lower than at August 1, 1937, when improvement had been noted; the index then stood at 120·8, as compared with 117·8 at the latest date. Logging, transportation, highway construction and maintenance, services and trade reported lowered employment at the beginning of August. On the other hand, manufacturing showed a moderate gain on the whole, due to greater activity in leather, food, pulp and paper and chemical plants, while textile, iron and steel and some other divisions were slacker, the losses being partly seasonal in character.

For August 1 of last year, 2,460 employers had reported 336,324 workers, as compared with 328,738 at July 1.

Ontario.—Industrial employment in this province showed a falling-off at August 1, when the 4,720 co-operating firms had 434,305 employees, or 10,837 fewer than at July 1. The average change at August 1 in the years since 1920 has been a slight decline, so that the reduction at the latest date is

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

seasonal, although it exceeds the average midsummer contraction. There were advances in construction and maintenance at the beginning of August, but the trend was downward in transportation, trade, logging and manufacturing. The largest losses in factory employment were in iron and steel, but textile and electrical apparatus works were also slacker; on the other hand, improvement was noted in lumber, pulp and paper, electric light and power and some other industries. Employment at August 1, 1937, had shown no general change from the preceding month, and the index number then was eleven points higher, standing at 122·2, as compared with 111·2 at the latest date. Returns had been tabulated for the beginning of August of last year from 4,559 employers with 475,754 persons on their payrolls.

Prairie Provinces.—The situation in the Prairie Provinces as a whole continued to improve; the 1,523 establishments furnishing data had 133,557 workers, as compared with 127,131 at the beginning of July. There were gains in trade, communications, transportation and building and highway construction, those on roadwork being most extensive. Employment in manufacturing showed little general change, losses in the iron and steel group being just about offset by improvement in the food, textile and some other divisions. Mining and railway construction also released workers. The index of employment was fractionally lower than at August 1 of last year, standing at 104·9, compared with 105·6 at the same date in 1937, when a total of 1,476 firms had reported an aggregate staff of 134,646 persons, compared with 132,683 at July 1, 1937.

British Columbia.—The tendency in British Columbia at August 1 was unfavourable; manufacturing, transportation and highway construction showed heightened activity, but logging, building and railway construction and maintenance and services were not so busy. Within the manufacturing division, the

Relative Weight of Employment by Economic Areas as at Aug. 1, 1938	100·0	7·7	30·9	40·5	12·4	8·5

Note.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated city, to the total number of all employees reported in Canada by the firms making returns at the date under review.

greatest gains occurred in fish and fruit and vegetable canneries, where they were of a seasonal nature. On the other hand, pulp and paper and lumber mills were slacker. Returns were compiled from 1,127 firms employing 91,642 persons, or 766 fewer than in the preceding month. A smaller decline had been indicated at the beginning of August of last year, and the index then stood at 116·9, compared with 107·1 at the latest date. The 1,099 employers co-operating at August 1, 1937, had reported 99,342 on their payrolls.

Index numbers by economic areas are given in Table 1.

Employment by Cities

Employment increased in Quebec, Ottawa and Vancouver; in Winnipeg there was no general change, while in Montreal, Toronto, Hamilton and Windsor curtailment was indicated. Except in Quebec City, the situation in each of these centres was not so favourable as at August 1, 1937, but, with the exception of Windsor, activity continued at a higher level than at midsummer in other years since 1931.

Montreal.—There was a decline in Montreal at the date under review, for which the 1,545 co-operating firms reported a combined payroll of 159,629 men and women, or 2,727 fewer than at July 1. Manufacturing, transportation, street construction and maintenance, services and trade showed contractions. Within the manufacturing group, textile and iron and steel plants were seasonally dull, while leather, musical instrument, chemical, non-metallic mineral and some other factories reported improvement. The index of employment was fractionally lower than at August 1, 1937, when a much smaller decrease had been indicated by the 1,410 establishments furnishing data, whose staffs aggregated 158,002.

Aug. 1	104·7	109·6	105·6	107·7	108·3	105·2	95·2	112·2
Relative Weight of Employment by Cities as at Aug. 1, 1938	14·9	1·4	12·3	1·3	3·2	1·3	3·8	3·4

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns at the date under review.

Quebec.—A moderate gain was reported in Quebec City, mainly in trade, transportation and manufacturing. Statements were received from 185 concerns having 14,903 workers on their payrolls, compared with 14,830 in the preceding month. A greater gain had been made at August 1 of a year ago, according to information which had been tabulated from 179 employers of 14,503 workers; the index was then a point lower than at the latest date.

Toronto.—There was a falling-off in activity in Toronto, according to data from 1,612 firms employing 132,292 persons, or 2,356 fewer than at the beginning of July. The decline was largely seasonal, employment having been reduced at August 1 in thirteen of the sixteen preceding years for which statistics for that city are available; the contraction this year was rather greater than at the same date in 1937, also exceeding the average loss at August 1 in the period, 1922-1937. The index was two points lower than at the beginning of August, 1937, although it was higher than at midsummer in any other year since 1931. Manufacturing showed a decline as compared with July 1, 1938, there being reductions in leather, iron and steel, electrical apparatus and some other factories. Trade was affected by midsummer dullness, and the service and transportation divisions also released help, while building construction showed slight improvement. For August 1, 1937, 1,547 concerns had reported a combined working force of 134,113 men and women.

Ottawa.—Employment in Ottawa advanced, 119 persons being added to the staffs of the 201 co-operating employers, who had 14,200 workers at August 1. There were moderate gains in manufacturing, notably in the lumber industry, and in construction. Employment at the beginning of August, 1937, had decreased, but the index then was rather higher;

Relative Weight of Employment by Industries as at Aug. 1, 1938	100·0	52·2	1·6	6·6	2·2	9·8	14·3	2·8	10·5

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated industry, to the total number of all employees reported in Canada by the firms making returns at the date under review.

205 establishments had furnished information for August 1 of last year, and their payrolls had included 14,959 employees.

Hamilton.—Curtailment was indicated in Hamilton, where 298 firms reported 34,677 men and women on their pay lists, as against 35,195 in their last return. Manufacturing showed a decrease, mainly in electrical apparatus and iron and steel products, while other industries reported little general change. Employment was not so active as at the same date of last year, when an advance had been recorded by the 290 co-operating employers, whose staffs had aggregated 37,959.

Windsor.—The trend of employment in Windsor was seasonally downward; statistics were received from 188 firms employing 14,367 workers, or 3,226 fewer than at July 1. Automobile and other iron and steel works afforded reduced employment, partly as a result of holidays, while trade and construction showed rather greater activity. A large decrease had also been indicated at August 1, 1937, as compared with the preceding month, but the index then was many points higher than at the date under review. A combined payroll of 18,428 men and women was reported by the 179 employers furnishing information for August 1 of last year.

Winnipeg.—No general change was recorded in Winnipeg, according to 496 firms who had 40,923 employees, as compared with 40,928 at the beginning of July. Curtailment was noted in manufacturing, mainly in the iron and steel division, and services and retail trade were also slacker, while improvement was shown in communications, transportation and road work. An unfavourable movement had been in evidence at the same date of last year, when 487 establishments had reported 41,905 workers. However, employment was then at a slightly higher level than at the date under review.

Vancouver.—In Vancouver, manufacturing, local and steam railway transportation and construction afforded greater employment, partly offset by losses in shipping, services and trade. Returns were compiled from 469

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Industries	[1]Relative Weight	August 1 1938	July 1 1938	August 1 1937	August 1 1936	August 1 1935	August 1 1934	August 1 1933
Manufacturing	52·2	110·0	111·8	118·1	104·9	99·8	94·2	85·2

Miscellaneous	0·5	145·4	147·0	143·3	133·1	119·3	114·8	96·3

[1] For explanation of term "Relative Weight", see footnote to Table III.

employers with 36,544 persons on their staffs, as compared with 36,146 in the preceding month. A larger gain had been indicated at August 1, 1937, by the 450 co-operating firms, whose payrolls aggregated 37,868; the index number then, at 117·3, was several points above that of 112·2 at the latest date.

Index numbers of employment by cities are given in Table 2.

Employment by Industries

Manufacturing.—There was a further decline in employment in manufacturing establishments, 6,194 of which reported 560,564 operatives on their payrolls, as compared with 569,630 at July 1. This was due to a considerable extent to shutdowns for vacations, the loss occurring largely in Ontario where advantage was taken of the Civic Holiday week-end for that purpose. The crude index of employment stood at 110·0 at August 1, compared with 111·8 in the preceding month, and with 118·1 at August 1, 1937.

On the average, employment in manufacturing at August 1 in the last seventeen years has shown a small fractional advance. After correction for seasonal movement, the index therefore declined from 109·5 at July 1, 1938, to 107·6 at the beginning of August.

The following shows the unadjusted index numbers at August 1 in recent years:—1938, 110·0; 1937, 118·1; 1936, 104·9; 1935, 99·8; 1934, 94·2; 1933, 85·2; 1932, 82·6; 1931, 94·7; 1930, 110·2; 1929, 121·6; 1928, 115·2 and 1927, 107·0.

Increased activity was indicated at the date under review in the leather, lumber, animal and vegetable food, pulp and paper, tobacco, chemical and mineral product industries. The seasonal gains in fruit and vegetable canning were most extensive. On the other hand, particularly large contractions took place in iron and steel plants; these were seasonal in character, but exceeded the average losses recorded at August 1 in the years since 1920. Textiles also reported pronounced seasonal declines and employment in electrical apparatus works was slacker.

For August 1, 1937, returns had been compiled from 5,998 manufacturers with 599,986 employees; in the preceding month, they had reported 605,027 persons on their payrolls.

Animal Products.—Fish canneries registered gains, which were rather larger than those recorded at August 1, 1937; however, the index then was slightly higher than at the latest date, when it stood at 142·1. Statistics were received from 323 firms employing 27,461 workers at August 1, 1938, as compared with 26,860 in the preceding month. The trend at August 1 in other years for which data are available has frequently been downward.

Leather and Products.—Marked improvement was shown in employment in the leather group, 1,210 persons being added to the staffs of the 308 co-operating manufacturers, who employed 22,368 at August 1. Much of the betterment occurred in shoe factories in Quebec. A smaller gain had been reported by the firms making returns for the same date a year ago, but the index of employment was then several points higher.

Lumber and Products.—Rough and dressed lumber mills were busier, and there were moderate increases in wooden vehicle factories, while the container, furniture and some other divisions reported contractions. The lumber manufacturing industry as a whole registered its fourth consecutive advance since April; the payrolls of the 904 firms furnishing data aggregated 48,277 operatives, as against 47,793 in their last report. There were increases in Ontario and the Prairie Provinces, but the tendency in New Brunswick and British Columbia was downward. Activity in the group as a whole was less than at August 1, 1937, although a loss had then been recorded.

Musical Instruments.—Employment in musical instrument factories was brisker than at July 1, while the index was fractionally higher than in the corresponding month of last year. Statements were received from 35 manufacturers who had enlarged their personnel by 158 persons, to 1,667 at August 1, 1938.

Plant Products, Edible.—Important additions to staffs were registered in fruit and vegetable canneries, but the bread and bakery division was quieter; 523 vegetable food manufacturers reported 39,072 workers, or 2,394 more than at the beginning of July. The increase took place mainly in Quebec, Alberta and British Columbia. Employment was slightly more active than at August 1, 1937, when a similar advance had been indicated.

Pulp and Paper Products.—Pulp and paper mills reported considerably heightened activity, while little general change occurred in paper products and in printing and publishing. Statistics were received from 620 manufacturers whose payrolls were increased by 390 employees to 65,414 at August 1. There were advances in the Maritime Provinces, Quebec, Ontario and Manitoba, but a downward tendency was in evidence in British Columbia. A smaller gain, on the whole, had been noted in the corresponding month last summer; the index then, however, was higher, standing at 113·8, as compared with 107·3 at August 1, 1938.

Rubber Products.—Little general change took place in rubber works, 53 of which had 12,144 persons on their payrolls, compared

with 12,218 at July 1. Improvement in Quebec was more than offset by curtailment in Ontario. A slight decrease had also been noted at the beginning of August of a year ago, when the level of employment was decidedly higher.

Textile Products.—Most divisions of the textile group showed seasonal contractions, those in garment and personal furnishings plants being most pronounced; however, there were also losses on a smaller scale in cotton, woollen, hosiery and knitting factories. The 1,139 co-operating manufacturers employed 98,434 workers, as compared with 100,502 at July 1. Most of the reduction was in Quebec and Ontario. Rather larger decreases had been noted at the beginning of August, 1937, but the index then stood at 123·6, compared with 113·7 at the date under review; the latter figure was the same as at August 1, 1936.

Tobacco.—Data were received from 46 establishments in this industry, whose payrolls, aggregating 8,222 at August 1, showed an increase of 189 over July 1. Employment at the same date last year was in slightly greater volume than at the date under review, although the improvement at August 1, 1938, was rather more marked.

Beverages.—The tendency was unfavourable in the beverage industries at the beginning of August, according to data from 141 manufacturers employing 9,157 men and women, compared with 9,253 in the month before. The index was higher than at midsummer of 1937.

Chemicals and Allied Products.—Improvement was reported is chemical plants at the beginning of August, 191 persons having been added to the staffs of the co-operating plants since July 1; they reported 17,781 employees. The index was higher by over five points than at August 1, 1937, when a reduction had been indicated.

Clay, Glass and Stone Products.—A small decline occurred in the building material industries, according to 215 employers with 10,431 workers, or 124 fewer than in their last report. Employment was in less volume than at the same date last summer, a moderate gain having then been recorded.

Electric Light and Power.—Slight improvement was noted in electric current works, 99 of which reported 17,054 employees, compared with 16,994 at July 1. The index number at the date under review was several points higher than at August 1, 1937, when a larger increase had been indicated.

Electrical Apparatus. — Employment in electrical apparatus plants declined; at the beginning of August, 127 of these employed 17,898 operatives, or 794 fewer than in the preceding month. The situation was not so favourable as at August 1 of last year, the trend having then been upward.

Iron and Steel Products.—Crude, rolled and forged, machinery, vehicle, agricultural implement and foundry and machine shops showed reductions, those in automobile factories being most pronounced. A combined labour force of 119,188 persons was indicated by the 913 co-operating manufacturers, who had 130,854 at July 1. Firms in Ontario recorded the largest losses, but the movement was also downward in Nova Scotia, Quebec, Manitoba and Saskatchewan. A smaller loss had been noted at the beginning of August in 1937, and the index then was from fourteen to fifteen points higher than at the date under review.

Non-ferrous Metal Products.—There was a slight advance in this group, according to the 181 firms furnishing data, who employed 24,622 workers at August 1, compared with 24,584 in the preceding month. Most of the gain occurred in the base metal divisions. Employment was not so active as at August 1 of a year ago, although a falling-off had then been indicated as compared with the preceding month.

Mineral Products.—Statistics tabulated from 103 manufacturers of mineral products showed that they employed 13,545 men and women, or 173 more than in their last report. The index was rather higher than at the same date in 1937, when there had also been an increase.

Logging

Seasonal dullness affected the logging industry in most provinces, while the continued, serious fire situation in British Columbia also resulted in lowered employment. Statements were tabulated from 328 firms throughout the Dominion employing 17,203 persons, or 7,632 fewer than in the preceding month. Only slight losses had been reported at August 1, 1937, and the index then stood at 124·7, as compared with 59·6 at the date under review.

Mining

Coal.—There was a decrease of 328 in the staffs of the 104 operators furnishing returns, bringing them to 22,897 at August 1, 1938. Curtailment was indicated in the Maritime and Prairie coal fields, while a small gain was reported in British Columbia. A contraction had also been registered at the same date of last year, when the index was slightly lower.

Metallic Ores.—A further advance was recorded in metallic ore mines, whose employment was rather brisker than at the beginning of August of last year. Returns were received from 224 firms with 39,152 workers, as compared with 39,046 in their last report. An upward trend was indicated in Quebec and Manitoba, but elsewhere the situation showed little general change.

Non-Metallic Minerals (Other than Coal).—For the first time since February a falling-off was noted in this division, in which 105 employers reported 9,032 persons on their payrolls at the beginning of August. Employment was at a lower level than in the same month last summer, but was better than in August of any other year since 1930.

Communications

There was an increase in the personnel of telephone and telegraph companies at August 1; the communication firms co-operating with the Dominion Bureau of Statistics had 23,555 employees, as against 23,284 in the preceding month. The number engaged in this group was smaller than at August 1 of a year ago, when a larger gain had been noted.

Transportation

Street Railway and Cartage.—A contraction was registered in this division, according to data received from 253 employers with 26,971 workers, as against 27,471 at July 1. Little general change had been recorded at August 1, 1937, when the index was slightly above its level at the time of writing.

Steam Railway Operation.—The trend of employment in steam railway operation was favourable in the Western provinces, while elsewhere the changes were small; the 99 companies and divisional superintendents furnishing data throughout the Dominion reported 59,011 employees, compared with 58,406 in their last report. A decline had occurred at the same date in 1937, but the index then, at 77·7, was a few points higher than that of 74·2 at the latest date.

Shipping and Stevedoring.—Statements were tabulated from 122 companies in this group, employing 18,735 workers, or 692 more than at July 1, 1938. There were gains in Quebec and Ontario, with only small changes in the remaining provinces. A slight decline on the whole had been noted at the beginning of August a year ago, when employment in shipping was not quite so active.

Construction and Maintenance

Building.—Considerable increases were again reported in building construction, 816 contractors adding 1,529 persons to their staffs, bringing them to 26,772 at the beginning of August. The largest advances were in Quebec and Ontario. Employment was quieter than in the same month of 1937, when the improvement indicated was on a much larger scale.

Highway.—The number engaged on highway construction and maintenance increased in New Brunswick, Ontario and the Western Provinces, the gains in Saskatchewan and Alberta being most pronounced; on the other hand, there were losses in this industry in Nova Scotia and Quebec. Data were received from 420 employers with 99,428 workers on their payrolls, as compared with 95,338 at the beginning of July. A decidedly greater advance had been noted at August 1, 1937, and employment on road work was then in rather larger volume.

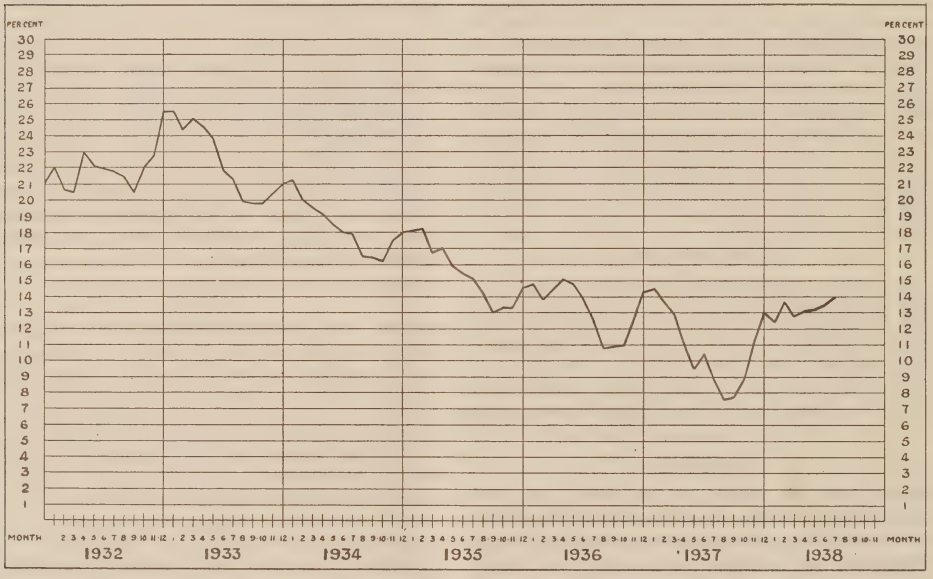
Railway.—Curtailment was recorded in this group at August 1, 1938, when 36 companies and divisional superintendents reported that they had 26,699 men on their staffs, compared with 28,643 in the preceding month. The most marked decreases were in the Western Provinces. The index number was many points lower than at the beginning of August of a year ago, although a larger contraction had then been noted.

Services

The trend of employment in the service group was downward, hotels and restaurants and laundries and dry-cleaning establishments sharing in the reduction; 513 firms employed 30,365 persons, compared with 30,909 at the beginning of July. Improvement had been recorded at August 1, 1937, but the level of employment was then rather lower.

Trade

Retail stores showed a seasonal falling-off in employment, while wholesale houses were more active, according to 1,530 trading establishments which employed 112,918 workers, as compared with 113,977 at July 1. Quebec and Ontario reported most of the decline in the trade group as a whole. Similar seasonal losses had occurred at the beginning of August last year, when the index was practically the same as at the date under review.



Tables

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables, in which the columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns at the date under review.

(2) Unemployment in Trade Unions at the Close of July, 1938

Unemployment as used in the following article has reference to involuntary idleness due to economic causes. Persons who are occupied at work outside their own trades or who are idle owing to illness are not considered as unemployed. Unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

Retarded activity on a small scale was reflected by local trade union members during July from the previous month, as manifest by the returns compiled from a total of 1,835 labour organizations including a membership of 218,428 persons. Of these, 30,651, or a percentage of 14.0, were idle, in comparison with an unemployment percentage of 13.5 in June. Conditions, however, were considerably quieter than in July last year, when unemployment stood at 8.9 per cent. The changes in the various provinces from June were not particularly marked, Manitoba unions showing a gain in employment of nearly 3 per cent and Saskatchewan, Alberta, British Columbia and Nova Scotia improvement of lesser degree. Moderate curtailment in work afforded, however, was reported from Quebec, largely the result of dullness in garment establishments, while in New Brunswick and Ontario the tendency was adverse though the variations noted were but fractional. Contrasted with the returns for July a year ago activity was substantially reduced among New Brunswick members during the month reviewed and marked increases in unemployment were apparent in Quebec and Ontario. The manufacturing industries in these three provinces were a large factor in the less favourable employment movement indicated, the iron and steel trades showing important losses, though in Quebec and Ontario the garment trades accounted in considerable measure for the change. Curtailment in steam railway operation was also evident, to quite an extent, in Ontario. In British Columbia the recessions apparent were noteworthy, while Manitoba and Saskatchewan showed but minor contractions in work available. Some slight employment advancement, however, was indicated by Alberta and Nova Scotia organizations.

The records of unemployment among local trade union members in the largest city in each province, with the exception of Prince Edward Island, are compiled separately each month. Of these, Edmonton and Saint John members showed notable gains in activity

during July from the preceding month and the situation improved slightly for Winnipeg, Vancouver, Toronto, Halifax and Regina members. Montreal unions alone, registered a rather noteworthy drop in work accorded, slackness in the garment trades being a largely contributing factor in this less favourable trend. When contrasted with the returns for July, 1937, considerably slacker conditions prevailed for Montreal and Toronto members during the month surveyed, and in Vancouver the recessions noted were pronounced. In Saint John declines in employment of somewhat lesser magnitude occurred, while Winnipeg and Halifax members showed retarded activity on a small scale. Edmonton unions however, reflected some betterment in the situation. Activity in Regina was maintained at exactly the same level as in July last year.

From the chart which appears with this article and shows the trend of unemployment by months from January, 1932, to date, it will be seen that the curve in July tended upward from that of June, though the projection was very slight, indicative of a small rise in unemployment. The level of the curve during July remained considerably above that of the corresponding month of last year, a manifestation of less active conditions during the month under survey.

The 530 unions in the manufacturing industries from which reports were tabulated during July, comprising a membership of 81,944 persons, showed that 16,038, or a percentage of 19.6, were without employment on the last day of the month, contrasted with percentages of 16·7 in June and 8·6 in July last year. Glass workers, who comprised but a small proportion of the entire membership reported in the manufacturing industries, showed a decidedly better situation during July than in June, and among general labourers and wood workers noteworthy gains were reported. Improvement, on a smaller scale, was evident among leather and jewellery workers, paper makers and bakers and confectioners. Of the recessions which were of a more than offsetting nature the most important were registered among garment, and textile and carpet workers, and metal polishers. Activity in the iron and steel trades and among hat, cap and glove workers, and meat cutters and butchers declined moderately and lesser contractions occurred among cigar and tobacco, and brewery workers and printing tradesmen. The percentage of idleness for fur workers remained identical with that for June. In comparison with the returns for July, 1937, activity was much more restricted in the garment establishments during the period surveyed and distinctly unfavourable conditions prevailed for iron and steel, wood and leather workers and metal polishers. Employment curtailment, on a small scale, was evident also among jewellery, textile and carpet, brewery and cigar and tobacco workers, bakers and confectioners and printing tradesmen. On the contrary, glass workers showed pronounced employment recovery during July from the corresponding month last year and the situation for meat cutters and butchers, and hat, cap and glove workers, and general

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

labourers was considerably better. Among paper makers the tendency was toward heightened activity, though the change from July a year ago was quite slight.

Little variation in the percentage of unemployment for coal miners was indicated during July from June, though the tendency was favourable, the 51 unions making returns, with a total of 20,637 members, showing that 2,271, or a percentage of 11.0, were out of work, as compared with 11.8 per cent in June. Improvement in somewhat greater measure was recorded from July last year when 15.0 per cent of the members reported were idle. In Alberta and British Columbia mining districts very slight gains in employment were apparent from June, while Nova Scotia unions showed approximately the same level of activity in the two months compared. Nova Scotia, Alberta and British Columbia unions all participated in the better movement noted in coal mining as a whole from July, 1937, the increase in employment of 4 per cent reported from Alberta being the most pronounced.

The building and construction trades afforded a slight increase in employment during July from the preceding month, according to the reports tabulated from 200 organizations with a membership aggregate of 22,137 persons. Of these, 6,463 were unemployed on the last day of the month, a percentage of 29.2, in contrast with 31.2 per cent in June. Bricklayers, masons and plasterers, granite and stonecutters, and hod carriers and building labourers showed improvement in substantial measure during July from June and noteworthy gains were indicated by bridge and structural iron workers. Among carpenters and joiners, and painters, decorators and paperhangers there was but a slight rise in work available. On the other hand, the tendency for plumbers and steamfitters, tile layers, lathers and roofers, and electrical workers was less favourable, though the changes were quite small. Steam shovelmen reported the same percentage of idleness as in June. In contrasting with the returns in building and construction, as a whole, from July, 1937, when 22.4 per cent of unemployment was recorded, bricklayers, masons and plasterers, carpenters and joiners, painters, decorators and paperhangers, and tile layers, lathers and roofers were much quieter during the month under review and activity was somewhat restricted among electrical workers, bridge and structural iron workers, and plumbers and steamfitters. Extensive employment advancement, however, was manifest by steam shovelmen, granite and stonecutters and hod carriers and building labourers.

63957—4½

There was a fractional increase only in the volume of work afforded in the transportation industries during July from the preceding month, the 805 unions from which reports were compiled, with 63,685 members, showing that 4,496, or a percentage of 7.1, were idle, as compared with 7.7 per cent of inactivity in June. In the steam railway division, which involved over 78 per cent of the entire group membership reported, and among street and electric railway employees, and teamsters and chauffeurs there was a nominal upward trend, navigation workers reflecting improvement on a somewhat larger scale. The situation in the transportation industries, as a whole, was less favourable during July than in the corresponding month of last year, when 4.6 per cent of inactivity was recorded. All divisions of the transportation industries participated in this downward movement, steam railway employees, with a drop of over 3 per cent, showing the greatest variation. In navigation the decline was slight, while among street and electric railway employees, and teamsters and chauffeurs the recessions indicated were quite small.

Retail shop clerks, with 4 unions reporting at the close of July a membership of 1,632 persons, indicated that all were busy, as in the previous month and July last year.

Civic employees were quite actively engaged in the three months used for comparative purposes. This was evident from the reports compiled for July from a total of 79 associations embracing 10,087 members, only 40 or a percentage of 0.4 of whom were out of work on the last day of the month, in contrast with 0.5 per cent in both June this year and July, 1937.

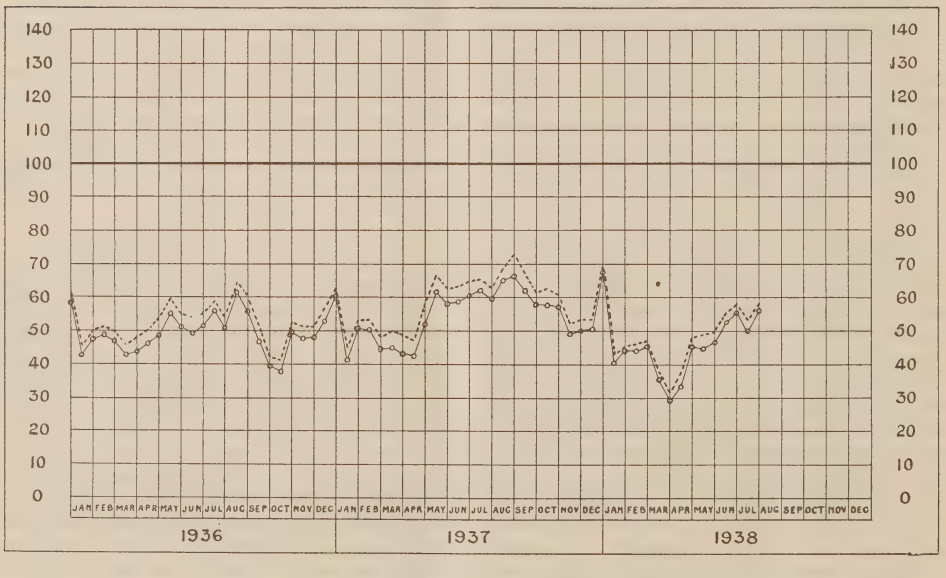
From unions in the miscellaneous group of trades 133 reports were forwarded to the Department during July, involving an aggregate of 9,972 members, 793 or 8.0 per cent of whom were unemployed on the last day of the month, in comparison with a percentage of 9.3 in June. Employment was slightly curtailed from July last year when 6.9 per cent of the members reported were idle. Moderate gains in activity were noted by stationary engineers and firemen during July from the previous month and the situation for theatre and stage employees showed some improvement. Barbers, hotel and restaurant employees and unclassified workers, however, indicated some lowering in the volume of work afforded. Compared with the returns for July last year hotel and restaurant employees showed a rather noteworthy drop in activity and conditions for barbers and unclassified workers were somewhat less favourable. Among theatre and stage employees, and stationary engineers and firemen

however, the level of activity was slightly above that of July, 1937.

Fishermen were busily engaged during July, as in the previous month, only 0.3 per cent of unemployment being recorded, as compared with a percentage of 0.6 in June. The July percentage was based on the reports received from 3 unions with a total of 709 members. Decided gains in employment, however, were recorded from July last year, when unemployment stood at 16.1 per cent.

Of the 592 lumber workers and loggers reported at the close of July 48 or 8.1 per cent were idle, as compared with percentages of 6.2 in June and 1.7 in July last year.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1937, inclusive, and also the percentages of unemployment by provinces for July of each year from 1919 to 1935, inclusive, and for each month from July, 1936 to date. Table II summarises the returns in the various groups of industries for the same months as in Table I.



(3) Employment Office Reports for July, 1938

The volume of business transacted by the offices of the Employment Service of Canada during the month of July, 1938, as indicated by the average daily placements affected, showed only a fractional gain over that of the previous period, but a decline of 12 per cent from that of the corresponding month last year. All industrial divisions except farming showed declines from June, in farming, trade and transportation. Of these changes recorded, the highest gain was in farming and the greatest losses in construction and maintenance where considerably less work was reported under highway construction and in logging, where only moderate activity was noted.

The accompanying chart shows the trend of employment since January, 1936, as re-

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications———— Vacancies - - - - - - - - - Placements —o—o—o—o—o—o—o

1938, the largest being in services, transportation, logging and manufacturing, but the very substantial gain in the agricultural section more than offset the losses recorded in all other groups. In comparison with July, 1937, fewer placements were made in construction and maintenance, logging, services, manufacturing and mining, but more were effected

presented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. In viewing the trend of the curves of vacancies and placements in relation to applications a sharp decline was recorded during the first half of

the month followed by a corresponding recovery during the latter half, with the result that each curve at the close of the period had reached a level slightly above that attained at the end of June, 1938, but was still several points below that recorded on the 31st of July a year ago. The ratio of vacancies to each 100 applications was 52.5 during the first half and 58.3 during the second half of July, 1938, in contrast with ratios of 65.3 and 62.6 during the corresponding periods of 1937. The ratios of placements to each 100 applications during the periods under review were 50.0 and 56.2, as compared with 62.0 and 59.8, respectively, during the corresponding month of last year.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during July, 1938, was 1,330, as compared with a daily average of 1,521 during the corresponding month a year ago and with 1,340 recorded daily in June, 1938.

The average number of applications for employment received daily by the offices of the Service during the month under review was 2,400, in comparison with 2,384 in July, 1937. Applications for work during the preceding month of 1938 averaged 2,359 daily.

The average number of placements made daily by the offices of the Service during July, 1938, was 1,275, of which 820 were in regular employment and 455 in work of one week's duration or less, as compared with a total daily average of 1,274 during the preceding month. Placements in July a year ago averaged 1,450 daily, consisting of 1,080 in regular and 370 in casual employment.

During the month of July, 1938, the offices of the Service referred 32,878 persons to vacancies and effected a total of 31,867 placements. Of these, the placements in regular employment were 20,485, of which 15,848 were of men and 4,637 of women, while placements in casual work totalled 11,382. The number of vacancies reported by employers was 23,939 for men and 9,307 for women, a total of 33,246, with applications for work numbering 59,987, of which 45,423 were from men and 14,564 from women. Reports for June, 1938, showed 33,485 positions available, 58,975 applications made and 31,828 placements effected, while in July, 1937, there were recorded 39,532 vacancies, 61,963 applications for work and 37,675 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1928, to date:—

Year	Placements		
	Regular	Casual	Totals
1928	334,604	135,724	470,328
1929	260,747	137,620	398,367
1930	187,872	180,807	368,679
1931	175,632	295,876	471,508
1932	153,771	198,443	352,214
1933	170,576	181,521	352,097
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936	217,931	113,519	331,450
1937	275,300	114,236	389,536
1938 (7 months)	122,805	64,031	186,836

Nova Scotia

During June, orders received at employment offices in Nova Scotia called for over 23 per cent more workers than in the preceding month, but nearly 16 per cent less than during the corresponding month of last year. There was an increase in placements of over 26 per cent in comparison with June, but a decrease of over 15 per cent when compared with July, 1937. The reduction in placements under construction and maintenance was mainly responsible for the decline from July of last year, although there were fewer placements also in manufacturing, mining and farming. These decreases were partly offset by a gain in services. Placements by industrial divisions included logging 54; farming 55; construction and maintenance 697 and services 466, of which 333 were of household workers. During the month 367 men and 136 women were placed in regular employment.

New Brunswick

Orders received at employment offices in New Brunswick during June called for nearly 20 per cent fewer workers than in the preceding month and over 33 per cent less than during the corresponding month of last year. There was a decrease also in placements of 21 per cent when compared with June and of nearly 34 per cent in comparison with July, 1937. All industrial divisions participated in the decline in placements from July of last year, the largest losses being in logging and services. Placements under construction and maintenance numbered 149 and in services 522. Of the latter, 390 were of household workers. Placements in regular employment numbered 44 of men and 75 of women.

Quebec

The demand for workers, as indicated by orders received at employment offices in the

Province of Quebec during June, was over 16 per cent less than in the preceding month, but nearly 1 per cent above the corresponding month of last year. Placements were over 13 per cent less than in June, but nearly 5 per cent above July, 1937. There was a substantial increase in placements under construction and maintenance, when compared with July of last year and smaller gains in transportation, services and trade. The improvement in these groups was to a large extent offset by a heavy decline in logging and small losses in manufacturing and farming. Industrial divisions in which most of the placements were effected during the month were manufacturing 116; farming 199; transportation 193; construction and maintenance 3,650; trade 104 and services 2,430, of which 2,040 were of household workers. During the month 4,340 men and 1,507 women were placed in regular employment.

ONTARIO

There was a decline of nearly 9 per cent in the number of positions offered through employment offices in Ontario during June when compared with the preceding month and of nearly 29 per cent in comparison with the corresponding month of last year. There was a decrease also in placements of 8 per cent when compared with June and of nearly 26 per cent in comparison with July, 1937. Substantial losses in services, farming, logging and construction and maintenance and a slightly smaller decline in manufacturing accounted for the large decrease in placements from July of last year. While the changes in other groups were unimportant, the majority showed reductions. Placements by industrial divisions included manufacturing 402; logging 203; farming 2,569; construction and maintenance 4,511; trade 281 and services 3,165, of which 1,927 were of household workers. There were 5,765 men and 1,324 women placed in regular employment.

MANITOBA

Positions offered through employment offices in Manitoba during June were 96 per cent higher than in the preceding month, but nearly 19 per cent below the corresponding month of last year. There was an increase in placements of nearly 96 per cent when compared with June, but a decrease of over 23 per cent in comparison with July, 1937. The decline in placements from July of last year was mainly due to a decrease in construction and maintenance, although a fairly substantial loss was also reported in logging. These reductions were partly offset by gains in farming, services and manufacturing, the first named being by far the largest. Industrial divisions in which most of the placements were effected during the month were manufacturing 73; farming 1,670, construction and maintenance 392 and services 672, of which 532 were of household workers. During the month 2,008 men and 353 women were placed in regular employment.

SASKATCHEWAN

Positions offered through employment offices in Saskatchewan during June were over 61 per cent higher than in the preceding month, but nearly 25 per cent below the corresponding month of last year. There was an increase of nearly 51 per cent in placements when compared with June, but a decrease of over 31 per cent in comparison with July, 1937. The most important change in placements from July of last year was a decline in construction and maintenance. This was partly offset by an increase in farming. Services also showed improvement, but there were small losses in mining and manufacturing. Placements by industrial divisions included logging 47; farming 1,038; construction and maintenance 114 and services 780, of which 475 were of household workers. Placements in regular employment numbered 1,267 of men and 478 of women.

ALBERTA

Employment opportunities, as indicated by orders received at employment offices in Alberta during June, were over 11 per cent better than in the preceding month and 8 per cent above the corresponding month of last year. There was an increase also in placements of nearly 9 per cent when compared with June and of over 5 per cent in comparison with July, 1937. With the exception of a large decrease in construction and maintenance and nominal losses in mining and communication, all industrial divisions showed improvement over July of last year. The only increases of importance, however, were in farming and services. Industrial divisions in which most of the placements were effected during the month were manufacturing 98; farming 869; construction and maintenance 347 and services 589, of which 442 were of household workers. There were 1,243 men and 402 women placed in regular employment.

BRITISH COLUMBIA

There was a decrease of nearly 6 per cent in the number of positions offered through employment offices in British Columbia during June, when compared with the preceding month, but an increase of over 2 per cent in comparison with the corresponding month of last year. Similar percentages of change

* 73 Placements effected by offices since closed.

were reported in placements under both comparisons. Placements under construction and maintenance and logging were considerably higher than during July, 1937, but these gains were largely offset by declines in all other groups. The most important losses were in services and farming. Placements by industrial divisions included logging 475; farming 229; construction and maintenance 3,201 and services 747, of which 488 were of household workers. During the month 814 men and 362 women were placed in regular employment.

Movement of Labour

During the month of July, 1938, the offices of the Employment Service of Canada effected 20,485 placements in regular employment, 11,140 of which were of persons for whom the employment found was outside the immediate vicinity of the offices at which they were registered. Of the latter, 182 were granted the Employment Service reduced transportation rate, 180 travelling to centres within the same province as the despatching office and 2 to other provinces. The reduced transportation rate, which is 2.5 cents per mile with a minimum fare of $4, is granted by the railway companies to bona fide applicants at the offices of the Employment Service who may desire to journey to distant employment for which no workers are available locally.

Quebec offices, during July, were instrumental in the despatch of 8 persons to provincial situations. Proceeding from Quebec City 6 plasterers were bound for Chicoutimi, while from Montreal one salesman and one bottler were conveyed to Val d'Or. In Ontario during July 55 reduced rate certificates were granted, all to provincial centres. To points within their respective zones the Port Arthur office despatched 21 bushworkers, one construction labourer, one waiter, one sawmill labourer, one mine carpenter, one mine labourer and one hotel cook; the Sudbury office, 8 bushworkers and 4 mine carpenters; and the Fort William office one wheelsman and one housekeeper. The Port Arthur zone in addition was the destination of one labourer travelling from Toronto. The Timmins zone received 2 carpenters from North Bay, the Ottawa zone one shoe maker from Guelph and the North Bay zone one miner from St. Catharines. Under the Dominion-Provincial Youth Training Plan during July 9 trainees for home service courses at various Ontario centres were transported at the reduced rate from St. Thomas, Toronto and Peterborough. The movement of labour in Manitoba during July comprised the transfer of 16 persons, 14 within the province and 2 outside. The latter, a mine cookee and an hotel general, travelled to the Porth Arthur zone on certificates secured at Winnipeg. The Winnipeg office was also responsible for all provincial transfers, which included 12 farm hands, one farm domestic and one mine mechanic bound for employment within the Winnipeg zone. Benefiting by the Employment Service reduced transportation rate in Saskatchewan during July 4 teachers were granted certificates at the Regina office for transportation within the same zone. Business transacted by Alberta offices during July involved the issue of 96 reduced rate certificates to points within the province. For employment within its own zone the Edmonton office transferred 24 Dominion parks employees, 15 farm hands, one farm domestic, 11 mine workers, 7 construction labourers, 5 carpenters, 5 transportation company employees, 4 bushmen, 4 sawmill labourers, 4 fish company employees, 2 highway construction workers, 2 labourers, 2 cooks, one machinist, one oil refinery worker, one edgerman, one garage mechanic, one hotel worker and one housekeeper. From Calgary 2 farm hands went to Drumheller and 2 farm hands to situations in the Calgary zone. The Vancouver office was responsible for the 3 transfers effected in British Columbia during July which were to provincial centres. Destined to the Penticton zone was one miner, to Kamloops one mine cook and to a point within the Vancouver zone one hotel porter.

Of the 182 workers who took advantage of the Employment Service reduced transportation rate during July 123 travelled by the Canadian National Railways, 56 by the Canadian Pacific Railway, 2 by the Northern Alberta Railway and one by the Pacific Great Eastern Railway.

(4) Building Permits Issued in Canada During July, 1938

The value of the building represented by the permits taken out in 58 cities during July stood at $6,230,254, a seasonal decline of $330,165 or five per cent as compared with the June, 1938, total of $6,560,419; however, there was an increase of $700,959 or 12·7 per cent in the more significant comparison with the July, 1937, aggregate of $5,529,295.

The value of the building authorized in the first seven months of the present year was $32,011,461; this was 4·7 per cent lower than the aggregate of $33,586,237 reported in the period January—July, 1937, but was higher than in the first seven months of any other year since 1931. The cumulative total for the January-July period in each of the last seven years has been very much lower than in earlier years of the record, being also considerably less than the eighteen-year average of $69,352,486. The wholesale prices of building materials have recently been lower than in the same months of 1937; while they have been rather higher than in January-July of the six years immediately preceding, they continue lower than the average for this period in the years since 1919.

Some 50 cities furnished detailed statistics for July, 1938, showing that they had issued nearly 600 permits for dwellings valued at over $2,076,000, and about 2,400 permits for other buildings estimated at some $3,961,000. In June, authority was given for the erection of about 540 dwellings and 2,500 other buildings estimated to cost approximately $2,000,000 and $4,000,000, respectively.

As compared with June, 1938, there was an increase of $56,251 or 5·6 per cent in Quebec, and of $485,396 or 39·1 per cent in British Columbia. The remaining provinces recorded declines, of which those of $253,281, or 9·6 per cent, in Ontario and $416,460, or 47·9 per cent, in Manitoba were most pronounced.

Increases over July, 1937, were reported in Prince Edward Island, Quebec, Manitoba, Alberta and British Columbia. The largest gain was that of $1,080,894, or 167·1 per cent in British Columbia, while the most noteworthy reduction was that of $381,810, or 13·8 per cent in Ontario.

Three of the largest cities, viz., Montreal, Winnipeg and Vancouver, showed improvement as compared with June, 1938, and July, 1937, but in Toronto, the July, 1938, aggregate was lower than in either comparison.

Of the other centres, Sydney, Sherbrooke, Chatham, Ottawa, Owen Sound, Peterborough, Sault Ste Marie, Saskatoon, Lethbridge, New Westminster and Victoria showed gains over the preceding month and also as compared with the same month of last year.

The following table gives the value of the building authorized by 58 cities during July, and in the first seven months of each year since 1920, as well as index numbers for the latter, based upon the January-July total in 1926 as 100. The average index numbers of wholesale prices of building materials in the first seven months of the years since 1920 are also given. (1926 average..100).

Year	Value of permits issued in July	Value of permits issued in first seven months	Indexes of value of permits issued in first seven months (1926=100)	Average indexes of wholesale prices of building materials in first seven months (1926 average=100)
	$	$		
1938.....	6,230,254	32,011,461	32·9	90·3
1937.....	5,529,295	33,586,237	34·5	95·9
1936.....	5,029,802	23,352,686	24·0	84·5
1935.....	4,396,402	29,036,913	29·8	81·8
1934.....	3,257,470	13,668,847	14·0	82·8
1933.....	2,180,403	12,496,302	12·7	76·5
1932.....	4,412,169	28,753,213	29·5	78·1
1931.....	11,042,609	69,993,717	71·8	83·3
1930.....	15,824,781	101,238,766	103·9	94·2
1929.....	22,702,584	147,311,851	151·2	99·2
1928.....	25,761,956	127,798,943	131·2	96·2
1927.....	16,369,195	97,211,914	99·8	96·1
1926.....	18,683,415	97,443,834	100·0	100·8
1925.....	12,812,603	78,712,320	80·8	103·1
1924.....	11,681,196	72,355,350	74·3	109·8
1923.....	13,078,547	86,126,043	88·4	111·7
1922.....	15,740,810	87,022,484	89·3	108·3
1921.....	10,965,891	66,737,575	68·5	130·2
1920.....	13,743,045	75,497,755	77·5	144·2

The aggregate for the first seven months of this year, as already mentioned, was 4·7 per cent lower than the corresponding figure in 1937, but exceeded that for the same period in any other year since 1931. The average index number of wholesale prices of building materials was rather lower than in the same months of 1937; it was also below the average for the last eighteen years, although it exceeded the January-July figure in any of the years, 1931-1936.

The accompanying table gives the value of the building permits issued by 58 cities during June and July, 1938, and July, 1937; the 35 cities for which records are available since 1910 are marked thus "*".

[1] Report not received in time for tabulation.

EMPLOYMENT CONDITIONS IN CANADA AT THE END OF AUGUST, 1938

Reports of the Superintendents of the Employment Service of Canada

THE employment situation at the end of August, 1938, was reported by the superintendents of the Employment Service to be as follows:—

Farmers in the Maritimes were busy harvesting their corps, but adverse weather had been detrimental to hay and grain and large quantities had been badly damaged. Potato blight struck heavily through parts of Northumberland County, but other vegetables were plentiful and of fine quality. Apples were colouring well and were of good size, blueberries also had been abundant. Logging was very quiet and was confined to pulpwood cutting. Fishing was fair. Mines in the New Glasgow area operated from one to five days per week and those in Cape Breton and vicinity worked two to four days. Manufacturing showed little change. Canning factories operated on part time, taking care of plums and other small fruits, but woodworking plants were extremely busy and the iron and steel industry reported no idleness. While no new building projects were being started, with the exception of an airport at Lakeburn, construction underway reported progress. Many men, too, found employment in highway construction. Passenger and freight traffic by rail, motor and water remained fairly good and a large number of steamers, loaded with lumber, cleared ports for overseas. Trade was rather quiet with collections somewhat slow. The demand for domestics in the Women's Division showed a slight increase and together with char work kept placements steady.

Unfavourable weather in some parts of the Province of Quebec precluded the hiring of

extra farm help, although, at Hull, an increase in orders was reported. Logging was quiet. Few placements were made in mining; however, active mines at Rouyn were operating normally. Manufacturing centres reported as follows:—Bagotville and Three Rivers—a slowing up in nearly all industries; Hull, La Tuque, Matane and Val d'Or—factories operating at full capacity; Montreal—quiet; Quebec—clothing and boot and shoe plants active; Rouyn—steady; Sherbrooke—textiles busy and some improvement shown in building materials and furniture works. Building construction throughout the province was better and there was much activity in road construction and maintenance. Transportation and trade, in general, were satisfactory. The demand for household help in the Women's Section was somewhat less during August, but more orders were gradually coming in as city people returned to their homes at the close of the summer season.

Harvesting in Ontario was about completed, thus, there was a decrease in the number of requests for extra farm help. Nevertheless, many persons obtained casual work picking peaches and tomatoes and suckering tobacco. Fruit packing also provided employment for women and girls. Logging was quiet but sawmills continued to operate steadily with full crews. Except at Timmins where a fair demand existed for various classes of experienced men, mining was slack. Manufacturing showed little definite change; a few additional workers were being hired for seasonal employment in canning factories, but many other industries reported slackness. Iron and steel, on the whole, was somewhat better; the Dominion Tire Company, also, was working on a larger scale, but textiles were only fairly busy. At Oshawa, a number of men had been recalled in preparation for the production of 1939 motor cars, but, at Windsor, business in automobile plants was very low. Building, except for airport construction, was gradually slowing down, but highway construction continued. The season on the waterfronts had been rather poor, however, with grain shipments coming in, an increased movement of freight was expected within a short time. Tourist trade was good. Calls for regular domestic workers in the Women's Division, in some localities, continued to be in excess of the supply available and day work for charwomen was fair. At Toronto, orders for female factory workers were received from candy and confectionery firms, both for the Exhibition and for the forthcoming Christmas trade, with little difficulty experienced in obtaining suitable workers in each case.

Threshing was well advanced throughout the Prairie Provinces, although in some parts operations had been delayed by frequent rains and enquiries were being received as to the monthly wage for fall work. Logging and mining both were quiet and oil field operations were slower than for two years past. Manufacturing was unchanged, with no call for additional help. Housing construction in and about Winnipeg was substantially in advance of that of the corresponding date of a year ago, but, elsewhere, no extensive building operation was underway. Airport and highway construction absorbed a number of men and a few youths were transferred to provincial forestry camps. There was a steady demand for domestics, both city and farm, and where experienced help was available, city positions were easily filled, but the placement of women domestics on farms was more difficult.

Recent heavy rains in parts of British Columbia had delayed haying and harvesting, but had improved ranges and helped gardens. Few requests had been received for orchard hands, although the apple crop was very good. While some logging firms continued to operate, several had either curtailed production or closed down, as a result of the increasing fire hazard and sawmills in many instances were running short shifts. Mining was quiet, except at Penticton, where all mines were working steadily. Building construction was fairly active, so that many building tradesmen were kept busy. Highway construction continued and some boys and young men were sent to the Youth Training camps. Railways, likewise, were calling, in seniority, men of the running trades, in preparation for the movement of the wheat crop. Drydocks and shipyards at Prince Rupert were quiet, but busy at Victoria. Longshoremen at New Westminster were well employed and also at Prince Rupert, where heavy shipments of frozen and canned fish from Alaska were passing through to the East. Conditions on the waterfront were quiet at Vancouver and at Victoria. At the latter port, lumber shipments had fallen off, due to the shutting down of the logging camps. Trade was fair. An increase in domestic orders for household service was recorded in the Women's Division, as families returned to the city from their summer holidays.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

THE British *Ministry of Labour Gazette*, August 1938, summarized the employment situation as follows:—

Employment at July 18 showed a slight improvement as compared with June 13, mainly due to resumption of work after stoppages for local holidays and extensions of the Whitsun holiday, which had affected employment in June. There was an improvement in the cotton and wool textile industries, and in textile bleaching, dyeing and finishing, due largely to the resumption of work after local holiday stoppages in certain districts. Employment also improved in the distributive trades, hotel and boarding house service, tinplate, electrical apparatus, boot and shoe, hosiery, hat and cap, and paper manufacture, certain food industries, dock and harbour service, and agriculture. On the other hand, employment declined in coal mining, building, public works contracting, the linen industry, tailoring, dressmaking, and motor vehicle and cycle manufacture.

It is estimated that at July 18, 1938, the number of insured persons, aged 16-64, in employment in Great Britain, exclusive of persons within the agricultural scheme, was approximately 11,371,000. This was 38,000 more than at June 13, 1938. On a comparable basis there was a decrease of about 300,000 as compared with July 26, 1937.

Among persons, aged 16-64, insured under the general scheme of unemployment insurance (including the special schemes for the banking and insurance industries), the percentage unemployed in Great Britain and Northern Ireland at July 18, 1938, was 13·3 compared with 13·4 at June 13, 1938. For persons aged 16-64 insured under the agricultural scheme the percentages were 4·5 at July 18, 1938, and 5·3 at June 13, 1938. For both schemes combined the percentage unemployed at July 18, 1938, was 12·9 as compared with 13·0 at June 13, 1938. On a comparable basis, there was an increase at July 18, 1938, as compared with July 26, 1937, of about 3·5 in the percentage unemployed among persons within the general scheme, and of about 1·9 among persons within the agricultural scheme. For the two schemes combined there was an increase of about 3·5 between these dates.

At July 18, 1938, the numbers of unemployed persons on the registers of Employment Exchanges in Great Britain were 1,244,461 wholly unemployed, 467,773 temporarily stopped, and 60,882 normally in casual employment, making a total of 1,773,116; this was 29,796 less than at June 13, 1938. As is indicated above, this decrease is partly accounted for by the fact that employment on June 13 was affected by local holidays on the day of the count and by extensions of the Whitsuntide holiday. On a comparable basis there was an increase of about 448,000 as compared with July 26, 1937, in the total number of persons on the registers.

The total of 1,773,116 persons on the registers at July 18, 1938, included 1,041,231 persons with claims admitted for insurance benefit, 519,845 with applications authorised for unemployment allowances, 65,686 persons with application for insurance benefit or unemployment allowances under consideration, and 146,354 other persons, of whom 36,353 were juveniles under 16 years of age.

In Great Britain and Northern Ireland the total number of persons on the registers of Employment Exchanges at July 18, 1938, was 1,875,083 as compared with 1,894,548 at June 13, 1938. On a comparable basis there was an increase at July 18, 1938, of about 486,000 as compared with July 26, 1937.

United States

In a press release dated August 23, Miss Frances Perkins, United States Secretary of Labor reported that approximately 40,000 factory wage earners were returned to employment in July, and weekly factory payrolls increased by nearly one-half million dollars, marking a definite improvement in the employment situation.

The following paragraphs taken from the official press release indicate that the employment situation in the United States to be as follows: Gains of 0·7 per cent in factory employment and of 0·4 per cent in pay-rolls were reported, although factory employment normally declines by about 1 per cent and pay-rolls by about 4 per cent in July.

As compared with last July, factory forces were reduced by one-fourth and wage earners' pay-rolls were one-third smaller.

Railroads took on 14,000 more men in July and the seasonal curtailment in retail stores was smaller than usual. Reductions in working forces in mines continued.

Non-agricultural employment usually declines by about 140,000 workers in July. This year it is estimated that there was practically no change.

The principal increases in factory forces were in the non-durable goods industries, in which employment expanded by more than 3 per cent, principally because of re-employment in the woolen and cotton goods industries, in men's clothing and shoes, and in the seasonal food industries, such as canning. Many of the heavy manufacturing industries continued to reduce employment, and in the durable goods group as a whole there was a decrease of 2·4 per cent in the number of wage-earners. The most pronounced losses were in machinery and transportation equipment, in particular, in agricultural implement plants; automobile plants, which laid off 22,100 during model changes; railroad carbuilding shops; foundries and machine shops; engine and tractor plants and in the manufacture of hardware, glass and electrical machinery.

A small number of wage-rate reductions were reported in 34 manufacturing industries, affecting 43,800 wage-earners out of a total of 3,400,000 whose employers reported to the Bureau of Labour Statistics. The most widespread reductions were in cotton mills, in which nearly 30,000 workers received wage cuts, and in mills making paper and pulp, woolen goods, and carpets and rugs.

In the manufacturing industries employment declines were largely seasonal. The release of nearly 90,000 workers from retail stores, a decline of 2·7 per cent, was the smallest decrease in any July during the past nine years. Country buyers and wholesale firms dealing in farm products reduced their forces sufficiently to offset small employment gains in groceries, food, petroleum and other important wholesale lines, resulting in a net reduction of 10,000 employees in wholesale trade as a group.

There were greater than seasonal reductions in employment in anthracite mines, which laid off 20 per cent or 16,000 of their workers, and in metal mines where 6,000 were laid off. Bituminous coal mines reduced their forces seasonally by 2 per cent, affecting 7,000 workers. The railroads increased employment for the second successive month, and brokerage houses added employees for the first time since last November.

Private building contractors employed somewhat larger crews than in June, and work on public road projects, both State and Federal, again expanded. There was a small decline in employment on those P.W.A. projects which are in process of completion. W.P.A. had 196,000 more persons engaged on its projects in July than in June, and the Civilian Conservation Corps took on 22,000 young men.

Twenty-six States reported more employment in private industry in July. The hiring of large numbers of workers by cotton and woolen mills was the chief factor in the gains reported by Massachusetts, North and South Carolina, Maine, and Rhode Island.

Among the States reporting declines in employment were Michigan, Pennsylvania, Illinois, Ohio, Indiana, and Alabama. Curtailed operations in coal mines, metal mines, automobile plants, and establishments manufacturing machinery contributed largely to these reductions.

Industrial Accidents in Quebec During the First Six Months of 1938

According to a report issued by the Quebec Association for the Prevention of Industrial Accidents there were fewer accident claims in the province during the first six months of 1938, as compared with the corresponding six months of 1937. The report shows that there were 10,862 claims for workmen's compensation during the period reviewed, compared with 10,910 claims during the same period of 1937, a decrease of 48.

During the first six months of 1938 there were 4,054 compensable claims compared with 3,987 during 1937, while medical claims totalled 6,808 in comparison with 6,923 in the first six months of 1937.

In making this report Mr. A. Gaboury, General Manager of the Association stated: "Accidents are like a disease with no respect for persons or plants, breaking out as they do in what might have been considered most immune quarters. This only goes to prove that constant effort, vigilance, and attention, must be given to every situation in which men and machines are involved."

In a review entitled *Hours and Wages of Women and Minor Laundry Workers,* published by the Pennsylvania State Department of Labor and Industry, it is reported that half of the women and minors working in laundries in Pennsylvania received a weekly wage less than $11.54 for the pay period nearest November 15, 1937, and more than 27 per cent were paid less than $10. These facts were revealed by a study of wages in the laundry industry made by the Bureau of Hours and Minimum Wages of the State Department of Labor and Industry.

Of the group of full-time workers who reported their earnings, half of them were paid less than $614 during 1937, and one-sixth received less than $500. On the other hand only three per cent were found to be earning $1,000 or more. On an hourly basis half of the workers received less than 29.3 cents with a range of hourly earnings from 11·4 to 57 cents.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefore the full text of which appeared in the LABOUR GAZETTE for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the Provincial Minimum Wages Laws require the payment of higher wages than those set out above, such higher wages shall apply in the execution of Federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wages scales of the respective provinces.

As respects contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922, as amended in 1924, were superseded in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight Hour Day Act, 1930." This Act, however, has now in turn been superseded by "The Fair Wages and Hours of Labour Act, 1935," which came into force on May 1, 1936. The clause relating to wages and hours in the last-named statute is in the terms following:—

"All persons in the employ of the contractor, subcontractor, or any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages;

"The working hours of persons while so employed shall not exceed eight hours per day or forty-four hours per week except in such special cases as the Governor in Council may otherwise provide, or except in case of emergency as may be approved by the Minister."

The new Act, like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not appear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by federal grant in the form of contribution, subsidy, loan, advance or guarantee.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the Department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for over time and as to the proper classification of any work for the purpose of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment, the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by

such workmen, these records to be open for inspection by fair wage officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor may be filed with the Minister of the Department with which the contract has been made and payments of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada unless the Minister of the Department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure due observance of the contracts are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" conditions of the Fair Wages Orders in Council, it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any dispute which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts have recently been executed by the Government of Canada.

GROUP "A" CONTRACTS

(1) *Works of Construction, Remodelling, Repair or Demolition*

Note: The labour conditions of each of the contracts noted under this heading, besides stipulating working hours of 8 per day and 44 per week, provide that: "Where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work," and also specify that the rates of wages set out therein are *minimum* rates only and that "nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation."

Department of Fisheries

Construction of a fish hatchery and dwelling at Lindloff Lake, near St. Peters, Richmond Co., N.S. Name of contractors, J. W. Stephen, Ltd., Sydney, N.S. Date of contract, August 2, 1938. Amount of contract, $14,092.40. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 70
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 35
Carpenters	0 50
Concrete and cement mixer operators: Gas. or Electric	0 40
Plasterers	0 70
Plasterers' helpers (mixing and tempering material)	0 35
Electricians (inside wiremen)	0 55
Plumbers and steamfitters	0 55
Tinsmiths	0 55
Painters and glaziers	0 50
Labourers	0 30
Driver, horse and cart	0 45
Driver, team and wagon	0 55
Drivers	0 30
Motor truck driver	0 35
Motor truck driver and truck: 1 to 2 tons	1 35
3 tons	1 85
Watchman	0 25

National Harbours Board

Extending sewers and dyking, Sections 46 to 49, Montreal Harbour, P.Q. Name of contractors E. G. M. Cape & Co., Montreal P.Q. Date of contract, August 2, 1938. Amount of contract, approximately $92,768.40. A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmiths	$0 60
Blacksmiths' helpers	0 45
Brick and hollow tile layers	0 90
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 45
Boatmen (rowboats)	0 40
Carpenters and joiners	0 70
Cement finishers	0 60

	Per hour
Cement and concrete mixer operators:	
Steam	0 65
Gasoline or electric	0 50
Compressor operators (gasoline or electric)	0 50
Divers (full day's pay to be allowed whether employed full or part time)	per day 14 00
Divers' tenders (full day's pay to be allowed whether employed full or part time)	5 00
	per hour
Dragline operators (steam)	0 85
Dragline firemen	0 55
Dragline oilers	0 50
Drivers	0 40
Driver, horse and cart	0 55
Driver, team and wagon	0 75
Engineers, operating, steam:	
Single or double drums	0 65
Three or more drums	0 75
Engineers on steel erection	0 75
Engineers, locomotive crane (steam, gasoline, electric)	0 70
Firemen, stationary	0 50
Hoist operator, gasoline or electric	0 60
Labourers	0 40
Machinists	0 65
Motor boat operators	0 45
Motor truck drivers	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Painters (spray)	0 70
Painters (brush)	0 66
Patternmakers	0 70
Pumpmen	0 50
Riggers (general)	0 55
Rodmen—reinforced steel	0 50
Steam shovel engineers	0 85
Steam shovel cranemen	0 65
Steam shovel firemen	0 55
Steam shovel oiler	0 50
Shovel operators (gasoline)	0 85
Structural steel workers	0 75
Timbermen and cribmen (measuring, scribing and, by the use of the axe, adze, etc., cutting and fitting timber)	0 50
Tractor operators	0 50
Watchmen	0 35
Welders and burners (acetylene or electric)	0 60
Welders and burners, on steel erection	0 75

Strengthening wharf No. 1, Sections 30 to 31, Montreal Harbour, P.Q. Name of contractors, L. G. Ogilvie & Co., Ltd., Montreal, P.Q. Date of contract, August 2, 1938. Amount of contract, approximately $158,685. The preceding fair wages schedule was also included in this contract.

Construction of a roadway at Berths 8, 9, 10 and 11, Saint John, N.B. Name of contractors, Maritime Construction Co., Ltd., Saint John, N.B. Date of contract, August 8, 1938. Amount of contract, approximately $24,967. A fair wages schedule was included in the contract as follows:—

	Per hour
Carpenters and joiners	$0 60
Cement finishers	0 70
Cement and concrete mixer operators:	
Steam	0 65
Gasoline or electric	0 50
Compressor operators (gasoline or electric)	0 50
Drivers	0 40
Driver, horse and cart	0 55
Driver, team and wagon	0 75
Drill runners	0 50
Electricians (inside wiremen)	0 65
Engineers, operating, steam:	
Single or double drums	0 65
Three or more drums	0 75
Labourers	0 40
Machinists	0 65
Motor truck drivers	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Ornamental iron workers	0 60
Painters (spray)	0 65
Painters and glaziers	0 55
Pipe fitters (surface—temporary work)	0 55
Road grader operators (horse drawn)	0 45
Road grader operators (including team)	0 80
Road grader operators (gasoline)	0 50
Rodmen—reinforced steel	0 50
Steam shovel engineers	0 85
Steam shovel cranemen	0 65
Steam shovel firemen	0 55
Steam shovel oilers	0 50
Shovel operators (gasoline)	0 85
Stonecutters	0 70
Stonemasons	0 90
Stonemasons' helpers (mixing and tempering mortar)	0 45
Tractor operators	0 50
Watchmen	0 35

Frostproofing of Shed No. 13, Saint John, N.B. Name of contractors, Acme Construction Co., Ltd., Saint John, N.B. Date of contract, August 8, 1938. Amount of contract, approximately $45,929.02. A fair wages schedule was included in the contract as follows:—

	Per hour
Asbestos insulation workers	$0 60
Blacksmiths	0 60
Blacksmiths' helpers	0 45
Boatmen (rowboat)	0 40
Carpenters and joiners	0 60
Cement finishers	0 60
Compressor operators (gasoline or electric)	0 50
Drivers	0 40
Driver, horse and cart	0 55
Driver, team and wagon	0 75
Drill runners	0 50
Electricians (inside wiremen)	0 65
Engineers on steel erection	0 75
Hoist operators (gasoline or electric)	0 50
Labourers	0 40
Lathers (wood)	0 55
Machinists	0 65
Mastic floor spreaders and layers	0 70
Mastic floor rubbers and finishers	0 55
Mastic floor kettlemen	0 55
Mastic floor labourers	0 45
Millwrights	0 65
Motor boat operators	0 45
Motor truck drivers	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Painters (spray)	0 65
Painters and glaziers	0 55
Pipe fitters (surface—temporary work)	0 55
Pipe layers, caulkers and solderers	0 50
Plumbers and steamfitters	0 70

	Per hour
Riggers (general)	0 50
Roofers—composition	0 50
Sheet metal workers	0 65
Structural steel workers	0 75
Timbermen and cribmen (measuring, scribing and, by the use of the axe, adze, etc., cutting and fitting timber)	0 50
Watchmen	0 35
Welders and burners—acetylene or electric	0 65
Welders and burners—on steel erection	0 75

Reconstruction of St. Charles River wharf and Shed 28, Quebec, P.Q. Name of contractors, A. Janin & Co., Ltd., Montreal, P.Q. Date of contract, August 8, 1938. Amount of contract, approximately $248,789.80. A fair wages schedule was included in the contract as follows:—

	Per hour
Asphalt rakers and finishers	$0 55
Blacksmiths	0 60
Blacksmiths' helpers	0 45
Brick and hollow tile layers	0 80
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 45
Boatmen (rowboats)	0 40
Carpenters and joiners	0 60
Cement finishers	0 55
Cement and concrete mixer operators:	
Steam	0 60
Gasoline or electric	0 55
Compressor operators (gasoline or electric)	0 55
Dragline operators (steam)	0 85
Dragline firemen	0 55
Dragline oilers	0 50
Drivers	0 40
Driver, horse and cart	0 55
Driver, team and wagon	0 65
Drill runners	0 50
Engineers, operating, steam:	
Single or double drums	0 60
Three or more drums	0 70
Engineers on steel erection	0 75
Engineers, locomotive crane (steam, gasoline, electric)	0 65
Firemen, stationary	0 45
Hoist operator, gasoline or electric	0 55
Labourers	0 40
Machinists	0 65
Motor boat operators	0 45
Motor truck drivers	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45

Roofers—composition	0 50
Roofers—felt and gravel	0 45
Sheet metal workers	0 70
Watchmen	0 35

Laying of a water line from MacDonald Lake to the Royal Canadian Air Force Station at Dartmouth, N.S. Name of contractors, Messrs. Bianco Brothers, Halifax, N.S. Date of contract, August 6, 1938. Amount of contract, $15,000. A fair wages schedule was included in the contract as follows:—

	Per hour
Pipe Layers, Caulkers and Solderers	$0 50
Plumbers and Steamfitters	0 75
Motor truck drivers	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
Driver, team and wagon	0 75
Drivers	0 40
Labourers	0 40
Watchman	0 35

Construction of a S. A. A. Store Building at Wolseley Barracks, London, Ontario. Name of contractor, Mr. William E. Dodd, London, Ontario. Date of contract, August 9, 1938. Amount of contract, $4,344.63. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$1 00
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 45
Carpenters and joiners	0 75

	Per hour
Cement and concrete mixer operator:	
Steam	0 65
Gasoline or electric	0 50
Cement finisher	0 60
Compressor operators (gasoline or electric)	0 50
Driver, horse and cart	0 55
Driver, team and wagon	0 75
Driver	0 40
Electricians	0 80
Engineers, operating, steam:	
Single or double drums	0 65
Three or more drums	0 75

Motor truck driver and truck:	
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
Painters and glaziers	0 60
Rodmen—reinforcing steel	0 50
Roofers, felt and gravel	0 45
Sheet metal workers	0 70
Watchman	0 35

Reconstruction of the Garrison pier at McNab Island, Halifax, N.S. Name of contractor, Mr. R. M. Hall, Halifax, N.S. Date of contract, August 12, 1938. Amount of contract, $10,800. A fair wages schedule was included in the contract as follows:—

	Per hour
Carpenters and joiners	$0 65
Labourers	0 40
Pile driver foremen	0 75
Pile driver engineers	0 65
Pile driver boom-men	0 50
Pile driver bridgemen	0 50
Pile driver men	0 50
Pile driver firemen	0 45
Pile driver derrick engineers	0 65
Pile driver derrick firemen	0 45
Pile driver derrick men	0 50
Watchman	0 35

Construction of a caretaker's quarters at Sussex Camp, Sussex, N.B. Name of contractor, Mr. W. F. Lutz, Sussex, N.B. Date of contract, August 13, 1938. Amount of contract, $5,355. A fair wages schedule was included in the contract as follows:—

	Per hour
Asbestos insulation workers	$0 50
Brick and hollow tile layers	0 70
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 35
Carpenters	0 50
Cement finisher	0 50
Driver, horse and cart	0 45
Driver, team and wagon	0 55
Drivers	0 30
Labourers	0 30
Lathers, metal	0 50
Lathers, wood	0 45
Motor truck driver	0 35
Motor truck driver and truck:	
1 to 2 tons	1 35
3 tons	1 85
4 tons	2 35
5 tons	2 85
Ornamental iron workers	0 50
Painters and glaziers	0 50
Plasterers	0 70
Plasterers' helpers (mixing and tempering material)	0 35
Plumbers and steamfitters	0 55
Watchman	0 25

Supply and erection of a steel water storage tank at the Royal Canadian Corps of Signals Depot, Barriefield, Ont. Name of contractors, Horton Steel Works, Ltd., Toronto, Ont. Date of contract, August 15, 1938. Amount of contract, $12,750. A fair wages schedule was included in the erection contract as follows:—

	Per hour
Boilermakers	$0 80
Blacksmiths	0 65
Blacksmiths' helpers	0 45
Carpenters	0 80
Cement finishers	1 00
Cement and concrete mixer operators:	
Steam	0 65
Gasoline or electric	0 50
Compressor operators, gasoline or electric	0 50

Construction of fabric spares for aircraft. Name of contractors, Boeing Aircraft of Canada, Ltd., Vancouver, B.C. Date of contract, August 4, 1938. Amount of contract, approximately $33,000.00. The preceding fair wages schedule was also included in this contract.

Immigration to Canada During the First Six Months of 1938

According to statistics issued by the Department of Mines and Resources, immigration to Canada during the first six months of 1938 totalled 8,135 compared with a total of 6,827 for the corresponding period of 1937, an increase of 19·2 per cent.

Of the total number of immigrants, 1,573 came from the British Isles, an increase of 39·3 per cent compared with the first six months of 1937. An increase of 11·2 per cent in the number of persons coming from the United States is also recorded, 2,890 having entered Canada during the six-month period. Northern European races accounted for 670 persons and other races 3,002, increases of 8·2 per cent and 19·2 per cent respectively compared with the corresponding six months of 1937. Of the total number of persons entering Canada, 2,030 were adult males, 3,151 adult females and 2,954 children under eighteen years of age. Farming was given as the occupation of 2,264 persons; labouring, 262; mechanics, 459; trading, 618; mining, 22; female domestic servants, 455; and other classes of occupation, 4,055.

Ontario was given as the destination of 3,671 of the total number entering Canada during the period; Quebec, 1,434; British Columbia, 776; Alberta, 689; Manitoba, 687; Nova Scotia, 417; Saskatchewan, 249; New Brunswick, 185; Prince Edward Island, 23; Yukon Territory, 2; and Northwest Territories, 2.

Employment in Manitoba

The Economic Survey Board of Manitoba has published the sixth in a series of reports covering many phases of the economic and social life of the province. This sixth report is entitled "Employment in Manitoba" and constitutes a survey of the adult population from the employment viewpoint. The results of the survey are given in four parts.

In Part I the background of provincial employment is set forth in its relation to a number of factors.

Part II deals specifically with employment in Winnipeg with a detailed analysis of employment by industries and occupations.

Part III deals with the earnings of wage-earners and evaluates the trend of wages in relation to prices.

Part IV deals with the factors entering into the causes of the decline of employment and earnings in Winnipeg.

In conclusion the outlook of employment in Manitoba both in regard to the immediate future and long range probabilities, is discussed.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

INDUSTRIAL agreements and schedules of wages and working conditions received in the Department are outlined in the LABOUR GAZETTE from month to month. It is not always possible because of limitation of space to include all agreements received each month. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of employers and workers are also included. Verbally accepted agreements are so indicated.

Manufacturing: Fur, leather, etc.

TORONTO, ONTARIO.—THE TORONTO INDEPENDENT FURRIERS' ASSOCIATION AND THE INTERNATIONAL FUR WORKERS' UNION, LOCALS NOS. 35, 40 AND 65.

Agreement to be in effect from April 5, 1938, to April 4, 1940.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, June, 1936, page 543, with certain minor changes:

The ratio of apprentices is one apprentice to every thirteen experienced workers or major fraction thereof.

The union will give its consent to contracting, sub-contracting or piece work in emergencies when work is required which is not usually performed in the employer's factory or for which such factory is not equipped or its workers not trained, but in any event all such work is to be sent to a shop operating under the terms of this agreement or a similar agreement with the union, and no employee shall be permitted to do homework in any case.

Misconduct of a worker to be cause for discipline or discharge, such cause to be determined by the permanent conciliation committee.

The reference to having a schedule approved under the Industrial Standards Act which was in the previous agreement is omitted from this agreement.

The unemployment insurance fund to be administered by an Unemployment Insurance Board composed of a representative of the association and a representative of the union and a chartered accountant, the money to be paid out only on signature of two of these three.

The wages and hours are unchanged, with a 40 hour week, and overtime at time and one half. Weekly minimum wages: cutters (male) $40 for first class, $35 for second class; male operators and finishers $30 for first class, $25 for second class; female operators and finishers $25 for first class and $20 for second class; blockers and nailers (after five years) $28; assistant finishers and tapers $18.

TORONTO, ONTARIO.—CERTAIN INDIVIDUAL FURRIERS AND THE INTERNATIONAL FUR WORKERS' UNION LOCALS NOS. 35, 40 AND 65.

Agreement to be in effect from April 5, 1938, to April 4, 1940.

This agreement is similar to the one summarized above for the Independent Furriers' Association with certain minor differences.

TORONTO, ONTARIO.—FUR TRIMMINGS MANUFACTURERS' ASSOCIATION AND THE INTERNATIONAL FUR WORKERS' UNION, LOCALS NOS. 35, 40, 65 AND 100.

Agreement to be in effect from April 15, 1938, to April 15, 1940.

This agreement is similar to the agreement noted above between Locals 35, 40 and 65 of the union and the Independent Furriers' Association with the following and certain other minor differences:

Overtime: time and one quarter.

For the unemployment insurance fund, the employers agree to pay 2 per cent of the payroll and the union members 2 per cent of their wages.

Construction: Buildings and Structures

HALIFAX, N.S.—ELECTRICAL CONTRACTORS AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL NO. 625.

Agreement to be in effect from May 1, 1938, to April 30, 1939, and thereafter from year to year, subject to notice.

Only union members to be employed.

Hours: 8 per day, 4 on Saturdays, a 44 hour week. When necessary to work two or more shifts a day, the men employed between 5 p.m. and 8 a.m. to be paid at the rate of 8 hours' pay for 7 hours' work.

Overtime: time and one half for first four hours worked; thereafter, and all work on Sundays and on ten specified holidays, double time.

Minimum hourly wage rates: for journeymen electrical workers, 85 cents; for apprentices, from 25 cents during first year to 50 cents during fourth year. A journeyman in charge of two or more journeymen to be considered a charge hand and paid 10 cents per hour over the journeymen's rate.

Not more than one helper to be allowed to three journeymen.

Men doing work outside the city limits to receive all expenses, including board, railway fares both ways and travelling time.

Any grievances arising between the parties to be reported to the president or business agent of the union.

OTTAWA, ONTARIO.—OTTAWA SHEET METAL EMPLOYERS' ASSOCIATION AND THE SHEET METAL WORKERS INTERNATIONAL ASSOCIATION, LOCAL NO. 47.

Agreement to be in effect from August 1, 1938, to April 30, 1939, and thereafter from year to year, subject to notice.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, October, 1937, page 1154, with this exception:

Minimum wage rate for journeymen sheet metal workers: 85 cents per hour (an increase of 3 cents per hour).

Niagara Falls, Ontario.—A Certain Cut Stone Company and the Niagara Falls, Ontario, Union of the Journeymen Stone Cutters' Association.

Agreement to be in effect from May 1, 1938, to April 30, 1939, and thereafter from year to year, subject to notice.

Only union members to be employed, if available.

Hours: 8 per day, 4 on Saturdays, a 44 hour week, both on the job and in all yards.

Overtime: time and one half for first two hours; thereafter and all work on Saturday afternoon, on Sundays and seven specified holidays, double time.

Wages for journeymen stonecutters: 95 cents per hour.

One apprentice allowed for each five journeymen employed, and apprentices to serve four years.

If any employer sends a stonecutter to work out of town who has been working at the firm's yard, board and railway fare to be paid by the firm.

Each party to elect a committee who shall endeavour to adjust grievances. If necessary a dispute will be referred to arbitration.

St. Thomas, Ontario.—Master Plumbers and the United Association of Plumbers and Steamfitters, Local No. 694.

Agreement to be in effect from May 1, 1938, to April 30, 1939, and thereafter from year to year, subject to notice.

Only union members and duly indentured apprentices to be employed to install any materials or handle the tools of the trade.

Hours: 8 per day, 4 on Saturday, a 44 hour week.

Overtime: time and one half; work on Sundays and eight specified holidays, double time.

Minimum wage rate for journeymen plumbers and steamfitters: 80 cents per hour. Fifth year junior mechanics to be paid two thirds of journeyman's rate.

Journeymen sent out of the city in charge of work to have their fares and board paid and travelling time to 5 p.m.

One junior mechanic allowed in any shop to each branch of the trade except when there are more than five journeymen plumbers or five journeymen steamfitters employed.

Apprentices to be employed in accordance with the Ontario Apprenticeship Act.

A joint conference board to be formed for the settlement of any disputes. If they are unable to settle any dispute, the matter will be referred to the international office of the union, and no strike or lockout to occur until their decision has been given.

Kirkland Lake, Ontario.—Master Plumbers and the United Association of Plumbers and Steamfitters, Local No. 151.

Agreement to be in effect from January 25, 1938, to January 25, 1939, and thereafter from year to year subject to notice. It applies to the townships of Teck, LeBel, Gauthier, McVittie, Hearst and McGarry.

Only union members to be employed, if avialable.

Hours, overtime and minimum wage rate for journeymen are as noted in the Labour Gazette, May, page 580 in the summary of the schedule which was made binding under the Industrial Standards Act, that is a 44 hour week, time and one half for overtime, double time for work on Sundays, and holidays and a minimum wage of $1.00 per hour for journeymen plumbers and steamfitters.

Wage for labourers and helpers: 50 cents per hour. Wage rate for junior mechanics, two thirds of journeymen's rate.

One helper allowed in any shop employing five plumbers or less and one helper for each additional five plumbers. One helper allowed in any shop employing three steamfitters or less and one for each additional three steamfitters.

Apprentices to be employed under the terms of the Ontario Apprenticeship Act.

Employers to furnish transportation to employees working outside a defined area.

A joint conference board to be formed to deal with any disputes.

Eastern Canada.—Trade Union Schedule of Wages and Conditions of National Union of Shovelmen and Operating Engineers, No. 1.

This schedule which has been verbally accepted by a number of firms covers work in the district of Eastern Canada and is effective from May 1, 1938.

Hours: 8 per day. Straight 8 hour shifts to allow a 10 minute lunch period with pay. A month to consist of the calendar working days (or nights) with 8 hours or any fraction thereof a day's work.

Work on statutory and civic holidays and for Sunday repair work, time and one half; double time for moving, or digging on Sunday.

Wages and overtime: shovel engineers $250 per month (overtime $1.25 per hour); firemen $150 per month (overtime 75 cents per hour); oilers $120 per month (overtime 60 cents per hour); crane engineers $220 per month (overtime $1.10 per hour). If men are hired by the hour, they shall be paid at these overtime rates and at time and one half after 10 hours.

Employer will refund to competent men transportation to the jobs and will provide return fare when laid off.

Regina, Sask.—Employers of Carpenters and Joiners and the Employed Carpenters and Joiners.

This agreement which was signed by the Builders Exchange and the United Brotherhood of Carpenters and Joiners is in effect from April 9, 1938, to March 31, 1939.

The terms are similar to those of the schedule later approved under the Industrial Standards Act and noted in the Labour Gazette, August, page 948, except that wage rates for apprentices are not included in this agreement. (The 44 hour week and the wage rate of 75 cents per hour for journeymen carpenters are in effect.)

REGINA, SASK.—REGINA MASTER PLUMBING, HEATING AND SANITARY ENGINEERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL 179.

Agreement to be in effect from March 1, 1938, to March 1, 1939.

The terms of this agreement are similar to those of the schedule which was approved under the Industrial Standards Act and noted in the LABOUR GAZETTE, April, page 454, with these exceptions:

Union members to be employed, if available and the union members agree to work only for recognized shops and to give preference to the shops which are party to this agreement.

Hours: men working out of town may work 50 hours per week.

Should any grievance arise, it will be referred to the advisory committee.

EDMONTON, ALBERTA.—EDMONTON SOCIETY OF DOMESTIC, SANITARY AND HEATING ENGINEERS, INC. AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL NO. 488.

Agreement to be in effect from June 30, 1938, to April 30, 1939, and thereafter from year to year, subject to notice.

The employers agree to employ union members, and the union members agree to work only for employers who are parties to this agreement.

Hours: 8 per day, 4 on Saturday, a 44 hour week. (The 40 hour week had been in effect during the previous three years.) For night shifts, 7 hours to be worked, with 8 hours' pay.

Overtime. time and one half until midnight, thereafter and all work after 5 p.m. on Saturday, all work on Sundays and eight specified holidays, double time.

Minimum wage rate for journeymen plumbers and steamfitters: $1 per hour (an increase of 5 cents per hour over the previous rate).

For work out of town, transportation, board and travelling time during regular hours to be paid by the employer.

Only one apprentice allowed each shop and they must be duly indentured; apprenticeship to be for five years.

Wages for apprentices: from $8 per week during first year to $20 during fifth year.

Any dispute which cannot be adjusted by the union representative will be referred to a joint conference board.

CALGARY, ALBERTA.—CALGARY GENERAL CONTRACTORS' ASSOCIATION AND THE CALGARY BRICKLAYERS' AND MASONS' LOCAL UNION.

Agreement to be in effect from June 1, 1938, to May 31, 1939.

Hours: 8 per day, 4 on Saturdays, a 44 hour week. In case of night shifts, 7 hours' work for 8 hours' pay.

Overtime: from 5 p.m. to midnight from Monday to Friday, from noon to 5 p.m. on Saturdays, time and one half; after these hours and all work on Sundays and three specified holidays, double time.

Minimum wage rate for bricklayers and masons: $1.10 per hour; foremen at least 10 cents per hour extra.

For work out of town, railway fare and travelling time to be paid by the employer.

CALGARY, ALBERTA.—CALGARY GENERAL CONTRACTORS' ASSOCIATION AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, NO. 1779.

Agreement to be in effect from August 1, 1938, subject to one month's notice.

Hours: 8 per day, 4 on Saturdays, a 44 hour week. For night shifts, 7 hours work for 8 hours' pay.

Overtime: time and one half; work on Sundays and four specified holidays, double time.

Minimum wage rate for carpenters and joiners; 80 cents per hour.

NELSON AND TRAIL, B.C.—CERTAIN CONTRACTORS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCALS 1843. (NELSON) AND 2165 (TRAIL).

Agreement to be in effect from July 1, 1938, to March 31, 1939.

Hours: 8 per day.

Overtime: time and one half for first four hours; thereafter and all work on Sundays and holidays, double time.

Minimum wage rate for carpenters: 75 cents per hour.

VANCOUVER, B.C.—CERTAIN CONTRACTORS AND THE BROTHERHOOD OF PAINTERS, DECORATORS AND PAPERHANGERS, LOCAL 138.

Agreemnt made in 1937 and still in effect in 1938.

Only union members to be employed.

Hours: 8 per day.

Overtime: time and one half from 5 p.m. to midnight; thereafter and all work on Sundays and legal holidays, double time.

Wages per hour for painters, decorators and paperhangers: 80 cents.

VANCOUVER, B.C.—CERTAIN GLASS MANUFACTURING AND CONTRACTING FIRMS AND THE BROTHERHOOD OF PAINTERS, DECORATORS, PAPERHANGERS AND GLASSWORKERS, LOCAL 954.

Agreement to be in effect from May 1, 1938, to May 14, 1939, and thereafter from year to year, subject to notice.

Hours: 8 per day, 4 on Saturdays, a 44 hour week. Where other trades on outside jobs work a 40 hour week, the 40 hour week to be in effect for members of this union.

Overtime: time and one half from 5 p.m. to midnight; thereafter and work on Sundays and holidays, double time.

Minimum hourly wage rates: plate glass foreman or head cutter, 70 cents; bevellers, silverers, leaded glass cutters, leaded glass glaziers and sheet glass cutters, 60 cents; outside putty glaziers, 85 cents.

For work outside the city, transportation, board and travelling time to be paid by the employer.

One apprentice allowed to each three journeymen. Apprentices to be registered and governed by the Provincial Apprenticeship Act.

Any dispute which cannot be settled between the employer and members of the union will be referred to a joint conciliation board whose decision will be final and binding.

Transportation and Public Utilities: Local Transportation

MONTREAL, QUEBEC.—A CERTAIN CARTAGE AND TRUCKING FIRM AND THE INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, STABLEMEN AND HELPERS, LOCAL NO. 730.

The agreement which came into effect following the strike reported elsewhere in this issue, is to be in effect from August 2, 1938, to November 30, 1938, and thereafter from year to year, subject to notice.

The company recognizes the union as sole bargaining agency for its employees and will not discriminate against any employee on account of his membership in the union or on union committees. The union may appoint members who are employees of the company as union delegates to present any grievances of the employees to the company.

Hours: 10 per day, between 7 a.m. and 6 p.m. from Monday to Saturday, a 60 hour week.

Overtime: time and one half, with this exception: for ordinary harbour work and for city coal deliveries overtime need be paid only when time required to complete delivery extends after 8 p.m. in which case overtime pay will be retroactive to 6 p.m. Work on Sundays and three specified holidays, double time. All employees covered by this agreement to receive at least four hours work if called to work on Sunday or legal holidays.

Minimum wages: all men engaged in the loading and transporting of sugar and who at the time of signing the agreement were receiving 33½ cents per hour and all hourly working men who were also receiving 33⅓ cents per hour, to be increased to 35 cents per hour; all hourly working men who were then receiving 30 cents to be increased to 35 cents; all hourly working men who were receiving 26½ cents to receive 28 cents.

Seniority to be recognized in principle and a committee consisting of an official of the company and a representative of the union to be formed for this purpose.

The parties agree to meet for the discussion of any differences and disputes and removal of grievances.

Collective Labour Agreements Act, Quebec

The following agreements and amendments to agreements have recently been made obligatory by Order in Council and are summarized in the next article:

Fur Workers, Quebec.
Fur Workers (Wholesale), Montreal.
Fur Workers (Retail), Montreal.
Printing Trades, Quebec.
Longshoremen, Sorel.
Grocers and butchers, Sherbrooke.
Shoe Repairers, Sherbrooke (amendment).
Barbers and hairdressers, Three Rivers (amendment).
Barbers and hairdressers, Montreal.

Industrial Standards Acts

The folowing schedules have recently been made binding by Orders in Council and are noted in a special article below:

ONTARIO

Jewellery Workers, Toronto.
Carpenters, Brantford.
Coal hoisting, Toronto.
Taxi drivers, Toronto.

SASKATCHEWAN

Sheet Metal Workers, Regina.

ALBERTA

Bakers, Edmonton.
Honey Producers, Vauxhal (amendment).
Marble and Tile Setters, Edmonton.
Plumbers, Edmonton.
Taxi Drivers, Edmonton.
Bowling Alleys, Edmonton.
Bowling Alleys, Calgary.

COLLECTIVE LABOUR AGREEMENTS ACT, QUEBEC
Recent Proceedings under the Act

THE Collective Labour Agreements Act which was assented to March 18, 1938, amends the Act respecting Workmen's Wages, 1937, by changing the title of the Act and by certain other changes which are summarized in the May issue of the LABOUR GAZETTE, page 503. Agreements and regulations under the Act respecting Workmen's Wages and under the original Act, "The Collective Labour Agreements Extension Act, 1934," continue in effect for the period for which they were made or have been renewed or amended. Under the Collective Labour Agreements Act, any party to a collective agreement made between the representatives of an association of employees and the representatives of an association of employers or one or more employers may apply to the Liteutenant-Governor in Council through the provincial Minister of Labour to have those terms of such agreements which govern wages, hours of labour, apprenticeship, classification of operations, determination of classes of employers and employees and all such provisions as the Lieutenant-Governor in Council may deem in conformity with the spirit of the Act, made obligatory on all employers and employees in the trade, industry, commerce or occupation within the district determined in the agreement. Notice of such application is published, and thirty days is then allowed for filing of objections and the Minister may hold an

inquiry. After this period, if the Minister considers that the terms of the agreement "have acquired a preponderant significance and importance" and that it is advisable, with due regard to economic conditions, an Order in Council may be passed granting the application, and making the provisions of the agreement obligatory from the date of publication of the Order in Council in the *Quebec Official Gazete* or its provisions may be made retroactive for a period not exceeding four months. The Order in Council may be amended or revoked at any time by the Lieutenant-Governor in Council and such amendment or revocation must be published in the *Quebec Official Gazette*. Unless otherwise stipulated, these agreements do not apply to provincial government departments or services or to work done by a third party for the provincial government under a contract providing for a scale of minimum wages. A joint committee must be formed by the parties to an agreement made obligatory under this Act and the Minister may add to such committee representatives nominated by employers and employees not parties to the agreement. The committee is to make its own by-laws and when these are approved by Order in Council and published in the *Quebec Official Gazette,* the committee is constituted a corporation. A joint committee may require certificates of competency from workers within the scope of the agreement in towns of 5,000 or more, and such by-law must be approved by Order in Council and published in the *Quebec Official Gazette*. Proceedings under the Collective Labour Agreements Extension Act were summarized in the LABOUR GAZETTE from June, 1934, to July, 1937. Proceedings under the Workmen's Wages Act were noted in the issues from July, 1937, to April, 1938. Proceedings under the Collective Labour Agreements Act are noted in the issues beginning May, 1938.

Recent proceedings under the Act include: the extension by Orders in Council of agreements affecting fur workers at Quebec, fur workers (industrial and wholesale) at Montreal, fur workers (retail establishments) at Montreal, printing trades at Quebec, longshoremen at Sorel, grocers and butchers at Sherbrooke, barbers and hairdressers at Montreal; the amendment by Orders in Council of agreements affecting barbers and hairdressers at Three Rivers and shoe repairers at Sherbrooke, all of which are summarized below. Requests for the extension of the folowing new agreements were published in the *Quebec Official Gazette*: garage and service station employees at Three Rivers in the issue of August 13, building trades at St. John in the issue of August 20, longshoremen at Montreal, ship liners at Montreal and steamship checkers and coopers at Montreal in the issue of August 27. In adition, Orders in Council were published in the August 27 issue approving the constitution and by-laws of certain joint committees which are noted below.

Manufacturing: Fur and leather products, etc.

FUR WORKERS, QUEBEC, P.Q.—An Order in Council, approved August 9 and published in the *Quebec Official Gazette,* August 13, makes binding the terms of an agreement between La Section de Fourrure de l'Association des Marchands Detaillants du Canada, Inc. (the Furriers Section of the Retail Merchants' Association of Canada) and certain other furriers and le Syndicat Catholique National des Employés en fourrure du district de Québec (the National Catholic Union of Fur Workers of the Quebec district).

The Order in Council is to be in effect from August 13, 1938, to August 12, 1939, and thereafter from year to year, subject to notice.

The industrial jurisdiction includes, any work of the fur trade whether performed in a special shop, workshop or in any other establishment, even if only a side line to any trade or occupation.

The territorial jurisdiction comprises the city of Quebec.

Hours: 8 per day, a 48 hour week.

Overtime: any work after 6 p.m. or before 8 a.m. to be paid at time and one half, except overtime work done by a foreman earning $40 per week.

Minimum wages per week: first-class cutters $27, second-class cutters $24, third-class cutters $18, journeymen blockers $20, first-class female operator and finisher $14, second-class female operator and finisher $12. Wages for foremen 10 per cent above first-class cutter.

The joint committee may establish lower rates for handicapped employees.

Not more than one apprentice allowed for each three journeymen or fraction thereof. Apprenticeship to be for six years for male employees and three years for female employees.

Minimum wages per week for apprentices: for male apprentices from $6 during first year to $16 during sixth year; for female apprentices, from $6 for first year to $10 during third year.

Any work of the fur trade done at home by any person, with the exception of the person working for an employer, is prohibited.

Any work of the trade done by contract, subcontract or piecework whether inside the shop or elsewhere is prohibited unless this work is done in a shop where conditions of work and wage rates are the same as established by this Order in Council. Piece work in a shop is prohibited.

The joint committee to be formed immediately and the inspectors appointed by this committee to have the right to inspect any shop or home where fur work is being carried on.

A certificate of qualification from the joint committee is required of all fur workers.

FUR WORKERS, (INDUSTRIAL AND WHOLESALE), MONTREAL.—An Order in Council, approved August 9, and published in *The Quebec Official Gazette,* August 13, with correction as published in the August 20 issue, makes obligatory the terms of an agreement between the Montreal Furriers' Association, the Fur Trimmers' Protective Association, Inc. and the International Fur Workers' Union, Locals Nos. 66 and 57.

The Order in Council to be in effect from May 1, 1938, to April 30, 1940.

The industrial jurisdiction includes all employers who are industrial or wholesale dealers in fur, but does not apply to fur retailers except certain named retail establishments who had signed an agreement with the union before June 6, 1938.

The territorial jurisdiction includes the Island of Montreal and within 50 miles of it. It is divided into two zones; zone I, the Island of Montreal and within 10 miles of it, zone II the rest of the jurisdiction.

Hours in zone I: a 40 hour week for both manufacturing and retail establishments; in manufacturing establishments, 8 per day from Monday to Friday inclusive; in retail establishments 7 per day from Monday to Friday and 5 hours on Saturday.

Hours in zone II: 8 per day, 6 days per week, a 48 hour week.

Overtime: time and one-half except as noted below. No overtime permitted during months of January to June inclusive except trimmers who may do overtime work in June. During the other months no overtime permitted unless all the workers of each factory are fully employed. Overtime not to exceed 20 weeks in any one establishment and never to extend after 9 p.m. It is permitted for 4 hours overtime to be done at single time during September, October, November and December. Trimmers may work 4 hours overtime each week in a single day, during the months of June, July, August and September, at single time. All other overtime to be paid at time and one half.

First class cutters, operators, nailers, finishers, etc. are those working on the more expensive furs, such as mink, caracul, seal, Hudson seal, wolf, martens, etc.

Minimum wages per week in both zones I and II: first class cutters $36.50, second class cutters $29.50; first class male operators $29.50, second class male operators $21.50, first class female operators $21.50, second class female operators $16.50, first class finishers $19.50, second class finishers $15.50, first class apprentice cutters, blockers and trimmers $22, second class apprentice cutters, blockers and trimmers $14, first class examiners $25.50, second class examiners $21.50; examiners employed in trimmings to be paid $25.50 for first class and $14 for second class; male finishers employed by trimmers to be paid $25.50 for first class and $21.50 for second class; employees employed on piece plates, i. e., beginners, cutters and operators, $14. These minimum rates are all $1.50 per week higher than under the previous Order in Council except for apprentice cutters, blockers and trimmers for whom the increase is $2 per week. All employers who were employed during 1937 and engaged in 1938 by the same employers, and who in 1937 were receiving higher than the minimum rates, are also to receive an increase of $1.50 per week. Workers promoted from second to first class to receive 25 per cent of the difference in wage rate each six months till the first class rate is reached.

In the weeks in which one of the seven specified holidays occur an employee to be paid for such holiday in the same proportion as the time he has worked in that week bears to the full working week. Any employee working on these holidays to be paid time and one-half in addition to his pay for that day.

Male apprentices to be limited to one in each factory employing less than 15 employees and one additional apprentice in factories employing more than 15. Female apprentices may be employed as required but must be between ages of 16 and 20 inclusive.

No contracting or sub-contracting of piece work to be permitted whether inside or outside the factory unless the factory to which such work is given is under the same conditions as established in this Order in Council. No home work permitted.

Inspectors engaged by the Joint Committee may inspect all establishments in the industry.

FUR WORKERS (RETAIL ESTABLISHMENTS), MONTREAL.—An Order in Council, approved August 9, and published in the *Quebec Official Gazette,* August 13, with correction in the issue of August 20, makes obligatory the terms of an agreement between l'Association des maîtres-fourreurs, Canadiens Inc. (The Association of Canadian Master Furriers) and l'union nationale du vêtement, section de la fourrure, (the National Clothing Union, Fur Section).

The Order in Council to be in effect from May 1, 1938, to April 30, 1940.

The industrial jurisdiction includes all retail establishments employing fur workers except those employers who had signed agreements with the International Fur Workers Union and who are included in the Order in Council summarized above. It does not include fur trimming and dyeing.

Hours on the Island of Montreal: 40 per week, distributed according to the needs of the employer, on any day from 8 a.m. to 6 p.m. except Sunday.

Hours outside the Island of Montreal: 48 per week.

Overtime: any time after 6 p.m. and any work over 40 hours per week, time and one-half. All employees to be paid for seven specified holidays in proportion to the duration of work of the employee in the week in which the holiday occurs. If an employee works on any of these holidays he will be paid time and one-half in addition to being paid for the holiday.

At least half of the employees to be of Class A in each operation.

Wages per hour on the Island of Montreal and any other towns outside the Island of Montreal with a population of 25,000 or more: qualified cutter (Class A) 95 cents, (Class B) 80 cents; operator (Class A) 75 cents, (Class B) 60 cents; finishers (Class A) 70 cents, (Class B) 55 cents; blockers (Class A) 55 cents, (Class B) 35 cents; female operator (Class A) 55 cents, (Class B) 40 cents; female finishers (Class A) 50 cents, (Class B) 40 cents.

Wages outside of Island of Montreal in towns of less than 25,000 may be 25 per cent less than the above rates. Any branch of a shop operating on the Island of Montreal, which

may be opened during the existence of the Order in Council not to benefit by this 25 per cent reduction.

Wages per hour for apprentices: apprentices (male or female) from 17½ cents during first half of first year to 30 cents during second half of second year; apprentice cutters and trimmers: from 57½ cents during first half of first year to 70 cents during second half of third year.

Home work is prohibited.

Work by contract, by sub-contract or by the piece performed inside or outside the shop is prohibited unless it is carried on in a shop governed by the provisions of this agreement.

Apprentices to be registerd with the joint committee. Any employer may have two apprentices; if the employer has five employees, he may have three apprentices; if ten employees, four apprentices, if fifteen employees, five apprentices; if twenty-five employees, six apprentices.

Manufacturing: Printing and Publishing

PRINTING TRADES, QUEBEC.—An Order in Council approved August 9, and published in *The Quebec Official Gazette,* August 13 and a correction published in the issue of August 27, makes obligatory the terms of an agreement between the Master Printers and Bookbinders of Quebec and district, certain newspaper and job printing establishments and L'Union Catholique des Imprimeurs et Relieurs de Québec (the Catholic Union of Printers and Bookbinders), Le Syndicat Catholique et National des Ouvriers de l'Imprimeurie de la Beauce (the National Catholic Union of Printing Shop Workers of Beauce), Le Syndicat des Imprimeurs de Rimouski et de Rivière-du-Loup, (the Printers Union of Rimouski and Rivière-du-Loup) L'Union Typographical Union of Quebec, No. 302), L'Union des Pressiers et Clicheurs de Québec, No. 152 (the Union of Pressmen and Stereotypers of Quebec, No. 152), L'Union des Relieurs de Québec, No. 152, (the Bookbinders' Union of Quebec, No. 152), L'Union des Photograveurs de Québec, (the Union of Photo engravers of Quebec) and Le Conseil des Métiers Alliés de L'Imprimerie de Québec et Levis (the Allied Printing Trades Council of Quebec and Levis).

A previous agreement was summarized in the LABOUR GAZETTE, November, 1935, page 1064.

The decree is to be in effect from August 13, 1938, to April 1, 1940 and shall renew itself from year to year unless terminated by written notice given by either party sixty days before the expiration of the original term or the expiration of any subsequent year.

The territorial jurisdiction comprises the judicial districts of Quebec, Beauce, Montmagny, Rimouski, and that portion of St-François which is not already covered by the decree covering the printing industry in the Montreal district.

The professional jurisdiction includes any person employed in producing printed matter, including bookbinders, rulers and newspaper employees whether they are working in a trade plant, a private or industrial enterprise using normal printing presses, offset and photo-litho-presses, stencil duplicators and all other graphic reproduction processes, including "silk" impressions, whether they are working in an institution, commercial enterprise or in any other establishment whether or not such operations constitute its principal business. It does not include office workers, maintenance men, mailers or others not actually engaged in the production of such printed matter.

Establishments covered by the decree are divided into three classes: Class A covers daily newspaper and three specified printing firms, Class B covers plants equipped with one or more composing machines, linotype or monotype, one or more cylinder presses working more than 20 hours per month and book binding establishments using motive power. Class C, covers establishments having only non-automotive feeding presses and having neither composing machines nor cylinder presses.

Hours: In establishments of classes A and B, 46 per week, in class C, 48 per week. For night work, 43 hours shall comprise a night working week.

Overtime: Work done outside of the specified hours or in excess of the weekly maximum shall be paid for at the rate of time and one-half. Work done on Sunday or on five specified holidays shall be paid for at the rate of double time. However, employees engaged in printing morning newspapers may work Sunday evening at the regular rates for night work.

Rates of wages: Journeymen typographers $30.50 and $28 per week in Classes A and B respectively. Journeymen pressmen, stereotypers, bookbinders, rulers, photographers and photolihto apparatus operators $26.50 per week in both class A and class B. Typographers, pressmen or bookbinders in class C $22.08 per week or $0.46 per hour. All journeymen working on the night shift shall receive $2 per week more than the regular rate of wages of employees working during the day. When foremen are absolutely necessary in any shop they shall be paid at least $3 per week more than journeymen.

Wages for apprentices range from $5 per week in the first year to $18 per week in the sixth year.

Transportation and Public Utilities: Water Transportation

LONGSHOREMEN, SOREL.—An Order in Council approved August 20, and published in *The Quebec Official Gazette,* August 27, makes obligatory the terms of an agreement between certain shipping and stevedoring concerns and Le Syndicat Catholique et National des Débardeurs de Sorel, Inc. (the National Catholic Union of Longshoremen of Sorel, Incorporated).

This agreement is in effect from August 27, 1938, to January 1, 1939, and from year to year thereafter subject to notice.

It is similar to the one previously in effect and summarized in the LABOUR GAZETTE, August, 1937, page 922, except that the union

is given the right to appoint a representative who shall have access to all docks, sheds or vessels where men are working in order to supervise the carrying out of the agreement. Certain new clauses specify the number of men to comprise a gang on different types of work and provide for the employment of a water boy on all bulk cargo excepting grain at 35 cents per hour.

Trade: Retail

GROCERS AND BUTCHERS, SHERBROOKE.—An Order in Council approved on August 9, and published in the *Quebec Official Gazette,* August 13, makes obligatory the terms of an agreement between "L'Association des Epiciers-Bouchers des Cantons de l'est (the Association of Grocers and Butchers of the Eastern Townships) and Le Syndicat des Employés de Magasins de Sherbrooke, Inc. (the Union of Store Employees of Sherbrooke, Incorporated).

The agreement shall be in effect from August 13, 1938, to May 1, 1939, but shall be renewed for another year unless either party gives notice before February 1, 1939.

The decree governs any grocery, butcher shop and confectionery-restaurant's trade in the city of Sherbrooke and within the territory three miles from its limits. Hotels and restaurants not engaged in the confectionery business shall not be governed by the decree.

Hours: For the first four business days of the week establishments may be open from 8.00 a.m. to 6.30 p.m. and on Fridays and Saturdays they may remain open two hours longer. Certain provisions allowing for longer hours on days preceding holidays are made by the decree. Confectionery stores are allowed to work such hours as are "necessary to the enterprise" but must not sell groceries after hours laid down for grocery stores proper. Grocery stores have similar rights in regard to the sale of confectionery products.

No work on Sundays and twelve specified holidays except for confectionery-restaurants.

Wages: Clerks working in establishments are divided into four classes for the purpose of wages, according to the number of employees in the establishment. The apportionment of employers is as follows:—

Number of employees	Class A	B	C	D
Two	1	..	..	1
Three	1	1	..	1
Four	1	1	1	1
Five	1	1	2	1
Six	1	1	2	2
Seven	1	1	3	2

The minimum weekly wages for these classes are: A, $15; B, $12; C, $10; and D, $8.

Extra helpers shall receive 25 cents per hour.

Weekly wages for delivery men are as follows: deliveryman with truck $12, with horse drawn vehicle $10, with bicycle furnished by employer $5 and with own bicycle, $6.

In case of misunderstandings in regard to classification, the Joint Committe shall decide and its decision shall be final.

Service: Custom and Repair

SHOE REPAIRERS, SHERBROOKE.—An Order in Council approved August 20, and published in *The Quebec Official Gazette,* August 27, amends the previous Order in Council for this trade (LABOUR GAZETTE, July, 1938, page 800) by providing that the territorial jurisdiction be extended to include a radius of 3 miles from the limits of the city of Sherbrooke; and also by providing that "the clients other than men furnishing the material shall pay 65 per cent of the prices already established."

Service: Business and Personal

BARBERS AND HAIRDRESSERS, THREE RIVERS.—An Order in Council, approved August 20, and published in the *Quebec Official Gazette,* August 27, amends the previous Orders in Council for these trades (LABOUR GAZETTE, October, 1937, page 1158, February, 1938, page 215 and July, page 800) by adding to the territorial jurisdiction the area within two miles of the towns in the jurisdiction, and by specifying two zones, of which zone I includes Three Rivers and Cap-de-la-Madeleine and within two miles of them and zone II the rest of the territorial jurisdiction.

BARBERS AND HAIRDRESSERS, MONTREAL.—An Order in Council, approved August 9 and published in the *Quebec Official Gazette,* August 13, with a correction published in the issue of August 20, makes obligatory the terms of an agreement between "Le Syndicat professional des Maîtres Barbiers de Montréal, Inc." (the Professional Union of Master Barbers of Montreal, Incorporated), L'Association des Maîtres Barbiers et Coiffeurs de Montréal et District, Inc." (the Association of Master Barbers and Hairdressers of Montreal and District Incorporated), L'Association des Maîtres Barbiers independents de Montréal, Inc.", (the Association of Independent Master Barbers of Montreal, Incorporated), The Master Barbers and Men's Hairdressers of Montreal, "La Corporation des Coiffeurs, section de Maîtres", (The Corporation of Hairdressers, Master's Section) on the one part and "La Corporation des Coiffeurs, section des Compagnons" (the Corporation of Hairdressers, Journeyman's section), "L'Association protectrice des Employés Barbiers de Montréal, Inc." (the Protective Association of Employed Barbers of Montreal, Incorporated), "L'Union internationale des Employés Barbiers d'Amerique, local 455" (the Journeymen Barbers' International Union of America, No. 455) and the "Syndicat national catholique des

Employés Barbiers-Coiffeurs de Montréal, Inc." (the National Catholic Union of Journeymen Barber-Hairdressers of Montreal, Incorporated) on the other part.

This agreement replaces one previously in effect (LABOUR GAZETTE, July, 1935, page 631, October, 1935, page 953, January, 1936, page 89 and August, 1938, page 946).

Territorial jurisdiction comprises the Island of Montreal.

Hours: 55 per week distributed between 8 a.m. and 7 p.m. on Monday, Tuesday, Wednesday and Thursday, between 8 a.m. and 8 p.m. on Friday and between 8 a.m. and 10 p.m. on Saturday and the eves of holidays. Customers who enter the shops before these hours may be served.

Wages: The minimum rates of wages shall be the following: for regular barber-hairdresser journeymen $16 per week plus a commission of 50 per cent on all gross receipts in excess of $25 made by him in the course of the week. For each extra barber-hairdresser journeyman 27 cents per hour plus a commission of 10 per cent on all gross receipts made by him in the course of the working week unless his gross receipts exceed $25 when the commission laid down for regular employees shall apply. Manicurists when employed, shall recive $12.50 for a 48 hour week. Wages are to be paid at least once a week.

Apprentices weekly wage rates range from $5 in second six months of apprenticeship to $13 during sixth six months.

No object or service of any value which may serve to decrease the rates in the agreement may be given a customer. Minimum rates to be charged the customer for each piece of work are set out in the agreement.

A shop employing two regular journeymen may employ one apprentice; a shop with four regular journeymen may employ two apprentices.

After May 1, 1939, there shall never be more than two apprentices per shop. The apprentices employed at the time of the enforcement of the present agreement shall terminate the six month term of apprenticeship already begun but they shall be governed by the provisions of the present decree for the final period of their apprenticeship.

Joint Committees

The constitution and by-laws of the joint committees set up under the following agreements were approved by Orders in Council and published in the August 27, issue of the *Quebec Official Gazette*:

Aluminum Industry, Arvidia.

Aluminum Industry, Shawinigan Falls.

Garage and Service Station Employees, Quebec.

Coal handlers, Montreal.

INDUSTRIAL STANDARDS ACTS

Schedules of Wages and Hours Recently Approved by Provincial Orders In Council in Ontario, Saskatchewan and Alberta

IN four provinces—Ontario, Alberta, Nova Scotia and Saskatchewan—legislation provides that, following a petition from representatives of employers or employees in any industry, the Provincial Minister charged with the administration of the Act may himself, or through a government official delegated by him call a conference of representatives of employers and employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council on all employers and employees in the industry in the zone designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to assist in carrying out the provisions of the Act and the regulations. The administration and enforcement of the Act is placed in Ontario under the Industry and Labour Board, assisted by industrial standards officers; in Alberta under the Board of Industrial Relations; in Nova Scotia under the Minister of Labour who may appoint inspectors; in Sasaktchewan under the Commissioner of Labour and Public Welfare. Reviews of these Acts and amendments have been published in the LABOUR GAZETTE, as follows: Ontario, in the issue of June, 1935, page 530, May, 1936, page 410, May, 1937, page 505, and May, 1938, page 501; Alberta, in June, 1935, page 504, June, 1936, page 501, June, 1937, page 640, and June, 1938, page 633; Nova Scotia, in June, 1936, page 604; Saskatchewan, in the issue of June, 1937, page 635, and May, 1938, page 507.

Ontario

Manufacturing: Miscellaneous Products

JEWELLERY WORKERS, TORONTO.—An Order in Council, dated August 18, and published in *The Ontario Gazette*, August 27, makes binding the terms of a schedule of wages and hours in the jewellery manufacturing industry in the city of Toronto and adjacent suburban area.

The Order in Council to be in effect from September 6, 1938, to July 31, 1939.

Hours: 8 per day from Monday to Fridays, 4 on Saturdays, a 44 hour week, except during months of June and July when there will be no work on Saturday and a 40 hour week.

Overtime may be worked for three hours on Mondays, Wednesdays and Fridays and 4 hours on Saturdays; all other overtime including work on Sundays and seven specified holidays may only be done with a permit from the advisory board. All overtime to be paid at time and one third.

Minimum wage rates: casters, jewellers, press hands, stampers and polishers, 70 cents per hour except when working full time at hand-made platinum work when they shall be paid at $1 per hour; setters who are not employed on a piece-work basis and engravers, 82½ cents per hour. A scale of piece rates is included for setters.

The minimum wage rates for apprentices vary from: $8 per week during first six months to $22.50 per week during second half of fifth year for apprentice jewellers and engravers, $25 during second half of fifth year for apprentice setters and $28 during second half of fifth year for apprentice polishers, press hands, stampers and casters.

Construction: Buildings and Structures

CARPENTERS, BRANTFORD.—An Order in Council, dated August 18, and published in *The Ontario Gazette*, August 27, makes binding the terms of a schedule of wages and hours for carpenters in the city of Brantford.

The Order in Council to be in effect from September 6, 1938, "during pleasure".

Hours: 8 per day, 4 on Saturdays, a 44 hour week. When any project is being carried on in two or more shifts, shifts not to exceed 8 hours, with 8 hours' pay for 7 hours' work.

Overtime: time and one half; work on Saturdays after noon, Sundays and seven specified holidays which may only be worked in cases of necessity and then only with permit from the advisory board, must also be paid for at time and one half.

Minimum wage rate for carpenters: 70 cents per hour. The advisory committee may fix a special minimum rate for handicapped employees.

Transportation and Public Utilities: Water Transportation

COAL HOISTING INDUSTRY, TORONTO.—An Order in Council dated August 18, and published in *The Ontario Gazette*, August 27, makes binding the terms of a schedule governing the coal hoisting industry, that is the work usually performed by operating engineers, firemen and oilers in connection with the unloading of coal from boats and the handling of coal in or about dock warehouses or dock yards.

The Order in Council to be in effect from September 6, 1938, "during pleasure".

Hours: 9 per day, a 54 hour week for engineers and 10 per day, a 60 hour week for firemen and oilers.

Overtime: all overtime, including work on Sundays and eight specified holidays, which is required to unload boats or railway cars to be paid at regular rates. All other overtime at time and one half.

Minimum hourly wage rates: engineers operating locomotive and crawler cranes with any kind of motive power, 85 cents; engineers operating truck cranes with any kind of motive power, 75 cents; fireman and oilers, 55 cents. The advisory committee may fix lower rates for handicapped workers.

Transportation and Public Utilities: Local Transportation

TAXI DRIVERS, TORONTO.—An Order in Council dated August 18, and published in *The Ontario Gazette*, August 27, makes binding the terms of a schedule of wages and hours for the taxi cab industry in the city of Toronto and within three miles of it.

The Order in Council to be in effect from September 6, 1938, to July 1, 1939.

Hours: 11 per day 66 per week. The daily hours may be divided into either one or two shifts provided that each shift consist of at least 4 hours of continuous work.

Overtime for drivers and despatchers: 35 cents per hour. No driver may work more than three hours overtime in any one day or more than 8 hours in any one week.

Minimum wage rates for all drivers: 25 per cent of the fares earned by the driver, with a minimum of $12.50 per week. Minimum wage for despatchers: $15 per week. Spare drivers to be paid a minimum of 25 cents per hour, with at least 5 hours' pay each day they are called to work. Drivers sent out to drive customers' cars to be paid 50 cents per hour.

Drivers sent on out of town trips need not conform to regular daily hours and no deductions from minimum rates may be made for food and lodging while on such trips.

A driver may be charged not more than 50 per cent of the cost of his uniforms supplied by his employer.

Saskatchewan

Construction: Buildings and Structures

SHEET METAL WORKERS, REGINA.—An Order in council approved August 16, and published in *The Saskatchewan Gazette,* August 31, makes binding the terms of a schedule of wages and hours for sheet metal workers in the city of Regina and within 20 miles of it.

The Order in Council to be in effect from September 10, 1938, "during pleasure."

Hours: 8 per day, a 44 hour week.

Overtime: time and one-half; work on Sundays and statutory holidays, double time.

Minimum wage rate: journeymen sheet metal workers, 75 cents per hour; helpers, 40 cents.

Minimum wages for apprentices; from $7.50 per week during first year to $15 during fourth year.

Alberta

Agriculture

HONEY PRODUCING INDUSTRY, COALDALE, TABER, VAUXHALL ZONE AND EASTERN IRRIGATION ZONE.—An Order in Council, dated July 28, and published in *The Alberta Gazette,* August 15, amends the original Order in Council (LABOUR GAZETTE, June, page 701) by adding to the district covered, the "Eastern Irrigation District."

Manufacturing: Vegetable foods, etc.

BAKERS, EDMONTON.—An Order in Council, dated August 26, and published in *The Alberta Gazette,* August 31, makes binding the terms of a schedule governing the baking industry in the city of Edmonton and within 15 miles of the main post office.

The Order in Council to be in effect from September 10, 1938, to December 10, 1938.

This schedule is similar to the one previously in effect and summarized in the LABOUR GAZETTE, June, 1938, page 701, and June, 1937, page 697, with this exception:

The minimum wage rate for foreman is increased $1.50 per week to $27 per week; weekly wage rates for all other classes except apprentices are increased by $1 per week making the weekly rates: doughman, ovenman and bench hand $24; helpers (male) shippers and truckers $18, wrappers (hand or machine) $13.50, salesmen (experienced) $22, salesmen (inexperienced) for first three months $17.50. The wage rates for apprentices are unchanged, from $8.50 per week during first three months to $16 during third year.

The hours are unchanged at 54 per week for all inside male employees and 48 hours for all inside female employees.

Construction: Buildings and Structures

MARBLE AND TILE SETTERS, EDMONTON.—An Order in Council, dated August 23, and published in *The Alberta Gazette,* August 31, makes binding the terms of a schedule governing the tile, marble, terrazzo and cold mastic construction industry in the city of Edmonton.

The Order in Council is to be in effect from September 10, 1938, to September 9, 1939.

This schedule, which covers the city of Edmonton is similar to a previous schedule which covered the northern part of the Province in addition to the city of Edmonton and which was summarized in the LABOUR GAZETTE, December, 1937, page 1391 and September, 1936, page 840, with these exceptions.

Minimum hourly wage rates: marble masons, tile layers and terazzo, mosaic and cold mastic layers, $1 (an increase of 10 cents per hour); floor machine men and mechanics' helpers, 65 cents (an increase of 5 cents); wall machine men 75 cents (an increase of 5 cents); asphalt tile, 75 cents; labourers 50 cents (no change).

Overtime after four hours to be paid at double time.

Hours are unchanged at 44 per week.

PLUMBERS, EDMONTON.—An Order in Council, dated August 26, and published in *The Alberta Gazette,* August 31, makes binding the terms of a schedule governing the plumbing, steamfitting, and gas fitting industry in the city of Edmonton and within ten miles of the post office.

The Order in Council to be in effect from September 10, 1938 to April 30, 1939.

Hours: 8 per day, 4 on Saturdays, a 44 hour week. Where more than one shift is worked, shifts to be 8 hours, with 8 hours' pay for 7 hours' work.

Overtime: time and one-half until midnight; thereafter double time. Work after 5 p.m. on Saturdays, on Sundays and on six specified holidays, double time.

Minimum wage rate for journeymen plumbers and steamfitters; $1 per hour.

Journeymen required to work out of city to have transportation and board furnished and travelling time paid for.

A steamfitter not to be allowed more than one steamfitter's helper: Where more than one journeyman is employed on a job, a machine man may be employed to cut and thread pipe.

Apprentices must be indentured and are to serve five years. Each shop allowed one plumber's apprentice and an additional apprentice for each four additional journeymen employed.

Wages for apprentices: from $8 per week during first year's apprenticeship to $20 during the fifth year's apprenticeship.

Transportation and Public Utilities: Local Transportation

TAXI DRIVERS, EDMONTON.—An Order in Council, dated August 10, and published in *The Alberta Gazette,* August 15, makes binding the terms of a schedule of wages and hours in the taxi industry in the city of Edmonton.

The Order in Council to be in effect from August 25, 1938, to August 15, 1939.

The previous schedule was summarized in the Labour Gazette, July, 1937, page 818.

Hours: 12 continuous hours with one hour rest period, for 6 days, a 66 hour week.

Minimum wages: from August 25, 1938, until September 30, 1938, and also from April 1, 1939, to August 15, 1939, $12.50 per week plus 25 per cent commission on all receipts from fares and authorized credit accounts in excess of $50 per week; from October 1, 1938, to March 31, 1939, $15 per week plus 25 per cent commission on all receipts from fares and authorized credit accounts in excess of $60 per week. Temporary chauffeurs to be paid pro rata of the above guaranteed minimum, with a minimum of $1.25 for one half day or less. The number of part time chauffeurs in any one busines not to exceed 20 per cent of the number of regularly employed chauffeurs in such business.

Any employers who were paying higher wage rates or working their employees fewer hours per week are not to reduce such wages or increase such hours.

Service: Business and Personal

Bowling Alley Employees, Edmonton.—An Order in Council, dated August 26, and published in *The Alberta Gazette,* August 31, makes binding the terms of a schedule governing bowling alleys in the city of Edmonton.

The Order in Council to be in effect from September 10, 1938, to September 9, 1939, and renews for this period the previous Order in Council which was summarized in the Labour Gazette, April, 1938, page 454.

Bowling Alley Employees, Calgary.—An Order in Council, dated August 26, and published in *The Alberta Gazette,* August 31, makes binding the terms of a schedule governing bowling alleys in the city of Edmonton.

The Order in Council to be in effect from September 10, 1938 to September 9, 1939, and renews for this period the previous Order in Council which was summarized in the Labour Gazette, February, 1938, page 217.

Estimate of Contribution made by the Home Improvement Plan in Assisting Employment and Activity in the Building Trades

The Department of Finance has released figures of particular interest, showing the extent to which the Home Improvement Loans Guarantee Act has contributed in assisting employment and activity in the building trades.

Up to August 31, 1938, loans aggregating over $19,477,000 had been made under the terms of the Home Improvement Plan. Careful estimates have been made of the beneficial effects on employment and labour of the expenditures on home improvement and modernization made with the proceeds of these loans. No exact figures can, of course, be obtained, but the estimates which have been made appear to indicate that approximately 12,702,000 man hours of employment were provided directly in the building trades as a result of these loans, and approximately $8,571,000 were distributed as wages or other earnings directly in the building trades. The estimate shows that these amounts were divided amongst the principal trades approximately as follows:—

Principal trades	Amount spent on materials of which a large percentage would go to labour indirectly	Amount spent for direct labour on improvement work	Number of hours direct labour provided on improvement work
Masonry, carpentry and plastering	$3,807,000	$4,649,000	6,198,000
Plumbing and heating	2,663,000	1,140,000	1,629,000
Painting	1,192,000	2,030,000	3,691,000
Roofing	1,191,000	587,000	903,000
Electric Wiring	252,000	84,000	130,000
Mechanical Equipment	162,000	37,000	62,000
Insulation	179,000	44,000	89,000
Total	$9,446,000	$8,571,000	12,702,000

These figures, of course, do not take account of employment created for and wages paid to workers in the industries manufacturing and supplying building materials which were purchased to the estimated amount of approximately $10,000,000 as a result of the loans being made. Nor do they take account of expenditures for Home Improvement purposes which were not financed by Dominion guaranteed Home Improvement loans but which were undoubtedly stimulated by the Government's program of encouraging the repair and modernization of existing homes as a means of solving the problem of unemployment.

PRICES RETAIL AND WHOLESALE IN CANADA, AUGUST, 1938

Cost of Living, Prices of Staple Articles and Index Numbers

IN retail prices the cost of a weekly family budget of staple foods, fuel and lighting and rent in August was higher than in the previous month due to an increase in the cost of foods, while the Dominion Bureau of Statistics weekly index number of wholesale prices was lower due mainly to a decline in the price of wheat.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of retail prices in sixty-nine cities was $8.81 at the beginning of August as compared with $8.57 for July. The advance was due in large part to a seasonal advance in the cost of potatoes with the marketing of the new crop. There were increases also in the cost of pork, bacon, and eggs. The principal declines occurred in the cost of beef and flour. Comparative figures for the cost of this list of foods for certain previous dates are $8.80 for August, 1937; $8.17 for August, 1936; $6.67 for March, 1933 (the low point in recent years); and $11.63 for August, 1929. Including the cost of fuel and rent with that of foods the total budget cost $17.70 at the beginning of August as compared with $17.45 for July; $17.48 for August, 1937; $16.72 for August, 1936; $15.41 for June, 1933, (the low point in recent years); $21.90 for August, 1929; $20.88 for August, 1922; $26.92 for July, 1920 (the post war peak); and $14.41 for August, 1914. Both fuel and rent were practically unchanged in cost in August from the levels in July.

In wholesale prices the Dominion Bureau of Statistics weekly index number on the base of 1926 as 100 has declined week by week since the last week in June the decrease down to the week ending September 2 being 7 per cent. Since the week ending July 29 the decrease was more than 4 per cent. For the week ended September 2 the index number was 74·6 as compared with 78·0 for the week ended July 29 and 80·4 for the week ended June 24. The latest figures available on a monthly basis are for July when the index number was 78·6 as compared with 85·6 for August, 1937; 76·1 for August, 1936; 63·5 for February, 1933 (the low point in recent years); 98·4 for August, 1929; 97·1 for August, 1922; 164·3 for May, 1920 (the post war peak); and 66·1 for August, 1914. During the month under review the vegetable products group recorded a decline of 14 per cent, the index number for the group being down from 72·8 to 62·5. The decline was due mainly to lower prices for grains, particularly wheat, as well as for flour and other milled products. The animal products group also showed substantial decline due mainly to lower prices for livestock, meats, eggs and butter. Other groups changed relatively little there being declines in the textile products group and in the non-ferrous metals group while the wood products group, and the iron products group were slightly higher. The non-metallic mineral products group and the chemicals group were unchanged.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of August of seventy-two staple foodstuffs groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the averages of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amount due.

The cost of a list of staple foods, fuel and lighting and rent, entering into the budget of a family of five is calculated in terms of the average prices in the cities for which reports are received and includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which figures were available when the publication of retail prices statistics was begun, that is for January, 1910, in the LABOUR GAZETTE for

(Continued on Page 1058)

COST PER WEEK (IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA) OF CERTAIN STAPLE FOODS, FUEL AND LIGHTING, IN THE QUANTITIES STATED, AND RENT ENTERING INTO A FAMILY BUDGET.

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost or the quantities of different foods required for an average family

price per cord from price quoted. f. Petroleum coke. g. Natural gas used extensively. h. Including lignite. i Including conveniences. r. Mining compan · houses in district $5-$10 per month; others, five and six rooms, $10-$35. s. Delivered

(Continued from Page 1050)

February, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the calculation serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

The heading to the table on page 1065 has been changed in this issue from that previously used, to prevent misunderstanding.

Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population differences in rates in the various cities being greater in these items than in the others. An index number of rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and cost of the various items from 1913 to 1926 weighted according to the importance of each item in workingmen's family expenditure and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

CHANGES IN THE COST OF LIVING IN CANADA FROM 1913 TO 1938*

(Average prices in 1913=100)

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18¼%; Clothing, 18¼%; Sundries, 20%.

Retail Prices

Beef prices changed little during the month the tendency being, however, toward slightly lower levels, round steak averaging 24 cents per pound in August as compared with 24·2 cents in July and shoulder roast averaging 15·8 cents in August and 16·1 cents in July. Fresh pork advanced from an average of 26·2 cents per pound in July to 27·4 cents in August and breakfast bacon from 34·2 cents per pound in July to 36·3 cents in August

†The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

‡For the week ended September 2, 1938; monthly figures not yet available.

*Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

increases being recorded in most localities. The price of eggs was generally higher, fresh grades averaging 34·1 cents per dozen as compared with 31 cents in July and 25·9 cents in May the low point. Creamery butter was little changed in price averaging 29·8 cents per pound in August and 30 cents in July. Bread has been unchanged in the average at 7·2 cents per pound since the beginning of the year. Flour was fractionally lower averaging 4 cents per pound. Onions were down in the average from 7 cents per pound to 5·7 cents. Potatoes were higher in most localities the price per 90 pounds averaging $1.41 as compared with 98 cents in July. An advance in the price of anthracite coal was reported from several cities the Dominion average price being up from $14.18 per ton in July to $14.23 in August.

Following are the prices per ton reported for Welsh coal, "cobbles" and "French nut":

Halifax $15.50; Charlottetown $14; Moncton $16; Saint John $13; Quebec $14; Three Rivers $15 and $14; Sherbrooke $14.75; St. Hyacinthe $14.50; Thetford Mines $17.25; Montreal $14.75 and $15; Ottawa $16; Kingston $15; Belleville $15; Peterborough $16.75; Oshawa $15; Toronto $15; St. Catharines $15.50 and $15; Hamilton $14.50 and $14; Brantford $16.25; Galt $16; St. Thomas $16; Cobalt $18.50; Timmins $18.50; Port Arthur $17.25; Fort William $17.25; Winnipeg $20.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to recent changes in prices in Great Britain and other countries. Tables giving the official and certain other index numbers of cost of living, wholesale and retail prices in Great Britain and several of the principal commercial and industrial countries appeared in the July issue of the LABOUR GAZETTE.

Great Britain and Northern Ireland

WHOLESALE PRICES.—The Board of Trade index number, on the base 1930=100, was 100·6 for July as compared with 100·7 for June. The index for the combined food groups was 97·8 as compared with 99·4 the previous month. The index for the combined industrial materials and manufactures groups increased from 101·3 to 101·9 in the same period. As compared with the figure for July, 1937, the general index showed a decline of 9·8 per cent for July, 1938.

The *Statist* index number, on the base 1867-1877=100, was 91·1 at the end of July as compared with 91·4 at the end of June, a decrease of 0·3 per cent for the month. The combined foodstuffs groups index declined 3·5 per cent during the month, while the index for the "materials" groups increased 1·8 per cent. The general index showed a decline of 14·0 per cent from the figure for the end of July, 1937.

COST OF LIVING.—The Ministry of Labour's index number, on the base July 1914=100, was 156 at the first of August as compared with 159 at the first of July. The index of food prices was 141 as compared with 146 the previous month, the decline of 3·4 per cent being due mainly to a marked fall in the price of potatoes which had been abnormally high the previous month. The other groups making up the index showed no changes.

France

WHOLESALE PRICES.—The General Statistical Office index number, on the base 1914=100, was 652 for July as compared with 653 for June. Food prices declined 3·1 per cent during the month while prices of industrial materials increased 2·6 per cent. The index based on gold curency, 1914=100, was 55 for July as compared with 56 for June.

COST OF LIVING.—The official index number of the expenditure of a workingman's family of four persons at Paris, on the base 1914=100, was 692 for the second quarter of 1938, an increase of 0·6 per cent over the figure for the previous quarter. The index for food prices rose from 727 to 732 or 0·7 per cent during the same quarter.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 105·6 for July, showing no change from the figure for June. The indexes for agricultural products and manufactured goods showed no change from the figures for June, standing at 106·0 and 125·9 respectively. The index of the combined raw materials and semi-manufactured goods groups rose from 93·7 to 93·8 during the month.

COST OF LIVING.—The official index number, on the base 1913-1914=100, was 126·8 for July as compared with 126·0 for June. Increases over the June figures were shown in the following groups: food, 1·1 per cent; clothing, 0·4 per cent and heating and lighting materials, 0·1 per cent. The index of the sundries group decreased 0·4 per cent.

India

WHOLESALE PRICES.—The index number of the Labour Office, Government of Bombay, on the base July, 1914=100, was 100 for May as compared with 101 for April. The index of prices of all foods was 102 as compared with 100 for the previous month while the index for non-foods was 99 as compared with 101 for April.

COST OF LIVING.—The official index number of the working class cost of living at Bombay, on the base July, 1933, to June, 1934=100, was 105 for June as compared with 104 for May. The index for food prices increased 0·9 per cent. The index of clothing prices decreased 1·2 per cent, those for fuel and lighting materials and miscellaneous articles each decreased 1·0 per cent, while the index for rent was unchanged.

United States

WHOLESALE PRICES.—The Bureau of Labour Statistics index number, on the base 1926=100, was 78·3 for June, as compared with 78·1 for May, an increase of 0·3 per cent for the month. The index of prices for farm products increased 1·8 per cent during the month, while that for food increased 1·4 per cent. The index of prices of hides and leather products declined 1·3 per cent. Changes in other groups were of less than one per cent. The index for all commodities was 10·2 per cent lower than that for June, 1937.

COST OF LIVING.—The index number of the Industrial Conference Board, on the base 1923=100, was 86·5 for July as compared with 86·7 for June. All groups of expenditures except fuel and light, showed moderate decreases. Living costs in July were 2·7 per cent lower than a year ago, but 20·6 per cent higher than at the depression low of 1933.

THE LABOUR GAZETTE

PREPARED AND EDITED BY

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 38] OCTOBER, 1938 [NUMBER 10

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

THERE was a considerable increase in employment at the beginning of September, according to returns received by the Dominion Bureau of Statistics from 10,915 firms, each with a minimum of 15 employees, representing practically all industries except agriculture, fishing, hunting and highly specialized business operations. These firms employed 1,106,989 persons, or 32,688 more than in the preceding month. The experience of the last seventeen years shows that the average change between August 1 and September 1 has been very slight, gains in a number of these years just about offsetting declines in the remainder; the large advance at September 1, 1938, was therefore especially interesting. The employment index number (with the average for the calendar year 1926 as the base equal to 100) stood at 115·5, as compared with 112·1 at August 1, 1938, and with 123·2 at September 1, 1937. At the same date in recent years of the record the index was as follows: 1936, 107·1; 1935, 102·7; 1934, 98·8; 1933, 88·5; 1932, 86·0; 1931, 107·1; 1930, 116·6; 1929, 126·8; 1928, 119·1, and 1927, 111·0.

Unemployment in Trade Unions.—At the beginning of September, 1938, reports were forwarded to the Department of Labour by 1,855 local trade unions, embracing a membership of 216,719 persons. Of these, 25,088 were without employment, a percentage of 11·6, in contrast with percentages of 14·0 at the beginning of August, 1938, and 7·6 at the beginning of September, 1937.

Employment Office Reports.—The volume of business transacted during August, 1938, by the offices of the Employment Service of Canada, as shown by the average daily placements effected, indicated a gain over July, 1938, and also over August, 1937, farming being the group under both comparisons mainly responsible for the change, although construction and maintenance also showed a substantial increase over the preceding month. Vacancies during August this year numbered 44,028, applications for work 68,590, and placements in regular and casual employment 41,891.

Prices.—In retail prices the cost per week of a family budget of staple foods, fuel and lighting, and rent was $17.41 at the beginning of September as compared with $17.70 for August; $17.41 for September, 1937; $16.84 for September, 1936; $15.41 for June, 1933 (the low point in recent years); and $21.90 for September, 1929. The decline in September as compared with August was due to a decrease in the cost of foods. In wholesale prices the Dominion Bureau of Statistics weekly index number based upon prices in 1926 as 100 was little changed week by week during the month being 74·5 for the week ended September 30 as compared with 74·6 for the week ended September 2, and 74 for the week ended September 9, the low point during the month. On a monthly basis the index number was 76·0 for August, 1938; 85·0 for September, 1937; 76·4 for September, 1936; 63·5 for February, 1933 (the low point in recent years); and 97·8 for September, 1929.

Business Statistics.—The latest information available reflecting industrial conditions in Canada is given in the table on page 1072. The index of the physical volume of business in August was slightly higher than in the previous month but considerably lower than in August, 1937. Of the principal factors used in the construction of the index and after adjustments for seasonal changes, mineral production was on a somewhat higher level during August than in the preceding month there being increases in the exports of nickel and in the shipments of gold and silver which more than offset declines in the exports of copper, zinc and asbestos and in the imports of bauxite. Other principal groups to record improvement in the same comparison were electric power output, carloadings, imports and exports, while manufacturing and trade employment were lower. In the manufacturing group foodstuffs, tobacco products and textiles were lower but forestry products and iron and steel were slightly higher. All of

* Most of the figures in this table with an analysis are included in the Monthly Review of Business statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

† For the week ended September 30, 1938.

(1) Calculated from yields of Ontario bonds. (2) For group figures see articles elsewhere in this issue.

(3) Adjusted for number of business days and seasonal variations. (4) Figures for end of previous month.

(5) Figures for four weeks ending October 1, 1938, and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending September 10, August 13, and July 16, 1938; September 11, August 14, and July 17, 1937. (7) MacLean's Building Review. (8) Index numbers are adjusted when necessary for seasonal variation.

the principal groups mentioned above were lower during August, 1938, than in August, 1937, except construction, trade employment and exports which were higher. Information available for September shows employment, the number of cars loaded and gross earnings of the Canadian National Railways at higher levels than in August but lower than in September, 1937, while the index number of wholesale prices and the value of contracts awarded were lower in both comparisons.

Strikes and Lockouts.—The number of strikes and lockouts during September was 15, involving 2,173 workers and causing a time loss of 18,840 man working days as compared with 19 disputes, involving 2,083 workers with time loss of 14,308 days during August. The principal disputes during September involved coal miners at Florence and Bras d'Or, N.S., salmon fishermen in British Columbia, and also four disputes carried over from August, namely: knitting factory workers at St. Catharines, Ont., foundry workers at Windsor, Ont., restaurant employees at Toronto, Ont., and lime plant workers at Blubber Bay, B.C. In September, 1937, the principal disputes involved steel foundry and shipyard workers at Sorel, P.Q., silk factory workers at Louiseville, P.Q., rubber workers at Kitchener, Ont., and clothing factory workers at Cornwall, Ont. The total number of disputes in September, 1937, was 32, involving 7,521 workers with a time loss of 41,288 man working days. Of the fifteen disputes recorded in September, 1938, eight were terminated during the month, three resulting in favour of the employers involved and compromise settlements being reached in two cases, while the results of three disputes were recorded as indefinite. Seven disputes involving approximately 970 workers were recorded as unterminated at the end of September. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or definitely declared terminated by the unions involved.

Industrial Disputes Investigation Act

During the month the Minister of Labour received a unanimous report (accompanied by a signed agreement) of a Board of Conciliation and Investigation which dealt with a dispute between the Lethbridge Collieries Limited and their employees.

A summary of the report and agreement, together with other proceedings under the Act, is given in an article commencing on page 1079.

Operation of Farm Employment Plan

The Honourable Norman McL. Rogers, Minister of Labour, announced on October 10 that the Farm Employment Plan, the cost of which will be shared jointly by the federal and provincial governments has been placed in operation in the western provinces. The detailed application of the plan will be based upon the representations that have been made by the provinces concerned, that the plan would be necessary so that suitable shelter under congenial conditions can be provided, combined with useful occupations, for single unemployed and homeless persons as a substitution for relief and the inevitable congregation in urban centres.

The Minister added that last year's experience would indicate that ample opportunity will exist for placement, making unnecessary the drift of single unemployed persons from the Prairie Provinces to British Columbia during the coming winter.

Statistics of Material Aid Recipients for August

A further decrease in the number of fully employable persons on relief is shown in preliminary figures for August from the national registration of the Department of Labour.

Early figures issued by Hon. Norman McL. Rogers, Minister of Labour, on October 10, showed the total of these unemployed in August at 124,000, a decrease of 6 per cent from the July total of 132,000. The net decrease from August a year ago is over 13 per cent. Decreases in the numbers of fully employable persons on relief have occurred in every month up to August from the winter peak of 174,932 in February last.

A total of 474,000 persons were receiving non-agricultural material aid in August this year—24,000 or nearly 5 per cent less than in the previous month. This category includes totally unemployable, partially employable and fully employable persons, together with all dependents of family heads in the three degrees of employability. This aggregate showed a net reduction of over 7 per cent from August, 1937.

The figures indicate that approximately 70,000 farmers who, together with their dependents, account for a farm population of 304,000, were reported as receiving agricultural aid for subsistence. These persons were chiefly located in the Province of Saskatchewan, that province alone showing a total of 264,000, largely as a result of the crop failure in 1937. The Dominion total on agricultural aid, though over thirty per cent greater

than in August, 1937, was nearly 13 per cent less in August than in July, 1938. The Saskatchewan total had already begun to reflect the improvement due to this year's crops and from July to August showed a reduction of more than 13 per cent.

The grand total of all classes of persons on material and agricultural aid in August, according to these early figures, was 778,000, a decrease of 8 per cent from July, but an increase of four and a half per cent from August, 1937. As indicated, the increase in the grand total is wholly attributable to the fact the larger numbers of farm population on Aid in the Province of Saskatchewan more than offset the reduction in the numbers on urban aid throughout the country.

Old Age Pensions and Canadian Government Annuities

In the LABOUR GAZETTE of March 1938, pages 286 and 287, a synopsis of the new regulations governing Old Age Pensions in Canada is given. The second paragraph (on page 287) setting out the chief changes in regulations establishing the income of an applicant reads as follows:—

> (*b*) the old regulation provided that the amount of a Canadian Government Annuity, purchasable by the personal property of the pensioner after making due allowance for reasonable clothing and household furniture should be included as income of the pensioner. The new regulations provide that the pension authority shall consider as income the amount of an immediate Canadian Government Annuity, Ordinary Life Plan, payable quarterly, purchasable with the cash and securities of the applicant taken at market value in excess of $250 and with the value of the personal property of the applicant less a reasonable allowance for household furniture and clothing and for the personal property from which any net profit or gain is derived by the applicant. If the applicant is one of two spouses living together the pension authority shall include as income of the applicant the amount of such an annuity purchasable with one-half the cash and securities of the two of them in excess of $250 and by one-half the personal property of both of them, less a reasonable allowance for household furniture and clothing and for personal property from which they obtain net profit or gain;

As the above paragraph has been erroneously interpreted to indicate that an annuity of $250 for a single person would be exempt under the present Regulations, it should be explained that $250 is the amount deductible from the value of the applicant's assets, at present market value, to determine the amount on which the annuity value is to be calculated.

The Old Age Pensions Act reads as follows:—

"that the maximum pension payable is $240 a year which shall be subject to reduction by the amount of the income in excess of $125 a year."

There is, therefore, no change in the exemption allowed which is still $125 a year, not $250 a year.

Minister of Labour Reviews Functions of Department

On October 10, the Hon. Norman McL. Rogers, Minister of Labour, gave a radio address over the national network of the Canadian Broadcasting Corporation on the work of the Dominion Department of Labour. The Minister's address was part of the series entitled "The Government of Canada," which is to be published by the C.B.C. in book form (price 50 cents) on the conclusion of the talks.

The Minister, in commencing, emphasized that the work of this Department of the Government lies almost entirely in the field of human relations—dealing with such matters as unemployment and other forms of social distress, the training of unemployed young men and women, the rehabilitation of older men and women, the investigation of combines, the observance of fair wages and working conditions on Federal public works and Government contracts, and the peaceful adjustment of industrial disputes, etc.

This list of major activities indicated that "the Department of Labour is first and last a Department of human relations," and the Minister further observed that "its hope and effort is to make these relations more wholesome and harmonious for the public good."

From this premise, the Minister proceeded to outline the functions and activities of the Department, reviewing in particular the factors attendant upon unemployment and the measures adopted to cope with it.

Touching on the conciliation machinery of the Department, he commended employees and employers alike for the fact "that there had been no strikes of a major character in Canada during the present year."

Another responsibility of the Department to which he referred was the administration of the Combines Investigation Act—a measure which "safeguarded the public interest against detrimental combinations and monopolies."

The Minister also referred to opportunities afforded residents of Canada by the Annuities Act "to provide economically for their old

age." He noted that there was "a growing interest in the system by large industrial concerns planning pension retirement funds for their employees."

Conference on Industrial Relations at Queen's University

Under the auspices of Queen's University, a conference on industrial relations was held in Kingston on September 14-17. The program of the conference covered a wide diversity of subjects.

"Industrial Relations and the University" was the topic of the opening meeting under the chairmanship of J. C. Macfarlane, Legal Counsel, Canadian General Electric Company Limited, the speaker being Principal R. C. Wallace, Queen's University, and Professor W. A. Mackintosh, Director of the School of Commerce and Administration, Queen's University.

Under the subject heading of "Trends in Employer-Employee Relations" three papers were given viz: "Trends in the United States" by W. H. Browne, Secretary, Moore Corporation Limited; "The Functions of an Employees' Representation Committee" by J. S. Willis, Educational Director, Canada Packers Limited; and "Collective Bargaining in Canada" by Professor J. Finkelman, Professor of Administration and Industrial Law, University of Toronto.

At another session of the conference Mr. A. B. Purvis, President and Managing Director, Canadian Industries Limited, spoke on the subject of "A Business Man Looks at Industrial Relations."

"Industrial Retirement Plans" formed the topic of one of the meetings and was subdivided into three sections. Dr. Bryce M. Stewart, Director of Research, Industrial Relations Counselors, Incorporated, New York, took as his subject "Some Fundamental Features of a Good Retirement Plan." "Financing the Plan" was discussed by J. A. Calder, Assistant Comptroller, Imperial Tobacco Company of Canada Limited, and Dr. W. C. Clark, Deputy Minister of Finance, Ottawa, spoke on the subject of "The Relation of Industrial Plans to Government Schemes."

Discussing "Minimum and Fair Wage Legislation", H. W. Macdonnell, Industrial Relations Department, Canadian Manufacturers' Association, spoke on "Recent Developments in Ontario and Quebec," while Professor V. F. Coe, Department of Political Science, University of Toronto, dealt with "The Economic Aspect."

"Wage Determination" was the subject of a paper delivered by W. F. Cook of the Industrial Relations Department, Kimberly-Clark Corporation, Neenah, Wisconsin. F. H. Robinson, Training Supervisor, The Bell Telephone Company of Canada, C. W. Foster, Personnel Manager, Dominion Stores, and K. A. Burgess, Safety Engineer, Canadian Kodak Company Limited, dealt with the subject of "Employee Training Plans."

At the concluding session of the conference, J. W. Fagan, Assistant General Superintendent of the Northern Electric Company Limited, spoke on "Work-Sharing During a Depression."

Death of Mr. James Simpson, Prominent Canadian Labour Leader

The death occurred on September 24 of Mr. James Simpson, former Mayor of Toronto and prominent Canadian labour leader. In his passing the Canadian labour movement not only lost one who had been active in leadership but who had become a national figure by reason of his participation as a labour representative on boards and commissions that directly concerned the economic and social life of the country.

Coming to Canada from Lancashire at the age of 14, Mr. Simpson was employed for three years as a factory worker, after which time he became a typesetter's apprentice and later joined the composing staff of the *Toronto Daily Star*. Subsequently he was assigned to the City Hall, becoming municipal editor of *The Star*, a position which he occupied for nine years.

At the age of 26, Mr. Simpson became active in labour circles and soon afterward entered upon his political career. He rose rapidly in the Labour movement, his first offices being those of secretary of the Municipal Committee, and later vice-president and president of the Toronto District Trades and Labour Council. For a period of six years he was vice-president of that organization.

Mr. Simpson represented the Toronto Trades and Labour Council on the Technical School Board for three years and also represented the same organization in the Canadian National Exhibition Association for a period of four years.

His connection with the Trades and Labour Congress of Canada extended over a lengthy period. For thirty-three years Mr. Simpson was a delegate to the Congress, and held the office of vice-president for eighteen years. He was a frequent fraternal delegate from the Trades and Labour Congress to the American Federation of Labor conventions and in 1916 he represented the Trades and Labour Congress at the British Trades Union Congress convention. His chief identity with trade union-

ism was, however, through his membership in the Toronto Typographical Union, and at the time of his death was a pensioner of that union by virtue of his close association with that organiaztion for thirty-seven years.

A keen debater and forceful speaker, Mr. Simpson entered upon his political career when he became a member of the Toronto Technical School Board, and later of the Board of Education which absorbed the former. In 1908, he ran for the office of mayor but was defeated. He returned to the Board of Education the following year and soon became chairman of that body.

In 1914, Mr. Simpson was elected controller with the highest vote ever given a candidate for that office in the City of Toronto up to that time. Again in 1930 he was elected to the Board of Control with a large vote and continued to hold that office until 1935, when he was elected mayor.

During his career, Mr. Simpson was appointed to many commissions, boards of conciliation and investigation, and delegations.

In 1908 he served as a member of the technical education commission and visited many cities in the United States. In 1910 Mr. Simpson was appointed by the Dominion Government as labour representative on the Royal Commission on Industrial Training and Technical Education to investigate educational systems here and in Europe. In 1925 he was elected by Canadian workers as a delegate to the British Commonwealth Labour Congress held in London, England.

Mr. Simpson's wide contact with labour in the international sphere resulted in his frequent appointment either in the capacity of labour delegate or technical adviser to the labour delegate at the annual conferences of the International Labour Organization.

Mr. Simpson was on many occasions chosen as the employees' representative on boards of conciliation and investigation established under the Industrial Disputes Investigation Act. In this sphere Mr. Simpson evidenced his great knowledge and understanding of the complexity and diversity of labour problems in their relationship to the national interest.

Convention Proceedings of Labour Bodies

Elsewhere in this issue reviews are made of the convention proceedings of the Trades and Labour Congress of Canada, the Confederation of Catholic Workers of Canada, and the British Trades Union Congress. These summaries of convention resolutions, etc., are to be found on pages 1101, 1107, and 1108, respectively.

Further Modifications of 40-Hour Week in France

Modifications of the forty-hour week in France have been dealt with in recent issues of the LABOUR GAZETTE (July, 1938, page 721, and February, 1938, page 127). In pursuance of its policy of simplifying and rendering more elastic the methods of applying the forty-hour week legislation, and of increasing the facilities for working overtime in exceptional circumstances, the French Government has recently issued a number of decrees.

The British *Ministry of Labour Gazette* summarizes the effect of them in its September issue as follows:—

Two Decrees dated August 6, 1938, give practical effect to the recommendations of the Committee of Enquiry into Production as regards additional allowances of overtime in industries suffering from a shortage of skilled labour and in certain key industries which have reached the limit of their productive capacity under existing conditions.

The first Decree provides for 75 hours of overtime a year, in addition to those already permissible, in respect of specified occupations for which a shortage of suitably qualified labour has been proved in the metal, engineering and shipbuilding, hardware and domestic utensils, motor-car body building, watch and clock, optical instrument, and certain other industries. The additional working time, which is subject to payment at increased rates, may not exceed three hours a week nor one hour a day.

The second Decree authorizes undertakings in specified branches of industry, the activity of which is a determining factor in important sections of national production, to apply to the Inspector of Labour for permission to work, during 1938, 50 hours of overtime after the exhaustion of the overtime permitted under other regulations. This additional overtime may not exceed one hour a day, and must be remunerated at increased rates. The specified branches of industry include the manufacture of machine tools, and of machinery and plant for works of construction and for the textile, paper and printing, food and chemical industries.

On August 30, 1938, a Decree was signed by the French President and countersigned by all members of the Cabinet giving partial effect to the policy enunciated by the Prime Minister in his broadcast of August 21. The first article of the Decree reiterates the provision, appearing in the existing regulations applying the forty-hour week, by which the Government may order the extension, by the amount deemed necessary, of hours of labour

on work in the interests of national defence and safety or of the public service. In a statement published with the Decree, it is explained that this article is designed to emphasize the determination of the Government to utilize the powers which it already possesses to extend working time in the circumstances in question. Further provisions of the Decree authorize the Minister of Labour, after consultation with the employers' and workers' organizations, to grant permission to undertakings or groups of undertakings, in industry generally, to work 100 hours of overtime a year, additional to those permissible under existing regulations (in general, 75 hours a year) during periods of exceptional pressure of work which cannot be dealt with by the normal staff or by the engagement of extra workers.

It is announced that the issue of a Decree is contemplated which will further simplify and accelerate the procedure for extending working hours, and that draft legislation will be submitted to the next session of Parliament authorizing a reduction of the rates of overtime pay laid down in collective agreements.

International Indices of Unemployment, Employment and Actual Hours of Work

In 1937, for the first time in eight years, the number of employed workers in the world regained the level at which it stood before the world economic crisis, according to a release issued recently by the International Labour Office.

Taking 100 as an index figure for the average number of employed workers in the world in 1929 (in sixteen of the principal industrial countries), it is found that this figure dropped to 92 in 1930, 83 in 1931, and 75 in 1932; it rose to 78 in 1933, 84 in 1934, 88 in 1935, and 93 in 1936; and it again reached 100 in 1937.

World unemployment, however, has not decreased in the same proportions. If the average number of registered unemployed workers in the world in 1929 (in fifteen of the chief industrial countries) be represented by 100, this average will be found to have risen to 164 in 1930, 235 in 1931, and 291 in 1932, and to have dropped to 277 in 1933, 225 in 1934, 196 in 1935, and 151 in 1936, while in 1937 it was only 111—still above the 1929 level.

These figures, which indicate in a particularly striking manner the effects of the world economic crisis on the possibilities of employment for workers, are international numbers calculated by the International Labour Office, and appear in the "International Year Book of Labour Statistics, 1938."

A table of international index numbers of actual hours of work, also in the new statistical "Year-Book," shows that for 100 hours worked in 1929, only 88 were worked in 1930, 76 in 1931, and 64 in 1932. In 1933, however, the average rose to 69, in 1934 to 74, in 1935 to 78, in 1936 to 85, and in 1937 to 90.

This edition of the "Year-Book" contains many other valuable tables giving data, country by country, relating to actual hours of work by industries, normal hours of work per week by industry or occupation, wages, the cost of living and retail prices, workers' family budgets, migration movements, industrial disputes, the gainfully occupied population by industrial status, by sex and by age groups, etc.

I.L.O. Conference of Medical Experts on Silicosis

The Conference of medical experts which opened at the International Labour Office on August 29 to study problems connected with silicosis—a lung disease to which many categories of workers are exposed owing to the nature of their work—closed on September 9, after unanimously adopting certain conclusions which will be submitted to the Governing Body of the I.L.O.

According to a release issued recently by the International Labour Office these conclusions deal, first of all, with purely medical points such as the definition of silicosis, the diagnosis of the disease, etc. Silicosis occurs among workers in coal mines when the dust to which they are exposed contains free silica. Besides metalliferous and coal mines there are many other industries and occupations in which this disease is produced. Examples are: sand-blasting of metal and other articles; certain processes carried out in metal foundries; and the manufacture of certain articles of pottery and of abrasive powders containing silica.

The experts made several suggestions on developing instrumental methods for sampling dust in the work-places, and on investigations into the characters of the dust present.

The Committee paid great attention to procedures applicable to the suppression of dust, and stressed the fact that the principle underlying the necessary measures in this direction is to ensure by such means as are applicable to the particular processes that the atmosphere to which the workers are exposed is free from harmful concentrations of silica dust. They also studied the question of dust-protection masks, noting that these means of protection should be made use of only when other methods, i.e., the suppression of dust at its source, are not applicable. The Committee urged that the radical suppression of dust be carried out wherever possible.

The experts expressed the wish that all persons interested in silicosis problems would forward to the I.L.O. the results of experiments made by themselves or by others of which they had knowledge. They considered that similar conferences should be convened periodically, say at intervals of every three years, to study the results achieved in various countries.

(The progress of silicosis prevention was reviewed in the LABOUR GAZETTE for July, 1937, page 713.)

Adoption of Social Security Legislation in New Zealand

In the September issue of the LABOUR GAZETTE a detailed reference is made to the introduction of Social Security legislation in the Parliament of New Zealand. This legislation (which provides free medical service for all, and pensions of 30 shillings ($7.50) weekly for all persons at 60) recently passed the legislative council.

Textile Committee Established under United States Fair Wage Standard Act

Among the provisions of the United States Fair Labour Standards Act (LABOUR GAZETTE, July 1938, page 719) was the establishment of a Wages and Hours Division in the Department of Labour under the direction of an administrator, who is authorized to appoint industry committees to recommend the minimum wages for particular industries, these rates to be between 25 cents and 40 cents an hour for the first year, and between 30 cents and 40 cents an hour thereafter, and to apply to all concerns within the designated classification of the industry or sub-division thereof.

The Act is to become operative 120 days after enactment which would bring it into force on October 24. Since its enactment, Mr. Elmer F. Andrews, formerly Industrial Commissioner of New York State, has been appointed Administrator of the new Wages and Hours Division of the Federal Department of Labour.

In addition, two Deputy Administrators and a General Counsellor have been appointed. The two Deputy Administrators are Mr. Paul Sifton, formerly Deputy Industrial Commissioner of the New York State Department of Labor; and Mr. Arthur Fletcher, Commissioner of Labor of North Carolina. The General Counsellor is Mr. Calvert Magruder, professor in the Law School of Harvard University.

Announcement has also been made recently of the establishment of the first industry committee under the Act. This committee is to inquire into the textile industry. Under the chairmanship of Mr. Donald Nelson, vice-president of Sears, Roebuck and Company, the committee consists of twenty-one members—seven representing the public, seven representing the employees, and seven representing the employers.

It is understood that approximately 1,300,000 wage earners are employed in the branches of the textile industry included in the scope of the committee's survey, and that the sections of the industry to be covered have been selected to include competitively related products so that complete establishments will be subject as far as possible to a single wage order.

It is stated that the object of the committee is to recommend classifications for the purpose of fixing for each classification the highest minimum rate (not more than 40 cents and not less than 25 cents per hour) which will not substantially curtail employment, and will not give a competitive advantage to any group in the industry. Wool, hosiery and worsted woven goods have been omitted. The committee commenced its sessions in Washington on October 11.

It is expected that the next committee to be set up will be that dealing with the tobacco industry.

According to an announcement made recently by Hon. Michael Dwyer, Minister of Public Works, Mines and Labour, Mr. Frank Rowe has been appointed as chairman of the Nova Scotia Workmen's Compensation Board. Mr. Rowe, who succeeds Mr. Frank Milner, K.C., was formerly solicitor and assistant commissioner of municipal affairs in the Department of the Attorney General.

A maximum working day of eight hours and a working week of 48 hours went into effect recently at the Royal Alexandra Hospital in Edmonton. The new schedule replacing a former one of nine hours a day and 52 hours a week affects about 200 nurses, and it was stated that the change would create positions for about 16 new nurses and about 10 other women workers.

The *Fifth Report on the Work of the Children's Branch,* published by the British Home Office, indicates that since the Children and Young Persons Act of 1933 came into force, "256 local education authorities, out of 316, have made by-laws regulating the employment of children under school-leaving age. Of the remaining 60, practically all had made by-laws before the 1st of November, 1933 (the effective date of the Act), and these remain in force.

"Sixty-four authorities have made a by-law prohibiting employment of all children under 13 years of age, 12 years of age being fixed by the Act as the minimum age for employment."

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

An application for the establishment, by the Minister of Labour, of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, was received in the Department of Labour on October 11 from certain employees of the Consumers' Gas Company, of Toronto, being members of the National Union of Domestic and Industrial Gas Workers. The dispute relates to the employees' demand for an agreement regarding wages, hours and working conditions. Nine hundred and ten workmen are directly affected by the dispute.

A Board of Conciliation and Investigation was established by the Minister on September 27 to deal with a dispute between Motorways Limited and its drivers, warehousemen, checkers, loaders, mechanics and helpers, and members thereof have been appointed as follows: Mr. A. Gordon McDougall, K.C., of Ottawa, Ont., chairman, appointed by the Minister on the joint recommendation of the other Board members, Mr. Duncan A. McIlraith, K.C., of Ottawa, nominated by the company, and Mr. Clinton H. Dowd, of Hull, P.Q., nominated by the employees. The employees' request for an agreement respecting wages, hours and working conditions is stated to be the cause of the dispute.

The personnel of the Board established on August 29 to deal with a dispute between the Canadian National Railways and the Canadian Pacific Railway Company and 650 checkers, freight handlers, etc., on the Montreal Wharf (Labour Gazette, September, 1938, p. 974), was completed during September by the appointment of Mr. Brooke Claxton, of Montreal, as third member and chairman. The appointment was made by the Minister of Labour in the absence of a joint recommendation from the other Board members, Messrs. George S. Currie and Tom Moore.

Report of Board in Dispute Between the Lethbridge Collieries, Limited, and its Coal Miners

A unanimous report, accompanied by a signed agreement, was received by the Minister of Labour on September 22 from the Board of Conciliation and Investigation which dealt with a dispute between the Lethbridge Collieries, Limited, and its employees being members of District 18, United Mine Workers of America.

The dispute arose in connection with negotiations looking to a new agreement. Certain general clauses of the new contract had been agreed upon, but no settlement could be reached with regard to the wage structure or the remaining general clauses, and these points were referred to the Board. Approximately 500 employees were directly affected by the dispute.

The Board was composed as follows: Honourable Mr. Justice H. W. Lunney, Calgary, Alta., chairman, appointed on the joint recommendation of the other Board members, Mr. John W. Davidson, Lethbridge, nominated by the employer, and Mr. Patrick Conroy, Calgary, nominated by the employees.

The Board in its report stated that public hearings were held in Lethbridge and Calgary, followed by conferences with the disputing parties, and that, with its assistance and approval, a mutually satisfactory agreement was reached and signed on September 17. This agreement, which is now before the membership of District 18, United Mine Workers of America, for ratification, is to be effective from September 16 and may be terminated on March 31 of any year on receipt of one month's notice from either party.

Wage increases are provided in the agreement for practically all classes of employees. The minimum rate for miners is set at $5.51 per day, an increase of approximately 6 per cent. Underground labourers are to receive $4.85 per day, and surface labourers $4.62 per day, an increase in each case of about 9 per cent. Similar increases are provided in the case of piece rates for contract miners.

Wages and Employment on United States Railways, 1937

Personnel on United States railways during 1937 numbered 1,114,663 compared with 1,065,624 in 1936, according to a statistical summary issued recently by the Association of American Railroads, Bureau of Railway Economics, Washington, D.C.

The summary shows that the total of paid hours worked (both hourly and daily employees) was 2,799,538,883 hours compared with 2,675,345,058 hours worked in 1936 and the aggregate compensation of employees in 1937 was $1,985,446,718 as against $1,848,635,804 paid in 1936.

The report also shows that the hourly rate per employee had increased to $0.709 in 1937 compared with $0.691 in 1936, and the average yearly compensation in 1937 was recorded as being $1,781.21 compared with $1,734.79 in 1936.

CONCILIATION WORK OF THE DEPARTMENT OF LABOUR FROM JULY 1, 1938, TO SEPTEMBER 30, 1938

CONCILIATION proceedings are carried on by the Department of Labour for the most part under the provisions of the Conciliation and Labour Act which empowers the Minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occuring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, preliminary inquiries and mediation by officers of the Department result in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation.

The Department of Labour has on its staff conciliators and mediators who are stationed at Vancouver, Toronto, Ottawa, and Montreal. The territory of the officer resident in Vancouver comprises the four western provinces. The conciliation officer resident in Toronto confines his activities to Ontario, while the officer in Montreal covers the province of Quebec and the Maritime Provinces. The headquarters of the Chief Conciliation Officer are at Ottawa.

The following statement covers the more important conciliation matters dealt with during the period July 1, 1938, to September 30, 1938. (An article covering the period April 1, 1938, to June 30, 1938, appeared in the LABOUR GAZETTE, July, 1938, page 733).

COAL MINERS, DRUMHELLER DISTRICT, ALBERTA.—The July issue of the LABOUR GAZETTE, at page 734, contained a report of a dispute existing between certain coal mine (lignite) operators in the Drumheller district and their employees, members of District No. 18, United Mine Workers of America. The operators had made application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, and an officer of the Department of Labour had mediated both prior to the application being made and subsequent thereto, but a settlement on all points proved impossible at that time, and a Board was established on April 14. The report of this Board was received early in July, and proved acceptable to the employees' committee. There were certain points, however, to which the operators objected, and negotiations between the parties directly affected were resumed. No agreement was reached, and the disputants jointly requested the services of a departmental conciliator. Through this officer's assistance negotiations proceeded for a further period of approximately five weeks, when an agreement was signed by all but three companies. This agreement is to be submitted to the miners for ratification. At the close of September negotiations with the three remaining companies were still in progress.

STREET RAILWAY EMPLOYEES, OTTAWA.—At the close of June there was before the Department a dispute between the Ottawa Electric Railway Company and its employees, members of the Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, which had arisen over the employees' request for increased wages and improved working conditions. Officials of the Department of Labour discussed the situation with representatives of the parties concerned. The Company offered certain concessions in regard to working conditions, but maintained that its financial position was not such as would permit of wage increases at that time. In the absence of an agreement the employees, on July 25, submitted an application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act.

AUTOMOTIVE TRANSPORT WORKERS, OTTAWA AND TORONTO.—Details of a dispute between Motorways, Limited, Ottawa, and certain of its employees were given in the July, 1938, issue of the LABOUR GAZETTE at page 735. The employees, newly organized into the Automotive Section of the Canadian Brotherhood of Railway Employees, had desired an agreement covering wages and working conditions, and when an agreement could not be reached an application was filed on their behalf for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act. The employers questioned the right of the applicants to make the application on the ground that they did not represent the majority of the employees affected. Through the conciliation service of the Department efforts were made to settle this dispute, but these were not successful and, the Minister being satisfied that the requirements of the governing statute had been met, a Board was established on September 27.

AUTOMOTIVE TRANSPORT WORKERS, OTTAWA.—On page 735 of the July issue of the LABOUR GAZETTE reference was made to an application received in the Department of Labour for the establishment of a Board of Conciliation and

Investigation under the Industrial Disputes Investigation Act to deal with differences between the United Delivery, Limited, Ottawa, and its truck drivers and helpers, represented by the Automotive Section, Canadian Brotherhood of Railway Employees. Conferences were held with the parties directly interested in the hope that a basis of settlement might be reached without the necessity of Board procedure. This was not possible, however, and the applicants having satisfied the Minister that they had the right to represent the majority of the employees directly affected, a Board was established on August 6.

Machinists, Ottawa.—The July issue of the Labour Gazette, at page 736, carried a reference to the efforts of the International Association of Machinists to secure an agreement with the Alexander Fleck Company, Limited, the Victoria Foundry Company, Limited, and the McMullen Perkins Company, Limited, Ottawa, embodying wages and working conditions applicable to the machinists in their employ. The assistance of the Department of Labour was requested in bringing about a joint conference, and on June 3 the matter was discussed with representatives of these firms. These representatives stated that there were other employers in the city who should be included in any agreement reached, and they agreed to take the necessary steps in this direction. Subsequently the Department was informed that, due to lack of business, and for other reasons as well, there was no likelihood whatever of the companies entering into an agreement with the machinists, and that while they were willing to meet individual employees at any time they were not prepared to deal with them collectively.

Coal Miners, Lethbridge, Alberta.—In the spring of 1938 a dispute developed between the Lethbridge Collieries, Limited, Lethbridge, Alta., and their coal miners, members of District No. 18, United Mine Workers of America. The existing agreement expired on March 31, and in negotiating a new agreement the miners sought increased wages, improved working conditions and union recognition. An officer of the Department of Labour participated in the negotiations and while a number of clauses of the proposed new contract were agreed to it was found impossible to reach an understanding on certain other points, particularly in respect to wages. The parties to the dispute therefore decided to jointly apply to the Minister of Labour for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, and on June 7 the Department received the application. Board procedure subsequently followed which resulted in an agreement being reached on September 17. This agreement is to be placed before the membership of District No. 18 for ratification.

Coal Miners, Edmonton District.—In the spring of 1938 a dispute arose between coal mine operators in the Edmonton district, organized into the Edmonton Coal Operators' Conference, and their coal miners, members of District No. 18, United Mine Workers of America, in regard to wages and working conditions, the existing agreement expiring on March 31. Conferences held prior to the expiration of the agreement were adjourned as both parties were apparently willing to allow the matters in dispute to remain in abeyance pending the adjustment of similar disputes in the lignite and bituminous fields in other parts of the Province. Following reports of Boards of Conciliation and Investigation established under the Industrial Disputes Investigation Act to deal with these latter disputes, negotiations between the Edmonton Coal Operators' Conference and officials of District No. 18, United Mine Workers of America, were resumed in September. No agreement was reached, however, and joint request was made for mediation by the Department of Labour. Conferences participated in by a departmental officer followed, and at the close of September it was reported that considerable progress had been made.

Automotive Transport Workers, Toronto.—An application for the establishment of a Board of Concilation and Investigation under the Industrial Disputes Investigation Act to deal with differences between the Adams Cartage and Storage Company, Toronto, Ont., and its truck drivers, warehousemen, checkers, loaders, mechanics and helpers was received in the Department of Labour on June 29, 1938. The application was filed by officials of the Canadian Brotherhood of Railway Employees as representatives of the men, who had recently joined the Automotive Section of the Brotherhood, when efforts to open negotiations with the Company looking to an agreement embodying wages and working conditions had failed. This dispute was dealt with by a departmental mediator with a view to avoiding Board procedure, and in this he was successful. An agreement was signed early in August. Twenty employees were stated to be affected in this instance.

Automotive Transport Workers, Toronto.—On June 29, 1938, an application was received in the Department of Labour for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with a dispute between the Weaver Cartage Company, To-

ronto, and its truck drivers, warehousemen, checkers, loaders, mechanics and helpers. The application, which was filed by officials of the Canadian Brotherhood of Railway Employees on behalf of the men, was made when efforts to secure an agreement with the Company covering wages and working conditions were not successful. The majority of the employees had recently joined the Automotive Section of this Brotherhood. A departmental officer mediated in this dispute and finally secured a settlement, an agreement being signed on August 29.

SEAMAN EMPLOYED ON THE GREAT LAKES.—Late on the evening of August 5, 1938, the President of the Canadian Seamen's Union advised the Department of Labour that, owing to the failure of negotiations which had been carried on with the management of the Canada Steamship Lines over a period of approximately five weeks, a strike of seamen employed by this Company on boats operating on the Great Lakes was to be called at noon the following day. Officials of the Department of Labour immediately communicated with representatives of both parties, and the attention of the President of the Union was directed to the fact that strike action would be in direct violation of the Industrial Disputes Investigation Act. It was also pointed out that it was the understanding of the Department that negotiations had not been definitely ended and that prospects were good for a direct settlement. Mediation by departmental officers was offered. As a result of this intervention negotiations were resumed on August 8, and an agreement signed on that date.

GRAIN ELEVATOR EMPLOYEES, PORT ARTHUR AND FORT WILLIAM, ONTARIO.—In September, 1937, the Vice-President of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, informed the Department of Labour that difficulty was being experienced in securing agreements with the Manitoba Pool Elevators, Limited, the Saskatchewan Pool Terminals, Limited, the McCabe Brothers Grain Company, Limited, and the Eastern Terminal Elevators, Limited, covering their employees at the Head of the Lakes. Officers of the Department mediated, and at the close of September there was reason to believe that conferences would be arranged between the parties directly affected. Particulars of this case were given in the October, 1937, issue of the LABOUR GAZETTE at page 1068.

In the spring of 1938 the matter had not been settled and the assistance of the Department was again requested. The employers objected to direct negotiations with the union and, further, questioned the contention that the majority of the permanent employees at the elevators were members of the union. Mediation by a departmental officer continued, and it was finally agreed that a ballot would be taken under his direct supervision. The result of the vote, which was taken on August 29 and 30, was 620 to 68 in favour of the right of collective bargaining, and 587 to 101 in favour of having the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, represent them. Negotiations were at once opened between representatives of the employing companies and of the men, the departmental officer assisting. On September 12 an agreement was reached which provided for wage increases, punitive overtime, holidays with pay, and union recognition.

CIVIC EMPLOYEES, DRUMHELLER, ALBERTA.—Under date of September 12, 1938, a request was received in the Department of Labour for the services of an officer of the Department in connection with a dispute between the Corporation of the City of Drumheller and certain civic employees. It was stated that the employees, newly organized into Civic Employees' Federal Union No. 135, had been negotiating an agreement with the City of Drumheller and, while certain clauses had been agreed upon, there were several points still in dispute. Assistance in negotiating an agreement covering wages and working conditions of school janitors was also requested. On September 15 an officer of the Department conferred with the President and Secretary of the Local Union and, after ascertaining the facts, advised them to renew negotiations with the civic authorities. They were further advised that if a settlement was not reached in this manner an application should be made to the Government of Alberta for the establishment of a conciliation board under the Provincial Act.

On September 3 the United States Social Security Board approved the Social Security plans of the State of Virginia, public assistance to the needy aged under the Social Security Act thereby becoming available in all states of the union. Virginia's laws for aid to the aged, the blind and dependent children became effective as of July 1. However, in the case of plans for old-age assistance and aid to dependent children, the state requested grants for the month of September only, while the grant for aid of the blind is for the quarter ending September 30.

STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1938

THE following table shows the number of disputes, workers involved and time loss for September, 1938, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in man working days
*Sept., 1938	15	2,173	18,840
*August, 1938	19	2,083	14,308
Sept., 1937	32	7,521	41,288

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Although the number of strikes and lockouts in September was slightly lower than in August the number of workers involved was slightly higher and the time loss in man working days was increased chiefly owing to two short strikes of coal miners in Nova Scotia and a strike of salmon fishermen in British Columbia. A considerable part of the time loss was due to strikes of knitting factory employees at St. Catharines, Ont., foundry workers at Windsor, Ont., restaurant employees at Toronto, Ont., and lime plant workers at Blubber Bay, B.C., all of which were carried over from August. In September, 1937, the principal disputes were those involving foundry and shipyard workers at Sorel, P.Q., silk factory workers at Louiseville, P.Q., rubber workers at Kitchener, Ont., and clothing factory workers at Cornwall, Ont.

Nine disputes, involving 1,228 workers, were carried over from August, including the dispute involving lithographers employed by one firm at London, Ont., which commenced on August 31, 1938, but was not reported to the Department in time for inclusion in the September issue of the Labour Gazette. Six disputes commenced during the month. Of these fifteen disputes, eight were terminated during the month, three resulting in favour of the employers involved, compromise settlements being reached in two cases, while the results of three disputes were recorded as indefinite. At the end of September, therefor, there were seven strikes and lockouts on record, namely: salmon fishermen, Johnstone Strait district, B.C., coal miners, Nacmine, Alta., knitting factory workers, St. Catharines, Ont., photo engravers, Montreal, P.Q., foundry workers, Windsor, Ont., lime plant workers, Blubber Bay, B.C., and restaurant employees Toronto, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to nine such disputes, namely: motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; coastwise longshoremen, Vancouver, B.C., November 23, 1936, several employers; meet packing employees, Vancouver, B.C., December 29, 1936,, one employer; beverage dispensers, Toronto, Ont., March 4, 1937, one employer; dairy employees Toronto, Ont., September 17, 1937, one employer; shoe factory workers, Perth, Ont., January 6, 1938, one employer; cotton factory workers, St. Gregoire de Montmorency, P.Q., July 11, 1938, one employer; clothing factory workers, Newmarket, Ont., August 3, 1938, one employer; and lithographers, London, Ont., August 31, 1938, one employer, the last two being added to the list this month.

The dispute involving bakery workers employed by one firm at Hamilton, Ont., commencing May 27, 1938, and carried in the above list for some time, appears to have lapsed by September 30 and has consequently been removed from the list.

Disputes involving men on unemployment relief work who are not paid wages but receive subsistence or allowances for which work is performed or may be required are not included in the record, no relation of employer and employees being involved.

A strike of car plant workers at Trenton, N.S., which commenced on August 18 to secure an adjustment of piece rates was recorded in the Labour Gazette for September as terminated on August 31 when the plant was closed down indefinitely. At the end of September the union, the Amalgamated Association of Iron, Steel and Tin Workers of America, arranged that work would be re-

sumed on October 5 pending negotiations for a settlement.

A minor dispute is reported to have involved about ten greenhouse employees at Kitchener, Ont., who ceased work on September 3 for about two and one-half hours alleging that the company had violated an agreement which ended a dispute in July. Work was resumed when the matter in dispute was settled.

A dispute involving beverage room employees in one hotel at Fort William, Ont., on September 6 has been reported in the press. Information secured by the Department is that there was no cessation of work but the establishment was picketed for a short time owing to a misunderstanding as to the union card of one worker.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

Disputes in Progress Prior to September

Coal Miners, Rosedale, Alta.—As noted in the September issue of the Labour Gazette a number of coal miners in one colliery, members of the United Mine Workers of America, ceased work on August 24 alleging that helpers' wages were paid to miners working at or near the coal face, contrary to the agreement. It was reported that the strike was not authorized by the union and was in violation of the provision of the agreement on the settlement of disputes. Work was resumed on September 7 on the advice of union officials, pending adjustment of the matter in dispute under the terms of the agreement. A new agreement for this and other mines in the Drumheller area had been reached following a report by a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act (Labour Gazette, August, 1938, page 877).

Coal Miners, Florence, N.S.—As noted in the September issue of the Labour Gazette, coal miners employed in one colliery ceased work on August 31 in protest against the employment of a haulage engineer from another colliery operated by the same company instead of a man from the mine. Work was resumed on September 6 following negotiations, a "neutral" man to be employed pending a final settlement, the matter in dispute to be referred to the Inspector of Mines. The shipping pier employees joined in the strike on September 1.

Knitting Factory Workers, St. Catharines, Ont.—On September 7 the members of the Canadian Full-Fashioned Hosiery Workers' Association on strike since July 30 for a change in the system of wage payment and for reduced hours voted to continue on strike until the management agreed to negotiate a union agreement and recognize the principles of collective bargaining. The dispute is reported to have been discussed with officials of the Ontario Labour Department. At the end of the month a settlement had not been reached.

Clothing Factory Workers (Dressmakers), Newmarket and Toronto, Ont.—This dispute occurred when a company in Toronto operating under an agreement with the International Ladies' Garment Workers' Union, to be in force until 1940, closed the establishment on August 3 and opened a factory in Newmarket operating under a new name, having secured a new company charter. It is reported that the Toronto employees were offered work in Newmarket, but not under union conditions. The union declared a strike and employees from Toronto picketed the Newmarket establishment. The company had secured other employees and stated that operations were being carried on without difficulty. Early in September it appeared that employment conditions were no longer affected and the dispute is included in the list of such disputes which the unions involved have reported as unterminated.

Lithographers, London, Ont.—A number of employees, members of the Amalgamated Lithographers of America, in one department of an establishment producing cartons, labels, stationery, etc., ceased work on August 31 as a result of a dispute as to wages for overtime work. The plant operates on a five-day week and the union demanded double time for Saturday and time and one-half for other overtime as provided for in agreements covering 90 per cent of the lithographing industry in Ontario and Quebec. During negotiations prior to the strike the company offered to pay time and one-half rates for overtime if it were found to be possible to pay it for the whole plant. It was reported that most of the employees on strike were replaced by the end of September. Information as to the commencement of this dispute was not received in time for inclusion in the September issue of the Labour Gazette.

Foundry Workers (Automobile Parts), Windsor, Ont.—In connection with the strike involving members of the United Automobile Workers of America, it was reported toward the end of September that the Trades and Labour Council of Essex County had appointed a mediation committee to attempt a settlement. Early in September a picket was convicted of watching and besetting but given a suspended sentence of two years' imprisonment. It was reported that counsel for the accused had asked for a stated case with a view to taking an appeal in order to secure an interpretation of the law on picketing. A picket

charged with intimidation was acquitted. Information received indicates that the strikers were replaced soon after the dispute commenced and that the plant has been in full operation.

Lime Plant Workers, Blubber Bay, B.C.—A number of men were arrested on charges of assault and unlawful assembly in connection with picketing a dock where strike breakers were reported to be coming to work in the plant. Several persons, including provincial police, were reported to be injured. In August a number of pickets were convicted on charges of intimidation, assault, obstructing police, etc., in July. Early in August it was reported that the company

STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1938*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(a) Strikes and Lockouts in progress prior to September, 1938.				
MINING, ETC.—				
Coal miners, Rosedale, Alta.	1	115	500	Commenced Aug. 24, 1938; for wage adjustment for helpers; terminated Sept. 7; return of workers; compromise.
Coal miners, Florence, N.S.	1	700	2,100	Commenced Aug. 31, 1938; against employment of a worker from a neighbouring colliery; terminated Sept. 3, 1938; negotiations; work resumed Sept. 6 pending reference to provincial official.
MANUFACTURING—				
Textiles, Clothing, Etc.—				
Knitting factory workers, St. Catharines, Ont....	1	54	1,350	Commenced July 30, 1938; alleged discrimination against two union workers and for increased wages, reduced hours and union agreement; unterminated.
Clothing factory workers (dressmakers), Newmarket, Ont.....	1	14	100	Commenced Aug. 3, 1938; alleged violation of agreement when plant moved; employment conditions no longer affected by Sept. 30; replacement; in favour of employer.
Printing and Publishing—				
Photo engravers, Montreal, P.Q.....	1	12	300	Commenced July 30, 1938; for reduced hours; unterminated.
Lithographers, London, Ont.....	1	7	175	Commenced Aug. 31, 1938; for increased rates of pay for overtime and against dismissal of union employee; employment conditions no longer affected by Sept. 30; replacement; in favour of employer.
Metal Products—				
Foundry workers (automobile parts), Windsor, Ont.....	1	150	3,750	Commenced Aug. 3, 1938; for closed shop union agreement, adjustment of wages and against discharge of union workers; unterminated.
Non-Metallic Minerals—				
Lime plant workers, Blubber Bay, B.C.....	1	111	2,700	Commenced June 2, 1938; *re* application of Conciliation Board (provincial) award; unterminated.
SERVICE—				
Business and Personal—				
Restaurant employees, Toronto, Ont.....	3	65	1,625	Commenced June 15, 1938; against discharge of workers alleged to be for union activity; unterminated.

STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1938*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(b) Strikes and Lockouts commencing during September, 1938				
FISHING AND TRAPPING—				
Salmon fishermen, Johnstone Strait District, B.C.	.....	450	3,150	Commenced Sept. 23; against reduction in price of fish; unterminated.
MINING, ETC.—				
Coal miners, Little Bras d'Or, N.S.	1	200	2,000	Commenced Sept. 2, against dismissal of worker; terminated Sept. 12; negotiations; indefinite.
Coal miners, Nacmine, Alta.	1	130	900	Commenced Sept. 23; for reinstatement of workers; unterminated.
CONSTRUCTION—				
Highway—				
Truck drivers, Parrsboro District, N.S.	1	25	15	Commenced Sept. 12; for increase in rate of pay per load; terminated Sept. 12; negotiations; in favour of employer.
Other—				
Truck drivers, Millidgeville, N.B.	1	25	60	Commenced Sept. 26; for increase in wages; terminated Sept. 28; negotiations; compromise.

Local—				
Cartage company employees, Montreal, P.Q.	1	115	115	Commenced Sept. 7; for recognition of union; increased wages, etc.; terminated Sept. 7; negotiations; indefinite.

*In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

had notified strikers living in company houses to move out.

RESTAURANT EMPLOYEES, TORONTO, ONT.—In connection with the strike on June 15 of employees in three restaurants operated by one company, it was reported in the press that early in September a local representative of the union involved (the Cafeteria and Restaurant Employees' Union, Local 168 of the Hotel and Restaurant Employees' International Alliance and Bartenders' League) conferred in New York with the management of the restaurant chain, accompanied by officials of the union in New York. A picket, arrested on August 26 on a charge of assaulting a restaurant employee and released on bail, came up for trial on September 20.

Disputes Commencing During September

SALMON FISHERMEN, JOHNSTONE STRAIT DISTRICT, B.C.—A number of fishermen ceased work on September 23 when the cannery operators reduced the price for chum salmon from 12 cents to 8 cents. It was reported that market conditions were unfavourable and that there was little demand for salt fish in the Orient. At the end of the month the dispute was unterminated but a compromise at 10 cents per fish was reached and operations were resumed early in October.

TRUCK DRIVERS, PARRSBORO DISTRICT, N.S.—A number of truck drivers, on a highway construction project, ceased work about noon on September 12 when their demands for an increase in the rate per load from $7 to $8 for hauling asphalt was refused. For some time prior to the stoppage the company had been paying a rate of $5.10 per load but had increased the rate to $7 commencing the morning of September 12. Work was resumed on September 13 at the rate offered by the company, namely $7 per load, but it was arranged that the employer would provide for certain services in maintaining the trucks.

TRUCK DRIVERS, MILLIDGEVILLE, N.B.—A number of truck drivers engaged in hauling gravel for the runway of an airport ceased work on September 26 to secure an increase in rates of pay according to the capacity of the trucks. The employer stated that the

rates paid were tentative for the commencement of the work and a compromise was reached and work resumed after two and one-half days.

Cartage Company Employees, Montreal, P.Q.—Employees of one cartage company, members of the International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers, ceased work on September 7. It was reported that the workers demanded recognition of the union as sole bargaining agency, increases in wages from 35 cents per hour to 40 cents with overtime for work after six o'clock and double time for holiday work. Work was resumed next day when the employer agreed to negotiate an agreement and arbitrate all points on which agreement could not be reached.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the Labour Gazette from month to month, bringing down to date that given in the March issue, in the review of Strikes and Lockouts in Canada and Other Countries, 1937. The latter included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the figures are not for relatively recent dates. Statistics given in the annual review and in the monthly articles are taken as far as possible from the government publications of the various countries concerned. Information as to particular disputes is obtained for the most part from newspaper reports. Inasmuch as reports on labour matters are apt to be curtailed during times of international crisis, the amount of information available through press reports may not be in proportion to the importance of actual events. This was particularly true during the past month.

Great Britain and Northern Ireland

In Great Britain the *Ministry of Labour Gazette* publishes statistics dealing with all strikes and gives some details in regard to the more important ones. These details which are published after investigation do not always agree with the information given earlier in the press.

The number of strikes beginning during August was 77 and 12 were still in progress from the previous month, making a total of 89 in progress during the month, involving approximately 22,700 workers with a resultant time loss of about 86,000 man working days.

Of the 77 disputes beginning in August, 11 arose out of demands for advances in wages, 3 out of proposed wage reductions and 11 were over other wage questions; 4 arose out of questions respecting working hours, 21 out of questions respecting the employment of particular classes or persons, 22 were over other questions respecting working arrangements and 3 were over questions of trade union principle. Two stoppages were due to sympathetic action in support of workers involved in other disputes.

Final settlements reached during August numbered 66. Of these, 8 were settled in favour of the workers, 36 were settled in favour of the employers and 22 resulted in compromises. In the case of 5 other disputes work was resumed pending negotiations.

The strike which involved the largest number of workers during August, was that in which 5,000 employees in one section of an airplane factory at Birmingham ceased work due to dissatisfaction with certain basic rates of wages (Labour Gazette, September, 1938, page 981). This strike began on August 29 and terminated on September 7 when work was resumed on conditions existing prior to the stoppage, pending further negotiations. One press report states that during this strike shop stewards from aircraft companies all over the country met in private at Birmingham to discuss wages and conditions in aircraft factories generally.

Official information in regard to the strike of 1,400 coal miners in North Staffordshire (reported in the Labour Gazette, September, 1938, page 981) gives the date of the commencement of this dispute as August 8. The number of workers who struck against a proposed reduction of 2½ per cent from wages in respect of "dirt filled with coal" was 790, while 850 were indirectly affected. Work was resumed on August 20, when the management withdrew the proposal for a period of three months to allow the miners to try to reduce the amount of dirt filled.

On August 23, 350 miners at another Staffordshire colliery ceased work in protest against conditions arising from the use of steel supports instead of wooden supports at the coal face; 680 miners were indirectly involved. Work was resumed the next day

65197—2½

when the management granted increased rates where steel supports were used.

Press reports during September contained information as to strikes of aircraft factory employees at Dudley, Walsall and Woodstock about the 9th of the month. The workers claimed that fair wage clauses of contracts were being violated and took steps to notify the Air Ministry of these alleged violations. Exact details as to the numbers involved and the settlements reached have not yet been received.

Australia

On or about September 9, approximately 22,000 coal miners, 80 per cent of whom were employed in New South Wales went on strike demanding a six hour day, a 30 hour week, a pension of £2 per week at sixty, improved safety and health regulations and pay for annual holidays. The Miners' Federation requested the Prime Minister to convene a conference of representatives of Federal and State Governments, the mine owners and miners but they were advised to apply to the Federal Arbitration Court. The miners' officials stated that they would not approach this Court unless they were assured that their demands would be considered by it. Previously the New South Wales Arbitration Court had ruled that the workers' demands could not be acted upon until the current wage agreement expires in August, 1939. No further details have yet been noted.

France

Information as to labour disputes in France during the month of September has not been as complete as usual owing to the emphasis on the international situation in newspaper despatches. It would also appear that some disputes have been dealt with by the government as questions of national emergency rather than as strictly industrial matters. The industrial situation has also been affected by the mobilization of large numbers of workers.

Exact details as to the settlement of strikes of dockers at Marseilles and textile workers at Amiens have not been received but indications were that the workers were willing to accept some modifications of the forty-hour week law during the crisis.

A press despatch of September 19 noted a strike of building trade workers in Paris in which between 15,000 and 20,000 were demanding new collective agreements with higher wages. The despatch notes that workers on official or national defence projects were not affected. No details as to a settlement have been noted.

The same despatch mentions a similar strike of building trade workers at Lyons but gives no details.

New Zealand

Figures recently published by the Census and Statistics Department of the Dominion of New Zealand show that during the six months ending June 30, 1938, there were 39 industrial disputes in New Zealand, involving 5,078 workers and resulting in a time loss of 12,796 man working days. During the corresponding six months of 1937 there were 29 strikes but the number of workers involved was 5,908 with a resultant time loss of 13,362 man working days.

United States

Preliminary estimates of strikes in July, 1938, which as the Bureau of Labour Statistics points out, are based on "scattered information from newspapers and other sources and are subject to revision as more definite reports are received" show 195 strikes, as beginning during the month, which with 130 unterminated at the end of June made a total of 325 in progress during the month. The number of workers involved in these disputes was 75,000 and the resulting time loss was 850,000 man working days. The comparable figures for the previous month show that there were 328 strikes in progress, involving 88,000 workers with a resultant time loss of 850,000 man working days.

On September 7 approximately 6,000 members of the Retail Department Store Clerks' Union employed by 27 major department stores in San Francisco went on strike after contract negotiations over the union's demand for storewide seniority rights and methods of hiring broke down. The stores involved remained open and some clashes between strike breakers and pickets resulted. A press despatch of September 19 reports that both parties to the dispute agreed to discuss the matter of seniority again but no report as to the outcome has been received.

On September 15 an unauthorized strike of truck drivers began in New York. The International Brotherhood of Teamsters had been negotiating for a reduction in hours from 47 to 40 per week with the basic wage of $56.50 per week to be unchanged, but about 15,000 members became dissatisfied with the course of the negotiations and went out on strike. The acting Mayor made attempts to get the employers and union representatives together and on September 22 the strikers agreed to a truce. Officials of the Union were to carry on negotiations for them and if an agreement was not reached by the evening of September 25, the strike was to be continued. On

September 26, the truckers ceased work again because the employers through the Merchant Truckmen's Bureau, the Highway Transportation Association and other organizations had refused to a forty-four hour week which the workers were willing to accept as a compromise settlement. In order to prevent a serious shortage of supplies necessary to the city's industries the mayor arranged to have union members drive reconditioned trucks owned by the city. Subsequently the employers agreed to the forty-four hour week and by September 30 conditions in the trucking industry were almost normal.

Loans Under Dominion Housing Legislation

The Department of Finance announced recently the results of operations under the Dominion's housing legislation up to the end of August.

The figures are of particular interest because they disclose the amount of the loans made for the first full month of operations under Part 1 of the National Housing Act, which contained special provisions designed to encourage the making of Housing Act loans, particularly small loans and loans in the small and more remote communities. According to the announcement made by the Department of Finance the incentives provided by the new legislation are apparently attaining the objectives aimed at, as despite the normal seasonal falling off of construction in August and the probable deterring effects of the international situation, loans approved during the month of August, 1938, showed a substantial increase over the loans approved during the same month of 1937.

In August, 1938, 254 family housing units were financed under Part 1 of the National Housing Act and the total loans approved amounted to $1,031,404. In number of family housing units provided for, this represented an increase of nearly 37 per cent over August, 1937, and in total value of loans approved, an increase of over 34 per cent.

The following results by provinces include loans under the Dominion Housing Act and the National Housing Act to August 31, 1938: Prince Edward Island, $59,634; Nova Scotia, $1,661,023; New Brunswick, $452,627; Quebec, $5,609,430; Ontario, $10,653,702; Manitoba, $668,533; Saskatchewan, $8,200; Alberta, no report; British Columbia, $3,072,415, making a grand total of $22,185,564.

During the twelve months ending August 31, 1938, total loans approved amounted to over $11,581,509.

According to a report entitled *The Mineral Production of Canada* issued by the Dominion Bureau of Statistics, Canada's mineral production during the first six months of 1938 was valued at $209,654,610, compared with $215,382,814 during the same period of a year ago.

On July 1, 1938, returns were tabulated from 429 Canadian mine operators with 71,489 employees, compared with 70,848 in the same period of 1937.

Mothers' Allowances in British Columbia, 1937-38

The annual report of the Superintendent of Welfare, British Columbia, on the administration of the Mothers' Allowances Act for the fiscal year 1937-38 shows that the expenditure under the legislation amounted to $747,903.40, an increase of 9·56 per cent over the fiscal year 1936-37, when expenditures totalled $682,588.15.

At the close of the fiscal year reviewed by the report, 1,692 allowances are recorded as being in force, an increase of 125, or 7·97 per cent over the preceding fiscal year. There were no increases in the rates of allowance during the year, but the allowances of a number of recipients who had been receiving less than the maximum were increased.

The report also refers to the introduction of the "Mothers' Allowances Act" which came into effect on January 1, 1938, replacing the former "Mothers' Pensions Act" (Labour Gazette, January, 1938, page 33) and outlines the chief points on which the new legislation differs from the old.

Accidents Arising from Use of Explosives

An increase in the number of accidents arising from the use of explosives is reported for the calendar year 1937 in the annual report of the Explosives Division of the Bureau of Mines, Department of Mines and Resources. During the year total casualties numbering 38 killed and 210 injured is reported as compared with 31 and 177 in the corresponding categories in 1936.

Of the 194 accidents that resulted in the casualties reported, 45 or 24 per cent were caused by playing with detonators and other explosives, and this "play" resulted in the death of three and the injury of 56, or 8 per cent of the total number of deaths and 27 per cent of the total injuries.

In ordinary use, the report states, the greatest number of fatalities was caused by returning too soon to the shot hole. This type of accident, it is pointed out, may be caused by underestimating the time required for a fuse to burn, miscounting the shots in a round that have exploded, or by thinking a fuse had not been lighted when it had been so in fact. Other frequent causes of fatal accidents are listed as "not taking proper cover, projected debris, and drilling into unexploded charges."

COMBINES INVESTIGATION ACT

Report of Investigation into Alleged Combine in Distribution of Tobacco Products

AN investigation into an alleged combine in the distribution of tobacco products in the province of Alberta and elsewhere in Canada is the subject of a report made to the Minister of Labour on August 31, 1938, by F. A. McGregor, Commissioner of the Combines Investigation Act.

The conclusion of the Commissioner, reached after several months' investigation of the wholesale distribution of manufactured tobacco products with primary reference to conditions in the trade in the province of Alberta, is that "a combine within the meaning of the Combines Investigation Act exists in the distribution of tobacco products and that the Imperial Tobacco Company of Canada, Limited, and the Imperial Tobacco Sales Company of Canada, Limited, and the Northern Alberta Tobacco and Confectionery Jobbers' Association have been parties and privy to and have knowingly assisted in the formation and operation of this combine."

An application for the investigation was made in February, 1938, under the provisions of the Combines Investigation Act. The hearings in the inquiry were commenced in March when witnesses were examined before the Assistant Commissioner in Edmonton and later in Vancouver. Mr. W. J. A. Mustard, K.C., of Edmonton, acted as counsel for the Commission in the hearings at Edmonton. Other witnesses were examined in Ottawa in April and May. While the application was concerned primarily with the nature of the alleged combine and its operation in Northern Alberta, the Commissioner points out that the report includes information secured with regard to similar operations in other districts in Canada.

Agreements of Wholesalers

The Commissioner finds that "In Alberta at the present time wholesale distributors of tobacco products are parties to an agreement providing for the maintenance of common wholesale prices of tobacco products, for joint refusal to sell to retailers who might sell below retail prices as fixed by tobacco manufacturers, and for other related restrictions in connection with tobacco distribution." The use of forms of statutory declarations by Edmonton wholesalers in the enforcement of the agreement is reported.

The development of this form of price-fixing agreement, called the "Jobbers' Selling Arrangement," is traced in the report, and in the opinion of the Commissioner the Imperial Tobacco Company was primarily responsible for its introduction into the industry.

Restrictive arrangements have been reported to have been made also between wholesalers and manufacturers with respect to the classification of dealers buying from manufacturers and for limitation of the numbers of retailers entitled to buy directly from manufacturers. Lists of recognized wholesale buyers are stated to be drawn up by the jobbers' associations and the manufacturers, with the reported understanding that others will not be supplied with tobacco products by the manufacturers.

Agreements of Manufacturers

In dealing with the agreements between jobbers' associations and tobacco manufacturers, the Commissioner reports that tobacco manufacturers by agreement have discontinued the use of premium cards, with the exception of a limited use of premium cards redeemable for playing cards only, and have undertaken to put up popular priced cigarettes only in certain sizes of packages. Other restrictions regarding donations of free goods and elimination of the packing of cigarette papers or pipe cleaners with tobacco also have been reported to have been put into effect by manufacturers. So-called "independent" manufacturers, seeking to make any price reductions to consumers through increasing the number of cigarettes in a package or adding premiums or merchandise to their products are said to have found that unless they conform to the policies supported by the Imperial Tobacco Company and the wholesalers, as expressed through the associations existing in the trade, the distribution of their products through wholesalers is likely to be impeded. On this point the report states these manufacturers "must now conform closely to the policies written into the jobbers' association regulations."

Refusals to Sell

The position of firms which are judged by the jobbers' association or by the Imperial Tobacco Company to have failed to sell at fixed wholesale or retail selling prices is illustrated in the report by reference to two firms in Alberta. In the case of one retail firm, pressure is reported to have been brought to bear upon the jobbers' association by the Imperial Tobacco Company, following which the retailer was unable to buy tobacco from wholesale dealers. It is stated that in the case of a wholesale firm judged by the association to have violated its price agreement

it was recommended to manufacturers that the firm be penalized by a period of suspension from the jobbers' list. In illustration of the position of wholesale firms which have not been recognized as wholesalers of tobacco products, the Commissioner cites the case of a wholesale house in Alberta which had been securing supplies of tobacco products at intervals from manufacturers other than the Imperial Tobacco Company and from other wholesalers but which after the institution of the existing jobbers' agreements has been unable to supply retailers with such products.

Price-Fixing by Imperial Tobacco Company

The Commissioner finds that the maintenance of the agreements between tobacco jobbers is dependent upon price agreements which the Imperial Tobacco Company, through its sales organization, requires to be signed by each wholesaler or retailer to whom it sells. Under the terms of these latter agreements the Imperial Tobacco Company, it is stated, requires distributors to maintain not only the wholesale and retail prices fixed by the Imperial Tobacco Company, but also the prices set by each other tobacco manufacturer, and enforces these requirements by refusing to permit goods of its manufacture to be sold by non-conforming distributors. The Commissioner concludes that these provisions "appear to amount to a highly unwarranted regulation of the distribution of products of other manufacturers, with the effect of substantially eliminating price competition in the wholesale and retail distribution of practically all tobacco products throughout Canada, since agreements of this nature have been put into effect by this Company not only in Alberta but throughout the Dominion."

Detriment to the Public

The effect of the price agreements of the Imperial Tobacco Company in conjunction with the various jobbers' selling arrangements, in the opinion of the Commissioner, is to limit greatly possible independent action by other manufacturers. With respect to distributors the report states: "When the trading position of a corporate organization supplying three-quarters of the Canadian tobacco market is buttressed by a sweeping agreement respecting not only its own products but those of other manufacturers as well, with penalties involving the cutting off of supplies of Imperial goods for breaches of the agreement, it is clear that the distributor, either jobber or retailer, has little option but to conform to the trading policies of the dominant company."

The Commissioner finds that "the ordinary individual distributor buying from the Imperial Tobacco Company must conduct his business, in so far as tobacco prices are concerned, on the basis of rules laid down in his written agreement with the Imperial Company. The injury to the majority of efficient distributors and to the general public from a system which deprives consumers of price reductions arising from price competition among distributors on the basis of ordinary differences and improvements in operating efficiencies is equally evident. This is particularly the case when coupled with an elaborately organized program which severely restricts the opportunities of independent manufacturers for building up their business by establishing lower prices to the public on such goods as cigarettes of their own manufacture, in such price competition as they might otherwise be able to offer to a company manufacturing the greater part of the goods supplied by the entire tobacco manufacturing industry."

The report then states:—

"Distributors generally have not been active in insisting upon the right to sell at lower than these fixed prices. While there have been complaints against the methods of control represented by the Imperial agreements, the distributors for the greater part appear to consider it to their immediate advantage to have guaranteed margins of gross profits and to be relieved of the necessity of competing in price in the services they render. Such escape from the need of reckoning with normal price competition in the operation of one's business might appear attractive to any group of distributors. The Imperial Tobacco Company has expressed itself as decidedly in favour of these present policies of control, which were introduced largely at its initiative and are being enforced largely through its insistence and support. But it is not sufficient justification for a price or trade combination policy to claim that it is satisfactory alike to manufacturers and wholesale distributors who shape the policy and administer it in their own interests. The interests of the ultimate buyer of the product must be considered. Under this system the consumer is deprived of that element in competition among dealers which is his most effective safeguard and is exposed to the costly elements which are characteristic of non-price competition."

Conclusions

In conclusion the Commissioner states:—

"The system of price maintenance, involving fixing of resale prices, certain standardization of packaging and other uniformity in trade practices, has undoubtedly contributed toward the lessening of price competition among manufacturers on important classes of tobacco products. Rivalry between manufacturers for the patronage of consumers continues, but the emphasis is now thrown on more extensive advertising and the provision of additional services and other selling facilities, all of which tend to increase the national cost of merchandising in the industry. The extent to which advertising costs in the tobacco industry have developed is shown in the evidence given before the Price Spreads Committee in 1934 by an officer of the Imperial Tobacco Company, who stated: 'I do not hesitate to tell you that during the three years of my connection with the Imperial Tobacco Company we have spent approximately three and one-half million dollars

in salesmen's salaries and expenses and nine and a half million dollars in advertising our brands.'

"One effect of these arrangements is that no tobacco or cigarettes made by any manufacturer may be sold by a wholesale or retail dealer in Canada handling products of the Imperial Tobacco Company unless they are sold at prices fixed by the manufacturer. Not only are all tobacco products in Canada required to be sold to the public at fixed prices, barring negligible exceptions, but in the case of the leading class represented by cigarettes about ninety-five per cent of all cigarettes in Canada are sold at one identical price to all consumers, with this price enforced regardless of source of manufacture, quantity, or any other consideration. Reference has already been made to obstacles in the way of independent manufacturers seeking to sell any brands below this fixed price. If a dealer reduces the fixed price of any tobacco product so much as by giving even a paper folder of matches, the Imperial company under its written agreements will refuse to permit him to buy any Imperial goods, even if the article so reduced in price is the product of some other tobacco manufacturer. The seriousness of this penalty is manifest when it is recognized that inability to handle Imperial brands means the practical elimination of a dealer whose business consists mainly of tobacco products.

"On the basis of the information secured in this investigation and summarized in this report it is my opinion that the suppression of competition which has been effected in this industry is distinctly against the public interest, and that it is against the public interest to leave it to one company or to any group of firms to proceed in this manner in setting aside the controls which operate generally under a competitive system, as well as in deciding who may engage in selling tobacco products and on what terms and in dictation by one company of the prices at which products of its manufacture constituting the greater part of the products of the entire industry shall be sold to the public by all distributors. Apart from its direct effect on prices and profits, it is submitted that this suppression of competition is in itself against the interest of the public, both in its hampering effect on reasonable freedom of enterprise and in the longer-term economic loss to the community arising from such private monopolistic regulation of an important industry."

One of the documents annexed to the report is a study made in 1937 by Dr. C. A. Curtis of Queen's University at the request of the Imperial Tobacco Company of Canada, entitled "An Economic Analysis of Resale Price Maintenance in the Canadian Tobacco Industry." Dr. Curtis made a searching analysis of the economic effects of the policy of resale price maintenance followed in the tobacco industry upon consumers, distributors, manufacturers, tobacco factory workers and growers. His conclusion, on economic grounds, was that "as a price policy the practice of resale price maintenance cannot, on its economic side, be supported in the general public interest or as an answer to unfair trade practices; it may even be of doubtful value in the long run to most divisions of the tobacco trade and industry itself."

The report and evidence have been transmitted to the Attorney General of Alberta for such court action as he may institute in view of the conditions disclosed.

Working Hours of Young Persons in Great Britain

The British *Ministry of Labour Gazette* for September gives the following summary of recent legislation in Great Britain respecting the hours of employment of young persons:—

The Young Persons (Employment) Act, 1938, which received the Royal Assent on July 29, will regulate the hours of employment of persons under 18 years of age in the following classes of employment (unless the hours of such persons are already regulated by Factories, Mines or Shops Acts, or the young persons are employed in or in connection with agriculture or in a ship):—

(*a*) employment in the collection or delivery of goods, or in any carrying, loading or unloading of goods incidental to the collection or delivery thereof;

(*b*) employment in connection with a business carried on at any premises in carrying messages or running errands, being employment wholly or mainly outside the premises;

(*c*) employment at a residential hotel or club in carrying messages or running errands, or in connection with the reception of guests or members thereat;

(*d*) employment in connection with the business carried on at any premises where a newspaper is published, in carrying messages or running errand;

(*e*) employment at a place of public entertainment or amusement, or at a public swimming bath, bathing place or turkish bath, in carrying messages or running errands, or in the reception of or attendance upon persons resorting thereto;

(*f*) employment elsewhere than in a private dwelling-houe, in the operation of a hoist or lift connected with mechanical power;

(*g*) employment in, or in connection with, the operation of cinematograph apparatus;

(*h*) employment at any premises occupied for the purposes of the business of a laundry, dyeing or cleaning works or other factory, in receiving or despatching goods.

As regards young persons thus employed, the Act limits working hours to 48 weekly, and prescribes intervals for meals or rest, a weekly half-holiday, and a whole holiday on Sunday or a day in lieu. A limited amount of overtime is allowed for persons over 16. For persons under 16, overtime is prohibited, and the working hours are to be reduced to 44 weekly from December 31, 1939. An amendment to the Shops Act, 1934, provides that the hours of persons under 16 employed about the business of shops shall at the same time be reduced to 44, subject to averaging of hours during the Christmas fortnight.

Night work is prohibited during a period of seven consecutive hours, including the hours between 10 p.m. and 6 a.m.

The Act comes into operation on January 1, 1939. It does not apply to Northern Ireland.

RECENT REGULATIONS UNDER PROVINCIAL LEGISLATION

REGULATIONS made within the last few weeks under the authority of provincial statutes include six minimum wage Orders under the Quebec Fair Wage Act applying to persons employed in cotton textiles, hospitals outside of the Cities of Quebec and Levis, the milk industry in Montreal, the construction industry in the County of Arthabaska, the manufacture of matches, and in the operation and upkeep of public buildings. Notice is also given of an assessment of 1½ per cent on the pay-roll of employers within the scope of any Order under the Act. Minimum Wage Orders in Alberta and British Columbia revise or amend earlier Orders except in the case of a new regulation applying to carpenters in and around Vancouver. Two of the British Columbia Orders provide for seasonal industries, tomato canning and the operation of hotels in tourist resorts.

Other regulations recently made affect truck drivers in Alberta, motion-picture operators in British Columbia, hours of work of taxicab drivers and shop employees in British Columbia, pensions for the aged or blind in British Columbia, truck and taxi drivers and travelling salesmen with respect to workmen's compensation in Nova Scotia, apprentices in motor vehicle repair work in Ontario and the medical care of men employed in lumber, mining and construction camps in Northern Ontario.

Alberta Department of Trade and Industry Act

By an order in council of August 9 the definition of "barber shop trade" in the code governing the trade which was approved on February 4, 1937, is amended to make clear that beauty parlours are not included. The code as adopted provided for payment of a commission of 60 per cent of the gross weekly receipts with a minimum of $15 weekly and a daily minimum wage of $3 with $3.50 on a Saturday. On February 16, 1937, these daily minima were struck out; they have now been restored.

Alberta Minimum Wage Acts

Two new Orders under the Male Minimum Wage Act amend Order 1 fixing minimum wages for all male employees under the Act. Order 1D approved on July 28 exempts persons engaged by contract and paid on a commission basis where the contracts have been approved by the Chairman of the Board of Industrial Relations. Order 1E approved on August 2 fixes the maximum amount that may be deducted by the employer for the board of an employee, to whom Order 1 applies, at $5 for a week of 21 meals or 25c. for a single meal. For lodging not more than $2 may be charged for a week of seven days or 25c. a day for any shorter period.

A new Order 9 under the Minimum Wage Act, 1925, applies to female telephone workers from September 15. It replaces Order 9 of November 30, 1937 (Labour Gazette, January, 1938, p. 35). The changes affect chiefly inexperienced operators, called student operators in the new Order instead of apprentices. The same rates as before apply to these classes, $7.50 per week for the second and third months increasing gradually to $14 after the twelfth month. The proportion of inexperienced workers that is permitted has been increased from one-fourth to one-third the total number employed. The new Order makes 10 hours of duty between 10 p.m. and 8 a.m. the equivalent of a full day shift. The employer may make arrangements with an employee for answering night calls where telephone service is normally given only from 8 a.m. to 8 p.m. As before, the Order applies only within a city, town or village, but the new Order excludes telephone exchanges serving less than 100 lines. Changes in the status of an exchange may be made semi-annually on a basis of 10 per cent differential above or below the hundred line exemption point.

Alberta Public Service Vehicles Act

Among the provisions of Regulation R 9-38, made by the Highway Traffic Board on August 16, is a stipulation that every driver of a truck licensed as a public service or commercial vehicle must carry a log book with a daily record of his hours of work, the book to be available for inspection at any time and returned to the Board before a new one is issued.

British Columbia Fire Marshal Act

Orders in council of July 16 and September 13, 1938, amend regulations of June 18, 1936, providing for the examination and licensing of motion-picture projectionists. The three classes of projectionists provided for in a previous order in force from 1931 to 1936 are restored. A first-class certificate is required for projectionists in theatres with a seating capacity of 500 or more, a second-class certificate in theatres with a 200 to 500 capacity and a third-class certificate in smaller theatres.

As before, two licensed projectionists must be employed where two or more kinematographs are used.

A candidate for a first or second-class certificate must be 21 years of age or over and have 12 months' experience as a projectionist or apprentice. In addition, candidates for first-class certificates must have served 1,000 hours under a licensed projectionists-instructor in a projection room or attended a school licensed by the Government to give such instruction. A candidate for a second-class certificate must have received instruction for at least 750 hours either in school or in a projection room.

A projectionist's licence must be granted to a holder of a certificate on payment of an annual fee of $2. Persons with second and third-class certificates on December 31, 1936, must be granted licences on payment of a prescribed fee without further examination. Applications for apprentice licences must set forth the place and manner in which the apprenticeship is to be served. Not more than one apprentice may be employed in any projection room.

Any two members of the board may hold an examination but an appeal is allowed from the results of any examination not held by a full board. Two examinations are to be held yearly in Vancouver. Examinations for second and third-class certificates may be held by any two members of the Board in any motion picture theatre, but a certificate so obtained is valid only for work in the theatre where the examination is held.

All candidates must pass examinations in electrical, mechanical and optical subjects and in safety measures. Examinations consist of a written test and a practical demonstration. The latter is only given to candidates who have made at least 60 per cent on each subject of the written examination and an average of 65 per cent. This rule does not apply to examinations held in motion-picture theatres as provided above.

A temporary permit may be given when a licensed projectionist is not available. Where a complaint is made that an operator is inefficient, he may be re-examined. The causes for which a licence may be cancelled now include failure to report, inattention to duty and absence from the projection room during a show unless relieved by a qualified projectionist.

British Columbia Hours of Work Act

Four new orders made under this Act relate to retail and wholesale establishments and to the taxicab industry. Order 15E of August 30 extends to September 30, 1939, the Order permitting employees in retail and wholesale stores, except in Vancouver, Victoria, Burnaby, Esquimalt, Oak Bay and Saanich, to work three hours beyond the statutory limit of eight hours on Saturday and on the day preceding a statutory holiday when the holiday occurs on a Saturday. The total hours worked in any one week, however, may not exceed 48. Order 16E also renews a former Order. It exempts persons employed in drug stores as apprentices, certified clerks or pharmacists from the daily limit of eight hours and permits one extra hour in a day, but not more than four extra in a week.

Orders 28 and 28A of August give notification that the taxicab industry has been brought under the Act and permit a maximum working day of nine hours and a working week of 54 hours.

British Columbia Minimum Wage Acts

Three orders of the Board of Industrial Relations make special provisions for seasonal industries. Two of August 12, under the Male and Female Minimum Wage Acts, exempt tomato canneries from Orders 46 and 47, fixing wage rates for the fruit and vegetable industry. (Labour Gazette, 1937, p. 869). The third order affects women working in hotels in tourist centres.

In tomato canneries the minimum rate for male employees is 35c for every hour up to 10 and $1.05 per day. Hours in excess of 10 and up to 12 must be paid for at 52c an hour and if the employee works for more than 12 hours the rate rises to 70c. A male employee under 21 is entitled to at least 25c an hour up to 10 hours with a minimum of 75c a day, 37½c for each hour in excess of 10 and up to 12, with 50c thereafter. For females the rates are now 27c an hour up to 10 per day with a daily minimum of 80c, 40c for every hour in excess of 10 and up to 12, with a 54c rate for any further work. The Orders for the 1937 season fixed an hourly rate of 38c for males 21 or over with a minimum of $1.14 per day. Males under 21 were to receive at least 28c an hour and 84c a day. The minimum for females was 30c an hour and 90c a day unless they had special licences. No punitive rates were fixed in 1937 for time worked after 10 hours.

As under last year's Orders, the total number of males under 21 is not to exceed 15 per cent of all male workers in the plant, and when 90 per cent of the female employees are paid the regular minimum, the rest may be paid not less than 25c an hour for not more than 10 hours. For those in this class working longer than 10 hours, the minimum is 37½c up to 12 hours and 50c thereafter.

The new Orders both stipulate that where employees are paid more than the minimum hourly rate prescribed for the first 10 hours of work, the extra wages may not be applied to payment for overtime work. The special rates for overtime must be paid. Piece rates must be fixed so that the employees are able to earn not less than the rates fixed by the Orders.

Both Orders provide, as last year, that employees are to have one hour's rest after a maximum of five consecutive hours' work, provided that if 75 per cent of the employees petition the employer to do so, he may, with the approval of the Board, shorten the rest period, but never to less than one-half hour.

Order 52C under the Female Minimum Wage Act relates to the hotel and catering industry in "resort hotels," that is establishments furnishing meals and lodging in unorganized territory. The Order is effective from September 16, 1938, to June 15, 1939. It varies Order 52 by permitting longer hours for the slack season. The maximum of 48 hours a week and eight per day or, in emergencies, 52 a week and 10 a day, is changed to 54 a week and 10 a day, but, as before, if a girl is employed more than 48 hours, overtime must be paid for at 1½ times the regular rate, but during the off-season the overtime rate does not apply to work in excess of eight hours in a day where the work-week does not exceed 48 hours. Neither does the provision of Order 52 apply which confines the work of an employee employed on split shifts within 14 hours immediately following commencement of work. The rest period of 24 consecutive hours in each calendar week is obligatory, but a new clause states that if this provision is unsuitable, it may be varied on application to the Board by the employer and employees.

If the employer and employees prefer to arrange for hiring by the month, they may apply in writing to the Board for approval of such an arrangement, the wage to be not less than $25 per month with board and lodging.

Two Orders made on August 30 and in effect from September 1, add to the Orders of June 19, 1935, and January 24, 1936, governing the road transport industry and taxicabs, respectively, a provision that where employers and employees apply in writing for approval of a different arrangement respecting the cost of uniforms the Board may permit such arrangement to be put in effect. The earlier Orders require uniforms to be supplied by the employer free of cost.

An Order relating to carpenters fixes a minimum hourly rate of 75c from November 7 in the cities of Vancouver, North Vancouver and New Westminster, the municipalities of the Districts of Burnaby and West Vancouver and the District of North Vancouver. The new Order applies to all persons engaged on work usually done by carpenters in the construction, alteration or repair of any building or structure except persons indentured under the Apprenticeship Act and maintenance workers in any industrial or manufacturing establishment. An Order fixing a minimum rate of 70c for carpenters is in effect in the southerly portion of Vancouver Island, including Victoria.

British Columbia Old Age Pensions Act

Regulations under this Act were revised on September 3. Application for an old age pension or pension for the blind must be made to the Workmen's Compensation Board, which administers the Act, in the form filed with the Dominion Department of Finance or prescribed by the Board. The Board must keep account of receipts and expenditures and may require proof of claims, pay pensions monthly by cheque, obtain without charge from any Government department any available information necessary to carry out the provisions of the Dominion and Provincial Acts and do whatever is incidental, conducive or necessary to administering these Acts.

Nova Scotia Workmen's Compensation Act

Regulations of April 6 were amended on September 9 to exclude operators of cabs and buses and travelling salesmen from the provisions of Part I of the Workmen's Compensation Act which provides compensation for injuries through the collective liability of employers. Travelling salesmen are not to be excluded, however, when employed only in industries within the scope of Part I.

Ontario Apprenticeship Act

The regulations governing the motor vehicle repair trade were amended on August 18 to permit any person who had had more than two years' but less than five years' experience in the trade on July 16, 1936, to apply for registration as a helper mechanic, his application to be accompanied by a registration fee of 50c and a certificate from his employer or former employer as to the date on which he commenced work as a helper mechanic. At the end of five years' experience a person who has been accepted for registration may try such examination as the Board prescribes, success in which entitles him to a certificate of qualification on payment of the prescribed fee.

Formerly the applicant who had more than two years' but less than five years' experience on February 5, 1936, when the trade was brought under the Act, was to try an examination at the end of five years, but registration was not required. The provision that if he failed to pass, he could try another examination at the end of a year has now been struck out.

Ontario Public Health Act

An order in council of August 18 revises regulations of April 17, 1934, governing lumber, mining and construction camps in districts without municipal organization. (LABOUR GAZETTE, June, 1934, p. 524). Special rules apply to "standard camps," that is, camps housing more than 15 workmen exclusive of a foreman and a clerk but these rules may be applied to any other camp by the inspector.

The duty of carrying out the regulations is placed upon the employer and any person acting for him in a supervisory capacity. The regulations must be obtained from the inspector and kept on file and open to inspection by the workmen. The inspector may make any orders necessary to ensure proper sanitary conditions and the health of the workmen. If such orders are not complied with within a reasonable time, he may close the camp until they have been carried out. The location, construction and maintenance of all camp buildings must be approved by the inspector and standard camps must conform to the specifications set out in the order.

A new provision makes it obligatory for an employer in a standard camp to enter into a "sanitation contract" with a physician for the sanitary control and inspection of the camp. A contract physician must carry out the duties of a medical health officer under the Public Health Act with respect to the camp and report to the Department.

As previously required, employers in standard camps must supply their workmen with medical, surgical and hospital care and treatment and with maintenance while under treatment. For this purpose, an employer may enter into a contract with a physician and deduct from each workman's wages not more than $1 per month to pay the cost. If an employer of workmen not in a standard camp makes this provision and deducts from wages, he is subject to the same regulations concerning medical care as an employer of workmen in a standard camp. Under the new regulations, the Minister may authorize the sums so deducted to be used to establish an industrial medical service under his direction. Employers, whether in a standard camp or not, who make deductions from wages for such care must keep records of all sums deducted open for inspection by the contract physician and the inspector.

A physician entering into a medical contract must report monthly to the Department all cases of sickness and non-industrial accidents among the employees, notify the Department when he engages another physician to perform any service other than as a consultant in connection with the medical contract and cause a notice to be posted in every camp in advance of his visits. The employer is liable for medical, surgical and hospital care and treatment and maintenance while under treatment for 90 days, of any workman who has been in his employment for three out of the six months, formerly five months, immediately preceding the need for such service. The employer has a like responsibility for 90 days from the termination of their service for indigent workmen who become ill after leaving their employment if the illness is traceable to such employment. In the case of a workman whom he has employed for less than three months out of the six months immediately preceding an illness which results from disease or defect existing prior to his employment, the employer is responsible only for the return of the workman to the municipality of which he was, within the meaning of the Public Hospitals Act, last a resident or failing such, to the place from which he was hired and to provide in the meantime the necessary medical care and maintenance. He is not liable for payment for treatment of any workman in a santorium under the Sanatoria for Consumptives Act, or where the case is one within the scope of the Workmen's Compensation Act, or where the sickness or injury is a result of acute alcoholism, drug addiction or venereal disease.

All medical and sanitation contracts must be submitted to the Department for approval within 30 days of their execution and the Department must be notified of any cancellation. It may amend any contract within 30 days of its submission and revoke or refuse to approve it for any sufficient cause. Any dispute between a workman and the employer or contract physician in respect to liability may be referred to the Department by any party and its decision is final. Penalties are provided for employers diverting funds collected for medical and surgical care to other purposes or supplying false information to the Department and for any person contravening any of the regulations.

Quebec Fair Wage Act

Levy on Employers.—The Fair Wage Board gives notice in the *Quebec Official Gazette* of September 24 of a levy from October 1 of one-half of one per cent on the pay-roll of every "professional employer" in the province. The notice is in accordance with a by-law of the Board approved April 28. A "professional employer" is a person habitually employing persons for the purpose of the trade, industry or business he carries on. The levy is to be made on all salaries and wages payable to employees who are

now or hereafter governed by an order of the Board.

On or before November 15 every professional employer of more than 50 workmen is required to furnish the Board with a sworn statement in prescribed form showing the number of his employees since October 1 and their wages and to remit the assessment on the wages paid between October 1 and October 31. Therafter on the 15th of each month a report must be made and the assessment paid with respect to the preceding month. Employers of 50 or fewer workmen are to furnish before January 15, 1939, a similar statement and the amount required covering the preceding quarter from October 1 to December 31. These employers are to furnish reports each quarter and pay the assessment for the preceding quarter.

Classification of Employees.—Under Order 4 of the Fair Wage Board, which fixes minimum wages for persons employed in industrial and commercial establishments in cities and towns (Labour Gazette, May, 1938, p. 512), it is stipulated that in manufacturing establishments and in retail and wholesale stores, the employees are to be classified. Class A is to include not less than 60 per cent of the employees, Class B not more than 25 per cent and Class C not more than 15 per cent of those employed by one employer. Different minimum rates are set for each class, Class A having the highest rate.

The Order also provided that when it or any other Order of the Board prescribes that the employees of certain establishments shall be divided into classes, certain rules must be observed. Temporary employees, members of employer's family, workers covered by another order, persons employed in seasonal industries and apprentices are not to be classified and male and female employees must be classified separately.

A table was gazetted on September 3 indicating the number of employees that must be placed in each class according as the total number ranges from 4 to 103. Where only 1. 2 or 3 persons are employed, Order 4 provided for their classification. A single employee is in Class C for the first six months of employment, then in Class B for six months and then in Class A. Where two people are employed, one is in Class A and the other in Class C for six months when he goes to Class B. Of three employees, two are in Class A, the third in Class C for six months and then in Class B. Where the number employed is 103, 62 must be in Class A, 25 in Class B and 16 in Class C. When the number employed exceeds 103, the number in each class is obtained by adding the number in each class where 100 are employed, or as many times the multiples of these numbers as there are hundreds in the total to be classified, to the number in each class in the table for the number less than 100 which makes up the total number employed.

Another table gazetted at the same time provides for four classes of wage-earners. Up to the present, only one Order has fixed minimum wages for four classes of employees, Order 10 for the milk industry noted below. Class D may include not more than 5 per cent of the employees and Class C not more than 10 per cent. Classes A and B have the same percentages, 60 and 25 respectively as when there are but three classes. Where there is only one employee in an industry in which the employees would ordinarily be divided into four classes, he is in Class D for the first three months of employment, then in Class C for three months and after six months in Class B he enters Class A. Where there are two employees, one is in Class A, the other is in Class D for the first three months, in Class C for the next three months and then in Class B. The various numbers in each class are set out for any number of employees up to 103, and above that number the classification is obtained in the same way as indicated above.

Wage Orders.—By an Order of August 18, Order 8 governing the cotton textile industry which was to expire on September 3 is to remain in force until a new order is made.

Five new Orders affect the milk industry in Montreal, hospital employees, construction in the County of Arthabaska, the manufacture of matches and workers employed by the proprietors of public buildings. These Orders were all made following the report of a conciliation committee of representatives of employers and employees. The provisions of Order 4 apply to the persons governed by these Orders where they are not inconsistent.

Order 10, gazetted on August 13, applies to persons employed in pasteurizing, processing and distributing milk in the City and Island of Montreal and within a five-mile radius of the Island. Unless the Board has approved the contract, wage-earners to whom the employer leases equipment or sells milk routes are within the scope of the Order which is made effective from May 15 and is to remain in force until January 31, 1939, when it is to be renewed for 12 months unless an order to the contrary is issued. The wage-rates paid on January 4, 1938, are to be deemed as those payable from that date until May 15 when the new rates become payable.

The rates apply to three categories of employees: (1) inside workers or all those engaged in establishments where such work is carried on, including truck drivers, stablemen, etc., (2) office workers including collectors and inspectors, and (3) outside sales workers and drivers. The wages for inside workers and office employees apply to a 12-hour day and a 60-hour week of six days or a 65-hour week of seven days. A seven-day week may be worked where the total number employed in each of these classes does not exceed five. Where more than five are employed, there must be a weekly rest of 24 hours unless an equivalent amount of time off is allowed a person who works seven days in a week or relieves in case of illness of another. Continuous work for seven days a week may not be permitted for more than 14 weeks. Wherever the working week is reduced from seven to six days as a result of this Order, the wages may be reduced by 5 per cent, provided the effect is not to bring them below the minimum fixed by the Order. The rates for outside sales workers apply to a 72-hour week of six days or a 78-hour week of seven days. Time worked in excess of the hours fixed for any category is overtime to be paid for at the rate of time and a half.

Inside workers are to be arranged in four classes—Class A to include not less than 60 per cent and to be paid at least $3 per day or 35 cents per hour; Class B to cover not more than 25 per cent of the employees who are to have a minimum rate of $2.50 a day or 30 cents an hour, Class C with not more than 10 per cent of the workers with a minimum of $2 a day or 25 cents an hour and Class D, the remaining 5 per cent to be paid not less than $1.60 per day or 20 cents per hour. Office workers have also four different minimum rates for a six-day week according to their classification, $18 for Class A, $15 for Class B, $10 for Class C and $8 for Class D. Outside sales help in three classes have a minimum rate of $3.50 per day or 40 cents per hour for not less than 60 per cent of those employed, $3 a day or 35 cents an hour for not less than 25 per cent of the employees and $2.50 a day or 30 cents an hour for the remaining 15 per cent.

Stationary enginemen and firemen and maintenance men in the milk industry are governed by Orders 6 and 4 respectively but for the purpose of determining the percentages they are included as inside workers. (Labour Gazette, 1938, June, p. 624 and May, p. 513.)

Drivers are not responsible for credit extended to customers except where they act contrary to a written order of the employer or his agent, or for milk bottles unless they are marked deposit bottles, or for damages to equipment except where negligence is shown. When a driver's route is cut, he must continue to be paid the same wages for the next three months. Outside employees may not be required to do inside work in addition to their regular duties. Employers must supply up to four uniforms in a year for an inside worker and provide free laundry. From March 23, 1938, one-half the cost of the uniforms of outside sales workers must be paid by the employer if he requires them to be worn. Deductions from wages for room and board supplied by the employer, the taking of which is optional with the employee, must not exceed $6 per week for both room and board or $3 per week for either.

Order 11, gazetted on September 3, and effective from that date to January 1, 1939, covers hospital employees with the exception of those in the cities of Quebec and Levis and the adjacent counties. It does not apply to male or female employees belonging to a religious community, religious or ecclesiastical order, or to maintenance men or other employees to whom other wage Orders apply. "Hospital" is defined as including, besides any public hospital, covered or not by the Public Assistance Act, any private hospital to which a licence has been granted or renewed in accordance with the Private Hospital Act.

The hours of work for both nurses and hospital attendants are 12. For others, the hours in any week are not to exceed 72 unless a special permit is issued or on account of *force majeure* when time worked over 72 hours is to be paid for at 50 cents an hour. On day duty nurses are to have one afternoon off a week and one full day a fortnight with two hours' rest each day. Hospital attendants are allowed two-half days off in four weeks and two full days in four months with one hour of rest each day. On night duty nurses are to have one evening off till midnight each week, one night every fortnight and one hour's rest outside the working department. Attendants on night duty are given one full night off in a week. For both classes of workers on each shift one half hour is allowed for meals.

All nurses are to have one week's holiday after six months and three weeks after a year's service, two of which are to be consecutive and the third at the discretion of the authorities. Hospital attendants are to have two weeks' holiday with pay and an additional two days per year. Both nurses and hospital attendants are to receive salary in case of illness up to 15 days with free medical care in

hospital for one month and attendance by physicians designated by the hospital.

The wage rates in effect by formal or tacit agreement on February 15 are to be the minimum both for those receiving them at the time and for their successors. This provision is subject to the authority of the Fair Wage Board to decrease the rates for certain occupations provided they are not reduced below the minimum fixed in this Order.

The Order stipulates that if the salary, in addition to board and lodging, is $50 or less a month but over $40, it is to be increased by 10 per cent; if the salary is $40 or less, but over $30, it is to be increased by 15 per cent; if it is $30 or less, but more than $20, 25 per cent must be added; if $20 or less, 30 per cent must be added. In addition to board and lodging, every employee must be paid a minimum of $5 per month. If lodging is not provided, an employee must be paid $7 a month or $13 a month if board is not provided.

Order 12 applying to the building trades in Arthabaska County, is to be in effect for one year from August 1, 1938. This Order of the Fair Wage Board replaces a collective agreement made binding under the Collective Labour Agreements' Act in 1935 at the request of a number of contractors and workers who were parties to the agreement. Hours of work in the building trades are limited to eight a day and 48 a week by orders in council under the Limitation of Hours of Work Act. In construction work not covered by this Act, the regular working day is to be eight hours for skilled men and nine hours for common labourers and helpers. All work done in excess of these hours is to be paid at an increase of 50 per cent.

The Order fixes minimum rates at 55 cents an hour for carters with a team, 50 cents for bricklayers, masons and plasterers, 40 cents for carters with one horse, 35 cents for electricians, stationary enginemen, joiners and carpenters, tinsmiths, plumbers and steamfitters, 30 cents for painters and 25 cents for common labourers. In municipalities where the population is less than 2,000, employees working on building contracts the cost of which, including wages and building materials, is less than $2,000 may be paid at 5 cents an hour less than these rates. In the case of teamsters, the reduction is to be 15 cents or 20 cents an hour according to whether two or one horse is used.

Apprentices in the skilled trades must be paid a minimum of 15 cents an hour for the first year, 20 cents for the second and 25 cents for the third. Apprentices in trades where licences are required by law are to be paid at the rate fixed for the third year until they have obtained their licence. Workers handicapped through age or any other cause which prevents them from performing an average amount of work may be paid 10 cents an hour less in the trade of bricklayer, mason or plasterer and 5 cents an hour less in other trades.

Order 13 of August 5, retroactive to May 15, declares that in the application of Order 4 to establishments manufacturing matches, the latter are to be considered as belonging to Zone No. 2 regardless of their location.

Order 14 applies to workers operating and maintaining public buildings, such as office buildings, warehouses, industrial and commercial establishments and apartment houses but not hotels and restaurants, in the City and Island of Montreal and within a radius of five miles, for one year from September 1 and for a year thereafter unless repealed in the meantime. Handy-men, elevator operators, watchmen, janitors, porters, cleaners, messengers and others employed by the proprietor of the building are covered by this Order. It does not apply to workers engaged in the construction or alteration of any part of the building.

All employees, except janitors and furnace handy-men who are entitled to 12 hours' rest each week are to have a full day's rest of 24 hours in a week. Where Sunday work is not prohibited, however, two rest periods per week of 18 consecutive hours each may be agreed on or not more than four holidays at some other time. Employers may not charge more than 25 cents for any meal on the premises. Taking the meals is to be optional with the employee. Any uniform required by the employer must be furnished and laundered at his expense.

For elevator operators in office and loft buildings five minimum rates are set varying from $13 for a week of 43 hours to $17 for a 56-hour week. For apartment houses, the four minimum rates range from $13 for 49 hours' work to $16 for the 60-hour week. Elevator starters in all buildings must be paid $16 for a 47-hour week increasing by three stages to $19 for a 56-hour week. In order to determine the wage to be paid to elevator operators and starters, the hours worked in four consecutive weeks are to be averaged. In no case may the total number of hours used for this calculation exceed 224 for four weeks or 60 for one week. When the working hours in a week exceed the number stipulated for any weekly wage but are less than the number for the next higher weekly minimum, the hourly rate is computed on the lower one. No boy under 17 or girl under 18 may operate an elevator unless they were doing so on December 1, 1937.

Overtime by all classes of workers covered by the Order, with certain exceptions, is defined as more than 12 hours a day when the

weekly hours are less than 60 or as more than 60 hours a week. In the former case, the overtime must be paid for at one and a half times the hourly rate of the weekly wage; in the second case at one and a half times the hourly rate for the 60-hour week. For work on "days off" or on legal holidays, double time must be paid. It may be agreed to give extra time off within the fortnight following overtime work instead of paying higher wages. The workers not entitled to overtime rates include any person paid at least $1,560 a year who has to answer emergency calls day or night for the protection of the property, night watchmen, janitors and furnace handy-men. The latter are men doing odd jobs such as shovelling snow, as well as furnace-work.

For porters, the minimum wage is $18 in office buildings and $17 in apartment houses for a 60-hour week. Night watchmen are to receive a minimum of $19 for a 60-hour week and messenger boys in apartment houses $8 for 56 hours. Cleaners, except women employed only for part of a day, must be paid not less than $9 for a week of 24 hours, the minimum increasing to $13, $16, $17 and $18 as the weekly hours rise to 36, 48, 56 and 60, respectively. Women employed by the day must be paid not less than 26c an hour.

Maintenance men holding certificates of qualification in their trade have a minimum hourly rate of 55c with time and a half after a week of 48 hours or a minimum weekly wage of $27 with time and a half after 54 hours. These men may be employed without additional pay at any other trade for which the employer judges them competent, but only those holding licences as required by statute may work as electricians or pipe mechanics. The minimum for general labourers engaged in maintenance work is 40c an hour for 48 hours after which time and a half must be paid or $20 a week and time and a half after 54 hours.

For "service men," which means those performing all types of general work in office and loft buildings having a floor area of less than 15,000 square feet, a minimum of $16 is fixed for a 60-hour week. Furnace and handy-men must be paid not less than $17 a week without regard to hours, but for men doing furnace work only the minimum is $3.50 a month for each furnace, $1.50 for each additional furnace in the same building, $1 for each jacket heater and 58c for each additional heater in the same building. The minimum rates for janitors employed for full time vary from $40 a month for 1 to 12 apartments to $85 where there are over 90 apartments. Heated living quarters must be provided or $15 per month added. Janitors employed part-time are to be paid according to the number of rooms and whether they are furnished or unfurnished. When caring for less than 60 unfurnished or 50 furnished rooms, they are required to be given heated living quarters only. For every furnished room in excess of 50, 35c per room and for every unfurnished room in excess of 60, 30c must be paid. If living quarters are not provided, wages must be increased by $10 a month for more than 60 unfurnished rooms and $12 for more than 50 furnished rooms.

No person within the scope of this order may have his rate of pay reduced on publication of the order. Any employee called on to perform work for which a higher rate is fixed, must be paid the higher rate while he is employed at that work.

Quebec Public Building Safety Act

By-laws under this Act in force since June 13, 1934, were amended by an order in council of September 1 to require window washers to wear safety belts. The windows of all public buildings are to be equipped with anchors or hooks to hold such belts and if the windows are large or have narrow sills, other precautions must be taken.

Unemployment in New Zealand

The report of the New Zealand Secretary of Labour covering the activities of the Employment Division for the period August 29, 1937, to June 4, 1938, indicates that unemployment registrations totalled 8,721 at June 4, 1938. These figures (exclusive of 1,301 awaiting expiration of their qualifying period and included in the total of 8,721), represent men who state they are fit for work and who have lost their engagement through no fault of their own. The number does not include men who have become a charge upon the Employment Promotion Fund through loss of employment on account of sickness, advancing years, etc. Eight thousand persons were receiving assistance at June 4 on account of unfitness for employment for health or other reasons. Statutory power to extend unemployment relief to such classes of persons was taken in the Employment Promotion Act, 1936. The total unemployed men at June 4 receiving and/or awaiting assistance from the Employment Promotion Fund was thus 16,721 as compared with 27,323 at August 28, 1937, the date as at which the previous report was prepared.

According to a press despatch the Governor of Jamaica announced recently that a permanent department would be set up, with a labour adviser as its head, whose main duty would be to study labour conditions throughout Jamaica.

FIFTY-FOURTH ANNUAL CONVENTION OF THE TRADES AND LABOUR CONGRESS OF CANADA

Proceedings Featured by Discussion on Right to Organize and Collective Bargaining, Political Action and Foreign Policy

WITH one of the largest attendances of delegates in its history, the fifty-fourth annual convention of the Trades and Labour Congress of Canada was held in Niagara Falls, Ontario, September 12-17, 1938.

Presiding over the formal opening, Mr. James J. White, past president of Niagara Falls and District Trade and Labour Council, welcomed the delegates and visitors to the city. In extending the welcome of organized labour of the city and district, Mr. Harry B. Lewin, president of the trades council, declared that the present meeting would be one of the most important in the history of labour in Canada.

Others who addressed the delegates at this session were: Mr. C. D. Hanniwell, Mayor of the city; Mr. W. Levell Draper, Mayor of Niagara Falls, N.Y.; Mr. D. J. Anderson, M.L.A., Welland; A. B. Damude, M.P., Welland and Hon. Peter Heenan, Minister of Lands and Forests in the Ontario Cabinet.

In speaking of the accomplishments credited to the Trades and Labour Congress of Canada, Hon. Mr. Heenan cited the enactment of the Mothers' Allowance Act, Old Age Pensions Act and the Workmen's Compensation Act, the combined expenditure under the three acts being given as approximately $233,000,000. In addition, there was the improvement in rates of wages and hours of labour. The Minister stated he had advocated that an unemployment insurance scheme should come under the Federal Government but since that body had encountered certain difficulties in securing the necessary consent of the provinces, Ontario could not wait but intends to take the lead. It was his hope that he would be a member of the cabinet that will introduce at the next session of the Legislature, the unemployment insurance scheme for the province.

Mr. Jas. C. Wilson, labour representative of the United States Government at Geneva, and Mr. Jerome J. Davis, president of the American Federation of Teachers, addressed the convention at a later session.

President's Address

Following the opening ceremonies, the president of the Congress, Mr. P. M. Draper, thanked the speakers for their words of welcome. In referring to the good-will that exists between Canada and the United States, the president stated: "Our fine relationship stands forth boldly as a brilliant example for the less fortunate to follow. The international good-will that exists between our countries is what all the world must achieve or perish. With war so devastatingly mechanized, it must be universal peace or oblivion. World amity can never be accomplished by treaties and sanctions but only through unity of ideas, of interests and understanding." President Draper pointed out that "the power behind every line of progress is the wage-earner. He it is, by constructive thought and unified action, who will preserve our democratic institutions. We must institute within his group, a solid phalanx against those who threaten destruction through division. Any organization can only be successful, in so far as employer and employee both see the welfare of the other."

Organizations Represented

The Credential Committee reported that certificates had been received for 647 delegates, of whom 544 were present and classified as follows: Fifty represented international and national organizations; 3 represented provincial federations and provincial associations; 58 trades and labour councils; 3 represented system divisions of telegraphers; 428 represented local branch unions and two were fraternal delegates, one representing the British Trades Union Congress and the other the American Federation of Labor.

Addresses of Fraternal Delegates

Delegate from British Trades Union Congress.—Mr. Ebby Edwards, fraternal delegate from the British Trades Union Congress, after conveying a message of good-will from the body he represented, declared that a point had been reached when fraternal greetings must pass from mere formalities to an understanding and co-operation with a view to securing economic freedom, social justice and what is of primary importance, the maintenance of world peace.

In discussing the question of trade union organization, Mr. Edwards stated that "the type of organization in one country may, because of certain national economic and geographical differences, differ from that in another. Its approach to the solution of its problems may, and of necessity will be conditioned and determined by the circumstances

at a given time. This is as it should be, but if the trades unions of the world are to be brought together into closer unity, these differences must not be exaggerated. The great factor and purpose of trades unionism which is common to all—economic freedom for the workers—must be nourished and strengthened, if success is to be our goal."

Commenting on the present crisis in Europe, Mr. Edwards observed that "the British trade union movement stands for peace. It stands for collective security for all states, but having called upon the Government to stand up against fascist dictatorship in the event of war over the invasion of Czechoslovakia, the British trade union movement will be behind its Government in the fight for freedom as distinct from imperialism."

Quoting statistics he showed that the British Trades Union Congress had grown from 150,000 members 70 years ago to 4,500,000 in 1938. Reference was made to the fact that clerical and professional workers in Great Britain were joining appropriate trade unions.

In speaking on the problem of unemployment Mr. Edwards stated: "Mankind has solved production. The machines that increase production a thousand fold are being made by machines. The displacement of labour is a national corollary; our attention must now be turned to organized methods of distribution." Continuing, he said. "Men in the prime of life unemployed while their aged fathers in cases can be retained in work; school children displacing their older brothers and sisters from industry. This is not economy it is insanity."

In conclusion Mr. Edwards referred to legislation affecting the lives of the workpeople which had been enacted following insistent demands of the trade unions and labour movement, and commended the work of the Interantional Labour Office.

Delegate from the American Federation of Labour.—Mr. Joseph C. Kehoe, president of the Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America and fraternal delegate from the American Federation of Labor, after extending greetings from that body, spoke of the friendly relations existing between the two countries and between trade unionists "to the north and south of the longest and most peaceful boundary in the world."

Mr. Kehoe stated that unemployment was probably the most severe problem confronting the nation, but that the Federation was moving forward in spite of many difficulties it had to face.

Reference was made to the enactment of social legislation which had been proposed and sponsored by the American Federation of Labor.

The division in the ranks of labour in the United States was commented upon by the speaker, who declared that a united movement will once again be restored.

Report of the Executive Council

The report of the executive cautioned the members to exercise coolness of mind in the difficulties encountered in the industrial world to-day, in order that any sectional differences which arise may be submerged. It referred to the challenge presented in the idleness of people desirous of being gainfully employed and the frustration of the rightful ambitions, hopes and aspirations of the less fortunate. Reference was made to the legislative program submitted to the Dominion Government on January 14, 1938, (a summary of the legislative program appeared in the February, 1938, issue of the LABOUR GAZETTE, page 142). The Government was informed it may rely upon the Congress support in any steps it takes towards a happier settlement of disagreements between nations than that afforded by war. The government was also informed that labour considered unemployment the greatest national problem and was urged to provide work where possible and to make satisfactory financial provisions in all other cases.

The executive endorsed the action of the Dominion Government in trying to bring about unemployment insurance in Canada and stated "it was a cause of widespread disappointment when the Privy Council found the Act of 1935 to be invalid," expressing the hope "that the steps already taken by the Government to overcome this difficulty would be followed with all possible vigour." It was requested that the present system of Old Age Pensions be converted into a retirement scheme for all who withdraw from industry or commerce at the age of 60, and that the amounts paid under the present Act be substantially increased. The executive also asked that the scope of the Industrial Disputes Investigation Act be enlarged to include the system of distribution (and production in some cases) of bread, milk, and coal; as well as motor transportation.

Other subjects discussed in the executive report were: Provision of work; housing; hours of work; holidays with pay; national employment commission; unemployed youth; transportation of workers; wage policy; British North America Act; civil liberty; immigration; public ownership and control; the rail-

way situation; legal picketing for union services; taxation and finance; reforestation, human safety, and shipping matters.

Committee on Officers' Reports

The Committee on Officers' Reports, in submitting its report, commented favourably on the preamble to the executive report and recommended its careful perusal by the membership. The appreciation of the Congress was recommended to those of its members who had served on various public bodies. The membership was urged to give full support to the executive of the Congress in their endeavour to increase the circulation of the official organ, the *Canadian Congress Journal*.

The officers were commended for their efforts to secure legislation that would give the workers the right to organize, and for the manner in which the labour brief was presented to the Rowell Commission on Federal-Provincial Relations. That Parliament provide a youth training program for not less than a three-year period as called for in the executive report was endorsed. The committee considered that the demand of the executive officers in requesting that the present immigration restrictions be maintained, was in conformity with the stand taken at past conventions. The report of the Committee was adopted.

Report of Secretary-Treasurer

Mr. R. J. Tallon, the secretary-treasurer, presented the financial statement for the fiscal year ending August 31, 1938, which, with the balance from the previous year, showed receipts of $49,318.31, with expenses amounting to $25,526.86, leaving a balance of $23,-791.45. Included in the above figures are the receipts and disbursements for the headquarters building in Ottawa. He reported that during the year the International Union of Elevator Constructors, International Brotherhood of Foundry Workers, International Ladies Handbag, Pocketbook and Novelty Workers' Union, and the Canadian Seamen's Union affiliated their entire Canadian membership with the Congress, while during the same period the American Flint Glass Workers' Union, Amalgamated Association of Iron, Steel and Tin Workers and United Textile Workers were dropped from membership. There are now 62 international and 5 Canadian organizations in affiliation, and pay per capita tax to the Congress.

The Audit Committee reported finding the financial statement correct and their recommendation of approval was adopted.

65197—3½

Address of the Dominion Minister of Labour

At one of its sessions the convention was addressed by the Hon. Norman McL. Rogers, Federal Minister of Labour. The chairman, in introduction, referred to him as a teacher but Hon. Mr. Rogers informed the delegates that he was going to speak not as a teacher but rather as a student of Labour. The Minister stated that he appreciated being invited to speak to the delegates and expressed his regret that he had been prevented from attending an earlier session as arranged. Hon. Mr. Rogers conveyed a message to the convention from the Prime Minister, who, he stated, had followed for many years the movements of the Congress and wished to congratulate the membership on the calm and reasoned progress made.

Dealing with unemployment insurance, the Minister stated that the Trades and Labour Congress of Canada had on numerous occassions approved of a national system of unemployment insurance. However, the Privy Council had rendered a decision placing such a scheme under provincial rather than Federal jurisdiction. The Dominion Government then undertook to devise a plan that would be constitutional and the Prime Minister asked the co-operation of the provincial governments so that the Federal Parliament might enact an unemployment insurance law. Six provinces replied favourably to that request. The proposed amendment to the British North America Act was sent to each of the provincial governments and when approved would enable the enactment of the necessary legislation. Three provinces refused to give approval and the Dominion Government could not go beyond the will of those provinces. Two of the provinces considered that this request to obtain power to pass legislation was a breach of provincial autonomy. The provinces were asked to co-operate for the good of Canada as a whole.

Hon. Mr. Rogers considered co-operation better than force and he did not regard this set-back of the unemployment insurance scheme as a defeat. The Minister further stated that "Quebec, New Brunswick and Alberta have not given their consent but we are not without hope that they will yet accede to our request and thereby be acting in their own best interests as well as the best interest of the country in giving their approval to the passing of unemployment insurance legislation."

The Minister next dealt with the protection afforded Canadian labour in munition contracts in Canada, pointing out that it had

been necessary to embark on a National Defence Policy. He stated that wherever munition contracts were placed there was inserted a fair wage clause and where possible a fair wage schedule to prevent exploitation of the workers. Mr. Rogers stated that there was close co-operation between Labour organizations and employers in regard to aircraft to be manufactured in Canada. In contracts let by the British Government, the Department of National Defence has co-operated with the Department of Labour in asking that these contracts should contain the same safe-guards and be similar to those let by the Canadian Government. The delegates were advised that these representations were well received by the British mission. The Minister emphasized that "the great business that concerns you, concerns government—the organization of work for human welfare" In closing he said: "We have been turning anxious eyes to the capitals of Europe—we must all hope and pray that a way of peace and honour may be found to solve the problem."

Convention Resolutions

Right to Organize.—Under the heading "Right to Organize and Collective Bargaining" there were twenty-one resolutions submitted to the convention. Fifteen of these were covered by one or other of the remaining six which were taken up separately. One of the resolutions pointed out that certain features which were not contained in the proposed bill as prepared and submitted by the executive of the Congress to the Provincial Legislatures as instructed by the 1937 convention. The executive were instructed to draft a revised proposed bill containing all features of their former proposed Act, as well as additional desirable features and distribute same for the guidance of the different provincial federations of labour and legislative committees. These proposed additional features were: (1) to definitely outlaw or provide penalties against the maintenance of what is commonly known as company unions; (2) to compel by law the employers to participate in collective bargaining with the duly elected representatives of the labour unions of their employees, and to provide penalties for their refusal to do so; and (3) to establish an independent government tribunal to ascertain by a majority vote as determined by secret ballot or otherwise, as to which labour union would have the exclusive bargaining rights in any industry or branch or sub-division thereof when there exists a dispute as between two or more unions as to which should be the said bargaining agency.

Political Action.—Considerable discussion occurred on the five resolutions dealing with political action. The opinion expressed by the various speakers was that labour would not be properly represented in parliament and the various legislatures until trade unionists were elected to these bodies. The substitute resolution submitted by the committee was a reiteration of the established policy of the Congress as laid down by the Victoria Convention in 1906 and the Ottawa Convention in 1917—the principle that the Trades and Labour Congress of Canada should be independent of any political organization but encouraged the formation of independent labour political bodies.

Foreign Policy.—The Committee on Resolutions submitted two substitutes for nineteen of the twenty resolutions under the heading "Foreign Policy." The adopted substitutes were as follows:

(1) That this Congress expresses the deepest sympathies of Canadian trade unionists with the people of Spain and China and their governments in the struggle for defence of their countries; we condemn this unprincipled and unprovoked attack and invasion of Spain and China by Fascist hordes as a violation of international law and treaty rights and as a crime against nations who desire only to live at peace with other nations; we view with horror the indiscriminate murder of civilian population of towns and cities by Fascist naval, military and air forces and express profound sympathy with the sufferings of the people whose homes have been so ruthlessly destroyed by the invaders; that we pledge our support to all practicable measures that can be taken by democratic governments to assist the Spanish and Chinese people to repel the wanton attack of Fascist forces by enabling China and Spain to obtain the means necessary for their defence and call upon Prime Minister W. L. Mackenzie King to exert his authority in an undertaking whereby the Canadian Government shall at once commence trade with these friendly nations who are fellow members of the League of Nations and at the same time place an embargo upon the shipment of war materials to aggressor nations in order to assist to put an end to international banditry; that we call upon all trade unionists to take the lead in organizing the Canadian people in an intensified boycott against all goods from aggressor nations, such as Japan, Italy and Germany.

(2) That the Congress, while reiterating its firm belief in collective action through the League of Nations as the most effective means of maintaining world peace, nevertheless recognizes the need to render help at this hour to those democratic countries whose independence and integrity is now being challenged; that our government be urged to co-operate with other peace loving countries of the world in whatever steps are deemed essential to destroy the reign of terror being imposed by Nazi and Fascist Dictators and thus remove this menace of international lawlessness and once more bring peace to mankind; that we call upon the Prime Minister, Right Honourable William Lyon Mackenzie King to immediately convene parliament in order to

make known the policy of Canada to its people and to the world.

Trade Union Unity.—The forty-six resolutions on "Trade Union Unity" were covered by the following substitute which was adopted with practically no discussion and very few dissenting votes:

That this convention concurs in the desires expressed for the avoidance of division of our movement in Canada, as set forth in the resolutions above mentioned; and be it further resolved, that the Executive of the Congress be instructed to continue its efforts to maintain harmony within the international trade union movement in Canada in compliance with the decision of the Ottawa convention "that action taken shall be on terms acceptable to international trade unions and thus avoiding any disregard for or defiance of their laws and policies"; and be it further resolved, that we call on our Executive to exert every effort to the end that we may again have a unified labour movement on the North American continent; to explore every possible avenue and lend their fullest support to all moves in this direction.

Other Resolutions Adopted

Among the recommendations contained in other resolutions adopted were:

Amendment to the Criminal Code or the enactment of special legislation, that will more clearly define lawful or peaceful picketing in industrial disputes.

Urging the Federal Government to amend the British North America Act so that a Federal system of unemployment insurance may become effective with the least possible delay.

Instructing the executive to oppose the Dominion Government and other governments lowering the standard of direct relief.

Approving the granting of relief to seamen on the same basis as other citizens upon producing discharge papers for the previous season.

Seeking the completion of highway No. 67 in Northern Ontario.

Requesting that the Dominion Government make a survey as to the best means of transporting transient labour from one place to another where employment has been secured through recognized employment offices.

Favouring complete and democratic national unity.

Calling upon the Provincial Government of Quebec to abrogate Acts 40 and 50 known as a "Law Respecting Workmen's Wages" and "the Fair Wages Act."

Seeking amendments to the Criminal Code making it a crime and penalizing employers who refuse to allow their employees to organize for collective bargaining.

Petitioning the Federal Government to include in all of its contracts with any private employer a stipulation that such employer shall sign collective bargaining agreements with representatives of their employees covering wages, hours and other conditions of employment.

Requesting an investigation into industrial espionage in Canada and asking the Federal Government to declare such practices illegal.

Amendment to the Fair Wage Act making it applicable to steamship companies receiving subsidies or subventions from the Government.

Reclassification and a higher rate of compensation for letter carriers.

Pressing for regular section labourers standard of wages for extra gang men.

Establishment of advisory or other boards, when proper and sufficient representation made, to regulate trade and industry, such boards to have necessary labour representation.

Desiring changes in the Industrial Standards Act.

Requesting immediate and complete change in the present personnel of the Industrial Labour Board of Ontario and that a labour member be appointed.

Favouring a Federal Government health policy to be carried on in co-operation with the provincial governments.

Requesting a change in the medical service plan for lumber camps in Northern Ontario.

Demanding that a certified first aid attendant and fully equipped first aid kit be carried on all Canadian vessels.

Prohibiting work being sent out to private homes and insisting that factory buildings have sanitary conditions.

Opposing the use of tin dishes in lumber camps.

Urging the enforcement of the law regarding life boat and fire drill and a regular inspection of safety appliances.

The establishment of the six-hour day and five-day week.

Seeking one day's rest of 24 consecutive hours each week for employees in the amusement industry of the Province of Quebec.

Enactment of legislation providing holidays with pay for all workers.

Opposing a minimum wage for skilled or semi-skilled male workers and approving a minimum wage for women only after a thorough survey of the cost of living has been made.

Seeking amendments to the provincial workmen's compensation laws of Ontario and Manitoba.

Requesting that the Old Age Pension Act be amended to become a Retiring Allowance Act.

Concerted action to organize the unorganized workers in Canada.

Favouring the repeal of the Act commonly known as the "Quebec Padlock Law."

Endorsing the proposal of the Workers' Educational Association to establish a Workers' Education Trade Union Committee to set up a Labour Economic Research Bureau.

Recommending active support to the Canadian Youth Congress.

Petitioning the Federal Government to abolish the sales tax.

Requesting a reduction in the tax on bottled beer.

According to municipalities the right to tax producing gold mining properties.

Asking the Federal Government to place a protective tariff on imoprted magazines, periodicals, books and religious literature.

Recommending that Canadian registered vessels be given some protection in competing with foreign ships in canals leading to inland waters of Canada.

Urging the necessity of incorporating the provisions of the Fair Wage Act in all contracts entered into as a result of loans made in accordance with the provisions of the National Housing Act.

Opposing railway unification.

Demanding the repeal of the C.P.R.-C.N.R. Act of 1933, which makes amalgamation or enforced co-operation possible.

Favouring a national system of public ownership of radio facilities.

Seeking a reduction in radio licences.

Urging an investigation of all existing schemes of group insurance with a view to finding out how far they control the employment of men in industries.

Proposing a Dominion-wide forest conservation and re-forestation program on both a provincial and federal basis co-operatively.

Insisting that His Majesty's Government concede the right to print and bind copies of the Holy Bible in Canada.

Opposing the prohibition of liquor advertising in newspapers and magazines published in Ontario or other province where such a law exists.

Enactment of legislation making racial libel a criminal offence.

Requesting the Government to direct the management of the Canadian National Steamships (West Indies) Limited to fully carry out the recommendation of the Committee on Industrial and International Relations and the direction of the House of Commons with regard to the employment of Canadian stewards and firemen.

Nationalization of all firms or corporations manufacturing aeroplanes for war purposes.

Nationalization of the possession, production and distribution of nickel in Canada.

Election of Officers

The election of officers resulted as follows: President, P. M. Draper, 172 MacLaren St., Ottawa; Vice-presidents, P. R. Bengough, Vancouver, R. Trepanier, Montreal, W. D. Morrison, Glace Bay; Secretary-treasurer, R. J. Tallon, 172 MacLaren St., Ottawa.

Provincial Executive Committees: Nova Scotia—W. K. Clarke (chairman), Halifax; James Wood, Halifax; Howard Tattrie, Springhill; C. Gillies, New Aberdeen. Manitoba—D. S. Lyons (chairman), Winnipeg; L. Guberman, Winnipeg; Robert Hewitt, Winnipeg; R. C. McCutcheon, Winnipeg. Saskatchewan—A. M. Eddy (chairman), Saskatoon; Albert Mose, Moose Jaw; H. D. Davis, Prince Albert; Alex. Cochrane, Regina; British Columbia—E. H. Morrison, (chairman), Vancouver; B. Showler, Vancouver; E. F. Fox, Victoria; J. E. Griffin, Vancouver.

(The provinces of Alberta, New Brunswick and Quebec having provincial federations chartered by the Congress, the executive officers carry on the legislative work of these provinces. As soon as a charter is issued by the Trade and Labour Congress of Canada a provincial federation will be formed in Ontario, the legislative work will then be entrusted to the executive.)

Fraternal delegate to the American Federation of Labour, W. G. Russell, vice-president, Toronto Trades and Labour Council.

Fraternal delegate to the British Trades Union Congress, Gus. Francq, secretary, Quebec Federation of Labour.

London, Ontario, was selected as the convention city for 1939.

The Primary Iron and Steel Industry in Canada, 1937

The Dominion Bureau of Statistics has issued a report on the *Primary Iron and Steel Industry in Canada, 1937*.

According to the report factory sales of pig iron, ferro-alloys, steel ingots and castings, and finished rolled products were 55 per cent higher in 1937 than in 1936, the values being $72,280,659 and $46,636,892, respectively. The 1937 figure was, in fact, the highest on record since 1920, being slightly above the 1929 total of $72,231,995. The 25 works in Ontario reported sales at $44,928,609, or 62 per cent of the total for Canada; 6 plants or departments in Nova Scotia accounted for $14,883,039, or 20 per cent, and 14 works in Quebec for $10,416,386, or 14 per cent. There were also 4 operating plants in Manitoba, 1 in Alberta, and 5 in British Columbia.

Capital.—Capital employed in 1937 amounted to $96,875,377, including $65,896,014 as the value of land, buildings and plant equipment, $21,377,846 as the value of inventories of raw and finished materials on hand and in process, $13,202,552; for Manitoba, $2,032,194; and for Alberta and British Columbia, $343,916. and $9,601,517 as the total of operating capital such as cash, bills and accounts receivable, etc. For works in Ontario the capital was $59,959,463; for Nova Scotia, $21,337,252; for Quebec,

Employees and Earnings.—The average number of employees in 1937 was 14,054, an increase of 26 per cent over the 1936 average of 11,138. About 981 persons worked in the blast furnace departments in 1937, 505 in ferro-alloy plants, 5,264 in steel furnace divisions, and 7,304 in rolling mills. About 59 per cent of the total, or 8,360, were employed in Ontario, 2,866 in Quebec, 2,316 in Nova Scotia, 387 in Manitoba, and 125 in Alberta and British Columbia.

Payments in salaries and wages amounted to $19,926,498 in 1937, an advance of 44 per cent over the 1936 total of $13,830,377.

CONFEDERATION OF CATHOLIC WORKERS OF CANADA

Summary of Proceedings of Seventeenth Annual Convention

WITH a large attendance of delegates, representative of a membership of approximately 46,000, the seventeenth annual convention of the Confederation of Catholic Workers of Canada was held at Thetford Mines, Quebec, September 11-14.

Featuring the opening session of the convention were addresses by the Dominion Minister of Labour, Hon. Norman McL. Rogers, and His Eminence, Cardinal Villeneuve, Archbishop of Quebec. These guests of the convention both emphasized the application of justice and charity in the solution of social problems.

The following summary of the convention proceedings has been prepared for publication in the Labour Gazette by Mr. Gerard Picard, general secretary of the Confederation:

About 200 delegates took part in the deliberations, with the general president, Mr. Alfred Charpentier, in the chair.

The convention dealt with the reports presented by the general president, the Confederation's Bureau and the Federations, and with the general list of resolutions.

The delegates debated nearly 150 resolutions most of which had to do with the three following Acts: Collective Labour Agreements Act, Fair Wages Act, Professional Syndicates Act.

During the last session of the Quebec Legislature, two Bills (Nos. 19 and 20) were adopted. They are amendments to the Collective Labour Agreements Act and to the Fair Wages Act respectively. The C.T.C.C. delegates protested energetically against the amendments contained in the above-mentioned Bills.

Among the resolutions adopted, the most important dealt with the following subjects:

Creation of either a Provincial Economic Council or Superior Labour Council.

Establishment of a Labour Court.

Establishment of old-age pensions on a contributory basis to be paid at the age of 65 instead of 70.

Amendments to the Workmen's Compensation Act as regards compensation.

Better enforcement of the Lord's Day Act, and

Request to the Federal Government to implement the conclusions of the Turgeon Inquiry into the textile industries.

The C.T.C.C. convention also adopted certain amendments to its constitution, and brought solutions to a number of internal management problems. The membership of the C.T.C.C. was reported to include 46,000 members duly registered. Last year, the membership was 50,000, and it had reached 54,000 in April, 1938.

The convention elected a new executive and a new Confederation Bureau for the next term.

The composition of the executive is the following:

President—Alfred Charpentier, Montreal.

First Vice-President—Emile Tellier, Three Rivers.

Second Vice-President—Maurice Doran, Hull.

Treasurer—Alphonse Bourdon, Montreal.

General Secretary—Gerard Picard, Quebec.

The Confederation Bureau is composed of all the members of the executive and of the following directors:

For the Federation:

Messrs. Osias Fillion, Montreal; Alphonse Roberge, Quebec; G. A. Gagnon, Montreal; Philippe Lessard, Port Alfred; J. O. Landry, Thetford Mines; Alphonse Robitaille, Quebec; J. A. Françoeur, Quebec; Philippe Hamel, Victoriaville; J. A. Anzalone, Quebec; Albert Coté, Montreal.

For the Centres:

Messrs. Rosaire Gosselin; O. D. Paulhus, Sherbrooke; Albert Bouchard, Chicoutimi; L. P. Boily, Jonquiére; Rene Harmegnies, St. Joseph d'Alma; Charles Dahl, Ha! Ha! Bay; Philippe Girard, Sorel.

Industrial Health Division established by Quebec Provincial Department of Health

Dr. Jean Gregoire, Deputy Minister of Health for Quebec, announced recently that an industrial hygiene division had been established under the jurisdiction of the Department of Health.

In making the announcement, Dr. Gregoire said that the purpose of the division was not "only to control occupational disease but also to do justice to, and to aid the employer." He said that the branch would render "more of an advisory than regulatory service."

ANNUAL CONVENTION OF BRITISH TRADES UNION CONGRESS

WITH an attendance of 650 delegates representing an approximate membership of 4,461,000, the seventieth annual convention of the Trades Union Congress (Great Britain) was held at Blackpool, commencing September 5. The total membership of the affiliated unions at the end of 1937 showed an increase of 11 per cent as compared with 1936, all groups sharing in the increase.

The British *Ministry of Labour Gazette* for September contained a summary of the proceedings of the Congress from which the following information has been extracted:

In his presidential address, Mr. H. H. Elvin gave an account of some of the principal activities of the General Council during the past year. In particular, he commended the Council's Youth Charter (embodying proposals for legislative and other reforms in the industrial conditions of young persons), and stressed the need to attract youth to the trade union movement; he recounted what had been done towards securing holidays with pay as a condition of employment, and pressed for further help from the Government in extending this principle to all industries; he spoke of the Council's hopes for securing the physical fitness of the workers, and removing obstacles thereto, through the Joint Committee recently established with the British Medical Association; he commended the Council's attempt to organize domestic servants, and also the work of the Research Department of the Congress, whose services he urged that trade unions should use more generally.

The Congress passed unanimously a resolution which sought to make foreign firms starting business in this country conform to British conditions of employment; a motion urging trade unionists and the public generally in purchasing goods to insist on assurances that they have been made and are sold under trade union conditions was referred to the General Council for consideration. A resolution was passed relating to improved and national scales of salaries for women public health officers, and also another, condemning "House Unions" and claiming the right of all workers, including non-manual workers, to form their own organizations for the purpose of collective bargaining with their employers.

The principal subject of debate on the second day of the Congress was re-armament, and the approach to the trade unions which had been made by the Government through the General Council, for the purpose of securing their co-operation. Sir Walter Citrine, the General Secretary, in presenting the Council's report on the subject, explained the attitude adopted by the Council, and a motion to refer back the report was lost by a large majority.

The Congress approved without division a report by the General Council on the preliminaries for a scheme of National Maternity Service which had been agreed upon by the Joint Committee representing the British Medical Association and the Council. The Congress passed a resolution opposing the extension of rent de-control, and also another, urging an amendment to the Education Act, 1936, which would remove the power of Local Education Authorities to exempt children from remaining at school until the age of 15. A resolution demanding that the General Council should withdraw the ban on the Communist Party, imposed in 1934, was defeated.

Unemployment—On the third day of the Congress the General Council brought forward an emergency resolution on unemployment, which was carried unanimously. The resolution referred to "the unmistakable signs of the approach of a new trade depression," and, claiming that international co-operation through the League of Nations, systematic planning, and the re-organization of basic industries on lines already approved by the Congress, were essential factors in meeting the situation, urged that an immediate survey of the situation should be undertaken by the Government, and plans prepared "for the development of the country's resources and its better economic equipment, with particular regard to the immediate needs of the Depressed Areas."

The Congress passed, on a card vote, a resolution in favour of pooling the surplus funds of Approved Societies, with a view to securing equal benefits for all insured persons.

Pensions.—A resolution for increasing Old Age Pensions and reducing the pension age was passed, as was another, relating to the co-ordination of industrial sickness statistics by trade unions, for the purpose of improving factory legislation and assisting claims under the Workmen's Compensation Act.

A resolution which was passed relating to employers' pension schemes, condemned schemes organized by Employers' Associations in the administration of which employees had no share, and those which prohibited trade union membership. Another resolution urging support for the demand for pensions for unmarried women at 55 years of age was lost on a card vote.

International Situation.—The international situation was discussed on the fourth day when the Congress gave special consideration to an important declaration which had been issued the previous evening under the joint signatures of the General Council and of the executives of the Labour Party and the Parliamentary Labour Party. This dealt with the European crisis, and called for a firm British stand against aggression and for the immediate summoning of Parliament. A motion to refer back the declaration was defeated almost unanimously.

In regard to the Spanish situation, a resolution calling for the immediate consideration of a co-ordinated policy to remove the embargo on arms for the Spanish Government was passed. In making a statement as to the financial assistance already rendered to the Spanish Government by British trade unionists, the General Secretary announced the gift of a further sum of £5,000 ($25,000) by the General Council.

Subsequently, on its concluding day, the Congress approved proposals under which simultaneous approach to their respective Governments was to be made by the French and British labour movements, while an appeal for funds in aid of the Spanish Government was to be made to all trade unions affiliated to the Congress.

Other Resolutions.—Among other resolutions adopted was one favouring measures against profiteering in food and other commodities; while another demanded improved conditions for agricultural workers, and a review of the agricultural industry to ensure more home-grown food. Two resolutions were concerned with the nationalization of the engineering and electricity supply industries respectively. Of resolutions relating to the Unemployment Insurance Act, one urged that there should be no disqualification from benefit where a stoppage of work was caused by an employer contravening an area or national agreement, while another desired the inclusion of non-manual workers up to an income limit of £500 ($2,500) per annum. The reconstitution of the Grocery and Provisions Trade Boards was called for in another resolution. Objects covered by other resolutions included the enforcement of the "fair wages" clause in factories on trading estates in the Special Areas; reforms in the law relating to Workmen's Compensation; additional restrictions in the working hours of young persons under the Shops and Factories Acts; the extension of the Factories Act to agriculture and the limitation of working hours of motion picture projectionists to a maximum of 8 per day or 48 per week.

Rural and Industrial Conference in Nova Scotia

The *Canadian Co-operator* for September gives a summary of the Rural and Industrial Conference of co-operatives held at St. Francis Xavier University, Antigonish, on August 16, 17 and 18.

The following paragraphs have been extracted from the Co-operative League News Service:—

One hundred and eighty-one college professors, public school superintendents, teachers, Catholic priests, Protestant ministers and co-operative educational directors from 27 states, the District of Columbia, Alaska, and four provinces of Canada, using the campus of St. Francis Xavier University, Antigonish, as headquarters, have recently spent three weeks studying the Nova Scotia co-operatives.

Two sections of the 1938 Tour of Nova Scotia Co-operatives met at Antigonish, August 7, for a two-day conference and then spent six days visiting co-operatives in Eastern Nova Scotia and Cape Breton Island. The third and fourth sections held their preliminary conference August 19 and 20 and completed their tour of investigation August 27.

All of the tour parties took part in the Rural and Industrial Conference—August 16, 17 and 18—which drew together 1,000 representatives of credit unions, co-operatives and study clubs in the Maritime provinces.

Leaders in the adult education and co-operative program sponsored by the Extension Department of St. Francis Xavier University, which has attracted world wide attention, reported that 142 credit unions, 42 co-operative stores, 17 co-operative lobster canneries, 11 co-operative fish processing plants and 7 other co-operatives have been organized in the province as a result of the program. Inspired by the work in Nova Scotia, other sections of eastern Canada have launched similar programs and representatives from New Brunswick, Prince Edward Island and Newfoundland reported the year's progress.

The Right Rev. James Morrison, Bishop of Antigonish, declared in opening the conference that "where communism was rampant in eastern Nova Scotia a few years ago," the development of co-operatives and adult education has given the people better economic conditions and renewed hope and as a result "Communism in our province is as dead as Caesar's ghost"!

A high point in the tour was the dedication of the Arnold Co-operative Housing development under construction by a group of miners at Tomkinsville, Reserve Mines, Nova Scotia, at which Premier Angus L. MacDonald, of Nova Scotia, and other high government officials participated.

LABOUR AND INDUSTRY IN BRITISH COLUMBIA IN 1937

Annual Report of Provincial Department of Labour

EXPANDING pay-rolls and increased employment during the year is recorded in the annual report of the British Columbia Department of Labour for 1937. The report states that: "The statistical survey of labour conditions for the year 1937 discloses a marked improvement over 1936. The total pay-roll increased some $20,000,000, the number gainfully employed in industrial undertakings being the highest since 1929, which, together with higher wages, has placed this Province in a very favourable position." Continuing the report observes:

"Unfortunately, an upward trend in prosperity in British Columbia has resulted in an ever-increasing number in search of work coming here in the hope there would be employment for all.

"The inevitable result has been that there is a considerable number of unemployed in this Province from other sections of Canada, which has made it more and more difficult for many of our own residents to obtain work.

"A study of the statistical section of this report will convince any one that but for this influx of unemployed, our own British Columbia residents would have been in more desirable circumstances."

Industrial Statistics, Pay-rolls, etc.—The improved industrial situation is reflected through statistical data of pay-rolls, employment, hours of labour, etc. The total number of firms reporting in time for tabulation in the tables of the report was 4,711 as compared with 4,357 in 1936, an increase of 354.

For these 4,711 reporting firms, a summary of the pay-rolls reveals a total of $126,683,377. The report states however, that "inasmuch as this figure covers only the industrial pay-rolls, it should not be considered as the total pay-roll of the Province, and must be further augmented by the following, yielding an accumulative total of $162,654,234, or an increase of $20,304,643 over 1936."

This aggregate total is made up as follows: Pay-roll of 4,711 firms making returns to Department of Labour, $126,683,377; returns received too late to be included in above summary, $1,003,125; employees in occupations included in Department's inquiry, not sending in returns (estimated pay-roll), $1,450,000; Transcontinental railways (ascertained pay-roll), $12,417,732; Dominion and Provincial government workers, $5,500,000; wholesale and retail firms, $3,000,000; delivery, cartage and teaming, warehousing, butchers, moving-picture operators, coal and wood yards, and auto transportation, $3,600,000; ocean service and express companies, $7,500,000; miscellaneous, $1,500,000.

During 1934 the statistics for the same classifications showed a pay-roll of $113,567,953, the figures for 1937 thus showing an increase of $49,086,281 over the three-year period.

The percentage of the total payable to wage-earners has again shown an increase. Of the total pay-roll, wage-earners received 78·67 per cent in 1937 in comparison with 77·76 per cent in 1936. "This," the report states, "together with an increase in the number employed and in the average weekly wage paid, is further evidence that the worker was in a better position during 1937 than in any year since 1932." Of the total pay-roll it is also shown that officers, superintendents and managers received 10 per cent and clerks, stenographers and salesmen 11·33 per cent.

An analysis of the pay-roll statistics for 1937 shows that of the twenty-five industrial groups, twenty-four show an increased pay-roll while one only indicated a decrease. The lumber industry continued to lead with an increase of $6,046,674; followed by metal-mining with $2,182,347; and contracting with $1,931,675; metal trades increased by $1,306,593; smelting with an addition of $1,250,695; followed by pulp and paper mills with $896,038; food products showed an additional $843,762; public utilities, $755,592; Coast shipping, $584,334; wood (N.E.S.), $551,367; explosives and chemicals with $476,227; miscellaneous trades, $441,727; garment-making, $341,150; coal-mining, $299,778; shipbuilding, $298,028; printing and publishing, $208,661; laundries, cleaning and dyeing $191,461; house-furnishings, $169,349; leather and fur goods, $156,786; building materials, $111,274; breweries, $101,507; jewellery-manufacture, $22,027; oil-refining, $19,129; paint-manufacture, $5,511.

One industry, cigar and tobacco manufacturing, showed a decrease of $391.

Weekly Wage Rates.—In the accompanying table, the average weekly wage is shown for 1935, 1936 and the year reviewed by the report as follows:

Average Full Week's Wages in Each Industry
(Adult Males only)

Industry	1930	1936	1937
Breweries	$27 40	$25 00	$26 18
Builders' materials	27 38	22 28	22 31
Cigar and tobacco manufacturing	25 06	17 75	15 50
Coal-mining	29 03	28 75	27 46
Coast shipping	31 36	31 61	31 99
Contracting	30 34	24 13	25 61
Explosives and chemicals	26 66	23 76	24 58

Industry	1930	1936	1937
Food products, manufacture of..	27 79	23 16	23 85
Garment-making..	28 34	22 74	22 97
House-furnishing..	25 54	21 29	22 25
Jewellery, manufacture of..	37 85	34 39	34 60
Laundries, cleaning and dyeing..	27 16	22 25	22 89
Manufacturing leather and fur goods..	28 31	20 48	21 23
Lumber industries..	25 69	24 83	26 81
Metal trades..	29 96	24 41	24 77
Metal-mining..	33 31	29 10	30 34
Miscellaneous trades and industries..	25 88	22 07	23 85
Oil-refining..	29 78	26 21	27 92
Paint manufacturing..	25 85	21 44	23 08
Printing and publishing.. ..	39 34	32 72	33 69
Pulp and paper manufacturing..	27 39	24 24	26 75
Ship-building..	30 35	26 38	27 88
Smelting..	30 05	24 54	25 08
Street railways, gas, water, power, telephones, etc.. ..	30 02	27 50	27 20
Manufacturing of wood (N.E.S.)..	26 03	20 32	21 97

From the foregoing, it will be observed that the average weekly wage per adult male employee increased in twenty-two of the twenty-five occupational classifications. Increases in the average weekly wage ranged from .03 cents in the builders' materials to $2.51 in pulp and paper manufacturing. Of the three industries reporting decreases, cigar and tobacco manufacturing registered the largest decrease of $2.25; coal mining, $1.29, and street-railways, gas, water, power, telephones, etc., 30 cents.

The report also contains tabular statistics indicating the number of wage-earners in each industry. The following table is a summary of all such tables and indicates the number of employees by weekly wage groups in 1937.

Classified Weekly Wage-rates (Wage-earners only)

For Week of Employment of Greatest Number	Males		Females		Apprentices
	21 Yrs. & over	Under 21 Yrs.	18 Yrs. & over	Under 18 Yrs.	
Under $6.00.....	155	103	374	104	111
$ 6.00 to $ 6.99..	125	78	153	85	100
7.00 to 7.99..	245	131	165	29	78
8.00 to 8.99..	172	182	213	89	130
9.00 to 9.99..	164	157	173	62	89

Totals....	97,877	4,332	11,241	756	1,097

Apprenticeship—The report of the Director of Apprenticeship shows that at March 31, 1938, the number of firms or employers training apprentices had increased to 375 and apprenticeship contracts in force had increased to 602. During the period reviewed by the report twenty-nine apprentices satisfactorily completed the period of apprenticeship set out in their contracts, and of these sixteen were in designated trades and received their certificates. There were twenty-four contracts cancelled for one cause or another, in every case by mutual consent.

The Director's report concludes with the statement "considerable progress has been made in the matter of periodic inspections and these have revealed that, generally speaking, the apprentices consist of boys, young men, and women of a high standard who are making satisfactory advancement and frequently receiving wages in excess of that set by our regulations."

Employment Service.—The report submitted by the General Superintendent of the Employment Service for the year 1937, shows a slight decrease in the number of applicants and re-applicants, which during the year totalled 198,775 as compared with 202,264 for the year 1936. A very considerable increase in employers' orders and placements over the preceding year is reported, which is accounted for by the relief work undertaken by the City of Vancouver, the figures being; employers' orders, 52,523 as compared with 32,162 for 1936 while placements were 52,365, as against 32,012 in the preceding year.

Commenting on the improved employment conditions the Superintendent's report states:

"Despite the general improvement in conditions and the increase in the volume of employment, it was found necessary to grant relief to a larger number of families and to reopen relief camps for single men during the winter months. The Coast area of the Province, owing to climatic conditions, is normally a Mecca for unemployed persons, particularly during the winter months. Drought conditions in Alberta and Saskatchewan have greatly accentuated the situation and large numbers have come from those Provinces, many of them destitute, and unable to secure relief here, they endanger the whole wage structure in their search for employment. The normal expectancy that employers would give preference to British Columbia citizens is not being fulfilled, at least in so far as relief recipients are concerned, due largely to the impression created by the disturbances caused by transients that all persons in receipt of relief are unreliable and reluctant to accept and remain in employment. Efforts by the Minister of Labour and officials to change this point of view have been partially successful, although it has been pointed out that a continuance of the policy must inevitably result in increased taxation to pay the costs of relief."

Reference is also made in the Superintendent's report to the work of the Handicap Section, and the Women's section; to the importation of labour, the forestry and placer-mining training camps and the "Work scheme" in Vancouver.

Unemployment Relief.—The report of the Administrator of Unemployment Relief for 1937 states "There was a great improvement in the relief situation during the calendar year 1937. The decrease in the average monthly numbers receiving relief in the Province was nearly 24 per cent as compared with the previous year's average. The lowest number receiving assistance since the peak of 128,858 in March, 1933, was in the month of September, 1937, when 43,110 individuals were assisted. This is about one-third less than the low for the previous year of 64,996 in October, 1936."

"The Province continued to pay 80 per cent of the cost of relief afforded to municipal residents and the whole cost of assistance granted to Provincial and transient cases residing within municipal limits. The Federal Government assisted by means of monthly grants-in-aid amounting to $200,812.50 for the months of January, February, and March; $150,000 for the months of April, May, and June; $120,000 for the months of July, August, and September; and $115,000 for the months of October, November, and December."

The report of the administrator also deals with various phases of the relief problem and the steps taken to cope with it, under such headings as "registration," "grub-stakes," "assistance to settlers plan," "forestry-training plan," "placer-mining training plan," and "winter work projects."

Trade Schools Regulation Act.—During the year a total of sixty-nine schools were registered under the Trade Schools Regulation Act (LABOUR GAZETTE, December, 1936, page 1131).

During the year a total of sixty-nine schools were registered and, of these, sixty-seven remain in active operation, one registration having been cancelled by the Minister of Labour for non-compliance with the regulations, and one correspondence school having voluntarily withdrawn their registration owing to lack of business.

Of the sixty-seven operating schools, fifty-two are practical schools situated throughout the Province, and fifteen are correspondence or home-study schools. Of the correspondence schools, four are Canadian schools and eleven are American schools.

An additional sixteen schools applied for registration under the Act, half this number being refused registration after a thorough investigation, the other half withdrawing their applications owing to their inability to comply with our regulations.

Owing to the volume of complaints that had been received regarding the past operations of some correspondence and home-study schools, special regulations governing their activities in this Province were brought into force on September 14, 1937.

Commenting on the enforcement of the Act the report states that "the Act and these regulations has in a few short months brought about a satisfactory change in the attitude of these schools towards their students.

"Enrolment methods have distinctly improved and the right of a student to discontinue any course of study under reasonable conditions has practically eliminated the objectionable tactics adopted by the collection departments of some schools in an effort to enforce one-sided and unreasonable contracts.

"Comparatively few complaints have been received from students enrolling in registered schools since the regulations became effective, and a considerable number of adjustments have been made in regard to contracts that were entered into before the regulations became effective.

"The Act has received the whole-hearted support of the general public and, as a result, similar legislation has already been enacted in the Provinces of Ontario and Manitoba and is under consideration in other Provinces."

Factory Inspection.—During the year 1937, there were 1,860 inspections and re-inspections of factories made by the Factories Inspection Branch. The report also reviews the activities of the branch in connection with accident prevention, prosecutions, factory conditions, investigations into complaints and inspections of passenger and freight elevators.

Home-Work.—Commenting on the effectiveness of legislation prohibiting industrial home-work under certain conditions, the Factories Inspector in his report states in part:—

"Persons who question the necessity of and criticize the trend of social legislation would, I feel sure, change their point of view to some extent if they had been privileged to observe conditions under which industrial home-work was being performed in this Province previous to legislation being enacted, having for its purpose some measure of control over this system.

"Prior to this legislation becoming operative, garments were being manufactured in homes where little or no regard was paid to sanitation. Work was being performed by individuals whose appearance in some instances would justify the opinion that they were the victims of a communicable disease. The manufacturing of wearing-apparel under such conditions constituted a menace to the public making purchases of same and, if it had been permitted to continue and expand, the continuity of employment of female factory-employees because of the extremely low remuneration home-workers were receiving for performing skilled work would have been seriously jeopardized. . . ."

". . . Assuming that strict enforcement of Part II of the 'Factories Act' has in a large measure been a contributing factor towards

industrial home-work being no longer a problem in this Province, it has not been accomplished without being subjected to a certain amount of criticism from our own nationals who would have us believe that for philanthropic reasons only did they wish to be permitted to give out work to be performed in the home. Our records show that to-day denial of a request for an employer's permit to such an individual has resulted in the establishment of a factory giving employment to fourteen female employees.

"While industrial home-work is no longer an industrial and social evil in this Province, we view with much concern the increasing domination by Japanese manufacturers of machine-made ladies' wearing-apparel. Although we have been successful in having this work performed under close supervision in factories, the proprietors of these plants still have a decided advantage over other competitors because, in addition to factory space, living-quarters are provided for their families."

Labour Disputes and Conciliation.—The report refers to 1937 as "one of peace in labour circles," sixteen disputes were reported affecting 1,188 employees resulting in 30,022 working-days being lost.

Report of Board of Industrial Relations

As in other years, the report of the Board of Industrial Relations—administering the Female Minimum Wage Act, the Male Minimum Wage Act and Hours of Work Act—is also contained in the report of the Department.

Male and Female Minimum Wage Acts.—Continuing its long-established policy of collecting data once a year, the Department circularized employers of women throughout the Province toward the end of 1937.

Statistical forms were received from 3,749 employers of women and girls, an increase of 184 over the 1936 figure. Returns covering 24,084 women workers were received in 1937, as against 21,924, thus revealing 2,160 more women and girl employees on the payrolls than appeared for the previous yearly period.

Coupled with this increase in reporting firms and reported employees is the noticeable upward trend in wages, and, in some cases, a shortening of working hours.

Restoration of cuts in salaries has been effected in many instances, and actual increases have been given to employees by other employers.

The average weekly wage for women 18 years of age or over rose from $12.96 to $13.30, and for the younger employee the average weekly wage for the year under review stood at $9.66, as against $8.88. A slight decrease in average working hours is also noted, the average hours worked per week decreasing from 41·94 in 1936 to 41·90 hours a week in 1937.

For the year under review the inspection staff made personal investigations of 13,212 establishments in all parts of the Province an increase of 2,967 over those made in 1936. Adjustments totalling $57,028.50 were effected for employees during the 12-month period.

Under the Male Minimum Wage Act, 517 firms were required to pay to 1,313 men or boys $40,794.68, and 386 employers paid to 609 women and girls the sum of $13,895.33 in adjustment of wages. Following decisions in various court cases employers were ordered to pay arrears of wages amounting to $2,338.49.

Under the Female Minimum Wage Act, there were 52 prosecutions during the year with 40 convictions; 6 cases were dismissed and 6 were withdrawn. There were 47 cases under the Male Minimum Wage Act in 36 of which convictions were registered, 8 dismissed, and 3 withdrawn, while under the Hours of Work Act there were 70 cases in 54 of which convictions were obtained, 8 dismissed and 8 withdrawn. Other cases were as follows: Factories Act, 7 cases, with 7 convictions, and 12 cases under the semi-monthly payment of Wages Act in which 11 convictions were obtained and one case was withdrawn.

Hours of Work Act.—The report shows that during the year 1,671 overtime permits were granted, it being stated that "while the number exceeds those issued in 1936, the increase is due to more rigid inspections by officials of the Board. The reasons for overtime are varied, the majority of requests being for taking periodic inventories."

Statistical data in the report shows that of the 102,235 employees reported by 4,711 employers, 89·31 per cent worked 48 hours or less per week; 4·57 per cent worked between 48 and 54 hours per week; and 6·12 per cent worked in excess of 54 hours.

Industrial Accidents in Ontario During August

The Ontario Industrial Accident Prevention Associations' Bulletin of September 10, contains information supplied by the Workmen's Compensation Board of Ontario showing that the total accidents reported to the Board during August, 1938, was 5,728 in comparison with 6,799 during August, 1937. Fatalities during the month numbered 34, compared with 35 in the same month of 1937. Total awards for compensation and medical aid during August, 1938 amounted to $484,680.02 as against $457,636.42 in August, 1937; while medical aid only cost $83,583.35 in August, 1938, compared with $90,743.97 in August, 1937.

In accordance with a resolution of the New Jersey State Legislature, Governor Moore recently appointed a commission of nine members to study labour relations legislation in that state.

FAIR WAGE SCHEDULE FOR PUBLIC AND CERTAIN PRIVATE CONSTRUCTION WORKS IN MANITOBA

IN the September issue of the LABOUR GAZETTE there was printed the fair wage schedule for public and certain private construction works in Manitoba. Unfortunately a mechanical error resulted in the throwing out of alignment the tabular summary of wage rates. This error rendered valueless the entire table as it appeared in the September issue. As this error only occurred in the English edition of the LABOUR GAZETTE, the entire schedule of rates, together with the introductory text, is herewith reproduced in this issue.

Under the authority of section 11 of the Fair Wage Act of Manitoba, 1916 (Consolidated Amendments, 1924, chapter 99—as amended, 1934, chapter 13; 1935, chapter 17; 1937-38, chapter 15) the provincial Minister of Public Works has approved a schedule effective June 15, 1938, establishing the minimum rate per hour and the maximum working hours applicable on public works for building construction under contract and on private works as described in the Act.

"Private works," as defined by the Act "means the building, construction, remodelling, demolition, or the repairing at a cost of all work done irrespective of the number of contracts made exceeding one hundred dollars, of any building or construction work within the Greater Winnipeg Water District or any city or town which has a population exceeding two thousand, or any other portion of the Province to which the provisions of this Act are extended by the Lieutenant-Governor in Council, but shall not include work which is done on property by or under the immediate direction and control of the owner, tenant or occupant thereof if no more than three men are employed in addition to the regular maintenance staff, if any, and if such work be not undertaken with a view to sale or rental of the property and shall not include work which is done by a maintenance man, or men, employed by the month."

The public work to which this schedule applies is that authorized by the Minister for the execution of which a contract has, or contracts have been entered into between the Minister and an employer, consisting of construction, remodelling, demolition or the repairing or painting of buildings in Manitoba, and, or, highway, road, bridge or drainage construction work, when a contract has been entered into, and when done outside the "Greater Winnipeg Water District Area."

Fair Wage Schedule

The following schedule shall apply from and after June 15, 1938, on "Public Works" and on "Private Work."

Occupation	Greater Winnipeg Water District Area for Private Work, and for Govt. Work, Wpg. and radius of 30 miles	Other than Greater Winnipeg Area (applies to private work when population exceeds 2,000)	Max'm Hours per week
	Minimum rate per hour		
Asbestos Workers—			
(a) Journeymen	$ .75	$ .75	44
(b) Improvers	.60	.60	44
Asphalters—			
(a) Finishers and Rakers	.544	.52½	44
Blacksmiths	.65	.60	44
Bricklayers	1.10	.90	44
Helpers—			
(a) Continuously employed at mixing and tempering mortar	.50	42½	48
(b) Attending on or at scaffold	.45	37½	48
Bridge and Structural Steel and Iron Workers	.85	.85	44
Carpenters	.85	.70	44
Cement Finishers (in warehouse or large floor area jobs)	.60	.55	48
Electrical Workers (inside wiremen, licensed journeymen)	.85	.75	44
Apprentices indentured for a four-year period shall be paid in accordance with the following classification—			
First Year	.25	Nil	44
Second Year	.30	Nil	44
Third Year	.40	Nil	44
Fourth Year	.75	Nil	44
Providing that these rates for apprentices shall be changed to agree with any rates which may be fixed, at a later date, by agreement.			

Occupation	Greater Winnipeg Water District Area for Private Work, and for Govt. Work, Wpg. and radius of 30 miles	Other than Greater Winnipeg Area (applies to private work when population exceeds 2,000)	Max'm Hours per week
	Minimum rate per hour		
Labourers—			
(a) Skilled	$ .45	$ .37½	48
(b) Unskilled	.40	32½	48
Lathers (Metal, Wood)—			
(a) Metal Lathers	.75	70	44
(b) Wood Lathers	.70	.65	44
(Wood lathers—work may be paid for on a square yard basis at not less than 6c. per square yard.)			
Linoleum Floor Layers	.60	.55	48
Marble Setters	1.05	.90	44
(a) Helpers (all men assigned to help tradesmen)	.50	42½	48
Mastic Floor Spreaders and Layers	.85	.85	48
Mastic Floor Rubbers and Finishers	.55	.55	48
Mastic Floor Kettlemen	.45	.45	48
Mosaic and Tile Setters	1.05	.90	44
(a) Helpers (all men assigned to help tradesmen)	.50	42½	48
Operating Engineers and Firemen on Construction—			
Class "A": Engineers in charge of hoisting engines of three drums or more operating any type of machine, or operating trenching machines, clamshells or orange peels, regardless of capacity; or operating steam shovels or draglines of one yard capacity or over, or operating drop hammer pile drivers; in all cases irrespective of motive power	.95	.75	48
Class "B": Engineers in charge of hoisting engines having only two drums or of single drum used in handling building material; or steam shovels and draglines not specified in "A" hereof; irrespective of motive power	.90	.70	48
Class "C": Engineers in charge of any steam operating machine not specified in "A" or "B" hereof; or in charge of a steam boiler if the operation of same necessitates a licensed engineer under the provisions of "The Steam Boiler Act"; or air compressor delivering air for the operating of rivetting guns on steel erection work, or pumps in caissons or concrete mixers of over ½ yard capacity, irrespective of motive power	.80	.65	48
Class "D": Men firing boilers of machines classified in "A," "B," or "C" hereof or assisting engineers in charge of same	.55	.45	48
Class "E": operators of gas or electric engines for machines not otherwise specified in "A," "B" or "C" hereof of a type usually operated by skilled labourers	.45	.37½	48
Painters, Decorators, Paperhangers and Glaziers	.70	.65	44
Plasterers	1.10	.90	44
(a) Helpers (continuously employed at mixing and tempering material including the making of putty and operation of machinery	.50	.42½	48
Plumbers	.95	.80	44
(a) Helpers (all men assigned to help tradesmen)	.50	.42½	48
Reinforcing Steel Rodmen; when specially hired for, or when exclusively occupied on such work for a longer period than 16 consecutive hours on the work of bending, placing, tieing and similar skilled work in connection with reinforcing steel work	.50	Nil	44
Roofers (Felt and gravel)—			
(a) Man in charge	.60	.55	48
(b) Roofers	.45	.37½	48
Sheet Metal Workers	.70	.65	44

Occupation	Greater Winnipeg Water District Area for Private Work, and for Govt. Work, Wpg. and radius of 30 miles	Other than Greater Winnipeg Area (applies to private work when population exceeds 2,000)	Max'm Hours per week
	Minimum rate per hour		
Steamfitters	$ .95	$ .80	44
(a) Helpers (all men assigned to help tradesmen)	.50	42½	48
Stonecutters	.90	.80	44
Stonemasons	1.10	.90	44
(a) Helpers—			
(1) Continuously employed at mixing and tempering mortar	.50	.42½	48
(2) Attended on or at scaffold	.45	.37½	48
(a) Teamsters	.40	Nil	54
(b) Teamsters with teams (if employed on the construction or demolition of the building by the owner, contractor or sub-contractor)	.80	Nil	54
Terrazzo Workers—			
(a) Layers	.70	.67½	44
(b) Machine Rubbers (while so engaged only)	.50	.47½	48
(c) Helpers (all men assigned to the trade other than the above)	.45	.37½	48
Timber Men and Crib Men working on grain elevators or bridges doing the "crib work" on grain elevators or rough timber work on bridges (such men shall be restricted to the use of hammers, saws, axes and augers)	.60	.50	48
Truck Drivers	.45	.40	48

Rule—All men hired in Winnipeg to go into the country to work on buildings shall be paid the City schedule rate, excepting where other definite agreements are made.

Attention is called to the fact that Winnipeg Contractors have agreed with tradesmen that 40 hours per week only shall be worked during the months of July and August, 1938.

PUBLIC ROAD AND BRIDGE WORKS

The following schedule shall apply from and after June 15th, 1938, on "public works" outside the Greater Winnipeg Water District Area in all parts of Manitoba for highway, road, bridge or drainage construction work where a contract has been entered into by the Honourable Minister of Public Works.

Occupation	Minimum Rate per Hour	Maximum Hours per Week
Labourers	$ .30	48
Teamsters	.30	48
Teamster and two horse team	.55	48
Teamster and four horse team	.80	48
Grader and Tractor Operators (excepting permanent municipal employees)	.60	48
Truck Drivers (regardless of basis for payment for truck)	.40	48
Combined Rate—Truck and Driver when paid by the hour—		
Capable of hauling not more than 1½ tons or 1 cubic yard	1.25	48
Capable of hauling not more than 3 tons or 2 cubic yards	1.35	48
Capable of hauling not more than 4 tons or 3 cubic yards	1.75	48
Larger trucks capable of hauling over 4 tons or 3 cubic yards	2.25	48
Combined Rate—Truck and Driver when paid at a unit rate per mile: If a rate per yard mile or per ton mile is the basis for payment, the minimum rate shall be fixed by the Chief Engineer of the Good Roads Branch of the Public Works Department for each contract or job, which rate shall be based on the Departmental schedule.		
Timber Men: timber work where use of hammers, saws, axes and augers only are required	.50	48

Note.—Men occupied on subsistence work projects such as Forestry Work, the Pas-Mafeking Highway, Grassmere Drain and similar undertakings—not less than the Minimum Wage Rate set by the Minimum Wage Board.

INDUSTRIAL RELATIONS IN GREAT BRITAIN

Review of Report of Commission Appointed by President Roosevelt to Study Employer-Employee Relationships in British Industry

THE Commission appointed by President Roosevelt on June 16 to make a factual report on industrial relations in Great Britain has released recently the results of this survey. The President's instructions to the Commission as contained in his letter of June 16 were as follows:

"In view of the many comments that have come to my attention relative to industrial relations in Great Britain, I feel that there is a definite need for an impartial report which will adequately portray the real situation that prevails in British industry. I trust that through conferring with Government officials, industrial leaders and labour officials, you will be in a position to report to the Secretary of Labour not only on the exact status of labour-employer relations in England, but also on the evolution of the established procedures that account for the current state of industrial relations in that country."

Subsequently, in releasing the Commission's findings, the President commended the report—unanimously submitted by eminent Americans representing various interests in the national life of the country—as something to be thoroughly read. Commenting on the nature of the findings, the President, in part, stated:

"The adequacy of this report attests again the usefulness of co-operative endeavours on the part of those in Government and those whose labours and interests, diversified as they may be, are closely identified with the labour-employer relationships as they exist in our country.

"This report ought to be read through. Unless this is done, discussions of the facts contained therein, will be of little value. To me, the most salient feature of it, is the co-operative spirit coupled with restraint which is shown by those who represent both employers and employees in Great Britain. Collective bargaining is an accepted fact and because of this the machinery which carries it out is functioning."

The report is in four main sections.

Part I (chiefly introductory) relates to the Commission's studies in Great Britain.

Part II deals with present precedure in worker-employer relations under the following subdivisions:

(*a*) Unions and Employers Organizations.
(*b*) Collective Agreements.
(*c*) Provisions in the agreements for the settlement of basic terms of employment, and disputes and grievances, without stoppage of work.
(*d*) Adjustment of inter-union disputes.
(*e*) Legislation relating to the existence and activities of Trade Unions.
  (1) Legal status of unions and strikes.
  (2) Picketing and intimidation.
  (3) Political objects.
  (4) Membership.
  (5) Registered and unregistered unions, and certifications.

65197—4

(*f*) Governmental agencies.
Arbitration.
Conciliation.
The Industrial Court.
Courts of Inquiry.
Trade Boards.
The Fair Wages Clause.

Part III outlines the evolution of existing methods of settling industrial disputes.

Part IV discusses social legislation and other factors.

Unions and Employers' Organizations

As already indicated in Part II, the present procedure in worker-employer relations is reviewed under a number of headings. The Commission first outlines the long history of labour union development in Great Britain, beginning as far back as the repeal of the Combination Laws in 1825, and similarly sketches the formation of employers' associations, giving the present position of each in regard to membership and organization.

Pointing to the diversity of structure in both employers' and workers' organizations, the Commission notes:

"Among the employers associations some, like the Mining Association, are quite homogeneous; some, like the Engineering and Allied Employers' National Federation, bring together many different types of manufacturing; some, like the Wholesale Clothing Manufacturers' Association, affiliate both district associations and individual firms; some, as in the textile industry, consist of particular divisions of an industry according to materials or processes or both. Among the union federations, some are very loosely organized and others are so highly developed that they differ little from amalgamations; they may bring together unions in different industries, or local unions in a single industry, or associations of national unions in a single industry.

"This diversity of structure is the result of long historical growth reflecting the different customs, practices and traditions in the various industries."

Collective Agreements

In the section on collective agreements the basis of practically a recognized industrial and national system is described as follows:

The employers associations and the unions have long since become an integral part of a collective bargaining system in which they respect one another and mutually attribute real value to the agreements and to the relations that have been built up between them. In Great Britain the expression "collective agreement" does not mean an agreement between a single employer and his workers, or even an agreement between a single employer and a union. It means an agreement negotiated collectively by representatives of a group or association of employers (commonly an industry-wide association), and representatives of a union or a group or association of unions.

Great diversity appears in the collective agreements; in the provisions for wages, hours, and working conditions, and in the procedure for the settlement of disputes. Many of the agreements with employers associations are national in scope, regulating the terms of employment of the members' employees, both union and non-union, in the categories covered by the agreements. Other agreements, though less frequently, are between unions and district, rather than national associations of employers. Moreover, even in industries where national agreements define the terms of employment with great precision, supplementary district or local agreements often exist. In the case of non-federated employers, individual agreements may be negotiated with the unions; when they are negotiated they generally conform to the national agreements. The extent to which standards set in the national agreements are observed by non-federated employers depends on the extent of union organization in the particular trade or locality.

The wage provisions in collective agreements are multiform. In the case of *time-rates* they are sometimes expressed as minima and sometimes as standard rates which in practice are the prevailing rates; they are frequently differentiated according to locality. In the case of *piece-rates* the agreements sometimes specify the actual rates in lists which may cover a large number and variety of articles and operations, while other agreements are less detailed. Generally the piece-rates are calculated to yield to an average or an ordinary worker a certain minimum percentage above the agreed time rates. Provisions are also made in some agreements for group piece-work, for bonus payments dependent on output, and for the automatic adjustment of wages in accordance with variations in selling price or in the proceeds of the industry (restricted to coal mining) or in the cost of living indices of the Ministry of Labour. Increases in wages have generally been made by a flat amount of so much per hour or per week and this has had the effect of decreasing the percentage difference between the unskilled and the skilled worker. At the same time, the difference between skilled workers in different trades are becoming less. In those trades where a cost of living bonus is applied (which is usually in the form of so many shillings per week rather than a percentage on the wages) this tendency of decreasing the percentage difference is again observed. The same tendency is found in the action of the Trade Boards in the very low wage classes. Hours are generally fixed by industry-wide agreements, usually from 44 to 48, but in some cases less. There are many differences in the provisions relating to overtime, starting and stopping, holidays and so on. Numerous details relating to working conditions and other matters, are frequently incorporated.

Almost invariably either in the collective agreements or in agreed-upon rules of joint standing bodies composed equally of representatives of union and employer organizations, there are provisions specifying the steps to be taken before strikes or lock-outs may occur.

Provisions for Settlement of Basic Terms and Disputes Without Stoppage of Work

The Commission detailed the *modus operandi* for settling basic terms of employment, disputes and grievances in British industry. Its first two findings in this respect were:

First, basic changes in wages and hours are commonly negotiated by the national unions not with each employer individually, but with associations of employers.

Second, if negotiations on these basic subjects fail resort is generally had, either by the terms of the agreement or by mutual agreement at the time, to some impartial agency whose decision is generally followed, though the parties rarely bind themselves in advance to follow it. The very gravity of the situation, when differences arise in negotiations applying to the whole or to a considerable portion of an industry, is such as to counsel resort to peaceful means of settlement.

In regard to local disputes, the Commission found that these, if not settled between the parties involved, are carried up through joint district bodies and finally if necessary to a national board of the industry, thus bringing to bear upon the problem "an informed and relatively detached judgment."

The Commission also found that "the objective is to settle locally as many disputes as possible, and if they cannot be so settled, to make the procedure short enough to satisfy the workers involved, and long enough to allay the tension and to make sure that the possibilities of collective conciliation and settlement are fully utilized."

Although the above measures for settling local disputes were generally effective, there were occasional unofficial stoppages, or "flare-ups."

These were cases in which the grievance was acute and the men had not waited, or in which a "demonstration" was made for speedy redress or to ensure recognition of the seriousness of the complaint. However, "the national officials of the union are energetic in procuring a resumption of work in instances where unofficial stoppages occur. The general principle that there shall be no negotiations while the workers are out on unauthorized strikes is insisted upon and generally maintained."

Agreements Based on Moral Force

The Commission further noted that:

"While the agreements provide that there shall be no strikes or lock-outs until the procedure for negotiating basic changes, or for settling local disputes and grievances, has been completed, these and the other provisions of collective agreements rest upon moral force rather than upon legal compulsion. We could find no desire on the part of either employers associations or unions to seek legislation which would make the voluntary agreements legally enforceable; on the contrary, perhaps the chief characteristic of the attitudes of both groups is that legal sanctions for these agreements are undesirable, and that the agreements should rest upon mutual understanding and good faith."

There was one exception to this general desire on the part of both parties not to make

voluntary agreements legally enforceable. This was in the cotton textile industry. By special Act of Parliament in 1934, at the request of both the unions and the employers' organizations, the Minister of Labour was authorized "to make legally binding on the weaving section of the industry, as minimum rates, the wage-rates collectively agreed to by unions and employer organizations."

It was pointed out that the legislation, limited only to wage provisions in this particular industry, "was occasioned by the breakdown in wage standards beginning in the unorganized portions of the industry and spreading to some of the unorganized employers."

"In another sense," reports the Commission, "the legislation illustrates a further and complementary British attitude, namely that where the collective bargaining process is not by itself able to manage wage standards, and the conditions are sufficiently serious, government sanction for standards should be sought, but only as a supplement and aid to collective bargaining and not in substitution for it."

In conformity with this general philosophy, the Commission observed:

"The idea of compulsory statutory arbitration of industrial disputes is opposed. This opposition, following experiments in the early industrial era, goes back at least as far as the Report of the Royal Commission on Trade Unions in 1869. The Whitley Committee Report of 1918 said"The experience of compulsory arbitration during the war period has shown that it is not a successful method of avoiding disputes and in normal times it would undoubtedly prove even less successful." Repeatedly union and employer representatives who conferred with us expressed their opinion quite definitely against compulsory arbitration, whether imposed by statute or, so far as basic terms of employment are concerned, by collective agreements. In addition to the desire of both sides to retain the right of direct action as a last resort, they believe that provision for compulsory arbitration at the end weakens the utility of preliminary conferences, since the parties tend to rely on the final arbitration. Moreover, though some collective agreements bind the parties in advance to abide by arbitration in the case of local disputes and grievances, provisions of that sort appear to be rather infrequent; and sometimes it will be found that though the term "arbitration" is used and the parties have agreed to resort to it, there is an express stipulation that the "arbitration" award shall not be binding, though it is usually accepted.

Adjustment of Inter-Union Disputes

The Commission next dealt with the methods evolved for the avoidance or settlement of disputes between unions. It found that these disputes involve questions of two sorts. The first is whether a particular operation should be performed by one type of craftsman or another—the so-called jurisdictional disputes. The second question is whether one union or another shall organize a certain type or group of workers—the so-called organizational disputes.

In reporting on the union machinery and methods to settle inter-union disputes, the Commission's finding are as follows:

For the settlement of jurisdictional disputes (or demarcational disputes as they are called in England) some of the National Federations of Unions, in industries where the disputes are most likely to occur, have created their own internal agencies of settlement. In addition, since 1920, under the Standing Orders of the Trades Union Congress, the General Council of the Congress has had power to summon any contending unions to appear before a Disputes Committee of the General Council—the Committee being composed of members having no connection with the unions involved in the controversy. The Disputes Committee decides the case, and in case of non-compliance the General Council may suspend the offending union until the next annual Congress, the Congress having final authority to deal with the case whether by way of re-admission, further suspension, or exclusion from membership. Furthermore, if a given situation becomes sufficiently serious a Court of Inquiry may be appointed by the Ministry of Labour to investigate the matter. These methods have been generally, but not entirely, successful in avoiding stoppages of work from jurisdictional difficulties.

As to the organizational disputes, it should be noted that there are three main types of unions in Great Britain: (1) the craft unions, some of which are federations of two or more separate craft unions; (2) unions which are substantially industrial in form, of which the National Union of Railwaymen and the local and district miners' unions are the chief examples; and (3) the so-called general unions, which take in unskilled workers from all industries and which are open, also, to skilled or craft workers in unorganized areas. There are two large unions of the latter sort, the Transport & General Workers Union, and the National Union of General and Municipal Workers. Those two unions have arrived at a working arrangement regarding the men that each will take in, and they have, on occasion, transferred membership from one to the other, in accordance with that arrangement.

Several principles have been laid down for avoiding organizational disputes, the most important of which are:

(1) The Trades Union Congress, composed as it is of craft, industrial and general unions, has consistently taken the stand that no union has an exclusive right to organize any class of worker. This principle has not been formally embodied in resolutions, but it has been repeatedly applied in the decisions of the Disputes Committee, which the Congress has endorsed.

(2) By formal action of the General Council, endorsed by the 1924 Congress, further principles were adopted: (*a*) that all union membership applications "should contain an inquiry to be answered by the candidate as to whether he is or has been a member of any other Union, and, if so, what his financial

relationship to that Union is;" (*b*) that no member of any union should be accepted by another without inquiry from the union concerned, or be allowed to escape his obligations by leaving one union while in arrears and joining another; and (*c*) "that under no circumstances should a Union accept members from any other Union which is engaged in a trades dispute."

"This settlement machinery works well", records the Commission, "and stoppages of work do not result from organizational disputes."

Legislation Relating to Trade Union Activities

In traversing the scope of legislation relating to the existence and activities of trade unions, the Commission first indicates that the term "trade union" is not limited in its meaning to labour unions; that it embraces combinations of employers as well as combinations of workers to regulate the relations between employers and workers, or among workers, or among employers; or to impose restrictive conditions on the conduct of any trade or business, or to provide benefits for members.

Extracts from this section of the Commission's report are as follows:

Legal status of unions and strikes.

From a state of affairs in which trade unions (whether of employers or of workers) had no legal status, and their activities were banned by law, the English law has been brought by a series of Acts (the most important of which are the Trade Union Acts of 1871 and 1913, the Conspiracy and Protection of Property Act of 1875 and the Trade Disputes Act of 1906) to a state in which trade unions not only have a recognized legal status but they have been given immunity from any charge of restraint of trade and, with respect to their activities in contemplation or furtherance of a trade dispute, from any action from civil or criminal conspiracy or for any tortious act. Of course the courts are not thereby closed to appropriate legal action against individual wrong-doers and, although a trade union as such cannot be sued for a tortious act, its trustees may be sued for an act touching or concerning the property of the union, provided it is not an act done in contemplation or furtherance of a trade dispute. Although the 1871 Act legalizes trade union contracts in restraint of trade it provides that such contracts cannot be directly enforced in court. The practical effect of all these statutes is that agreements between employers' associations and labour unions or associations of unions rest upon good faith rather than upon legal enforceability. The statutory immunity of trade unions from suit for acts done in contemplation or furtherance of a trade dispute is denied only in the case of illegal strikes or lockouts, as defined in the Trades Disputes and Trade Unions Act of 1927; i.e., a strike or lockout having an object other than or in addition to the furtherance of a trade dispute within the industry in which the strikers are engaged and designed or calculated to coerce the Government, either directly or by inflicting hardship upon the community. From the beginning, in 1875, up to and including the Act of 1927, the British laws have contained special penalties with respect to certain acts of individuals likely to deprive the public of essential services (particularly water, gas and electricity) during industrial disputes.

We found a complete unanimity of opinion that the Act of 1927 does not forbid, or destroy the immunity of unions from suit in the case of sympathetic strikes extending beyond a given industry, unless such strikes are also designed or calculated to coerce the Government, either directly or by inflicting hardship upon the community. Nor does it forbid or destroy the previously granted statutory immunity of unions from suit in the case of sympathetic or other strikes within a given industry, even though they may be designed or calculated to coerce the Government, either directly or by inflicting hardship upon the community. The Act according to this consensus of opinion, was intended to prevent a repetition of the general strike of 1926 and it fully "de-legalizes" everything done in support of such a strike. But for ordinary industrial strikes the immunity of trade unions is preserved.

These provisions of the Act have not been interpreted in courts of record, and there is a great latitude for interpretation in the provisions prohibiting sympathetic strikes which are (1) not "within the *trade* or *industry*" and (2) are *"designed* or *calculated* to *coerce the Government* either directly *or by inflicting hardship upon the community."* How the courts will construe the italicized words, if cases should be presented, no one can venture to say. Among the persons who met with us, opinions differed as to whether or not this uncertainty had been a deterrent to sympathetic strikes.

Picketing and intimidation.

Permissible picketing is defined by successive Acts of Parliament (the Acts of 1875, 1906 and 1927) as attending* *by one or more persons acting on their own behalf or on behalf of a trade union or of an individual employer or firm in contemplation or furtherance of a trade dispute (Act of 1906)* at or near the house where a person resides, or works, or carries on business or happens to be, or the approach to such house or place, in order merely to obtain or communicate information, *or to peacefully persuade any person to work or abstain from working* (Act of 1906); *provided that they do not so attend in such number or otherwise in such manner as to be calculated to intimidate any person in such house or place, or to obstruct the approach thereto or egress therefrom, or to lead to a breach of the peace.* (Act of 1927).

When, in 1825, Parliament repealed certain provisions of the Combination Laws and thereby partially lifted the ban upon trade union activities, it simultaneously penalized the use of violence, threats or intimidation, molestation, or obstruction in connection with such activities. Certain doubts arose as to the true meaning of the words "molestation" and "obstruction" and the Act of 1859 defined these words so as to permit peaceable and reasonable persuasion "without threat or intimidation, direct or indirect." The subsequent definition

* The words not italicized are the original provisions of the Act of 1875. The italicized phrases were added by the Acts of 1906 and 1927 as indicated.

of permissible picketing in the Conspiracy and Protection of Property Act of 1875, was associated with an express prohibition of rioting, unlawful assembly, breach of the peace, use of violence or intimidation and the like. This prohibition has been preserved by the subsequent Acts and, additionally, the 1927 Act defines the words "to intimidate" as "to cause in the mind of a person a reasonable apprehension of injury to him or to any member of his family or to any of his dependents or of violence or damage to any person or property"; thereby excluding any idea that its meaning might be restricted to infliction of actual property damage or bodily harm.

For the most part the conduct of strikes has been accompanied, at least since collective bargaining became generally accepted by relatively little violence or provocation. In the case of strikes involving at the outset enough workers to make a continued operation of a plant impractical, employers almost invariably shut down their plants and do not attempt to operate until the controversy has been settled by negotiation. Several reasons for this practice were given us. In the first place, in the strongly organized industries it is difficult to obtain replacements, but even where organization is not extensive there is a general feeling among workers and employers that "the job belongs to the man" and that it is not right for men to take, or to be asked to take, the jobs of their fellows. Secondly, collective bargaining having been generally accepted, there is confidence on both sides that the controversy will be settled by peaceful negotiations, and a desire on both sides to effect a resumption of work under circumstances as free from bitterness as possible, so that future strife may be avoided.

It follows from these policies that discrimination against strikers and their leaders, if not wholly eliminated, is reduced to insignificance. In the case of strikes involving only a portion of a plant, the plant may be operated with the men who remain at work, but they are not usually asked by the employer to do the work of the men on strike; order is generally preserved and men are not forcibly prevented by picket lines from going to or coming from their work.

All of these statements are subject to qualifications in exceptional instances, particularly where the community may consist chiefly of workers and their families engaged in the industry where the trouble has occurred. But it is certainly true that violence on the part of the workers, and provocative tactics on the part of the employers, have not for a long time played any significant part in industrial disturbances, and that the chief reliance for the maintenance of industrial peace in Great Britain is placed on the settlement of all issues and differences by the voluntary collective bargaining methods already described.

Political Objects.—Under this sub-heading the Commission's report outlines the objectives of the British Labour Party, "created by trade union action," and the legislation which restricts "the application of the funds of a trade union to certain political objects."

Membership.—Referring to membership composition of trade unions, the report continues:

"By the Police Act of 1919 membership in a trade union was prohibited to a policeman; and, by the Act of 1927, "established civil servants" are forbidden, with minor exceptions to belong to a trade union affiliated with trade unions outside the civil service. The prohibition does not extend to industrial employees of the Government, or to municipal employees. The Act of 1927 prohibits local or other public authorities from making union membership a condition of employment or a ground for discrimination."

Registered and unregistered unions and certification.—The Act of 1871 prohibits the registration of trade unions under the Company Act; in other words, they cannot be incorporated. Voluntary registration of trade unions was provided for under the Trade Union Act of 1871, and voluntary certification in lieu of registration by the Trade Union Act of 1913.

The principal benefit of registration is that it enables a trade union to carry on its affairs through a board of trustees that has continuing existence; and the most considerable further benefit is a limited exemption from taxation of its benefit funds. The major obligation of a registered union is to file with the Registrar an annual account of its general funds (as well as its political funds, for which every trade union must account, whether registered or not); and the most important further obligation is to file with the Registrar a copy of its rules, which must state the name and objects of the union and the provisions for benefits, for fines and forfeitures and for amending the rules; and which must include provision for appointment and removal of trustees and officers, for the investment of funds, for an annual audit, and for inspection of its books and names of members, by every person having an interest in its funds. The Registrar functions only administratively, to see that the rules do in fact contain such provisions. Beyond this he has no power to require any particular form of organization, or to supervise the conduct of a trade union.

An unregistered trade union has neither these benefits nor obligations. Under the 1871 Act it has legal status, but must sue or be sued by a more cumbersome procedure.

The benefit of certification in lieu of registration is that a certificate is convenient and conclusive legal evidence that the certified union is a trade union and is therefore entitled to the immunities from suit granted by sections 1 and 2 of the 1871 Act and by the Trade Union Act of 1906. Certification, like registration, is not required, and certified unions are not required to file copies of their rules or accounts, except their political accounts.

At the end of 1935 less than half the trade unions were registered, but those contained about three-quarters of the total union membership in Great Britain. One national union, whose officials we met with, had registered and later withdrawn from registration; non-registration involved the payment of two or three hundred additional pounds a year of taxes on the income from the union's benefit fund, but it was content to pay this amount in return for what it regarded as the greater convenience of being unregistered. The fact of registration or non-registration is a matter of no interest to employers; and unions, whether registered or unregistered, are authorized by the Government to assist in the administration of the unemployment insurance law, provided they maintain their own employment exchanges or branch offices to which unemployed men in the particular industry may be sent to get their payments, and provided that they also have their own unemployment benefit plans and pay out certain minimum amounts therefor.

Governmental Agencies

The Commission then dealt with the governmental machinery under the Ministry of Labour. It described the functions of each under the following designations:—

Arbitration.—The Minister of Labour, is sometimes called upon under the provisions of collective agreements to appoint impartial arbitrators or chairmen, and for this purpose the Ministry maintains a panel of qualified and experienced citizens who are willing, when called upon, to serve in such capacities. The existence of this panel, with its known composition, accounts in part for the confidence with which clauses of the sort described are incorporated, here and there, in agreements.

Conciliation.—The Ministry also, pursuant to the provisions of the Conciliation Act of 1896, maintains a staff of full-time trained conciliators, with divisional offices in Bristol, Birmingham, Leeds, Manchester and Glasgow. Their duty is to keep intimately in touch with industrial conditions in the areas which they cover, to anticipate trouble and if possible forestall it, and to shorten it as best they can when it comes. They have no power, and their success depends on their skill in conciliation.

The Industrial Court.—By the Industrial Courts Act of 1919 a permanent Industrial Court was created to decide controversies submitted to it by the Minister of Labour with the consent of both parties, after (and only after) any existing joint machinery for settlement had failed. By statute the Minister of Labour appoints the members, representing industry, labour and the public.

Many of the cases, referred jointly by national organizations of employers and workers, have involved the determination of national wage rates; other cases have involved a particular locality, or even a single plant. Unless otherwise agreed, the Court's awards are not binding; but they are generally accepted. They are expressed in the form of decisions, with a full statement of the rival arguments, but without an opinion. The absence of opinions has been occasioned by the desire of both sides in some industries to avoid the application of precedents to their disputes. The result has been to avoid, rather than to foster, the development of a body of industrial case-law.

Courts of Inquiry.—The Act of 1919 also authorized the Minister of Labour, in an industrial dispute, to appoint a Court of Inquiry to make an investigation and report, the report to be laid before both Houses of Parliament. This authority has been exercised only in cases of major public interest. From 1920 through 1937 twenty Courts were appointed. Under the law the appointment of a Court does not operate to stop or postpone a dispute; the purpose is to expose the facts and to bring public opinion to bear on the merits.

Trade Board.—These activities of the Ministry of Labour have been effectively reinforced by the Trade Board Acts which authorize under certain conditions the creation of boards (composed of representatives of employers, employees and the public) having power to fix minimum wages and to declare normal working hours (with overtime rates thereafter) in particular industries.

Following in part the second report of the Whitley Committee, 1918, Parliament amended the Trade Board Act, 1909, which had limited the application of Trade Boards to "sweated" industries, to permit the Minister of Labour to set up a Trade Board in any trade in which, in his opinion, "no adequate machinery exists for the effective regulation of wages throughout the trade, and that accordingly, having regard to the rates of wages prevailing in the trade or any part of the trade, it is expedient that the Acts should apply to that trade." Thus, although there are no laws to compel union recognition, or to compel collective bargaining, and the Government consistently maintains the principle of non-interference with voluntary collective bargaining, yet in industries having no effective organization and excessively low wages the Government may, and does, set up Trade Boards to determine minimum standards by legislative and administrative processes.

It should be added, however, that the resort to such procedure is not favoured by Government, by organized labour or by employers' associations until every possibility of voluntary determination of wages and working conditions in the trade have been thoroughly explored. Even then the Ministry of Labour presses for a certain minimum of voluntary agreement within the trade as a prerequisite to the setting up of a Trade Board.

The report then describes the process adopted by the trade boards in establishing minimum rates, declaring normal hours and fixing overtime rates, etc.

Evolution of Existing Methods of Settling Industrial Disputes

Under this heading the Commission amplifies its summary of "the long and gradual development of union organizations and employers' associations, and of the methods of collective bargaining between them."

"The historical evolution of collective bargaining in Great Britain," states the Commission, "may be traced in the pages of Government reports." From these reports, the Commission proceeds to sketch its origin and development. It quotes from the Royal Commission on Labour (which was appointed in 1891 and made its fifth and final report to the British Parliament in 1894). "The fundamental conclusion" of that body was expressed by the American Commission as being "that strong organizations of employers and workers, dealing together through collective agreements and setting up machinery for conciliation and arbitration, afforded the most practical approach to industrial peace."

The United States investigators then followed the steady progress of collective bargaining in Britain—through the early part of this century, through the war years, and through the post-war period to the general strike of 1926. On the aftermath of this experience the Commission observes:—

Conditions which need not be traced here, brought to a head by the strike of the coal miners in 1926, led to the general strike of that year. That strike was called off after nine days, and, though the miners' strike continued for some months, industrial peace was generally restored without disruption of the established collective bargaining relations.

From this brief historical sketch it will be seen that the network of collective bargaining relationships in Great Britain extending back to its origins over many years, had reached substantially its present form shortly after the close of the war. Through experience Great Britain has learned that strife is wasteful where reason can gain the day; and that agencies through which reason, patience and objective judgment can be brought to bear on controversies are of the utmost value.

We found complete agreement that the general strike was a salutary lesson. It is generally believed that there will be no repetition. The Government learned that drastic economic changes in policy should not be undertaken without the fullest consultation with both labour and employer organizations. Such consultation had been general throughout the war, and we were informed that to-day, before legislative or administrative action is taken that may affect labour, its continuity of employment, its wages, hours, cost of living, or working conditions, the views of labour and employers alike are invariably sought. This governmental recognition and utilization of the services of these organizations is thought to have played a part in enhancing their public standing and increasing their sense of public obligation and the breadth of their viewpoint.

Labour and employer organizations have been further strengthened by the frequent support and encouragement which they render to each other. Repeatedly employers and representatives of employers organizations stated to us that they preferred strong unions to weak ones, because the strong union is better able to secure the fulfillment of agreements and is better able to bring competitors up to the wage and hour standards of the industry, as set by the agreements. Repeatedly labour representatives stated to us that they preferred strong employer organizations to weak ones, because the stronger the organization the fewer the units which remain outside to undermine industry standards.

Social Legislation and Other Factors

The Commission, in its concluding section, states that it had been informed "by many workers and employers that the social legislation enacted during the present century had improved conditions in Great Britain, and had created an atmosphere in which harmonious employer and worker relations could be developed."

It referred to such social measures as contributory unemployment insurance (begun in 1911 and now covering 13,000,000 workers), old age insurance, and health insurance. Two other important factors were mentioned as follows:—

One of the most important of the social services tending to improve the industrial relations is better housing, of which much has been done in England by private companies, many without subsidy, some with; and much has been done by municipalities and local boards with assistance from the Government.

The co-operative movement should also be mentioned as a factor in decreasing the cost of the necessaries of life, especially to the workers. There are now almost 8,000,000 members of the retail co-operative societies with sales of over one billion dollars per year.

Conclusion

In conclusion the Commission reported:—

There is a real determination upon the part of national officers and individual members of the employers organizations and of the trade unions to employ to the full the system of voluntary national agreements and to make these function as effectively as possible. In the last analysis, the continuing value of these agreements outweighs with both sides any particular dispute.

The national unions have great stability without which such machinery could not continuously function. This stability, we think, may be explained by a number of factors. In the first place, in many of the unions the administrative officers are not subject to annual election but are appointed during good behaviour by an elected executive council or board (normally elected each year), and in practice they generally continue in office until retired, provision being made for automatic retirement at a certain age with a pension. Measured in terms of the men's wages and superannuation benefits (which are provided by most of the larger unions) the salaries and retirement pensions of the officials compare favourably. With reasonably assured tenure these men acquire knowledge of the problems of their industries through repeated personal contacts with the employers and through the process of negotiating national agreements. The large funds administered by the principal unions in the way of unemployment, sickness and accident, superannuation, funeral and other benefits may furnish an additional element of stability.

Improved industrial relations in Great Britain have been reflected in the trend of hours of work which have been reduced, during the last 20 years, from 54 to 48 or in some cases less, and by the changes in the real wage level which for manufacturing and railways has risen approximately 16 per cent since 1924, according to the figures of the Ministry of Labour. These factors, together with improved machinery, better technology and improved organization of industry, have contributed to a higher standard of living.

Finally, and most important, the acceptance and general practice of collective bargaining on an industry basis places upon the employers and workers organizations, because of the sheer numbers of men and the magnitude of interests involved, a peculiarly heavy responsibility calculated by its very nature to call forth patience, understanding, and a desire to make and keep agreements and to achieve industrial peace.

The commission also reported on industrial relations in Sweden, and a summary of its findings will be given in the next issue of the Labour Gazette.

EMPLOYEES' RETIREMENT AND PENSION PLAN OF CAMPBELL SOUP COMPANY LIMITED

THE Campbell Soup Company Limited, has inaugurated a plan enabling its employees to make provision for pensions upon retirement. Effective August 1, the plan affects about 200 employees of the company's plant at New Toronto, Ontario.

Briefly, the plan applies to all employees of the company whose earnings do not exceed $250 a month; retirement for employees earning over this figure was provided for under another plan. The new scheme provides for a retirement and pension fund system for all full-time employees at the age of 65. Employees will contribute in premiums an amount equal to four per cent of their wages, the company assuming the balance.

Eligibility.—According to the descriptive pamphlet issued by the company, "each regular full-time employee in service on August 1, 1938 who has completed at least one year of continuous service as of August 1, 1938, is eligible to join the plan as of August 1, 1938.

Each other regular full-time employee in service on August 1, 1938, and each new full-time employee will be eligible to join the plan on the August 1st" on which the employee has completed at least one year of continuous service, and has not reached his normal retirement age (65 years)."

The plan is a voluntary one, eligible employees signing an application form, which authorizes the required payroll deduction.

Contributions.—Each employee who joins the plan will contribute four per cent of the full amount of his earnings in each month subject to certain limitations outlined in the Group Annuity Contract. The term "earnings" is defined as meaning "wages or salary including any labour standard premiums but excluding additional compensation."

Retirement Income for Past Service.—According to the plan, service with the company prior to August 1, 1938, is to be known as Past Service. The annual rate of an employee's Past Service Retirement income will, subject to certain limitations contained in the group annuity contract, be 1 per cent of the employee's average annual rate of earnings during the five-year period of his employment ending December 31, 1937, or during the entire period of his employment ending December 31, 1937, (if less than five years) multiplied by the number of full years of continuous service completed prior to August 1, 1938.

These last Service Retirement Income Benefits were purchased by the company at its own expense, by a substantial lump sum payment to the insurance company underwriting the plan.

Retirement Income for Future Service.—Service with the Campbell Soup Company on and after August 1, 1938, is referred to in the plans as Future Service, the annual rate of an employee's pension in this respect being 1½ per cent of the total amount of earnings on which the employee has contributed.

Illustrations are given in the pamphlet, indicating the manner in which the retirement pension (for both past and future service) is compiled. For example, a male employee with 20 years of past service who joins the plan on August 1, 1938, at the age of 45, and works until age 65, will retire with 20 credited years of past service and 20 years of future service. If during this period he has continuously received a salary of $120 monthly he will receive a future service retirement income per month equal to 20 years of service multiplied by 1½ per cent of $120 or $36, and a past service retirement income of 20 years of service multiplied by 1 per cent of $120 (i.e. the average monthly earnings during the five-year period ending December 31, 1937) or $24, making a total pension of $60 per month commencing at age 65 and continuing during the entire remaining lifetime.

Death Benefit.—The plan also provides that in the event of the death of an employee before his retirement pension begins, his total contribution will be returned by the insuring company to his beneficiary. In addition, interest on each contribution at the rate of 3 per cent per year, compounded annually will be credited from the end of the year of the plan in which the contribution was made to the first day of the month in which death occurs.

In the event of the death of an employee after his retirement pension begins, the plan provides for the payment to his beneficiary the excess, if any, of the amount which would have been payable if the employee had died immediately prior to his retirement date over the total amount of retirement income payments made.

Administration.—The administration of the plan is vested in the general manager of the company, or officers or representatives authorized by him, "who shall determine employees' rates of earnings and years of service for purposes of the plan and decide all of the matters

of any nature whatsoever in connection with the administration, interpretation or application of the plan, subject to the terms of the group annuity contract" with the insuring company.

The plan also provides for earlier retirement than age 65; postponed retirement; continuation of retirement income to a survivor at death after retirement; temporary absence; termination of service, etc.

SAFETY CONDITIONS AND WORKING HOURS IN BRITISH INDUSTRY

THE annual report of the Chief Inspector of Factories and Workshops (Great Britain) for the year 1937, issued recently, is the first since the enactment of the factories Act, 1937 (Labour Gazette, October 1937, page 1059).

It is pointed out that the Factories Act, 1937, is an innovation in factory legislation. Hitherto, the elasticity, essential in view of the variety of conditions that have to be provided for in a single Act designed to cover the whole of industry, has for the most part been secured by framing the requirements in general terms, and adapting the application of these requirements to the circumstances of each case. In the new Act, however, an alternative method has been much more extensively adopted, the requirements embodied in it (especially those relating to safety) having been made precise and detailed; the necessary latitude has been attained by conferring extensive powers, both of exemption and of imposing additional restrictions, where necessary.

The report (reviewed in the British *Ministry of Labour Gazette* for September) indicates that there has been a substantial increase in the number of accidents reported, though the increase is not so great as last year. The total number of accidents reported during the year was 193,542, of which 1,003 were fatal, showing an increase in each case of about 9 per cent over the figures for 1936. This increase appears to be attributable in the main to greater industrial activity, especially in the heavy industries, for the increase in accident incidence is substantially more rapid than the increase in the number of persons employed. It was most marked in those areas in which the heavy industries are situated or where there has been great industrial expansion. A factor of growing importance in connection with the incidence of accidents in certain areas is the employment for the first time in factories of large numbers of unskilled or partly trained persons on processes or at machines of which they have little or no knowledge, in consequence of the shortage of skilled or semi-skilled labour. Other factors which must be taken into consideration are the speeding up of operations and the longer hours worked in many factories.

The incidence of accidents to young workers under the age of eighteen, in proportion to the number in employment, continues to be greater in frequency than to adult workers of the corresponding sex, and continued special attention has been devoted by Inspectors to the incidence of accidents among young workers.

Comments on the various classes of accidents occupy a considerable part of the report, and statistical tables give detailed analyses of the accidents, classified according to industry, age and sex, and the causes of accidents. More than a third of the fatal accidents, and more than half the total number of accidents in 1937, occurred in the metal, engineering and shipbuilding group of industries.

During the year a return was made which showed that safety committees exist in 1,246 works. The report states that this particular feature in safety organization is specially suitable for either large works or works involving common risks and that, in view of the fact that there are only 4,100 factories with more than 250 workers (and 1,535 with more than 500 workers), the situation is regarded as not unsatisfactory. Other methods of safety organization include the pooling of the joint experience of employers and workers through, for instance, the Joint Standing Committees covering the cotton spinning, cotton weaving, paper making and flour milling industries. There are also the activities of the regional industrial safety committees covering certain specified areas.

Health.—The statistics show that the number of cases of lead-poisoning was fewer than in any year since the disease was made notifiable; the increase in the number of cases of epitheliomatous ulceration can be ascribed in part to more extensive medical examination of workers.

Seventy-four deaths from silicosis and 65 from silicosis with tuberculosis were notified during 1937; also nine deaths from asbestosis and from asbestosis with tuberculosis. There were 196 cases of gassing reported, with 20 deaths, but many other cases of gassing did not come within official notice. The number of cases of dermatitis reported voluntarily, was 1,985, the highest figure yet recorded.

Several pages of text in the report are devoted to the various kinds of industrial poisoning and diseases.

Hours of Employment.—It is observed that, notwithstanding the trend towards shorter hours, there still remained groups of factories and numerous individual factories in which advantage was taken of the long hours allowed by law. These long hours will have been reduced by the operation of the Factories Act, 1937, under which from July, 1938, the normal maximum weekly limit of hours for women and young persons is 48. Instances are given of flagrant infringements of the law in regard to hours of employment; it is remarked, however, that the bulk of the illegal employment is of a less serious character.

The number of applications to work the two-shift system has been greatly reduced, following the passing of the Employment of Women and Young Persons Act, 1936.

Welfare.—The report contains a brief account of the present position of Welfare organization, including schemes which are outside the requirements of the Factory Act. Reports from all parts of the country indicate an increased interest in that side of factory organization which is generally included under the term "Welfare".

Employment of Newsboys in United States

According to an Associated Press report in the *New York Times* of October 3, Elisha Hanson, general counsel for the American Newspaper Publishers' Association, stated that he would advise publishers to "get rid of" newsboys under 14 years of age, and to obtain proof of age for all minor employees.

He made this statement after a committee of publishers had conferred with Miss Katharine Lenroot, chief of the Children's Bureau.

He said that newspaper publishers in cities of 50,000 persons or more already had established a fourteen-year minimum under a "gentlemen's agreement" made after the NRA was outlawed. Under the same agreement, he said, newspapers in cities of less than 50,000 had employed boys between 12 and 14 years of age.

"We are advising publishers now, irrespective of size of cities, to jack the low limit up to 14," he explained.

The attorney emphasized that the publishers discussed with Miss Lenroot merely the distribution of newspapers by minors, and said she gave them no indication of what the regulations would be under the new Fair Labor Standards Act.

He said that his advice would be made on the "presumption" that the law would permit employment of boys 14 to 16 years of age outside school hours, if no night work were involved.

Miss Lenroot said after the meeting that she was "not yet in a position to issue regulations or make any statements," but that orders would be issued before October 24, when the act becomes effective.

The new law will prohibit the shipment in interstate commerce of goods manufactured by children under 16, except where regulations are issued permitting such employment.

Mr. Hanson and a group of newspaper publishers also conferred with Elmer F. Andrews, the wage-hour administrator.

Mr. Hanson said that the group gave the administrator information on the newspaper business. Mr. Andrews is expected to announce whether he thinks newspaper reporters will be subject to the act or be exempt as professional

---

Unemployment in Australia

According to statistics up to the end of June, 1938, as published in the *Melbourne Argus,* unemployment in Australia among members of trade unions has shown a small increase for the first time since 1932, when recorded unemployment reached its peak of 30 per cent.

With unemployment among members of trades unions reduced to normal levels, this increase is merely seasonal. It is explained that formerly when employment was rapidly improving after the depression, this seasonal effect was masked to such an extent by the continued absorption of labour that it was not noticeable.

Returns furnished by unions show that in the middle of May, unemployment among members amounted to 8·6 per cent, compared with 8 per cent in the previous quarter.

The Commonwealth Statistician (Dr. Roland Wilson) commenting on these figures said that the slight rise was mainly due to increased unemployment in the timber and food and drink industries, although the majority of industrial groups showed small increases. In the June quarter of 1937, unemployment was 9·7 per cent.

Tasmania and New South Wales showed the largest percentages of unemployment during the June quarter of 1938. The percentage of unionists unemployed in each State was: New South Wales, 9·8; Victoria, 8·5; Queensland, 7·2; South Australia, 7·5; Western Australia, 5·3; Tasmania, 10·4.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA, AUGUST, 1938

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on September 1 was 10,915, the employees on their pay-rolls numbering 1,106,989 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for August was 1,855, having an aggregate membership of 216,719 persons, 11·6 per cent of whom were without employment on September 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from 70 centres in which the Employment Service of Canada is situated, showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

(1) The Employment Situation at the Beginning of September, 1938, as Reported by Employers

According to data tabulated by the Dominion Bureau of Statistics, employment at the beginning of September showed a decidedly upward movement, the expansion exceeding that indicated at September 1 in any previous year of the record. All provinces except New Brunswick shared in the improvement, but the recovery in manufacturing in Ontario and that of a more general character in the Prairie Provinces were especially important factors in the situation.

Statistics were compiled from 10,915 employers whose staffs aggregated 1,106,989; this was an increase of 32,688, or three per cent since the beginning of August. The crude index rose from 112·1 in the preceding month to 115·5 at September 1, but it was then several points lower than that of 123·2 at the same date in 1937. However, the index at the latest date was higher than at September 1 in any other year since 1930. After correction for seasonal movement, the index advanced from 109·1 at August 1 to 111·0 at the beginning of September.

The following are the unadjusted indexes for September 1 in recent years: 1938, 115·5; 1937, 123·2; 1936, 107·1; 1935, 102·7; 1934, 98·8; 1933, 88·5; 1932, 86·0; 1931, 107·1; 1930, 116·6; 1929, 126·8; 1928, 119·1 and 1927, 111·0 (1926 average = 100).

An analysis of the returns by industries shows unusually pronounced expansion in manufacturing, in which over 22,000 persons were added to the reported payrolls; this increase was the largest ever recorded in the early autumn, and compared favourably with the slight gain which has been the average change from August to September in the years since 1920. The greatest improvement in factory employment at the date under review took place in food, textiles and iron and steel. In the first two of these industries, the exceptionally large advances were seasonal in character, while those in iron and steel, also pronounced, were contra-seasonal. In the non-manufacturing industries, mining, transportation, construction and maintenance, services and wholesale trade showed heightened activity. The increases in construction were most extensive, and were especially interesting because the average change in employment at September 1 in the experience of past years has been a decline. On the other hand, logging and retail trade was quieter.

The employers furnishing data for September 1, 1937, had numbered 10,336, and their employees had aggregated 1,174,041, which was an increase of 30,581 over their August 1, 1937, payrolls. The improvement then had also been fairly general, there having been gains in each of the five economic areas and in most of the main industrial divisions, with the exception of trade.

Employment by Economic Areas

Firms in all provinces except New Brunswick showed considerable gains over the preceding month, those in Ontario and the Western Provinces being particularly large. Employment in Prince Edward Island and in the Prairie area was brisker than at September 1 of last year, but in the remaining provinces the situation was not so favourable. However, industrial activity in four of the five economic areas was at a higher level than at the beginning of September in 1936, the Maritime Provinces, with a slightly lower index, being the exception. General improvement was indicated in comparison with the same date in each of the years, 1932-35.

Maritime Provinces.—Employment in the Maritime Provinces as a unit showed expansion at September 1, due to increases in Prince Edward Island and Nova Scotia; the general advance, though not large, is especially interesting because it is contrary to the usual seasonal trend at this time of year, the experience of the years since 1920 showing, on the average, a decline between August 1 and September 1. Most of the gain at the date under review took place in construction, all branches of which were busier; coal-mining also showed improvement, but manufacturing, logging, shipping and retail trade released employees. Statistics were received from 798 firms in the Maritime Provinces, whose staffs aggregated 82,972 workers at September 1, 1938, compared with 82,540 in the preceding month. A rather larger increase had been recorded at the beginning of September of last year, when the 715 employers furnishing data had reported 97,762 persons on their payrolls; the index then was many points higher than at the latest date, when it stood at 113·2.

Quebec.—Moderately increased employment was noted in Quebec, mainly in manufacturing, metallic ore mining, transportation and construction and maintenance; within the first-named, textile, leather and rubber showed recovery, while vegetable food and iron and steel plants were slacker. The working force

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

of the 2,706 employers co-operating in Quebec stood at 332,820 persons, as against 331,862 at August 1. This gain was not equal to the average increase indicated at September 1 in the years, 1921-1937, being also considerably smaller than that reported at the beginning of September of last year. Employment then was generally in greater volume, the index standing at 124·5, as compared with 118·1 at the latest date. Statements for September 1 of last year had been tabulated from 2,468 establishments employing 346,778 workers, compared with 336,505 in the preceding month.

Ontario.—In this province, 4,745 firms reported considerable additions to their staffs, which were enlarged from 434,399 at the first of August, to 452,147 at September 1. Expansion on a smaller scale had been noted at the same date last year, but the index then, at 125·0, was some nine points higher than at the latest date, viz., 115·8. Manufacturing recorded a substantial advance; there was marked improvement over August 1, 1938, in the vegetable food, iron and steel, textile and electrical apparatus divisions, together with smaller gains in leather, chemical, rubber, non-ferrous metal, electric light and power and some other factories, while the working forces of lumber mills declined. In some of these industries, the gains were seasonal in character. Among the non-manufacturing industries, mining, wholesale trade, building and railway construction and services reported heightened activity, while shipping, highway construction and retail trade showed reductions in personnel.

The 4,581 employers co-operating at the same date in 1937 had employed 486,959 persons, as compared with 475,903 at August 1 of last year.

Prairie Provinces.—A further and greater increase on the whole was indicated in industrial employment in the Prairie Provinces at the beginning of September; the index was 2·8 points higher than at September 1, 1937, when a decidedly smaller advance had been recorded by the firms making returns. Data for the date under review were tabulated from 1,530 employers of 143,167 workers, as compared with 133,833 in the preceding month. This increase of seven per cent which was the largest so far recorded in 1938 and also exceeded that indicated by the firms reporting in any month of 1937, no doubt partly resulted from the more favourable agricultural situation. Manufacturing, mining, transportation, services, wholesale trade and construction and maintenance showed heightened employment, the gains in the last-named being most extensive. On the other hand, retail trade was slacker.

British Columbia.—Employment in British Columbia showed a marked increase at September 1. This was the largest so far recorded in 1938, and exceeded that indicated at the same date of last year. The index then, however, at 121·2, was considerably higher than at the latest date, (viz., 112·0). Manufacturing, on the whole, was much brisker than at August 1, 1938, the improvement occurring largely in lumber and vegetable food factories, while pulp and paper also reported some recovery. In the non-manufacturing classes, logging, transportation, construction and maintenance and services showed heightened activity. The personnel of the 1,136 firms furnishing data rose from 91,667 persons in the preceding month, to 95,883 at the beginning of September. At the same date last year, 1,099 employers had made returns, showing an aggregate working force of 103,048.

Table 1 gives index numbers by economic areas.

Employment by Cities

Employment advanced in each of the eight cities for which data are segregated, firms in Montreal, Quebec, Toronto, Ottawa, Hamilton, Windsor, Winnipeg and Vancouver showing improvement since August 1. The greatest gains were in Montreal, Toronto and Windsor. Except in Quebec City, the situation in these centres was not so favourable as at September 1, 1937, while little general change was indicated in that comparison in Quebec.

Montreal.—Employment in Montreal increased at the beginning of September, 2,940 persons having been added since August 1 to the paylists of the 1,566 co-operating firms, who employed 163,049. Considerable improvement was noted in manufacturing, particularly in textiles, but leather and many other factories were also busier; iron and steel, however, again reported curtailment. Among the non-manufacturing industries, construction and transportation showed heightened activity; retail trade was slacker, while in other groups the changes on the whole were slight. A larger advance had been made at September 1, 1937, when data were received from 1,415 employers or 161,838 men and women; the index was then one point higher.

Quebec.—A further, small increase was indicated in Quebec, according to 187 establishments having 14,984 workers, as compared with 14,903 in the preceding month. Manufacturing, especially of pulp and paper products, and transportation were rather quieter, but improvement was noted in construction and trade. Employment was at practically the

same level at the beginning of September of a year ago, when a larger advance had been reported by the 178 concerns making returns, whose payrolls had aggregated 14,686.

Toronto.—Manufacturing showed substantial improvement, chiefly in the leather, vegetable food, pulp and paper, textile, chemical, electrical apparatus and metal divisions; services and wholesale trade also afforded considerably more employment, while building was slacker. Statements were received from 1,612 firms with 135,556 employees, or 3,234 more than at August 1. Expansion on a smaller scale had been indicated at the same date of a year ago, but employment was then slightly above its present level, according to the information furnished by 1,552 employers with 136,989 persons on their staffs.

Ottawa.—Heightened activity was noted in Ottawa, chiefly in manufacturing and building construction, while retail trade was rather quieter. The 203 establishments making returns reported 14,402 workers, compared with 14,206 in the preceding month. At September 1, 1937, an increase had also been indicated by the 204 co-operating employers, who provided work for 15,093 men and women; the index was then a few points higher.

Hamilton.—Manufacturing afforded more employment, mainly in food and electrical apparatus factories, while iron and steel plants were slacker. Trade also released employees, but construction showed a gain. Three hundred and one concerns had 34,966 persons on their payrolls, as compared with 34,667 at August 1. Greater improvement had been indicated at the beginning of September of a year ago, when industrial activity was at a much higher level, according to data from 291 firms with 38,500 employees.

Windsor.—Important recovery was shown in Windsor, where the 189 establishments making returns reported 16,542 workers, as against 14,367 in the preceding month. Iron

Relative Weight of Employment by Economic Areas as at Sept. 1, 1938	100·0	7·5	30·1	40·8	12·9	8·7

Note.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns at the date under review.

and steel plants reported heightened activity, partly due to the resumption of operations following holiday shutdowns, and food and other factories were also busier; on the other hand, construction and trade released some employees. A loss had been noted at the same date of last year, but the general index was then higher; a combined working force of 18,032 had been employed by the 179 firms furnishing statistics for September 1, 1937.

Winnipeg.—Employment in Winnipeg advanced; manufacturing, transportation, construction and services showed improvement, while trade and communications were not so active. An aggregate staff of 41,477 men and women was reported by the 499 co-operating establishments, which had employed 40,929 in the preceding month. A similar increase had been recorded at the same date in 1937, when the index was slightly higher. Statements had then been received from 488 firms whose employees had numbered 42,422.

Vancouver.—There was an upward movement in industrial activity in Vancouver, according to information received from 471 employers of 37,414 persons, as against 36,550 at August 1. Manufacturing plants reported rather larger payrolls, there being moderate gains in the food division; transportation, construction, services and trade were also brisker. Employment was at a slightly lower level than at the same date of a year ago, when a smaller increase had been noted in the personnel of the 452 co-operating employers; they had reported 38,650 workers.

Index numbers by cities are given in Table 2.

Employment by Industries

Manufacturing.—Employment in manufactures showed an important advance at September 1, the 6,202 co-operating employers enlarging their payrolls from 560,553 at August 1, to 582,709 at the date under re-

Relative Weight of Employment by Cities as at Sept. 1, 1938	14·7	1·4	12·2	1·3	3·2	1·5	3·7	3·4

Note.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated city, to the total number of all employees reported in Canada by the firms making returns at the date under review.

view. This increase of four per cent in the month has been exceeded only three times in the last ten years, and compares very favourably with the slight advance indicated, on the average, at the begininng of September in the years since 1920. However, the gain was partly in the nature of recovery from the contra-seasonal losses reported at July 1 and August 1; while the index advanced from 110·0 at the latter to 114·4 at September 1, (the highest so far in 1938), it was lower than that of 121·2 at September 1, 1937. Factory employment, however, was more active than at the beginning of September in other years since 1929.

After adjustment for seasonal movement, the index rose from 107·6 at August 1, to 111·2 at the date under review; it was then lower than at September 1, 1937, but was higher than at that date in earlier years since 1929.

An analysis of the returns from manufacturers shows particularly large increases in the vegetable food, textiles and iron and steel divisions. As already stated, those in canneries and textile plants were seasonal. The gains in iron and steel were especially interesting in that they were contra-seasonal in character, the movement having been downward in thirteen of the seventeen preceding years for which data are available; however, they succeeded unusually large seasonal declines at the beginning of August, and activity in this group was lower than in most of 1937. Leather, rubber, chemical, electric light and power, electrical apparatus and non-ferrous metal factories also reported considerable improvement. On the other hand, animal food, lumber, and pulp and paper mills were slacker. While the trend in factory employment was favourable in all but the Maritime

Relative Weight of Employment by Industries as at Sept. 1, 1938	100·0	52·6	1·5	6·6	2·1	9·7	14·5	2·8	10·2

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated industry, to the total number of all employees reported in Canada by the firms making returns at the date under review.

Provinces, the gains in Ontario were most pronounced.

The unadjusted indexes of employment in manufacturing at September 1 in recent years, based on the 1926 average as 100, are as follows: 1938, 114·4; 1937, 121·2; 1936, 105·9; 1935, 100·8; 1934, 94·3; 1933, 86·8; 1932, 83·1; 1931, 94·7; 1930, 108·2; 1929, 119·8; 1928, 115·9 and 1927, 106·8.

For September 1, 1937, 6,013 manufacturing establishments had reported 615,962 employees on their staffs compared with 599,997 in the preceding month.

Animal Products, Edible.—Curtailment was indicated in fish canneries, while other plants classified in this group showed little general change. The payrolls of the 317 co-operating factories included 27,200 employees, as compared with 27,456 in the preceding month. Employment at September 1, 1937, had shown an improvement, and the index number then was decidedly higher than at the date under review.

Leather and Products.—An important increase took place in the leather industries, chiefly in the footwear division; the general gain in the group was much larger than that noted at the beginning of September of last year, but employment then was more active. Statements were received from 312 manufacturers having 23,315 men and women in their employ, as against 22,368 at August 1, 1938. Ontario firms reported the greatest advances.

Lumber and Products.—There were seasonal reductions in sawmills, and container, vehicle and some other lumber-using factories were rather slacker; on the other hand, furniture works showed improvement. The result was a decrease of 670 persons in the staffs of the 907 lumber establishments furnishing data, whose payrolls aggregated 47,584. A small gain had been indicated at September 1, 1937, when the index was some nine points higher.

Musical Instruments.—No general change took place in musical instrument works, 35 of which employed 1,667 workers at the date under review. An increase had been recorded at the beginning of September, 1937, and the

Table IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (Average 1926=100)

Industries	[1]Relative Weight	Sept. 1 1938	Aug. 1 1938	Sept. 1 1937	Sept. 1 1936	Sept. 1 1935	Sept. 1 1934	Sept. 1 1933

[1]For explanation of term "Relative Weight", see footnote to Table III.

index of employment was then fractionally higher.

Plant Products, Edible.—Confectionery and chocolate, bread and bakery, and fruit and vegetable preserving factories reported heightened activity, the additions to staffs in canneries being particularly pronounced. The general improvement was on a much larger scale than at the same date last year, when the index stood at 152·7, compared with 157·5 at September 1, 1938. Data were compiled from 531 firms in the vegetable food division, whose payrolls rose from 39,073 at August 1, to 47,788 at the date under review. Ontario recorded the most marked advances.

Pulp and Paper Products.—Employment in this group showed a falling-off, gains in paper product manufacturing being more than offset by losses in pulp and paper mills and printing and publishing plants. An upward movement had been noted at September 1 of last year, when the index, at 115·3, was over eight points higher than at the date under review. The forces of the 620 co-operating establishments included 65,303 persons at the beginning of September, as compared with 65,435 in the preceding month.

Rubber Products.—The trend was favourable in rubber factories, 53 of which employed 12,862 workers, compared with 12,144 at August 1. The situation at September 1, 1937, had also shown a betterment as compared with the preceding month; although this was on a smaller scale than that recorded at the date under review, employment was then at higher level, the index standing at 110·9, as against 102·9 at September 1, 1938.

Textile Products.—Unusually pronounced recovery of a seasonal nature occurred in textile factories, 1,141 of which had 103,488 employees, as against 98,459 at August 1. Most of the advance took place in Quebec and Ontario. Garment and personal furnishing, headwear, woollen, silk, cotton and knitting mills were decidedly busier. The increase reported at the same date of last year had involved a much smaller number of workers, but the index then was higher.

Beverages.—Moderate improvement was noted in these industries at September 1 as compared with August 1, 77 persons being added to the payrolls of the 143 co-operating factories, which employed 9,234 operatives. The level of employment was higher than at the beginning of September, 1937, when a greater gain had been indicated in the group as a whole.

Tobacco.—Factories were slightly busier; 45 of these employed 8,264 workers, compared with 8,220 in the preceding month. Additions to staffs on a larger scale had been recorded at September 1, 1937, and the index was then a few points higher.

Chemical Products.—An upward movement was shown in this division, according to statistics from 289 employers of 18,061 persons, compared with 17,754 at August 1. The situation in the chemical industries was rather more favourable than at the same date a year ago.

Clay, Glass and Stone Products.—These classes of building materials reported moderately lowered activity; statements were received from 215 plants, having 10,397 employees, as against 10,431 in the preceding month. A small gain had been noted at the beginning of September last year, and the index then was many points higher.

Electric Light and Power.—Further expansion was shown in electric current plants, 98 of which employed 17,212 persons, or 174 more than at August 1. Employment was rather brisker than at September 1, 1937, although more marked improvement had then been indicated.

Electrical Apparatus.—Employment in this group considerably increased at the beginning of September, 956 workers having been added since August 1 to the forces of the 127 co-operating establishments, which had 18,854 employees. The gain occurred mainly in Ontario. A smaller advance had been noted at the corresponding date in 1937, but the index then was much higher.

Iron and Steel Products.—The agricultural implement, shipbuilding and iron and steel fabrication divisions of the iron and steel group recorded contractions in employment, while the automombile, crude, rolled and forged, heating appliance, wire and foundry and machine shop divisions were busier, the recovery in the motor vehicle group being especially pronounced. On the whole, there was an increase of 5,617 in the forces of the 913 co-operating iron and steel manufacturers, who employed 124,825 men and women at the beginning of September. The greatest revival in activity was in Ontario. The trend at September 1, 1937, had been downward, but the index number then was over nine points higher than at the date under review, when it stood at 95·4.

Non-Ferrous Metal Products.—Smelting and refining and the manufacture of lead, tin, zinc and copper products reported heightened employment; 182 manufacturers of non-ferrous metal products employed 25,232 operatives, as against 24,622 at August 1. Improvement on a larger scale had been indicated at the same date last year, when the general situation in these industries was rather better.

Non-metallic Mineral Products.—Employment in this group showed little change on the whole, according to statements from 103 establisments with 13,520 persons on their pay-rolls, as against 13,542 at the beginning of

August. The index was higher than at September 1, 1937.

Logging

Logging operations were further curtailed at the beginning of September, according to the 331 co-operating firms, whose pay-rolls aggregated 16,901 workers, compared with 17,203 in the preceding month. The number engaged in the bush at September 1 was much smaller than at the same date in 1937, when an important increase had been indicated.

Mining

Coal.—Data were received from 105 operators having 24,128 men on their pay-rolls, as compared with 22,897 at the beginning of August. Improvement was noted in the Maritime and Prairie coal-fields, that in Alberta being most pronounced. Much larger gains had been made at the same date a year ago, and the index number then was slightly higher than at the date under review.

Metallic Ores.—Employment in metallic ore mines showed a further increase, according to returns from 222 firms whose forces rose from 39,152 persons at August 1, to 40,089 at the beginning of September. A much smaller advance had been shown at September 1, 1937, when activity was not quite so great.

Non-Metallic Minerals (other than coal).—A considerable decline was reported in this group, in which 106 firms reduced their staffs by 424 workers to 8,611 at September 1. Slight improvement had been noted at the corresponding date of last year, and employment was then decidedly brisker.

Communications

Little general change occurred in the communications division, in which the co-operating companies reported a personnel of 23,581, as compared with 23,555 in the preceding month. The index was somewhat lower than in September, 1937, when the gain indicated had exceeded that recorded at the date under review.

Transportation

Street and Electric Railways and Storage.—A marked advance was shown by 254 local transportation companies, whose staffs aggregated 28,362, or 1,277 more than in the preceding month. The increase took place chiefly in the Prairie Provinces. Employment had declined at the beginning of September, 1937, and the index was then some five points lower.

Steam Railways.—There was a gain in the number employed in steam railway operation at September 1, according to the 99 organizations from which returns were received, and which had 60,650 employees, compared with 59,012 at August 1. Employment was not so active as at the corresponding date last year, although smaller advances had then been indicated. The improvement reported at the beginning of September, 1938, took place mainly in the Prairie Provinces as the movement of grain commenced.

Shipping and Stevedoring.—Reductions in staffs were noted in the water transportation group, in which the index was fractionally lower than at the same date in 1937, when the tendency had also been downward. Statements were received from 122 employers of 17,980 workers, as against 18,735 at August 1, 1938.

Construction and Maintenance

Building.—Important expansion was shown in building construction, in which employment was quieter than in the late summer of 1937. Data were received from 845 contractors, whose pay-rolls stood at 29,716 at September 1, 1938, as compared with 26,783 at the beginning of August. The trend was favourable in most of the provinces, but Quebec reported the greatest gains.

Highway.—There was a further increase in this group, 355 men being added to the forces of the 427 co-operating organizations, which had 99,860 workers. There were large advances in the Maritime Provinces, Saskatchewan and British Columbia. The number employed on road work was smaller than at September 1 of last year, the advance then indicated having been on a decidedly larger scale.

Railway.—Considerable improvement was recorded by the 35 employers furnishing data in this division who employed 30,476 persons, as against 26,698 in the preceding month. An upward movement was noted in all provinces except Prince Edward Island and Nova Scotia, but that in the Prairie area was most pronounced. Curtailment had been reported at the corresponding date in 1937; in spite of this, the index number was then some six points higher.

Services

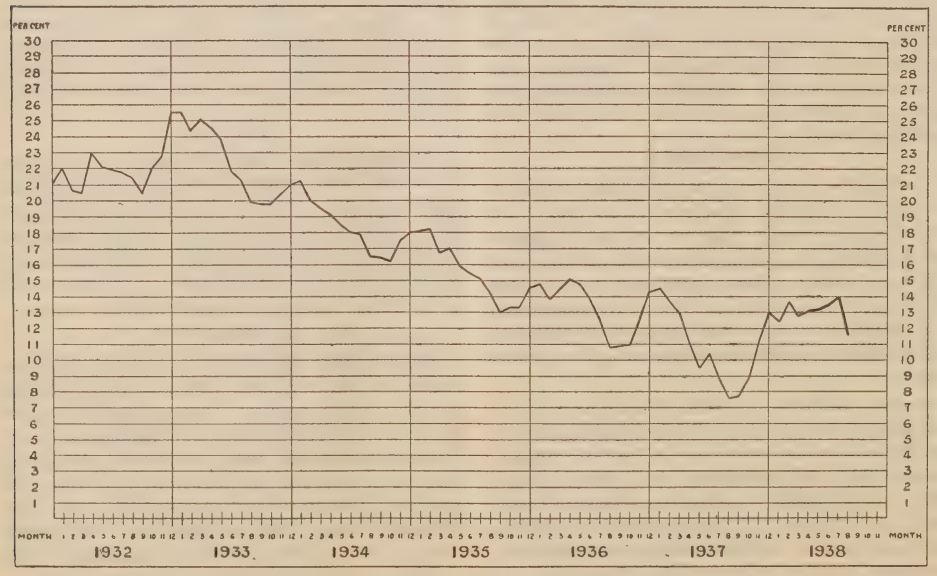
Expansion was shown in the service group, in which the general level of employment approximated that indicated last autumn. The 518 firms furnishing information for September 1, 1938, reported 31,099 assistants, or 665 more than at August 1. Most of this gain was in hotels and restaurants.

Trade

Employment in retail trade again declined, while wholesale houses added to their working forces. Little general change was shown in trading establishments as compared with September of last year, when a rather larger loss in the group as a whole had been reported. Statistics for September 1, 1938, were received from 1,564 retailers and wholesalers employing 112,827 persons, compared with 113,654 at the beginning of August, 1938.

Tables

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables, in which the columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns at the date under review.



(2) Unemployment in Trade Unions at the Close of August, 1938.

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged at work in other than their own trades or who are idle on account of illness are not considered as unemployed while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Activity for local trade union members at the close of August tended more favourably than in July, the increase noted being the first interruption in the series of slight employment contractions characterizing the situation since the close of March. Reporting for August were 1,855 labour organizations with a total of 216,719 members, 25,088 of whom were out of work, a percentage of 11·6 as compared with 14·0 per cent of idleness in July. The volume of unemployment was, however, in excess of that recorded in August, 1937, when 7·6 per cent of the members reported were idle. Conditions in New Brunswick, Quebec, Ontario and Alberta improved by over 3 per cent from July, the manufacturing industries in Quebec and Ontario, particularly the garment trades, showing increased activity, while in Alberta the coal mines afforded a somewhat better volume of employment. In Saskatchewan, Manitoba and British Columbia lesser gains occurred, Nova Scotia unions alone showing retarded activity on a small scale. In making a comparison with the returns for August, 1937, noteworthy curtailment of employment was manifest by New Brunswick, Quebec, Ontario and British Columbia unions during the month surveyed, and minor declines were apparent in Manitoba and Alberta. The trend in Nova Scotia and Saskatchewan, however, was toward heightened activity though the variations from August last year were quite slight.

A separate tabulation is made each month of unemployment affecting local trade union members in the largest city in each province with the exception of Prince Edward Island. Toronto members were considerably better engaged during August than in July, and moderate advances were noted by Halifax and Montreal members. In Saint John, Winnipeg, Regina and Vancouver also, there was a slight rise in employment available. Pro-

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

nounced curtailment of activity, however, was evident among Edmonton unions from July. Compared with the returns for August last year Montreal and Edmonton members suffered marked losses in employment, and recessions, of somewhat lesser degree, were manifest by Vancouver and Toronto members. In Saint John and Winnipeg also, retarded activity was apparent. Halifax and Regina unions, on the contrary, reflected a more favourable tendency when compared with August last year.

Accompanying this article is a chart which illustrates the trend of unemployment by months from January, 1932, to date. The curve at the close of August showed a drop in level from the preceding month, the first interruption in the steadily upward movement evident since the close of March and denoting a tendency toward increasing employment. The point attained by the curve at the end of August, however, remained above that of the corresponding month of last year when conditions were somewhat better than during the month reviewed.

Noteworthy improvement in the situation was apparent in the manufacturing industries during August from the previous month, unemployment standing at 14·0 per cent as compared with a percentage of 19·6 in July. The August percentage was determined from the reports tabulated from 522 organizations combining a total of 79,169 members, 11,080 of whom were out of work at the end of the month. Prevailing conditions, however, were not so favourable as in the corresponding month of last year when 8·2 per cent of the members reported were unemployed. A large share of the increase noted in manufacturing, as a whole, from July was recorded in the garment trades, which afforded a much greater volume of work, though in the wood products division and among hat, cap and glove, and fur workers also, pronounced expansion was evident. Papermakers and metal polishers showed noteworthy employment advancement from July and the situation for cigar and tobacco, and brewery workers reflected some improvement. On the contrary, glass and textile and carpet workers suffered important losses in work available, and moderate recessions were indicated among general labourers, meat cutters and butchers, and bakers and confectioners. The trend of activity for printing tradesmen, leather and jewellery workers was also in a less favourable direction, though the changes were slight. In the iron and steel trades the same level of employment was maintained as in July. When contrasted with the reports for August, 1937, the textile and carpet trades showed a substantial drop in employment during the month surveyed, and among glass workers

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

severe losses were noted. Recessions involving the greatest number of members, however, were registered in the iron and steel trades, and considerably reduced activity was manifest by leather and jewellery workers, and among metal polishers. The level of activity for wood and brewery workers, bakers and confectioners, and printing tradesmen was also somewhat below that of August last year. Hat, cap and glove, and fur workers, papermakers and general labourers, on the contrary, indicated marked employment recovery from August, 1937, and lesser gains were evident among cigar and tobacco workers, and meat cutters and butchers.

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month	Fishing	Lumbering and Logging	Mining	Manufacturing industries	Vegetable products	Pulp and paper products	Pulp and paper mill workers	Printing, publishing and lithographing	Electric current	Wood products	Fibres, textiles and textile products	Textile and carpet workers	Garment workers	Hat, cap and glove workers	Animal products	Iron and its products	Non-ferrous metals	Clay, glass and stone products	Mineral products	Miscellaneous manufacturing industries	Building and construction	Transportation	Shipping and stevedoring	Steam railway operation	Local transportation	Communication	Telegraph operation	Telephone operation	Trade (retail shop-clerks)	Services	Governmental	Miscellaneous	All occupations

In the coal mining industry during August the trend of activity was upward, both from the preceding month and August last year according to the reports compiled from 54 local unions, with a membership aggregate of 20,838 persons. Of these, 2,036, or a percentage of 9·8, were unemployed on the last day of the month contrasted with percentages of 11·0 in July and 11·1 in August last year. The Alberta mining areas were entirely responsible for the better tendency noted in the industry as a whole from July, Nova Scotia members indicating a fractional adverse change, while in British Columbia adequate work was provided for all members reported in the two months compared. Some improvement in the situation from August last year was reflected by Nova Scotia and British Columbia miners during the period surveyed, while in Alberta there was a slight lessening in the volume of work accorded.

Little variation in conditions was apparent in the building and construction trades during August from July, though the tendency was toward retarded activity, the 209 associations from which reports were tabulated combining a membership of 22,282 persons, showing that 6,757 or a percentage of 30·3 were idle, as compared with a percentage of 29·2 in July. Heavy increases in unemployment were manifest from August last year when 15·6 per cent of the members recorded were out of work. The situation for bricklayers, masons and plasterers was materially better during August than in the previous month, and heightened activity on a small scale was evident among plumbers and steamfitters, electrical workers and steam shovelmen. Of the recessions which were of a rather more offsetting nature, the most important, viewed from a percentage basis, were reported among bridge and structural iron workers, and tile layers, lathers and roofers who showed pronounced increases in slackness. Activity for carpenters and joiners, granite and stonecutters, and hod carriers and building labourers was moderately curtailed from July while a fractional decline only was noted by painters, decorators and paperhangers. When a comparison is made with the reports for August, 1937, distinctly unfavourable conditions prevailed for steam shovelmen, bridge and structural iron workers, carpenters and joiners, plumbers and steamfitters, and tile layers, lathers and roofers, and noteworthy curtailment of employment was recorded among bricklayers, masons and plasterers. A somewhat lower level of activity was apparent also among painters, decorators and paperhangers and electrical workers. The situation for granite and stonecutters, and hod carriers and building labourers, however, was decidedly better than in August, 1937.

The 820 organizations in the transportation industries making returns for August, and covering a membership of 63,909 persons, indicated that 3,521 or a percentage of 5·5 were without employment on the last day of the month in contrast with a percentage of 7·1 in July and 4·4 per cent at the close of August, 1937. Steam railway employees, whose returns constituted over 78 per cent of the entire group membership reported, showed a slight rise in work afforded, and in the navigation division noteworthy improvement was evident. The situation for street and electric railway employees remained unchanged from July, while among teamsters and chauffeurs activity was but nominally retarded. In contrast with the reports compiled for August last year, navigation workers registered a moderate gain in employment during the month reviewed, while slight curtailment of activity was indicated in the steam railway division and among teamsters and chauffeurs. Employment for street and electric railway employees, as in the previous comparison, was maintained at exactly the same level as in August, 1937.

Retail shop clerks in the three months used for comparative purposes in this article were all quite busily engaged. This was apparent from the reports received for August from 3 associations, with a membership numbering 1,517 persons.

The level of activity for civic employees during August showed no variation from July, 0·4 per cent of idleness only being reported at the close of each of these months. Making returns for August were 76 associations of civic employees, with a total membership of 9,330 persons, 41 of whom were out of work. A nominal change only, though favourable, was reflected from August last year when 0·6 per cent of inactivity was registered.

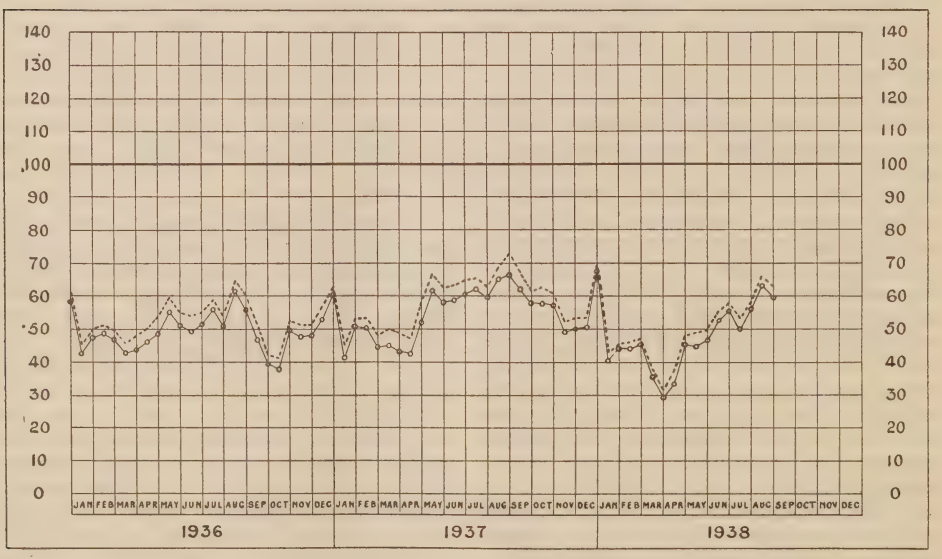
In the miscellaneous group of trades there was some slight improvement during August from the previous month, as manifest by the returns compiled from 134 local unions with 9,972 members. Of these, 677 or a percentage of 6·8 were unemployed as compared with 8·0 per cent in July. Theatre and stage employees showed a gain of over 3 per cent in work afforded from July, and among hotel and restaurant employees, barbers, stationary engineers and firemen, and unclassified workers the trend was toward heightened activity though the changes were slight. Contrasted with the reports for August last year in the miscellaneous group of trades when 6·2 per cent of idleness was recorded, hotel and restaurant employees suffered rather noteworthy losses in work afforded and activity for barbers and stationary engineers and firemen was nominally retarded. Largely offsetting this

curtailment was the improvement, noted among theatre and stage employees and unclassified workers.

Some slowing up in employment was apparent in the fishing industry during August from July, though conditions were much improved from August last year. This was manifest from the reports furnished by 3 unions involving a membership of 701 persons, 5·0 per cent of whom were idle at the end of the month as contrasted with percentages of 0·3 in July and 16·3 in August last year.

Lumber workers and loggers with 3 associations reporting a membership of 2,041 persons during August indicated that 476, or a percentage of 23·3, were out of employment as compared with a percentage of 8·1 in July. The situation declined sharply from August last year when 1·4 per cent of idleness was recorded.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1937 inclusive, and also the percentages of unemployment by provinces for August of each year from 1919 to 1935 inclusive and for each month from August, 1936, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.



(3) Employment Office Reports for August, 1938

During August, 1938, reports from the offices of the Employment Service of Canada showed gains of nearly 22 per cent and 4 per cent, respectively, in the average daily placements over those of the preceding period and also those of the corresponding month last year. When compared with work transacted in July, 1938, very substantial gains were reported in farming and construction and maintenance, with others of lesser importance in services, manufacturing and mining, while minor losses only were shown in logging, transportation and trade. In comparison with August, 1937, all groups, except farming and construction and maintenance, recorded declines, the largest being in logging, but the increase in farming alone, more than offset the decreases in all other groups, as the gain in construction and maintenance was very small.

The accompanying chart shows the trend of employment since January, 1936, as represented by the ratio of vacancies notified and of placements effected for each one hundred applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be seen from the graph that the curves of vacancies and placements in relation to applications followed an upward trend during the first half of August, but showed a decline during the latter half of the month. At the close of the period under review the level of vacancies was about ten points and that of placements nearly seven points lower than the level attained at the end of August, 1937. The ratio of vacancies to each one hundred applications

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications———— Vacancies - - - - - - - - - Placements —o—o—o—o—o—o

was 65·9 during the first half and 62·6 during the second half of August, 1938, in contrast with ratios of 68·7 and 72·9 during the corresponding periods of 1937. The ratios of placements to each one hundred applications during the periods under review were 62·9 and 59·4 as compared with 64·8 and 66·1 during the corresponding month of 1937.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during August, 1938, was 1,631, as compared with 1,330 during the preceding month and with 1,612 in August a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,541, in comparison with 2,400 in July, 1938, and with 2,270 during August last year. The average number of placements made daily by the offices of the Service during August, 1938, was 1,552, of which 1,081 were in regular employment and 471 in work of one week's duration or less, as compared with a total daily average of 1,275 during the preceding month. Placements for August a year ago averaged 1,487 daily, consisting of 1,103 placements in regular and 384 in casual employment.

During the month of August, 1938, the offices of the Service referred 43,193 persons to vacancies and effected a total of 41,891 placements. Of these, the placements in regular employment were 29,181, of which 24,185 were of men and 4,996 of women, while placements in casual work totalled 12,710. The number of vacancies reported by employers was 33,480 for men and 10,548 for women, a total of 44,028, while applications for work numbered 68,590, of which 53,374 were from men and 15,216 from women. Reports for July, 1938, showed 33,246 positions available, 59,987 applications made and 31,867 placements effected, while in August, 1937, there were recorded 41,896 vacancies, 59,005 applications for work and 38,659 placements in regular and casual employment.

The following table gives the placements effected by offices of the Employment Service of Canada, each year, from January, 1928, to date:

Year	Placements		
	Regular	Casual	Totals
1928	334,604	135,724	470,328
1929	260,747	137,620	398,367
1930	187,872	180,807	368,679
1931	175,632	295,876	471,508
1932	153,771	198,443	352,214
1933	170,576	181,521	352,097
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936	217,931	113,519	331,450
1937	275,300	114,236	389,536
1938 (8 months)	151,986	76,741	228,727

Nova Scotia

During the month of August, 1938, positions offered through Employment Offices in Nova Scotia were nearly 4 per cent higher than in the preceding month, but less than one per cent above the corresponding month of last year. There was an increase also in placements of over 5 per cent when compared with July and of 4 per cent in comparison with August, 1937. The largest increase in placements over August of last year was in services, but there were also smaller gains in farming, trade and manufacturing. Of the losses in other groups, the most important were in construction and maintenance, logging and mining. Placements by industrial divisions included manufacturing, 43; logging, 71; farming, 52; construction and maintenance, 654 and services, 541, of which 395 were of household workers. During the month 394 men and 147 women were placed in regular employment.

New Brunswick

The demand for workers, as indicated by orders received at Employment Offices in New Brunswick during August, was over 47 per cent higher than in the preceding month and nearly 11 per cent above the corresponding month of last year. There was an increase also in placements of over 49 per cent when compared with July and of over 15 per cent in comparison with August, 1937. The increase in placements over August of last year was due to a gain in the highway division of construction and maintenance, as, with the exception of a nominal increase in farming, all other groups showed declines. The only decrease of importance, however, was in logging. Placements under construction and maintenance numbered 445 and in services 586. Of the latter, 461 were of household workers. Regular placements numbered 208 of men and 105 of women.

Quebec

There was an increase of over 11 per cent in the number of positions offered through Employment Offices in the Province of Quebec during August, when compared with the preceding month and of 15 per cent in comparison with the corresponding month of last year. There was a gain also in placements of nearly 4 per cent, when compared with July and of 19 per cent in comparison with August, 1937. Increased placements under construction and maintenance were responsible for the gain over August of last year for the province as a whole, although there was improvement also in transportation and services. The most important declines were in logging and manufacturing and there was a minor loss in farming. Industrial divi-

sions in which most of the placements were effected during the month were:—manufacturing, 95; logging, 236; farming, 102; transportation, 179; construction and maintenance, 3,787 and services, 2,561, of which 2,288 were of household workers. There were 4,202 men and 1,669 women placed in regular employment.

Ontario

Orders received at Employment Offices in Ontario during August called for over 9 per cent more workers than in the preceding month, but nearly 29 per cent fewer than during the corresponding month of last year. There was an increase of over 8 per cent in placements when compared with July, but a decrease of nearly 24 per cent in comparison with August, 1937. With the exception of a small increase in farming, all industrial groups showed declines when compared with August of last year. The most important losses were in logging and construction and maintenance, while somewhat smaller decreases were reported in services, manufacturing and transportation. Placements by industrial divisions included manufacturing, 694; logging, 197; farming, 2,963; construction and maintenance, 4,369; trade, 298 and services, 3,504, of which 2,252 were of household workers. During the month 5,720 men and 1,438 women were placed in regular employment.

Manitoba

During August, orders received at the Employment Offices in Manitoba called for nearly 171 per cent more workers than in the preceding month and over 55 per cent more than during the corresponding month of last year. There was a gain also in placements of over 172 per cent, when compared with July and of nearly 55 per cent in comparison with August, 1937. The increase in placements over August of last year was largely due to a gain in farming, although considerable improvement was also reported in construction and maintenance and services. The changes in all other groups were small and included gains in manufacturing and trade and losses in logging and mining. Industrial divisions in which most of the placements were effected during the month were logging, 249; farming, 4,553; construction and maintenance, 2,154 and services, 772, of which 615 were of household workers. Placements in regular employment numbered 6,859 of men and 337 of women.

Saskatchewan

Opportunities for employment, as indicated by orders received at Employment Offices in Saskatchewan during August, were over 125 per cent better than in the preceding month and over 57 per cent above the corresponding month of last year. Placements also were considerably higher, being over 138 per cent above July and 54 per cent in excess of August, 1937. There was a substantial gain in farm placements when compared with August of last year, but this increase was largely offset by a decline under construction and maintenance. The changes in other groups were unimportant and consisted of losses in mining, manufacturing and logging and increases in trade and services. Industrial divisions in which most of the placements were effected during the month were:—farming, 3,791; construction and maintenance, 201 and services, 838, of which 534 were of household workers. There were 4,026 men and 519 women placed in regular employment.

Alberta

Employment opportunities, as indicated by orders received at Employment Offices in Alberta during August, were over 35 per cent better than in the preceding month and nearly 25 per cent above the corresponding month of last year. There was a gain also in placements of nearly 36 per cent when compared with July and of nearly 20 per cent in comparison with August, 1937. As in Manitoba and Saskatchewan farm placements were considerably higher than during August of last year. This increase, although augmented by a gain in services, was largely offset by a decline in construction and maintenance. Of the changes in all other groups, the largest was a decrease in logging. Placements by industrial divisions included manufacturing, 88; farming, 1,692; construction and maintenance, 236 and services, 662, of which 528 were of household workers. During the month 2,009 men and 483 women were placed in regular employment.

British Columbia

There was a decrease of over 3 per cent in the number of positions offered through Employment Offices in British Columbia during August, when compared with the preceding month, but a gain of over 17 per cent in comparison with the corresponding month of last year. Slightly higher percentages of change were reported in placements under both comparisons. There was a substantial increase in the highway division of construction and maintenance when compared with August of last year. The gain in this group accounted for the movement, indicated for the province as a whole, as fewer placements were made in all other divisions. The largest declines were in services and mining. Placements by industrial divisions included manufacturing, 71; logging, 68; farming, 156; construction and maintenance, 3,552 and services, 692, of which 466 were of household workers. During the month 767 men and 298 women were placed in regular employment.

Movement of Labour

During the month of August, 1938, the offices of the Employment Service of Canada made 29,181 placements in regular employment, 17,779 of which were of persons for whom the employment located was outside the immediate district of the offices at which they were registered. Of the latter, 311 were granted the Employment Service reduced transportation rate, 190 going to points within the same province as the dispatching office, and 121 to other provinces. The reduced transportation rate, which is 2·5 cents per mile with a minimum fare of $4, is granted by the railway companies to bona fide applicants of the offices of the Employment Service who may wish to travel to distant employment for which no workers are available locally.

In Quebec during August, 99 persons profited by the Employment Service reduced rate, 3 of whom were destined to provincial situations and 96 to points outside the Province. The former were plasterers who secured certificates at the Quebec City office for transportation to Chicoutimi. The inter-provincial movement emanated from Hull, from which centre 96 bushmen were conveyed to Pembroke. Ontario offices issued 147 reduced rate certificates during August, 144 of which were provincial and 3 inter-provincial. Provincially the Port Arthur office dispatched 26 mine employees, 23 bush workers, 15 construction workers, 5 hotel employees, one domestic and one handyman; the Sudbury office, 48 bush workers and one mine cook; the Fort William office, 10 bushmen, and the Owen Sound office, one farm hand, to various sections of their respective zones. Travelling from Toronto 3 electricians went to Port Arthur, one pressman to Timmins, one tool and die maker to Windsor, and one auto mechanic to Sudbury. From Hamilton one tinsmith was carried to Sault Ste. Marie, from North Bay, one steel sharpener to Kingston, and from Pembroke, one saw filer to North Bay. In addition, there was a movement of labour under the Dominion-Provincial Youth Training Plan during August whereby 4 persons were granted certificates at London, enabling them to proceed to Kitchener for registration in home training courses. Journeying to other provinces 2 mine workers went to Rouyn on certificates secured at St. Catharines while one farm hand was transferred from Port Arthur to Winnipeg. The Winnipeg office was responsible for all transfers effected in Manitoba during August, which numbered 21. Of these, 2 were farm hands sent from Winnipeg to employment within the territory covered by that City office. Travelling outside the province, 11 bush workers and 7 bricklayers were bound for Port Arthur and one upholsterer for Regina. In Saskatchewan during August the Regina office was instrumental in the dispatch of one farm hand to Prince Albert and one farm domestic to Swift Current. Workers taking advantage of the Employment Service reduced transportation rate in Alberta during August were 33 in number, 30 of whom went to provincial employment and 3 outside the province. The latter were farm hands, 2 of whom journeyed to North Battleford, and one to Saskatoon on certificates granted at Edmonton. Provincially from Edmonton 13 mine employees, 3 highway construction workers, 3 oil refinery workers, 2 saw mill workers, 2 building construction workers, 2 transportation company employees, one labourer, one fisherman and one cafe waitress were transported to various centres within the Edmonton zone, and one mine worker to Drumheller. From Calgary, one highway construction cook was carried to a point within the same zone. Offices in British Columbia issued 9 certificates for reduced transportation during August, all provincial. On certificates granted at Vancouver, one cook, one cook's helper and one school janitor went to Kamloops, one school teacher to Prince George and one wireless operator within the Vancouver zone, while from New Westminster 2 fruit packers were dispatched to Penticton, and one farm hand to Kamloops. The Prince Rupert office transferred one first aid man to a point within its own zone.

Of the 311 persons who travelled at the Employment Service reduced transportation rate during August 256 were conveyed by the Canadian National Railways, 53 by the Canadian Pacific Railway, one by the Northern Alberta Railway and one by the Pacific Great Eastern Railway.

In order to facilitate the movement of harvest labour within the Prairie Provinces there was in addition to the 2·5 cents rate referred to in the above, a special harvest rate afforded by the railway companies, becoming effective on August 1st of this year and terminating September 15th. Under this arrangement the railway companies granted a special rate of 1·5 cents per mile to all applicants upon presentation of a certificate supplied by the offices of the Employment Service in Manitoba, Saskatchewan and Alberta, the movement of labour being confined entirely to districts within their respective provinces. Transferred under this plan during August were 392 harvest workers in Manitoba, 110 in Saskatchewan and 289 in Alberta of whom 344 travelled over the Canadian National Railways and 447 over the Canadian Pacific Railway. The figures for the first half of September will appear in the next issue of the LABOUR GAZETTE.

(4) Building Permits Issued in Canada During August, 1938

The value of the building permits issued by 58 cities during August, 1938, was less than in the preceding month, but greater than in August of last year; during the month under review, these municipalities authorized building estimated to cost $5,814,330 as compared with $6,230,254 in July, 1938, and $4,262,966 in August, 1937. There was therefore a decrease of 6·7 per cent in the first comparison, but an increase of 12·9 per cent in the second and more significant comparison.

The value of the building represented by the permits taken out in the first eight months of the present year was $37,825,791; this total showed little difference from that of $37,849,203 reported in the period, January-August, 1937, while the cumulative total in both 1938 and 1937 was decidedly higher than in the first eight months of any other year since 1931. However, the estimated cost of the construction work undertaken in each of these years has been very much lower than in earlier years of the record, being also below the eighteen-year average of $80,157,517. The wholesale prices of building materials have recently been lower than in the same months of 1937, although they continue higher than in any of the years, 1931-1936.

Some 50 cities furnished detailed statistics showing that they had issued over 500 permits for dwellings estimated to cost about $1,480,000 and more than 2,100 permits for other buildings valued at approximately $3,760,000. In addition, there was one engineering project valued at $45,000. During July, authority was granted for the erection of some 600 dwellings and 2,400 other buildings, estimated at about $2,076,000 and $3,961,000, respectively.

As compared with July, 1938, Prince Edward Island, New Brunswick, Quebec, Ontario and Alberta reported gains, that of $223,114 or 21·2 per cent in Quebec and $440,734 or 18·4 per cent in Ontario being most pronounced.

ESTIMATED VALUE OF CONSTRUCTION WORK AS INDICATED BY BUILDING PERMITS ISSUED BY 58 CITIES

[1] Report not received in time for tabulation.

Of the reductions elsewhere indicated, those of $222,025 or 49·1 per cent in Manitoba, and $849,446 or 49·2 per cent in British Columbia were greatest.

Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Ontario, Alberta and British Columbia reported higher aggregates of building authorizations than in August of last year; the greatest increase was in Quebec, where there was a gain of $503,712 or 65·1 per cent. Of the declines recorded in the remaining provinces, that of $40,676 or 45·2 per cent in Saskatchewan was most marked.

Of the four largest cities, Montreal showed an increase as compared with July, 1938, and also with August, 1937. The Toronto total was higher in August than in July, but it declined considerably from that of August, 1937. Winnipeg showed reductions in both comparisons, while the Vancouver aggregate was lower than in the preceding month, but higher than in August of last year. Of the other centres, Charlottetown, Halifax, Fredericton, Moncton, Quebec, Belleville, Brantford, Hamilton, London, Ottawa, Owen Sound, Port Arthur, St. Thomas, Sault Ste. Marie, York and East York Townships, Welland, Riverside, Calgary, Lethbridge, Medicine Hat, New Westminster, Prince Rupert and Victoria recorded gains in both comparisons.

Table I gives the value of the building authorized by 58 cities during August, and in the first eight months of each year since 1920, as well as index numbers for the latter, based on the January-August total in 1926 as 100. The average index numbers of wholesale prices of building materials in the first eight months of the years since 1920 are also given (average 1926=100).

Year	Value of permits issued in August	Value of permits issued in first eight months	Indexes of value of permits issued in first eight months (1926=100)	Average indexes of wholesale prices of building materials in first eight months (1926=100)
	$	$		
1938.....	5,814,330	37,825,791	34·6	90·2
1937.....	4,262,966	37,849,203	34·7	95·4
1936.....	3,673,455	27,026,141	24·7	84·6
1935.....	4,311,968	33,348,881	30·5	81·2
1934.....	3,764,420	17,433,272	16·0	82·8
1933.....	1,910,809	14,407,111	13·2	77·0
1932	3,823,251	32,576,464	29·8	77·7
1931.....	8,201,879	78,194,996	71·6	83·0
1930.....	14,029,564	115,268,330	105·5	93·4
1929.....	21,582,221	168,894,072	154·6	99·2
1928	17,448,542	145,247,485	133·0	96·4
1927.....	29,478,378	126,690,292	116·0	96·2
1926.....	11,672,599	109,211,942	100·0	100·7
1925.....	9,511,008	88,223,328	80·8	103·1
1924.....	9,406,733	81,762,083	74·9	109·0
1923.....	11,425,031	97,551,074	89·3	111·8
1922.....	18,158,932	105,181,416	96·3	108·4
9921.....	10,928,039	77,665,614	71·1	128·6
1920.....	10,805,846	86,303,601	79·0	143·8

The aggregate for the first eight months of this year, as already stated, was practically the same as in 1937, but exceeded that for the same period in each of the preceding five years. While the index of wholesale prices of building materials was lower than in 1937, it was higher than in any of the years, 1931-1936, although it was lower than in earlier years since 1919.

Table II gives the value of building permits issued by 58 cities during July and August, 1938, and August, 1937. The 35 cities for which records are available since 1920 are marked thus "*."

EMPLOYMENT CONDITIONS IN CANADA AT THE END OF SEPTEMBER, 1938

Reports of Superintendents of the Employment Service of Canada

THE employment situation at the end of September, 1938, was reported by the Superintendents of the Employment Service to be as follows:—

Farmers in the Maritime Provinces were busy harvesting their crops and many also were clearing land and burning brush. Apple picking was in progress and it was estimated that more than half the crop had been gathered. Logging was quiet and the demand for lumbermen small. Fishing was fair. The catch of sword fish was slightly higher than that of the previous year, but cod and halibut landings were lighter and heavy gales and rain storms had been detrimental to lobster fishing. Coal mines in the New Glasgow area operated from 2 to 5¾ days per week, while those in Cape Breton and vicinity worked from 3 to 6 days. Manufacturing remained at a fair level. Sawmills continued cutting long lumber for the British market and woodworking plants were busy, likewise confectioners and manufacturers of foodstuffs. Other than road construction, where a large number of men was employed, not much new building was being started, but that under way was progressing favourably. Transportation was brisk. Improvement was noted in trade and collections. Requests were received for domestics and charworkers, with regular placements made daily.

Farming in the Province of Quebec was quiet and logging likewise registered decreased activity. Mines were operating normally.

Manufacturing centres reported as follows:—Bagotville, Rouyn and Three Rivers—quiet; Chicoutimi and Matane—main industries operating at full capacity; Hull and LaTuque—somewhat better conditions; Montreal—aviation showed unprecedented activity as the result of important contracts, but boots and shoes, textiles and aluminum showed a marked decline; Quebec—all factories generally active; Sherbrooke—textiles below normal. Public works were still being carried on throughout the province and in Montreal, in particular, a favourable trend was noted both in municipal and private construction. At Sherbrooke, building was very active as a result of property damage amounting to $250,000 from a recent storm. Trade was quiet. Calls for domestic workers in the Women's Department were numerous.

The demand for farm help in Ontario decreased greatly, as seasonal work had declined considerably; grape cutting and hauling to the wineries, however, still helped to keep a number employed. Activity in logging was far below normal and all indications pointed to a much reduced scale in this line of work for the coming winter. Mining was active, although there was no call for additional workers. The industrial situation showed little marked change. Iron and steel establishments, in particular, were very slack, with comparatively few hands employed, but canning factories, wineries and confectionery concerns were absorbing a number of seasonal workers. Textile plants, also, were busier. Building construction continued fairly brisk, maintaining many skilled and unskilled workers in employment, however the volume of work underway was not adequate for all workers available. Highway construction progressed favourably. Freight transportation, by rail, was somewhat less, as grain shipments from the west were reduced. Placements in household work for women were numerous and the demand still exceeded the supply. A greater interest was being developed in girls trained in government domestic schools and such graduates were quickly placed. A few women also found work in manufacturing plants, but this latter kind of employment was more difficult to obtain.

As threshing in the Prairie Provinces was nearly completed, the demand for farm labour was much less; nevertheless, numerous enquiries were being received concerning the farm bonus scheme. Logging recorded little change. Mining was quiet, but was showing gradual signs of improvement. In manufacturing, a fair volume of business was reported in nearly all lines. Slightly increased activity was noted in building construction and work on highways continued. Railways were busy with the hauling of grain and in some localities it had been necessary to bring experienced men from the east to handle the heavy shipments. Trade was better, with collections fair. There continued to be a scarcity of experienced help in the women's division, so that a number of vacancies still remained unfilled.

Little call was reported for farm help in British Columbia, other than that for the usual fall work and a few extra hands for apple and hop picking, but packing houses and fruit canneries were very busy. Salmon canneries, however, were closing for the season. Logging showed some improvement, although this industry was still curtailed, owing to dry conditions in the woods. Sawmills in Prince George were operating at full capacity; elsewhere, saw and shingle mills were running on short shifts. Mining was quiet. Construction consisted chiefly of maintenance work, as inclement weather proved adverse for outside building. Men on highways were being used in rotation in order to provide employment for as many as possible and a number of young men had been despatched to the Youth Training camps. Railways were busier than for years, hauling wheat. Shipments of fruit and fish also were heavy, both by rail and water. Drydocks and shipyards at Prince Rupert and Victoria were rather quiet, but plenty of longshore work was available on all waterfronts, due to increased shipments of timber and wheat. Trade was fair. There was a steady demand for experienced domestics, but any other line of employment for women workers was very quiet.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

THE British *Ministry of Labour Gazette*, September, 1938, summarized the employment situation as follows:—

Employment at August 15, showed a slight improvement as compared with July 18. There was an improvement in coal mining, building, public works contracting, and the boot and shoe and linen industries. On the other hand employment declined in the cotton, wool textile, pottery and tailoring industries, iron and steel manufacture, iron mining and quarrying, certain branches of the engineering industry, and the distributive trades.

It is estimated that at August 15, 1938, the number of insured persons, aged 16-64, in

employment in Great Britain, exclusive of persons within the agricultural scheme, was approximately 11,402,000. This was 31,000 more than at July 18, 1938. On a comparable basis there was a decrease of about 320,000 as compared with August 23, 1937.

Among persons, aged 16-64, insured under the general scheme of unemployment insurance (including the special schemes for the banking and insurance industries), the percentage unemployed in Great Britain and Northern Ireland at August 15, 1938, was 13·0 compared with 13·3 at July 18, 1938. For persons aged 16-64 insured under the agricultural scheme the percentages were 4·3 at August 15, 1938, and 4·5 at July 18, 1938. For both schemes combined the percentage unemployed at August 15, 1938, was 12·6 as compared with 12·9 at July 18, 1938. On a comparable basis, there was an increase at August 15, 1938, as compared with August 23, 1937, of about 3·4 in the percentage unemployed among persons within the general scheme, and of about 1·2 among persons within the agricultural scheme. For the two schemes combined there was an increase of about 3·4 between these dates.

At August 15, 1938, the numbers of unemployed persons on the registers of Employment Exchanges in Great Britain were 1,262,343 wholly unemployed, 439,024 temporarily stopped, and 57,875 normally in casual employment, making a total of 1,759,242; this was 13,874 less than at July 18, 1938. On a comparable basis there was an increase of about 451,000 as compared with August 23, 1937, in the total number of persons on the registers.

The total of 1,759,242 persons on the registers at August 15, 1938, included 1,020,036 persons with claims admitted for insurance benefit, 518,374 with applications authorized for unemployment allowances, 53,408 persons with application for insurance benefit or unemployment allowances under consideration, and 167,424 other persons of whom 52,896 were juveniles under 16 years of age.

In Great Britain and Northern Ireland the total number of persons on the registers of Employment Exchanges at August 15, 1938, was 1,843,272 as compared with 1,875,083 at July 18, 1938. On a comparable basis there was an increase at August 15, 1938, of about 470,000 as compared with August 23, 1937.

United States

According to a press release dated September 22, issued by Miss Frances Perkins, United States Secretary of Labor, employment increased nearly a quarter of a million in non-agricultural occupations in August, the largest August gain in recent years, with the exception of 1933 and 1935.

The following paragraphs taken from the official press release show the employment situation in the United States during August to be as follows:

Gains were widespread in manufacturing industries. With 65,000 seasonal cannery workers added to regular employees in manufacturing industries, a total of 320,000 factory wage-earners was taken on in August. Wholesale trade firms hired more employees, while in retail trade reductions in employment were smaller than usual for the season. Bituminous coal mines reported a small seasonal gain of approximately 9,000 men. Employment in anthracite mines declined by about 10,000. Railroads took on 10,000 more men in August, the third consecutive expansion this summer. In other lines of industry, there were no marked changes in employment.

The increase of 4·9 per cent in factory employment from mid-July to mid-August, as shown by the revised index of the Bureau of Labor Statistics which is released this month, was much larger than the usual seasonal increase of 1·5 per cent. The 8·9 per cent advance in factory pay-rolls was even more marked, particularly when compared to the normal gain for August of about 3 per cent. This pay-roll rise represented an increase of nearly $12,000,000 in weekly wage disbursements.

As compared with August of last year, factory employment was 21 per cent lower, and factory pay-rolls were down by 29 per cent, as measured by the revised indexes.

The non-durable goods industries again accounted for most of the gain in factory forces during the month, with an increase in employment of 7 per cent. The outstanding gains in this group were in men's and women's clothing, cotton goods, knit and woollen goods, and canning. For all of these industries except canning re-employment was much greater than seasonal.

Employment in the durable goods group of manufacturing industries increased for the first time in 10 months, by about 2 per cent. Steel mills expanded their forces by 6,500, electrical machinery plants by 3,700, and there were substantial gains in foundries and machine shops, furniture factories and sawmills. In the automobile industry employment was reduced by about 18,000, primarily because of shut-downs for model changes.

Wage rate decreases were reported in 18 manufacturing industries, affecting 32,100 wage-earners out of a total of 3,400,000 engaged in firms reporting to the Bureau of Labor Statistics. As in the preceding month, the most

widespread reductions were in cotton mills, in which nearly 25,000 of these workers received wage cuts. Comparatively few increases were reported. Wage rate increases were granted in the metal mining industry, affecting approximately 5,000 workers, and in the electric-railroads and motor-bus lines, affecting approximately 2,000 men.

In wholesale trade the increase of 1·5 per cent in employment, which accompanied increased industrial activity, was the first gain since last October. Among the more important lines which reported gains were dry goods and apparel; chemicals and drugs; petroleum; paper; and lumber and building materials. Retail stores had 1·3 per cent fewer employees in mid-August than in mid-July. This decline was slightly smaller than in recent years, with the exception of 1936. The largest reductions were in apparel and general merchandising stores, hardware, automobiles and automobile supplies, and food stores.

Gains of 2·7 per cent in employment in private building construction and of 0·9 per cent in quarrying were of seasonal proportions. This was also true of the increase of 2·4 per cent in the number of bituminous miners.

Anthracite mines reported a further employment loss of 15·7 per cent, affecting about 10,000 miners, partly because of strikes in the first half of August. Pay-rolls showed little reduction, as output of anthracite was generally sustained. Metal mines reported a further small curtailment of forces, although pay-rolls rose 13·4 per cent, due to increased production and wage-rate increases.

The gains in employment were distributed throughout the country, with 42 States reporting more workers on industrial and business pay-rolls in August than in July. Among these were California, with an increase of 6·8 per cent, chiefly in canneries, sawmills, beet sugar mills, and can factories; North Carolina with a gain of 6·5 per cent, primarily in the manufacture of cotton and knit goods, and in wholesale trade; Massachusetts with an advance of 5·6 per cent, in the manufacture of cotton and woollen goods, and shoes; New York with a gain of 2·8 per cent, for the most part in the manufacture of clothing; and Ohio with 2·4 per cent, mainly in canneries and factories manufacturing machinery and stamped and enamelled ware.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor the full text of which appeared in the Labour Gazette for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the provincial Minimum Wages Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wages scales of the respective provinces.

As respects contracts for buildings and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, were superseded in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight Hour Day Act, 1930." This Act, however, has now in turn been superseded by "The Fair Wages and Hours of Labour Act, 1935," which came into force on

May 1, 1936. The clause relating to wages and hours in the last named statute is in the terms following:—

"All persons in the employ of the contractor, subcontractor, or any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages;

"The working hours of persons while so employed shall not exceed eight hours per day or forty-four hours per week except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency as may be approved by the Minister."

The new Act like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not appear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by Federal grant in the form of contribution, subsidy, loan, advance or guarantee.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment, the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a consppicuous place on the premises where the contract is being executed, occupied or frequented by the workmen the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would oherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Order in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Order in Council, it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any dispute which may arise.

During the past month statements were received in the Departmentof Labour showing that the following contracts have recently been executed by the Government of Canada:

GROUP "A" CONTRACTS

(1) *Works of Construction, Remodelling, Repair or Demolition*

NOTE: The labour conditions of each of the contracts noted under this heading, besides stipulating working hours of not more than 8 per day and 44 per week, provide that: "Where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work," and also specify that the rates of wages set out therein are *minimum* rates only and that "nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation."

Department of National Defence

Construction of a canteen building at the Dominion Arsenal, Valcartier, P.Q. Name of contractors, A. Deslauriers & Fils, Ltée., Quebec, P.Q. Date of contract, August 31, 1938. Amount of contract, $67,770. A fair wages schedule was included in the contract as follows:—

	Per hour
Asbestos insulation workers	$0 60
Blacksmiths	0 60
Brick and hollow tile layers	0 80
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 45
Carpenters	0 60
Cement finisher	0 55
Cement and concrete mixer operator:	
Steam	0 60
Gasoline or electric	0 50
Compressor operators—gasoline or electric	0 50
Driver, horse and cart	0 55
Driver, team and wagon	0 65
Drivers	0 40
Engineers, operating, steam—	
Single or double drums	0 60
Engineers on steel erection	0 75
Electricians (inside wiremen)	0 65
Firemen—stationary	0 45
Hoist operators—gasoline or electric	0 50
Labourers	0 40
Lathers, metal	0 65
Lathers, wood	0 55
Machinists	0 65
Motor truck driver	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Ornamental iron workers	0 60
Painters and glaziers	0 55
Plasterers	0 75
Plasterers' helpers (mixing and tempering material)	0 45
Plumbers and steamfitters	0 65
Roofers—felt and gravel	0 45
Rodmen—reinforced steel	0 50
Sheet metal workers	0 65
Shovel operators—gasoline	0 85
Steam shovel engineers	0 85
Steam shovel cranemen	0 65
Steam shovel firemen	0 55
Stonecutters	0 70
Structural steel workers	0 75
Tilesetters	0 80
Tilesetters' helpers (all men assigned to help tradesmen)	0 45
Watchman	0 35

65197—6½

Roofing Ordnance Buildings Nos. 14 and 15 at Port Osborne Barracks, Winnipeg, Man. Name of contractors, Carter-Halls-Aldinger Co., Ltd., Winnipeg, Man. Date of contract, September 10, 1938. Amount of contract, $2,500. A fair wages schedule was included in the contract as follows:—

	Per hour
Carpenters	$0 85
Labourers	0 40
Motor truck drivers	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
Sheet metal workers	0 70
Roofers—felt and gravel	0 45

Installation of central heating mains etc. to the Single Officers' Quarters, R.C.A.F. Station, Rockcliffe, Ont. Name of contractor, M. Mantha, Ottawa. Date of contract, September 12, 1938. Amount of contract, $2,920. A fair wages schedule was inserted in the contract as follows:—

	Per hour
Plumbers and steamfitters	$0 95
Labourers	0 45

Bituminous surfacing of the Parade Ground at Fort Osborne Barracks, Winnipeg, Man. Name of contractors, Carter-Halls-Aldinger Co., Ltd., Winnipeg, Man. Date of contract, September 7, 1938. Amount of contract, $1,400. A fair wages schedule was included in the contract as follows:—

	Per hour
Asphalt rakers and finishers	$0 54
Cement finishers	0 60
Cement and concrete mixer operators:	
Steam	0 80
Gas. or electric	0 55
Driver	0 40
Driver, horse and cart	0 55
Driver, team and wagon	0 80
Labourers	0 40
Motor truck drivers	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
Road grader operators—gasoline	0 55
Tractor operators	0 60
Watchman	0 35

Repairing roof of Royal Montreal Regiment (M.G.) Armoury, Westmount, P.Q. Name of contractors, Michel Chouinard Ltd., Montreal, P.Q. Date of contract, September 14, 1938. Amount of contract, approximately $2,531.50. A fair wages schedule was included in the contract as follows:—

	Per hour
Carpenters	$0 70
Labourers	0 40
Motor truck drivers	0 45
Roofers—felt and gravel	0 45
Sheet metal workers	0 70
Motor truck driver and truck:	
1 to 2 tons	1 45

Supply and installation of a weigh scale at St. Johns Barracks, St. Johns, P.Q. Name

of contractors, Messrs. Latour & Dupuis, Inc., St. Johns, P.Q. Date of contract, September 15, 1938. Amount of contract, $1,500. A fair wages schedule was inserted in the contract for the installation as follows:—

	Per hour
Carpenters and joiners	$0 55
Cement finishers	0 50
Cement and concrete mixer operators:	
Steam	0 60
Gas. or electric	0 45
Drivers	0 35
Driver, horse and cart	0 50
Driver, team and wagon	0 60
Engineers on steel erection	0 75
Labourers	0 35
Machinists	0 55
Motor truck drivers	0 40
Motor truck driver and truck:	
1 to 2 tons	1 40
Painters and glaziers	0 50
Rodmen—reinforced steel	0 45
Structural steel workers	0 75
Watchman	0 30
Welders and burners—on steel erection	0 75

Construction of a sewer at the R.C.C.S. Depot, Vimy Barracks, Barriefield, Ont. Name of contractor, Mr. K. A. Morrison, Toronto, Ont. Date of contract, September 19, 1938. Amount of contract, $3,400. A fair wages schedule was included in the contract as follows:—

	Per hour
Cement finishers	$0 60
Labourers	0 40
Pipe layers (tile pipe)	0 50
Cement and concreate mixer operators:	
Gas	0 50
Carpenters	0 80
Motor truck drivers	0 45
Motor truck drivers and trucks:	
1 to 2 tons	1 45
3 tons	1 95
Watchman	0 35

Supplying and laying a marble, tile and terrazzo and asphalt tile flooring at the Royal Canadian Air Force Station hospital, Trenton, Ont. Name of contractor, Mr. Arthur A. Sills, Belleville, Ont. Date of contract, September 23, 1938. Amount of contract, $4,186. A fair wages schedule was inserted in the contract as follows:—

	Per hour
Cement finishers	$0 60
Floor layers—asphalt, tile	0 90
Floor layers' helpers—asphalt, tile	0 45
Labourers	0 40
Tile setters—ornamental	0 90
Tile setters' helpers—all men assigned to help tradesmen	0 45

Construction of an anti-aircraft building at Kingston, Ont. Name of contractors, Frontenac Construction Co., Ltd., Toronto, Ont. Date of contract, September 29, 1938. Amount of contract, $24,576. A fair wages schedule was included in the contract as follows:—

	Per hour
Asbestos insulation workers	$0 70
Brick and hollow tile layers	1 00
Brick and hollow tile layers' helpers mixing and tempering mortar	0 45
Carpenters	0 80
Cement finisher	1 00
Cement and concrete mixer operators:	
Steam	0 65
Gas. or electric	0 50
Compressor operators—gas. or electric	0 50
Driver, horse and cart	0 55
Driver, team and wagon	0 75
Drivers	0 40
Engineers, operating, steam:	
Single drum	0 65
Double drum	0 75
Engineers on steel erection	0 80
Electricians (inside wiremen)	0 75
Firemen, stationary	0 45
Hoist operators—gas. or electric	0 50
Labourers	0 40
Lathers, metal	0 70
Lathers, wood	0 70
Machinists	0 70
Motor truck driver	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Ornamental iron workers	0 60
Painters and glaziers	0 70
Plasterers	1 00
Plasterers' helpers (mixing and tempering material)	0 45
Plumbers and steamfitters	0 80
Plumbers' and steamfitters' helpers (all men assigned to help tradesmen)	0 45
Roofers—felt and gravel	0 45
Rodmen—reinforced steel	0 50
Sheet metal workers	0 75
Shovel operators—gas.	0 90
Steam shovel engineers	0 90
Steam shovel cranemen	0 70
Steam shovel firemen	0 55
Stonecutters	1 00
Structural steel workers	0 80
Welders on steel erection	0 80
Watchman	0 35
Stonemasons	1 00

Construction of Married Officers' Quarters at Currie Barracks, Calgary, Alta. Name of contractors, Bennett & White Construction Co., Ltd., Calgary, Alta. Date of contract, September 29, 1938. Amount of contract, $11,495. A fair wages schedule was included in the contract as follows:—

	Per hour
Asbestos insulation workers	$0 85
Brick and hollow tile layers	1 10
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 50
Carpenters	0 80
Cement finisher	0 60
Cement and concrete mixer operators:	
Steam	0 65
Gas. or electric	0 55
Compressor operators—gas. or electric	0 55
Driver, horse and cart	0 60
Driver, team and wagon	0 75
Drivers	0 45

	Per hour
Engineers, operating, steam:	
Single drum	0 65
Double drum	0 80
Engineers on steel erection	0 85
Electricians (inside wiremen)	0 90
Firemen, stationary	0 50
Hoist operators—gas. or electric	0 55
Labourers	0 45
Lathers, metal	0 90
Lathers, wood	0 75
Machinists	0 70
Motor truck driver	0 50
Motor truck driver and truck:	
1 to 2 tons	1 50
3 tons	2 00
4 tons	2 50
5 tons	3 00
Ornamental iron workers	0 75
Painters and glaziers	0 80
Plasterers	0 90
Plasterers' helpers (mixing and tempering material)	0 60
Plumbers and steamfitters	0 95
Plumbers' and steamfitters' helpers (all men assigned to help tradesmen)	0 50
Roofers—felt and gravel	0 50
Rodmen—reinforced steel	0 55
Sheet metal workers	0 80
Shovel operators—gas	1 00
Steam shovel engineers	1 00
Steam shovel cranemen	0 75
Steam shovel firemen	0 60
Stonecutters	1 00
Structural steel workers	0 85
Welders on steel erection	0 85

Engineers, locomotive crane	0 70
Firemen—stationary	0 45
Hoist operators—gas. or electric	0 50
Labourers	0 40
Lathers, metal	0 60
Lathers, wood	0 55
Machinists	0 65
Mastic floor spreaders and layers	0 70
Mastic floor rubbers and finishers	0 55
Mastic floor kettlemen	0 55
Mastic floor labourers	0 45
Motor truck driver	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Painters—spray	0 65
Painters and glaziers	0 55
Pipe fitters (surface—temporary work)	0 55
Pipe layers, caulkers and solderers	0 50
Plasterers	0 90
Plasterers' helpers (mixing and tempering material)	0 45
Plumbers and steamfitters	0 70
Riggers (general)	0 50
Roofers—composition	0 50
Roofers—felt and gravel; patent	0 45
Rodmen—reinforcing steel	0 50
Sheet metal workers	0 65
Structural steel workers	0 75
Tractor operators	0 50
Watchman	0 35
Welders and burners—acetylene or electric	0 65
Welders and burners—on steel erection	0 75

Construction of an extension to the boiler house at Berth 13, Saint John, N.B. Name of contractors, the Acme Construction Co., Saint John, N.B. Date of contract, September 13, 1938. Amount of contract, $10,868. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 90
Brick and hollow tile layers' helpers (mixing and tempering mortar	0 45

	Per hour
Carpenters and joiners	0 60
Cement finishers	0 70
Cement and concrete mixer operators (gas. or electric)	0 50
Compressor operators (gas. or electric)	0 50
Crane operators (gas. or electric)	0 55
Drivers	0 40
Driver, horse and cart	0 55
Driver, team and wagon	0 75
Electricians (inside wiremen)	0 65
Engineers, operating, steam:	
Single or double drums	0 65
Three or more drums	0 75
Engineers on steel erection	0 75
Firemen, stationary	0 45
Hoist operators (gas. or electric)	0 50
Labourers	0 40
Machinists	0 65
Millwrights	0 65
Motor truck drivers	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Painters (spray)	0 65
Painters and glaziers	0 55
Pipe fitters (surface—temporary work)	0 55
Pipe layers, caulkers and solderers	0 50
Plumbers and steamfitters	0 70
Riggers (general)	0 50
Roofers—composition	0 50
Roofers—felt and gravel, patent	0 45
Rodmen—reinforced steel	0 50

Terrazzo layers	1 00
Terrazzo finishers and helpers	0 60
Tile setters	1 00
Tile setters' helpers (all men assigned to help tradesmen)	0 42½
Watchman	0 35

Construction of repairs to the wharf at Kincolith, B.C. Name of contractors, Messrs. John Currie & Son, Prince Rupert, B.C. Date of contract, September 21, 1938. Amount of contract, approximately $3,363. A fair wages schedule was included in the contract as follows:—

	Per hour
Pile driver foreman	$1 25
Pile driver engineer	1 12½
Pile driver man	1 00
Boomman	1 00
Bridgeman	1 00
Fireman	0 68¾
Labourer	0 45

Renewal of approach etc. at the landing at Haysport, B.C. Name of contractors, Messrs. John Currie and Son, Prince Rupert, B.C. Date of contract, September 21, 1938. Amount of contract, approximately $2,960. A fair wages schedule was included in the contract as follows:—

	Per hour
Pile driver foreman	$1 25
Pile driver engineer	1 12½
Pile driver man	1 00
Boomman	1 00
Bridgeman	1 00
Fireman	0 68¾
Labourer	0 45

Renewal of protection work at Blairmore, Alta. Name of contractor, Mr. John S. D'Appolonia, Coleman, Alta. Date of contract, September 6, 1938. Amount of contract, approximately $7,112.15. A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmith	$0 60
Carpenter	0 70
Cement and concrete mixer operator:	
Steam	0 65
Gas. or electric	0 45
Labourer	0 40
Motor truck driver	0 40
Motor truck driver and truck:	
1 to 2 tons	1 40
Driver, horse and cart	0 50
Driver, team and wagon	0 65
Driver	0 40
Rodman, reinforcing steel	0 45
Watchman	0 35

Repairs to Queen's wharf at Summerside, P.E.I. Name of contractors, North Shore Construction Co., Ltd., Montreal, P.Q. Date of contract, September 16, 1938. Amount of contract, approximately $11,793.20. A fair wages schedule was included in the contract as follows:—

	Per hour
Carpenters	$0 50
Hoist operator—gas. or electric	0 40
Eingineers, operating, steam (single or double drums)	0 55
Firemen, stationary	0 35
Labourers	0 30
Driver	0 30
Driver, horse and cart	0 45
Driver, team and wagon	0 55
Motor truck driver	0 35
Motor truck driver and truck:	
1 to 2 tons	1 35
3 tons	1 85
Timbermen and cribmen (measuring scribing and, by the use of the axe, adze, etc., cutting and fitting timber)	0 37½
Watchman	0 30

Reconstruction of the wharf at Ste. Emelie, P.Q. Name of contractor, Mr. J. Ernest Fleury, Three Rivers, P.Q. Date of contract, September 6, 1938. Amount of contract, approximately $32,379.40. A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmiths	$0 50
Bluacksmith's helpers	0 35
Boatmen (rowboats)	0 30
Carpenters and joiners	0 50
Compressor operator (gas. or electric)	0 40
Cement and concrete mixer operator:	
Steam	0 55
Gas. or electric	0 40
Drill runner	0 40
Driver, horse and cart	0 45
Driver, team and wagon	0 55
Driver	0 30
Motor truck driver	0 35
Motor truck driver and truck:	
1 to 2 tons	1 35
3 tons	1 85
4 tons	2 35
Engineers (steam)	0 55
Hoist operators (gas.)	0 40
Labourers	0 30
Machinists	0 55
Powderman	0 40
Watchman	0 25
Pile driver foreman	0 65
Pile driver engineer	0 55
Pile driver boomman	0 37½
Pile driver bridgemen	0 37½
Pile driver men	0 37½
Pile driver firemen	0 35

Repairs to the breakwater at Red River Mouth, Man. Name of contractors, Nelson River Construction Ltd., Winnipeg, Man. Date of contract, September 21, 1938. Amount of contract, approximately $31,368.22. A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmith	$0 60
Blacksmith's helper	0 40
Carpenter	0 70
Hoist operator—gas. or electric	0 45
Labourer	0 35
Pile driver foreman	0 75
Pile driver engineer	0 65
Pile driver fireman	0 45
Pile driver boommen	0 50
Pile driver bridgemen	0 50
Timberman and cribman (measuring, scribing and, by the use of axe, adze, etc., fitting and cutting timber)	0 50
Cement and concrete mixer operator—gas. or electric	0 45
Watchman	0 30
Driver	0 35
Driver, team and wagon	0 65
Driver, horse and cart	0 50
Pile driver derrick engineer	0 65
Pile driver derrick men	0 50
Pile driver derrick fireman	0 45

Re-establishment to grade and rectification of a section of the rubble mound breakwater in the harbour at Port Arthur, Ont. Name of contractors, Canadian Dredge and Dock Co., Ltd., Toronto, Ont. Date of contract, September 2, 1938. Amount of contract, approximately $99,996. A fair wages schedule was included in the contract as follows:—

	Per month and room and board
Dredge captain (dipper dredge)	$200
Dredge engineer (dipper dredge)	160
Craneman (dipper dredge)	140
Fireman (dipper dredge)	60
Oiler (dipper dredge)	60
Tug captains	*145-180
Chief marine engineer (Class 2)	170
Second marine engineer (Class 2)	140
Chief marine engineer (Class 3)	165
Second marine engineer (Class 3)	130
Chief marine engineer (Class 4)	150
Second marine engineer (Class 4)	120
Chief marine engineer on vessels requiring engineers with less than 4th class certificates	135
Fireman	65
Oiler	70
Deckhands	50
Cook	80
	Per day
Diver (full day's pay to be allowed whether employed full or part time)	$14 00
Diver's tender (full day's pay to be allowed whether employed full or part time)	5 00
	Per hour
Shovel operator	0 90
Shovel craneman	0 70
Shovel fireman	0 55
Derrick runner, steam	0 65
Derrick fireman	0 45
Dinkey engineer	0 65
Dinkey fireman	0 45
Pile driver foreman	0 80
Pile driver engineer	0 70
Pile driver crew	0 50

* According to nominal horse-power of vessels as described in classification of the National Association of Marine Engineers of Canada.

	Per hour
Pile driver fireman	0 45
Labourers	0 40
Motor boat operator	0 45
Carpenter	0 70
Blacksmith	0 60
Blacksmith's helper	0 45
Drill runners, machine	0 50
Powdermen	0 50
Driver	0 40
Driver, horse and cart	0 55
Driver, team and wagon	0 75
Motor truck driver	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Timbermen and cribmen (measuring, scribing and, by the use of the axe, adze, etc., cutting and fitting timber)	0 50

Department of Public Works

Construction and installation of metallic fittings in the Records Storage Building at the Experimental Farm, Ottawa, Ont. Name of contractors, The Office Specialty Mfg. Co., Ltd., Newmarket, Ont. Date of contract, September 21, 1938. Amount of contract, $53,622.

Construction and installation of interior fittings in the public building at Innisfree, Alta. Name of contractors, The Office Specialty Mfg. Co., Ltd., Newmarket, Ont. Date of contract, September 22, 1938. Amount of contract, $888.

Construction and installation of interior fittings of wood, bronze, etc. in the public building at Kitchener, Ont. Name of contractors, The Interior Hardwood Co., Ltd., Kitchener, Ont. Date of contract, August 22, 1938. Amount of contract, $8,989.

SPECIAL CONTRACTS

Manufacture, Overhaul and Reconditioning of Aircraft

NOTE.—The labour conditions applicable to contracts under the above heading are identical with those for building and construction work, except that one scale of minimum wage rates has been approved for all works of this nature undertaken in Eastern Canada (Ontario, Quebec and the Maritime Provinces) and another scale for all such works in Western Canada (Manitoba, Saskatchewan, Alberta and British Columbia). It is provided in these contracts that working hours shall not exceed 48 per week.

DEPARTMENT OF NATIONAL DEFENCE

Major reconditioning of Tiger Moth Landplane. Name of contractors, DeHavilland Aircraft of Canada, Ltd., Toronto, Ont. Date of contract, September 7, 1938. Amount of contract, $1,556.12. A fair wages schedule was included in the contract as follows:

	Per hour
Engine assembly—	
Fitter (A.E.)	$0 60
Fitters' helper (A.E.)	0 40
Machinist	0 65
Machinist's helper	0 40
Machine operators	0 50
Sandblasters	0 55
Labourers	0 35
Air frame construction and assembly—	
Fitter (A.F.)	0 60
Fitter's helper (A.F.)	0 40
Machinist	0 65
Machinist's helper	0 40
Machine operator	0 50
Woodworker (joiner)	0 60
Woodworker's helper	0 40
Welder	0 60
Welder's helper	0 40
Electrician	0 65
Electrician's helper	0 40
Painter and doper	0 55
Painter and doper's helper	0 40
Fabric worker—female	0 40
Fabric worker's helper	0 30
Upholsterer	0 55
Upholsterer's helper	0 40
Sandblaster	0 55
Labourer	0 35
Erector	0 60
Erector's helper	0 40
Sheet metal worker	0 60
Sheet metal worker's helper	0 40
Riveters	0 50
Riveter's helpers	0 40
Apprentices to fitters, machinists, and sheet metal workers only—(16 to 21 years of age)—	
1st year	0 20
2nd year	0 25
3rd year	0 35

NOTE.—Only one helper to be employed to each journeyman.

No more than one apprentice to be employed to each five journeymen.

Major reconditioning of Atlas A/C Landplane. Name of contractors, Ottawa Car Mfg. Co., Ltd., Ottawa, Ont. Date of contract, September 1, 1938. Amount of contract, $6,677. The preceding fair wages schedule was also included in this contract.

Complete overhaul of Jaguar Engine Mark IV. Name of contractors, Ottawa Car Mfg. Co., Ltd., Ottawa, Ont. Date of contract, September 6, 1938. Amount of contract, $1,668. The preceding fair wages schedule was also included in this contract.

Complete reconditioning and modification of Fairchild 71 Monoplane. Name of contractors, Fairchild Aircraft Ltd., Longueuil, P.Q. Date of contract, September 19, 1938. Amount of contract, $5,773.80. The preceding fair wages schedule was also included in this contract.

Certain modifications and additional work on 18 Wapiti aircraft. Name of contractors, Ottawa Car Mfg. Co., Ltd., Ottawa, Ont. Date of contract, September 27, 1938. Amount of contract, $14,984.56. The preceding fair wages schedule was also included in this contract.

Manufacture of a quantity of fabric and other spares for the upkeep and running maintenance of Bolingbroke aircraft in the Royal Canadian Air Force. Name of contractors, Fairchild Aircraft Ltd., Longueuil, P.Q. Date of contract, September 29, 1938. Amount of contract, $8,000. The preceding fair wages schedule was also included in this contract.

Manufacture of fabric spares for Bolingbroke aircraft. Name of contractors, Fairchild Aircraft Ltd., Longueuil, P.Q. Date of contract, September 29, 1938. Amount of contract, $25,000. The preceding fair wages schedule was also included in this contract.

Complete overhaul of Wright engine. Name of contractors, Canadian Wright Ltd., Montreal, P.Q. Date of contract, September 14, 1938. Amount of contract, $1,326.85. The preceding fair wages schedule was also included in this contract.

Manufacture of spare parts for Stranraer Boat Seaplanes. Name of contractors, Canadian Vickers Ltd., Montreal, P.Q. Date of contract, September 29, 1938. Amount of contract, $18,268.55. The preceding fair wages schedule was also included in this contract.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

INDUSTRIAL agreements and schedules of wages and working conditions received in the Department are outlined in the Labour Gazette from month to month. It is not always possible because of limitation of space to include all agreements received each month. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of employers and workers are also included. Verbally accepted agreements are so indicated.

Manufacturing: Printing and Publishing

Toronto, Ontario.—Publishers of Two Daily Newspapers and the International Typographical Union, No. 5 (Mailers).

Agreement to be in effect from June 1, 1938 to May 31, 1941.

This agreement is similar to the one previously in effect and summarized in the Labour Gazette, November, 1937, page 1268 with these exceptions:

Hours to continue as before until May 31, 1939, that is, 8 per day for day work and 7 per night for night work, a 48 hour week for day work and 42 hour week for night work. From June 1, 1939 (or from a previous date if mutually agreed on), each man to work only five days or five nights per week.

Wages for journeymen mailers: from June 1, 1938, to May 31, 1939, $43.50 per week of six days or six nights (an increase of $1 per week over last year's rate); from June 1, 1939, to May 31, 1940, $39 per week of five days or five nights; from June 1, 1940 to May 31, 1941, $40.50 per week of five days or five nights.

Wages for apprentices are increased to: from $14 per week during second year to $32.50 during sixth year during the year June 1, 1938 to May 31, 1939; after June 1, 1939, when the five day week is in effect, apprentices wages to be from $10.75 during second year to $32 during sixth year.

Construction: Shipbuilding

Saint John, N.B.—Saint John Dry Dock and Shipbuilding Company Limited and the International Association of Machinists, Local 482.

Agreement to be in effect from April 1, 1938 to March 7, 1939, and thereafter from year to year subject to notice.

This agreement is similar to the one previously in effect and summarized in the Labour Gazette, April, 1935, page 375, with these exceptions:

Hours are reduced from 9 per day, 4½ on Saturdays, a 49½ hour week, to 8 per day, 4 on Saturdays, a 44 hour week.

Minimum wage rates: for machinists, 65 cents per hour (an increase of 7½ cents per hour); for helpers, 40 cents per hour (an increase of 5 cents for some helpers).

Seniority and merit to rule employment.

Collective Labour Agreements Act, Quebec

The following agreements and amendments to agreements have recently been made obligatory by Order in Council and are summarized in the next article:

Bakers, Granby.

Bakers, Hull (amendment).

Fur Workers (Industrial and Wholesale), Montreal, (amendment).

Furniture Industry, Province of Quebec, (amendment).

Railway and Tramway Car and Bus Manufacturing Industry, Province of Quebec.

Ornamental Iron and Bronze Workers, Montreal District (Building Materials Industry, Province of Quebec) (amendment).

Building Trades, Sorel.

Building Trades, Sherbrooke (amendment).

Building Trades, Montreal (amendment).

Clerks, Accountants, Stenographers, etc., Jonquière, Kenogami, Arvida and St. Joseph D'Alma (amendment).

Retail Store Clerks, Magog.

Grocers and Butchers, Sherbrooke (amendment).

Garage and Service Station Employees, Quebec (amendment).

Barbers and Hairdressers, Quebec (amendment).

Barbers and Hairdressers, St. Hyacinthe.

Barbers and Hairdressers, Hull (amendment).

Industrial Standards Acts

The following schedules have recently been made binding by Orders in Council and are noted in a special article below:

Nova Scotia

Electrical Workers, Halifax and Dartmouth.

Ontario

Plumbers, St. Thomas.

Garage Industry, St. Thomas and Elgin County.

Saskatchewan

Barbers, Rosetown.

Beauty Culture Industry, Rosetown.

COLLECTIVE LABOUR AGREEMENTS ACT, QUEBEC

Recent Proceedings Under the Act

THE Collective Labour Agreements Act which was assented to March 18, 1938, amends the Act respecting Workmen's Wages, 1937, by changing the title of the Act and by certain other changes which are summarized in the May issue of the Labour Gazette, page 503. Agreements and regulations under the Act respecting Workmen's Wages and under the original Act, "The Collective Labour Agreements Extension Act, 1934," continue in effect for the period for which they were made or have been renewed or amended. Under the Collective Labour Agreements Act, any party to a collective agreement made between the representatives of an association of employees and the representatives of an association of employers or one or more employers may apply to the Lieutenant-Governor in Council through the provincial Minister of Labour to have those terms of such agreements which govern wages, hours of labour, apprenticeship, classification of operations, determination of classes of employers and employees and all such provisions as the Lieutenant-Governor in Council may deem in conformity with the spirit of the Act, made obligatory on all employers and employees in the trade, industry, commerce or occupation within the district determined in the agreement. Notice of such application is published and thirty days is then allowed for filing of objections and the Minister may hold an inquiry. After this period, if the Minister considers that the terms of the agreement "have acquired a preponderant significance and importance" and that it is advisable, with due regard to economic conditions, an Order in Council may be passed granting the application, and making the provisions of the agreement obligatory from the date of publication of the Order in Council in the *Quebec Official Gazette* or its provisions may be made retroactive for a period not exceeding four months. The Order in Council may be amended or revoked at any time by the Lieutenant-Governor in Council and such amendment or revocation must be published in the *Quebec Official Gazette*. Unless otherwise stipulated, these agreements do not apply to provincial government departments or services or to work done by a third party for the provincial government under a contract providing for a scale of minimum wages. A joint committee must be formed by the parties to an agreement made obligatory under this Act and the Minister may add to such committee representatives nominated by employers and employees not parties to the agreement. The committee is to make its own by-laws and when these are approved by Order in Council and published in the *Quebec Official Gazette,* the committee is constituted a corporation. A joint committee may require certificates of competency from workers within the scope of the agreement in towns of 5,000 or more, and such by-law must be approved by Order in Council and published in the *Quebec Official Gazette*. Proceedings under the Collective Labour Agreements Extension Act were summarized in the Labour Gazette from June, 1934, to July, 1937. Proceedings under the Workmen's Wages Act were noted in the issues from July, 1937, to April, 1938. Proceedings under the Collective Labour Agreements Act are noted in the issues beginning May, 1938.

Recent proceedings under the Act include: the extension by Orders in Council of agreements affecting bakers and pastry cooks at Granby, rail and tram car manufacturing throughout the Province, building trades at Sorel, retail store clerks at Magog and barbers and hairdressers at St. Hyacinthe all of which are summarized below; and amendments to several other agreements which are also summarized below. Requests for the extension of new agreements affecting the manufacture of cans, etc., throughout the Province, garage and service station employees in the eastern townships and barbers at St. Jerome were published in the September 3 issue of the *Quebec Official Gazette* and one affecting barbers at Joliette in the issue of September 10. A correction to the Order in Council affecting building trades at Montreal is also noted below. In addition, Orders in Council were passed approving the constitution and by-laws of certain joint committees and others making competency certificates obligatory as listed below.

Manufacturing: Vegetable Foods, etc.

Bakers, Granby.—An Order in Council, approved September 10, and published in the *Quebec Official Gazette* September 17 makes obligatory the terms of an agreement between three bakeries and Le Syndicat des Employés de la Boulangeries et de la Pâtisserie, Inc. de Granby, (The Union of Bakery and Pastry Employees of Granby).

The Order in Council is to be in effect from September 17, 1938, to September 16, 1939, and thereafter from year to year subject to notice, and includes all bakery and pastry shops in the town of Granby and within five miles of

it and also such shops outside this area who sell part or all of their production within this area.

Hours are limited to 60 per week.

Overtime: time and one-half.

Minimum weekly wages for bakeries are: $12 per week for lowest paid baker, $15 for first baker in bakeries employing two or three bakers, $15 second baker in bakeries employing four or more men, $22 for first baker in bakeries employing four or more men. Minimum weekly wage for pastry cooks and biscuit makers; $20 for first pastry cook or biscuit baker and $15 for second pastry cook. Packers and loaf checkers, $10. Jobbers or peddlers of bread or pastry $15 per week with all expenses of delivery and wages of helpers being paid by employer, helpers to be paid $6 per week. Any extra employee working less than 30 hours a week to be paid at least 25 cents per hour.

One apprentice of each class allowed bakers employing two men or more.

If employee is lodged or boarded by employer, he may not be charged more than $5 per week in town and $3 in country.

Bread, cakes and pastry distributors are not responsible for the collection of money, but only for the money collected.

Children less than 16 years of age may not work in bakeries, pastry shops or on delivery vehicles.

Bakers, Hull.—An Order in Council, approved September 2, and published in the *Quebec Official Gazette* September 10, amends the previous Orders in Council for this trade (Labour Gazette, June, 1935, page 531 and October, 1935, page 954) by replacing clause II (*e*) relating to "confectioners" by a provision whereby pastry cooks journeymen must be paid a minimum of $20 per week and pastry cook foremen $28. Apprenticeship for pastry cooks to be four years with wages from $6 per week during first year to $15 during fourth year and the proportion of apprentices to journeymen pastry cooks is limited.

Manufacturing: Fur, Leather and Miscellaneous Animal Products

Fur Workers (Industrial and Wholesale) Montreal.—An Order in Council, approved September 2, and published in the *Quebec Official Gazette* September 10, and another Order in Council, approved September 10, and published in the September 17 issue, amend the original Order in Council for this industry (Labour Gazette, September, page 1043).

The original Order in Council stated that it did not apply to the fur trimming and dyeing industry. This restriction is now replaced by one which excludes instead the fur dressing and dyeing industry and "establishments performing works pertaining to the said industry."

In the wage scale: finishers (first and second class) are replaced by "finishers, female" (first and second class) with the same wage rates of $19.50 to $15.50 respectively; the rate of second class examiners is changed from $21.50 to $14 per week.

Manufacturing: Miscellaneous Wood Products

Furniture Industry, Province of Quebec.—Two Orders in Council, one approved September 2 and published in the *Quebec Official Gazette* September 10, and a second approved September 16 and published in the issue of September 24, amend the original Order in Council for this industry (Labour Gazette, December, 1937, page 1386 and February, 1938, page 214) by excluding the manufacture of coat hangers and shoe trees.

Manufacturing: Metal Products

Railway and Tramway Car and Bus Manufacturing Industry, Province of Quebec.—An Order in Council, approved September 2 and published in the *Quebec Official Gazette*, September 10, makes obligatory the terms of an agreement between the Canadian Car and Foundry Company, Limited and the Association of Canadian Car and Foundry Employees of Turcot and Dominion Works.

The Order in Council applies throughout the Province of Quebec to the manufacturing operations relating to the making of railway passenger and freight cars, busses, tramway cars, mine cars, industrial cars and parts and accessories thereof, and is to be in effect from September 10, 1938 to September 9, 1939 or for a further 30 days if negotiations are in progress at expiration date.

Hours: 9 per day or shift except Saturday when 5 hours to be worked, a 50 hour week, with the exception of the following classes: power house firemen and engineers, watchmen, locomotive engine crews and sprinkler and heating system attendants.

Overtime: time and one-half, such overtime rates not to apply to watchmen and sprinkler and heating system attendants; for power-house employees, overtime rates apply after 56 hours in one week; for yard engine crews, overtime rates after 11 hours in one day, engine crews to be paid for lunch period at regular hourly rates. Overtime rates do not apply to piece workers. Work on Sundays or eight specified holidays, double time except for watchmen, sprinkler and heating system attendants and power-house employees.

At the option of the employer, the nature of employment shall be either by the hour or by the piece.

Workers when of equal ability, are to be employed according to seniority.

The bonus system at Turcot Works is abolished and adjustment made in the minimum wage rates.

The wage schedule which is included in the Order in Council provides for a minimum wage for the majority of skilled trades of between 50 and 70 cents per hour, for helpers 40 to 50 cents and for labourers 35 and 40 cents. Among the wage rates are blacksmiths at 60 to 70 cents, die and tool makers 70 cents, machinists 65 to 80 cents, plumbers and pipe fitters 65 and 75 cents, welders 60 to 70 cents, reamers 50 cents, riveters and caulkers 70 cents, carpenters 60 and 70 cents.

Handicapped workers may be employed at lower than regular rates, such lower rates to be determined by the joint committee.

Wages for machinist apprentices: from 35 cents during first year to 70 cents during fifth year.

Manufacturing: Metal Products

ORNAMENTAL IRON AND BRONZE WORKERS, MONTREAL DISTRICT (BUILDING MATERIALS INDUSTRY, PROVINCE OF QUEBEC).—An Order in Council, approved September 2 and published in the *Quebec Official Gazette*, September 10, amends the previous Orders in Council for this industry (LABOUR GAZETTE, June, 1937, page 694, September, page 1034 and December, page 1387 and also August, 1937, page 921) by making certain changes in the section relating to ornamental iron and bronze workers in the Montreal district:

This section of the agreement, as amended is in effect from April 1, 1938, to March 31, 1939, and for a further 30 days pending the adoption of a new Order in Council to replace it.

The territorial jurisdiction is the same as that previously noted in the August, 1937, LABOUR GAZETTE, page 921, with the exception of the County of Verchères which is now omitted.

Previously only shop work was included. Under the new amendment, the terms of the agreement apply to erection work as well as shop.

Hours are the same as previously 8 per day (from 8 a.m. to noon and from 1 p.m. to 5 p.m.) and 4 hours on Saturday (from 8 a.m. to noon). Any special or emergency work which cannot be done in regular hours may be done at other hours with permit from the joint committee and be paid at regular wage rates.

Overtime: time and one-half for all other work outside regular hours and till midnight; thereafter, and all work on Sundays and seven specified holidays, double time.

Minimum hourly wage rates: the rates of 66 cents for mechanics, 55 cents for fitters and 45 cents for helpers remain in effect, and two new classes are added: erectors at 66 cents and erectors' helpers at 50 cents. In all establishments under the agreement, 17 per cent of the employees to receive 66 cents per hour, 33 per cent 55 cents and remaining 50 per cent 45 cents.

Employees called to work outside the city of Montreal to have their board, lodging, transportation and travelling time paid for by the employer.

Apprentice mechanics in the shop must be at least 16 years and not more than 21 years of age when they begin. They shall serve for four years, that is 208 weeks, with one apprentice allowed for every seven employees in a shop, with one allowed in a shop of less than seven employees. Apprentice mechanics in shops to be paid from 25 per cent of journeymen's rate during first six months to 75 per cent during fourth year. For erection work, apprentices to qualify as helpers after a 6-month probation during which they are to receive 45 cents per hour.

In case of disputes between the parties, men will not be withdrawn from shops fully observing the conditions of the agreement.

Manufacturing: Non-Metallic Minerals

BUILDING MATERIALS INDUSTRY, PROVINCE OF QUEBEC.—The section of this agreement (LABOUR GAZETTE, June, 1937, page 694, September, page 1034 and December, page 1387) which deals with ornamental iron and bronze workers in the Montreal district has been amended as noted above under "Manufacturing: Metal Products."

Construction: Buildings and Structures

BUILDING TRADES, SOREL.—An Order in Council approved September 2, and published in the *Quebec Official Gazette*, September 10, makes obligatory the terms of an agreement between certain contractors, Le Conseil de la Ville de Sorel (the City Council of Sorel) and le Syndicat National et Catholique de Métiers de la Construction de Sorel, Inc. (the National Catholic Union of Building Trades of Sorel, Inc.).

The Order in Council is in effect from September 10, 1938, and from year to year thereafter subject to notice.

Territorial jurisdiction includes the city of Sorel and within 6 miles of its limits.

Hours: 8 per day, a 48 hour week.

Daily overtime, time and one-half. All work on Sundays and twelve specified holidays double time.

Rates of wages:

Trades	*Hourly rates*
Bricklayers, plasterers, masons and cement finishers:	
Contractors (personal services)	$0 75
Journeymen	0 60
Carpenters-joiners:	
Contractors (personal services)	0 75
Journeymen	0 50
Setters of screens (wood or metal) framework, window, steel division	0 50
Painters and paperhangers:	
Contractors (personal services)	0 75
Journeymen	0 45
Painters-sprayers	0 60
Pipe-mechanics:	
Contractors (personal services)	0 75
Journeymen	0 50
Junior journeymen, 1st 6 months	0 35
Junior journeymen, 2nd 6 months	0 45
Electricians:	
Contractors (personal services)	0 75
Journeymen	0 50
Steam stationary or portable enginemen	0 75
Boiler firemen	0 45
Steam mixers operators	0 50
Steam crane operators	0 55
Electrical and gas crane operators	0 55
Marble setters	0 55

Foremen supervising a shift of men shall be paid ten cents an hour more than the rate fixed for their trade.

Apprentice's wage rates: For bricklayers, plasterers, masons, marble setters, tile and terrazzo setters from 20 cents per hour in first year to 40 cents per hour in fourth year. For carpenter-joiners, painters and upholsterers, electricians, plumbers, tinsmith roofers from 10 cents per hour during first year to 25 cents per hour during fourth year.

Maintenance men are skilled tradesmen or unskilled workmen of the building trades employed throughout the year by the same employer for the upkeep of a building. No new construction, reconstruction or reinstallation of a unit of a building shall be construed as maintenance work.

Rates for maintenance men in churches, schools, colleges, hospitals, etc.:

Journeymen:	Per week
Town of Sorel	$20 00
Municipality of the parish of St. Joseph	12 00
All other municipalities	12 00
Labourers:	
Town of Sorel	15 00
Municipality of the parish of St-Joseph	10 00
All other municipalities	8 00

Maintenance men employed in public buildings or "concierge offices" or a dwelling of any kind, hotels, manufacturing establishments and stores shall be paid the following minimum rates of wages:

Journeymen:	Per week
Town of Sorel	$22 00
Municipality of the parish of St. Joseph	12 00
All other municipalities	12 00
Labourers:	
Town of Sorel	17 00
Municipality of the parish of St. Joseph	12 00
All other municipalities	10 00

Apprenticeship: Apprentices shall be between 16 and 25 years of age and shall serve for a period of 48 months, except that where an apprentice attends an industrial or trade school one hour of study shall be equivalent to one hour of apprenticeship provided studies and work are being carried out at the same time.

In the trades of bricklayer, plasterer, mason, carpenter, joiner and painter there shall be only one apprentice per five journeymen or fraction thereof.

Where workers are given room or board by their employers the latter may charge $1 per room per week or $2 per room per month in the case of maintenance men and 25 cents per meal.

Workers employed away from their homes shall be paid transportation cost but shall not be paid for travelling time.

Any higher wages now paid to workers governed by the present agreement are not to be reduced after this agreement goes into effect.

Building Trades, Sherbrooke.—An Order in Council, approved September 10, and published in the *Quebec Official Gazette*, September 17, amends the previous Order in Council for these trades (Labour Gazette, June, page 693).

Carpenters in the city of Drummondville and within five miles of its limits to be paid minimum rates of 40 to 45 cents. The special rate for pipe mechanics and tinsmith roofers in Drummondville is cancelled.

Ornamental Iron and Bronze Workers, Montreal.—Ornamental iron and bronze workers on erection work are included in the amendment summarized above under Manufacturing: Metal Products.

Building Trades, Montreal.—A correction to the previous Order in Council for these trades (Labour Gazette, August, page 945) was published in the *Quebec Official Gazette*, September 17:

In the wage schedule, the class "masons (stone and cutters on the field)" is corrected to read "masons (stone) and cutters on the job."

Trade

Clerks, Accountants, Stenographers, Etc., Jonquière, Kenogami, Arvida and St. Joseph D'Alma.—An Order in Council, approved September 2, and published in the *Quebec Official Gazette*, September 10, amends the previous Order in Council (Labour Gazette, December, 1937, page 1388 and March, 1938, page 335) by excluding from the terms of the agreement industrial or commercial establishments which are already or will become governed by a collective labour agreement under the Professional Syndicate Act.

Retail Store Clerks, Magog.—An Order in Council approved September 16 and published in the *Quebec Official Gazette*, September 24, makes obligatory the terms of an agreement between le Syndicat Catholique et National des Commis de Magog (the National Catholic Union of Clerks of Magog) and several employers.

The agreement is to be in effect from September 24, 1938, until June 1, 1939 and shall renew itself automatically for another year unless one of the parties thereto gives notice before March 1 of its intention to repeal or modify it.

The territorial jurisdiction comprises the city of Magog and territory within two miles of the city.

The agreement covers all employees engaged in baking, butchering, ice-making or soft drink manufacture or in selling or delivering for establishments engaged in any branch of retail trade.

Hours: In industrial establishments, sixty per week without a daily limit on the working day. In retail stores, sixty-five per week between 7.30 a.m. and 6.30 p.m. on Monday, Tuesday, Wednesday and Thursday and between 7.30 a.m. and 10 p.m. on Fridays and Saturdays. From December 15 to January 1 the stores may be kept open until 10 p.m. and until 11 p.m. on the eves of Christmas and New Year's Day. In hotels, restaurants, drug stores and pool halls, seventy per week without daily limit. No work on Sundays or on ten specified holidays except that bakers shall work on those days if their services are required.

Licensed grocers shall follow the hours set by the Quebec Liquor Commission but may only

sell groceries during the hours allowed by the agreement.

Wages: In bakeries: baker-pastry cook 29 cents per hour, first baker 24 cents per hour, second baker 18 cents per hour, apprentices from 12 cents per hour during first six months to 18 cents during the period from the forty-second to the sixtieth month, deliverer 25 cents per hour, deliverer's helper 10 cents per hour.

In grocery-butcher shops: first butchers $20 per week, second butchers $15 per week, apprentices from $7 per week during first year to $15 per week during fifth year, deliverer-butcher $18 per week, deliverer $15 per week, deliverer taking care of horse $16 per week, deliverer with bicycle or small wagon $6.50 per week, deliverer with tricycle $8 per week. In soft drink bottling plants: first mixer and bottler $15 per week, mixer and bottler helpers $10.80 per week, deliverer $15 per week and deliverers' helpers $12 per week. In natural ice storages: ice cutting workmen $15 per week, deliverer $15 per week, deliverers' helpers $12 per week. In retail stores: Clerks are designated as first, second, third or fourth clerk with weekly rates starting at $8 for the first year for all grades and rising in the fifth year to $15, $14, $13.50 and $13 for the four classes respectively. After five years all clerks shall receive a minimum of $15. Seamstresses in men's or ladies' clothing stores $12 for a 48 hour week. In hotels and restaurants: waiters, waitresses, fountain or cabaret employees, 13 cents per hour; cooks, 14 cents per hour; kitchen help 10 cents per hour.

In all the above categories managers shall receive at least $35 per week; assistant managers $18 per week or $9.60 for a week of 48 hours, bookkeepers $10.80 per week of 54 hours, $12 for a week of 60 hours or 25 cents per hour; messengers or bill distributors 10 cents per hour.

Part time employees shall receive 25 cents per hour.

Wages paid since January 1, 1938, which are higher than those set forth in the agreement shall continue in force during the term of the agreement.

Vacation: After one year's service employees shall be entitled to six days vacation without pay.

All employees must be registered at the Joint Committee.

Grocers and Butchers, Sherbrooke.—An Order in Council, approved September 2, and published in the *Quebec Official Gazette,* September 10, amends the original Order in Council (Labour Gazette, September, page 1045) by making it retroactive to May 16, 1938.

Service: Custom and Repair

Garage and Service Station Employees, Quebec.—Two Orders in Council dated September 2, and published in the *Quebec Official Gazette,* September 10, amend the previous Order in Council (Labour Gazette, June, page 696) the first by providing that half the cost of uniforms required by the employer be paid by the employer and half by the employee and the second Order in Council making a correction in one clause which does not affect the summary as previously given.

Service: Business and Personal

Barbers and Hairdressers, Quebec.—An Order in Council, approved September 1, and published in the *Quebec Official Gazette,* September 10, amends the previous Orders in Council for these trades (Labour Gazette, October, 1937, page 1158 and December, page 1388) by adding to the four existing zones, a fifth zone consisting of the town of Montmagny and within 4 miles of its limits, with the same wage rates as zone IV, that is $12 per week plus 50 per cent commission on receipts over $22 made by the journeymen in the week. Hours distributed from 8 a.m. to 6 p.m. on Mondays, from 8 a.m. to 8 p.m. on Tuesdays, Wednesdays and Thursdays, from 8 a.m. to 9 p.m. on Fridays and from 8 a.m. to 11 p.m. on Saturdays. During June, July and August, shops may open at 7.30 a.m. A schedule of minimum prices which must be charged in zone V is included.

Wages of female employees in beauty parlours to be as provided in ordinances under the Fair Wages Act.

Barbers and Hairdressers, St. Hyacinthe.—An Order in Council, approved September 2, and published in the *Quebec Official Gazette,* September 10, with correction published in the issue of September 24, makes obligatory the terms of an agreement between Le Syndicat National Catholique des Maîtres-Barbiers et Coiffeurs de St. Hyacinthe (the National Catholic Union of Barbers and Hairdressers of St. Hyacinthe) and Le Syndicat National Catholique des Employés Barbiers et Coiffeurs de St. Hyacinthe (The National Catholic Union of Employed Barbers and Hairdressers of St. Hyacinthe).

The Order in Council to be in effect from September 10, 1938, to September 9, 1939, and until a new agreement comes into force.

The territorial jurisdiction includes the towns of St. Hyacinthe, Drummondville, Granby, Sorel and within two miles of their limits, and the county of Rouville.

Hours: 59 per week, with a variation in the shop hours specified for the different towns.

Overtime: any hairdresser for ladies who must work more than half an hour after closing hour to finish work begun before the closing hour, to be paid at the rate of 50 cents per hour.

Minimum wages for barbers and hairdressers for men: at St. Hyacinthe, and Granby $14 per week plus 50 per cent on all gross receipts over $20; at Drummondville $15 per week plus 50 per cent of receipts in excess of $22, at Sorel and in the county of Rouville, $12 per week. Minimum wages female hairdressers for ladies: at St. Hyacinthe, Drummondville and Granby $12.50 per week; at Sorel, $8 per week.

Extra employees to be paid $2.50 per day for Monday to Thursday inclusive and $3.50 for Friday, Saturday or the day before a holiday. If hired by the hour, he shall receive 45 cents per hour. Handicapped workers may work for lower wage rates if the joint committee permits.

A schedule of minimum prices which must be charged customers in each town is included.

One apprentice allowed in each shop, apprenticeship to be six months at a school and 18 months in a beauty parlour. Wages for apprentices from $7 per week for second six months to $11 for fourth six months.

Barbers and Hairdressers, Hull.—An Order in Council, approved September 2 and published in the *Quebec Official Gazette,* September 10, amends the previous Order in Council (Labour Gazette, August, 1935, page 731, June, 1937, page 696 and March, 1938, page 336).

The new agreement is to be in effect from September 10 for one year and is to be renewed from year to year unless either party give notice of change to the Minister of Labour.

Under the amended Order in Council the territorial jurisdiction has been enlarged and is divided into two zones as follows: Zone 1.—The city of Hull and within ten miles of its limits. Zone 2.—The town of Buckingham and within ten miles of its limits.

Working hours shall be distributed as follows: Zone 1: From Monday to Friday from 8 a.m. to 7 p.m. On Saturday and on the eves of holidays from 8 a.m. to 10 p.m. Zone II: On Monday, Wednesday and Friday from 8 a.m. to 6 p.m On Tuesday and Thursday from 8 a.m. to 8 p.m. and on Saturday and the eves of holidays from 8 a.m. to 11 p.m.

The minimum wage for Zone I is unchanged at $16 per week plus 60 per cent of receipts in excess of $25. The minimum wage for Zone II is $13 per week plus 50 per cent of receipts in excess of $20 per week.

A schedule of prices for various jobs in the two zones is included in the Order in Council.

Joint Committees

The constitution and by-laws of the joint committees set up under the following agreements were approved by Orders in Council and published in the September 3 and September 10 issues of the *Quebec Official Gazette:*

Shoe repairers Sherbrooke.
Barbers and hairdressers, Quebec (amendment).
Building trades, Montreal.
Building trades, Counties of St. Hyacinthe and Bagot.
Fur Industry, District of Quebec.
Building trades, Hull.
Retail fur trade, Montreal and District.
Barbers and hairdressers, Rouyn and Noranda.
Grocers and butchers, Sherbrooke.
Shoe industry, Province of Quebec (amendment).
Fur industry, Montreal.

Certificate of Competency

The certificate of competency was made obligatory by Orders in Council as noted in the *Quebec Official Gazette,* September 17 and September 24, for the following trades:

Bakers and confectioners, Hull.
Building trades, Montreal.
Barbers, etc. Chicoutimi and Lake St. John regions.
Barbers, St. Hyacinthe.
Barbers, Three Rivers.
Baker and bread distributor trades, Three Rivers.
Building Trades, Hull.
Graphic Arts Industry, Quebec.
Bricklayers, plasterers and masons, Three Rivers.
Building trades, Chicoutimi.

INDUSTRIAL STANDARDS ACTS

Schedules of Wages and Hours Recently Approved by Provincial Orders in Council in Nova Scotia, Ontario and Saskatchewan

In four provinces—Ontario, Alberta, Nova Scotia and Saskatchewan—legislation provides that, following a petition from representatives of employers or employees in any industry, the Provincial Minister charged with the administration of the Act may himself, or through a government official delegated by him call a conference of representatives of employers and employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council on all employers and employees in the industry in the zone designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to assist in carrying out the provisions of the Act and the regulations. The administration and enforcement of the Act is placed in Ontario under the Industry and Labour Board, assisted by industrial standards officers; in Alberta under the Board of Industrial Relations; in Nova Scotia under the Minister of Labour, who

may appoint inspectors; in Saskatchewan under the Commissioner of Labour and Public Welfare. Reviews of these Acts and amendments have been published in the LABOUR GAZETTE, as follows: Ontario, in the issue of June, 1935, page 530, May, 1936, page 410, May, 1937, page 505, and May, 1938, page 501; Alberta, in June, 1935, page 504, June 1936, page 501, June, 1937, page 640, and June, 1938, page 633; Nova Scotia, in June, 1936, page 604; Saskatchewan, in the issue of June, 1937, page 635, and May, 1938, page 507.

Nova Scotia

Construction: Buildings and Structures

ELECTRICAL WORKERS, HALIFAX AND DARTMOUTH.—An Order in Council, dated September 9 and published in *The Royal Gazette*, September 14, makes binding the terms of a schedule governing the electrical industry in the city of Halifax and the town of Dartmouth until April 30, 1939, and thereafter from year to year, subject to notice. If such notice is given, the joint committee will meet within 30 days.

Only members of the local union 625 of the International Brotherhood of Electrical Workers to be employed.

Hours: 8 per day, 4 on Saturdays, a 44-hour week. When necessary to work more than one shift per day, men employed between 5 p.m. and 8 a.m. to be paid 8 hours' pay for 7 hours' work.

Overtime: time and one-half for first four hours; thereafter, double time. Work on Sundays and on eleven specified holidays, double time.

Minimum wage rate for journeymen electricians: 85 cents per hour. A journeyman in charge of two or more journeymen to be considered a charge hand and be paid 10 cents per hour extra.

Apprentices to be paid from 25 cents per hour during first year to 50 cents during fourth year.

Not more than one helper to be allowed to three journeymen.

For work outside the city, fare, board and travelling time to be paid by the employer.

Any grievances arising between the parties to be reported to the president or business agent of the union.

Ontario

Construction: Buildings and Structures

PLUMBERS, ST. THOMAS.—An Order in Council, dated September 7, and published in *The Ontario Gazette*, September 10, makes binding the terms of a schedule governing the plumbing and heating industry in the city of St. Thomas and the adjacent suburban area.

The Order in Council to be in effect from September 20, 1938, "during pleasure."

Hours for all employers and employees: 8 per day, 4 on Saturdays, a 44-hour week. If required to work on Saturday afternoon for the protection of life or property or the setting of sleeves and inserts, this may be done at straight time.

Overtime: time and one-half. Work on Sundays and eight specified holidays, double time.

Minimum wage rates for journeymen: 80 cents per hour. Fifth year junior mechanics to be paid two-thirds of journeymen's rate. A special minimum rate of wages may be established by the Advisory Committee for handicapped workers.

Apprentices to be governed by the Ontario Apprenticeship Act.

Service: Custom and Repair

GARAGE INDUSTRY, ST. THOMAS AND ELGIN COUNTY.—An Order in Council, dated August 18, and published in *The Ontario Gazette*, September 10, makes binding the terms of a schedule governing the garage industry in the county of Elgin and all cities and other municipalities within its boundaries from September 20, 1938, "during pleasure."

Hours: 9 per day, a 54-hour week.

Overtime and work on Sundays and eight specified holidays, time and one-half.

Minimum wages for all work done during regular working periods: 50 cents per hour. Employees who are not paid on a time basis and who are paid a percentage of the price charged for their work to the employer's customers to be paid at least 40 per cent of the prices established for such work in the 10th edition of the Motor's Flat Rate Manual (whether or not the employer charges his customer such prices) and shall be paid a minimum of $15 per week. The advisory committee may fix a lower minimum rate for handicapped workers.

Saskatchewan

Service: Business and Personal

BARBERS, ROSETOWN.—An Order in Council approved September 10, and published in *The Saskatchewan Gazette*, September 30, makes binding the terms of a schedule governing the barbering industry in the town of Rosetown from September 20, 1938, "during pleasure."

Hours to be those allowed under municipal by-law, but not to exceed 45 per week from January 1 to March 31, 49 a week from April 1 to August 15, and 54 from August 16 to December 31.

Minimum wage rates: persons given full time employment $15 per week or 60 per cent of proceeds taken in by the employee whichever is greater; persons given part time or casual employment, 30 cents per hour or 60 per cent of proceeds taken in by the employee, whichever is greater, but in no case may the hours of employment be less than three consecutive hours.

No deduction may be made from wages for materials supplied, laundry or operating expenses of any kind.

A schedule of minimum charges which may be made for each operation is included.

Beauty Culture Industry, Rosetown.—An Order in Council, dated September 10, and published in *The Saskatchewan Gazette* makes binding the terms of a schedule governing the beauty culture industry in the town of Rosetown from September 20, 1938, "during pleasure."

Shops may not open before 9 a.m. nor remain open after 6 p.m. on any day except Saturday or the day before a holiday, when they may not remain open after 10 p.m. No work on Wednesday afternoon from January 1 to August 15 except the Wednesday in a week in which a holiday occurs.

Minimum wages: any person given full time employment to be paid $12 per week of 51 hours, plus 30 cents per hour for all time in excess thereof, or 50 per cent of the proceeds taken in by the employee, whichever is greater; any person given part time or casual employment to be paid at least 30 cents per hour or 50 per cent of proceeds, whichever is greater, but in no case may employment be less than three consecutive hours.

No deduction may be made from wages for materials supplied, laundry service or other operating expenses.

A schedule of minimum prices which must be charged customers is included.

Pensions and Family Allowances in New Zealand

The fortieth annual report of the New Zealand Pensions Department, covering the period ended March 31, 1938, indicates that the total number of pensions in force on that date was 110,015, as compared with 102,974 in the previous year. Of the 1938 total, 54,953 were old age pensions; 24,096 were war pensions; 10,633 were invalidity pensions; and 6,853 were family allowances.

Family allowances claims lodged during the year totalled 1,021, which, with the 152 outstanding from the previous year, made a total of 1,173 to be dealt with. Of these, 774 were accepted and 313 rejected. Of the rejected claims 117 represent cases where the income of the family was in excess of the limit allowed. Three hundred and eighty-one new claims from Maoris were finally dealt with during the year, 244 being granted and 137 rejected.

The total children of the 6,853 allowances in force as at March 31, 1938, and those in excess of two in a family numbered 32,302 and 18,596, the average per family being 4·71 and 2·71 respectively.

The total amount paid during the year was £106,402 ($532,010), while the total annual value of all allowances in force at the close of the year was £94,168 ($470,840).

The scope of the old-age and invalidity pensions legislation has been widened during the financial year by sections 29 and 30 of the Finance Act, 1937, and by the Pensions Amendment Act, 1937.

The provisions of section 29 of the Finance Act, 1937, increased the period of absence from New Zealand allowed to an applicant for invalidity pension from six months during the preceding ten years to twelve months, plus one month's absence for every year of residence in excess of ten years.

Section 30 of the Finance Act, 1937, provided that any applicant whose incapacitating condition originated elsewhere than in New Zealand should, if actually resident in New Zealand on September 4, 1936 (the date of the passing of the Pensions Amendment Act, 1936, which enacted the original invalidity-pensions legislation), be eligible for an invalidity pension on the completion of ten years' residence, and, if not actually resident in New Zealand on that date, on the completion of twenty years' residence.

The Canadian Press reports recently that the British Columbia Workmen's Compensation Board was given authority by order-in-council "to do all such acts and things as are incidental, conducive or necessary to the proper administration" of old age pensions and pensions for the blind in the re-drafting of six regulations under the Old Age Pensions Act.

PRICES, RETAIL AND WHOLESALE IN CANADA, SEPTEMBER, 1938

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was downward, the cost of a weekly family budget of staple foods, fuel and lighting and rent and the Dominion Bureau of Statistics index number of wholesale prices being both lower than in August. The decline in the former was due to a fall in the cost of foods and in the latter mainly to lower prices for grains, chiefly wheat.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of retail prices in sixty-nine cities was $8·52 at the beginning of September as compared with $8·81 for August. Of the twenty-nine items included in this list, seventeen cost less than in the previous month, while four were higher. Changes were in the main not large, the most important being a seasonal fall in the cost of potatoes and less important decreases in meats, butter, cheese, bread and flour, with increases in eggs and milk. Comparative figures giving the cost of this list of foods for certain earlier dates are $8.72 for September, 1937; $8.28 for September, 1936; $6.67 for March, 1933 (the low point in recent years); and $11.64 for September, 1929. Including the cost of fuel and rent with that of foods the total budget cost $17.41 at the beginning of September as compared with $17.70 for August; $17.41 for September, 1937; $16.84 for September, 1936; $15.41 for June, 1933 (the low point during recent years); $21.90 for September, 1929; $20.90 for September, 1922; $26.92 for July, 1920 (the post-war peak); and $14.33 for September, 1914. Both fuel and rent were practically unchanged in cost.

In wholesale prices the Dominion Bureau of Statistics weekly index number on the base of 1926 as 100 continued downward until the week ended September 9 when the figure was 74. Some recovery followed and by the end of the month the index was 74·5 as compared with 74·6 for the week ended September 2 and 77·2 for the week ended August 5. The latest figures available on a monthly basis are for August when the index number was 76 as compared with 85 for September, 1937; 76·4 for September, 1936; 63·5 for February, 1933 (the low point in recent years), 97·8 for September, 1929; 164·5 for May, 1920 (the post-war peak); and 67·2 for September, 1914. In the classification according to chief component materials the vegetable products group showed the most movement during the month declining 3 per cent during the first two weeks and later advancing to about the same level as at the beginning of the month. The chief factors in the movement of this group were the prices of grains and milled products, chiefly wheat, prices of which were influenced by the threatened war in Europe. In the animal products group live stock and meats were lower. The prices of several non-ferrous metals advanced during the month and the index for this group rose from 69·8 at the beginning to 71·3 for the last week.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of September of seventy-two staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amount due.

The cost of a list of staple foods, fuel and lighting and rent, entering into the budget of a family of five is calculated in terms of the average prices in the cities for which reports are received and includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which figures were available when the publication of retail prices statistics was begun, that is for January, 1910, in the LABOUR GAZETTE for

February, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the calculation serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number of rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and cost of the various items from 1913 to 1926 weighted according to the importance of each item in workingmen's family expenditure and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

Retail Prices

Meat prices averaged lower at the beginning of September than in the preceding month. Sirloin steak was down from an average price of 28·6 cents per pound in August to 27·7 cents in September, rib roast of beef from 21·1 cents per pound to 20·3 cents, fresh pork from 27·4 cents per pound to 25·8 cents and breakfast bacon from 39·6 cents per pound to 38·6 cents. Eggs were higher in most localities, the prices of fresh grades averaging 36 cents per dozen in September as com-

*The figures for "all items" were calculated by giving the following weights to each group; Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

COST PER WEEK (IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA) OF CERTAIN STAPLE FOODS, FUEL AND LIGHTING, IN THE QUANTITIES STATED, AND RENT ENTERING INTO A FAMILY BUDGET.

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost or the quantities of different foods required for an average family

††An allowance for the cost of clothing and sundries would increase the figures by about 50 per cent

(Continued from page 1179)

pared with 34·1 cents in August. Increases in the price of milk were reported from several cities and the Dominion average price was fractionally higher at 10·9 cents per quart. Creamery butter was down from an average price of 29·8 cents per pound in August to 28·3 cents in September, declines being fairly general. The price of flour, at 3·6 cents per pound, averaged nearly one-half cent per pound lower in September than in August and nearly one cent lower than at the beginning of the year. Onions were generally lower in price averaging 4·1 cents per pound as compared with 5·7 cents in August. The price of potatoes also was much lower in most cities the Dominion average price being down from $1.41 per 90 pounds to $1. Prices were higher in British Columbia than in other provinces. Seasonal increases in the price of anthracite coal were reported from several cities and the Dominion average was slightly higher at $14.28 per ton.

Following are the prices per ton reported for Welsh coal, "cobbles" and "French nut"; Halifax, $15.50; Charlottetown, $14; Moncton, $16; Saint John, $13; Quebec, $14; Three Rivers, $15 and $14; Sherbrooke, $14.75; St. Hyacinthe, $14.50; Thetford Mines, $17.25; Montreal, $15.25 and $15.50; Ottawa, $16.50; Kingston, $15; Belleville, $15.50; Peterborough, $16.75; Oshawa, $15; Toronto, $15; St. Catharines, $15.50 and $15; Hamilton, $14.50 and $14; Brantford, $16.25; St. Thomas, $16; Cobalt, $19; Timmins, $18.50; Port Arthur, $17.75; Fort William, $17.75; Winnipeg, $20.

price per cord from price quoted. f. Petroleum coke. g. Natural gas used extensively. h. Including lignite. i. In- and conveniences. r. Mining company houses in district $5-$10 per month; others, five and six rooms, $10-$35. s. delivered

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE accompanying tables, which appear quarterly, give the official and certain other index numbers of the cost of living, retail and wholesale prices in Great Britain and certain of the principal commercial and industrial countries. The following notes afford information as to recent changes according to groups of commodities in several of these countries.

Great Britain and Northern Ireland

Wholesale Ppices.—The Board of Trade index number, on the base 1930=100, was 99·5 for August as compared with 100·6 for July. A decline of 3·2 per cent in food prices was responsible for the lower index as prices of industrial materials and manufactured goods showed no appreciable change. Compared with the corresponding month in 1937, the general index fell 10·7 per cent, food prices having fallen 7·9 per cent and prices of industrial materials and manufactured goods 12·1 per cent.

The *Statist* index number on the base 1867-1877=100, was 88·6 at the end of August as compared with 91·1 at the end of July, a decrease of 2·7 per cent for the month. The index of prices for foodstuffs fell 4·6 per cent while that for "materials" fell 1·6 per cent. The general index showed a decline of 15·1 per cent from the figure for the end of August, 1937.

Cost of Living.—The Ministry of Labour's index number, on the base July, 1914=100, was 156 at the first of September showing no change from the figure for the first of August. The index of food prices declined from 141 to 140, due mainly to decreases in the prices of potatoes, bread and flour although these decreases were partly counterbalanced by increases in the prices of eggs. The remaining groups showed no change.

France

Wholesale Prices.—The General Statistical Office index number on the base 1914=100, was 644 for August as compared with 652 for July, a decrease of 1·2 per cent for the month. Food prices declined 1·6 per cent during the period while prices of industrial materials declined 0·9 per cent. The index based on gold currency, 1914=100, was 54 for August as compared with 55 for July.

Germany

Wholesale Prices.—The index number of the Federal Statistical Office, on the base 1913 =100, was 105·9 for August as compared with 105·6 for July, an increase of 0·3 per cent for the month. The index of prices of all agricultural products was 106·6, which was 0·6 per cent higher than the figure for the previous month; that for raw materials and semi-manufactured goods was 94·0, an increase of 0·2 per cent for the month and that for all manufactured goods was 125·8, a decrease of 0·1 per cent for the month.

Cost of Living.—The official index number on the base 1913-14=100, was 126·5 for August as compared with 126·8 for July, a decrease of 0·2 per cent for the month. The decrease was due to a decline of 0·3 per cent in the price of foods. The heat and lighting materials index increased 0·3 per cent, while the remaining groups were unchanged.

India

Wholesale Prices.—The index number of the Labour Office, Government of Bombay, on the base July, 1914=100, was 100 for June showing no change from the figure for the previous month. Small increases in the various groups making the "all foods" index were not large enough to affect the general index.

Cost of Living.—The official index number of the working class cost of living at Bombay, on the base July, 1933 to June, 1934=100, was 106 for July as compared with 105 for June. Food prices increased from 112 to 115 or 2·6 per cent in the same period.

United States

Wholesale Prices.—The Bureau of Labour Statistics index number, on the base 1926= 100, was 78·8 for July as compared with 78·3 for June, an increase of 0·6 per cent for the month. The increases in individual groups were as follows: chemicals and drugs, 1·8 per cent; foods, 1·6 per cent; hides and leather products, 1·6 per cent; farm products, 1·0 per cent; textile products, 0·9 per cent; fuel and lighting materials 0·5 per cent. Four groups showed decreases: metals and metal products, 0·9 per cent; housefurnishing goods, 0·8 per cent; building materials 0·6 per cent; sundries 0·3 per cent. The July all commodity index was 0·9 per cent above the year's low reached in May when the index stood at 78·1. As compared with July, 1937, the index showed a decline of 10·4 per cent.

Cost of Living.—The index number of the Bureau of Labour Statistics, on the base 1913=100, was 145·2 on June 15, 1938, as compared with 144·6 on March 15, an increase of 0·4 per cent during the quarter. The

(a) Average for year. (b) First of month. (c) 15th of month. (d) End of month. (e) New series. (g) Until end of 1927, "Dr. Lorenz." (h) Prior to 1929, the number of commodities was 236, from January 1926 to December 1933, 502, and since January, 1934, the number is 567.

(Continued from page 1188)

groups which contributed to the increase were food, rent and sundries with increases of 2·0 per cent, 0·4 per cent and 0·2 per cent respectively. The largest decrease was in the fuel and lighting materials group which declined 2·9 per cent. The cost of house-furnishing goods declined 0·9 per cent and clothing prices declined 0·7 per cent. Since June 15, 1937, when the index was 147·4, it has declined 1·5 per cent.

The index number of the Industrial Conference Board, on the base 1923=100, was 85·9 for August as compared with 86·5 for July, a decrease of 0·7 per cent for the month. Food prices declined 2·0 per cent, sundries 0·5 per cent and clothing 0·1 per cent. Rents were unchanged, while the prices of fuel and lighting materials showed a seasonal increase of 0·4 per cent. In August this year the cost of living was 3·5 per cent lower than a year ago and 14·2 per cent lower than in August, 1929.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Quebec Court Enforces Agreement Under Collective Labour Agreements' Act

In the Superior Court at Montreal, Mr. Justice Chase-Casgrain on February 26, 1938, allowed the claim of the joint committee of the building trades under the Collective Labour Agreements' Act in an action to recover $103.20 back wages due a worker. The amount represented the difference between the rate set by the agreement made binding under the Act and the rate actually paid.

The defendant's argument that he employed a contractor who hired the worker and was therefore responsible for the underpayment was held to fail. The Court held that the "contractor" in question was simply an experienced man employed to supervise the construction at a fixed rate of wages per week, the cost of construction being determined in advance with allowance for variation of 5 per cent. No payments for work, purchase or contracts were allowed without the approval of the defendant. The risk of gain or loss was entirely with the latter, who alone profited by underpayment of wages. *Comité Conjoint des Métiers de la Construction* v. *Bournival*, (1938) Rapports Judiciaires de Québec, Cour Supérieure, 346.

Claim for Wages Under Alberta Male Minimum Wage Act Allowed in Part

On May 17 Mr. Justice W. A. Macdonald of the District Court of Southern Alberta, while dismissing the action against one defendant, allowed against the other, who was in fact the employer, the claim of a service station attendant for payment of the difference between the wages he had received and the amount to which he was entitled under the Male Minimum Wage Act. The minimum rate provided by an order under this Act for such workers is 28 cents an hour for the day of nine hours fixed by the Hours of Work Act. The further claim for payment for overtime at the rate of time and a half for every hour in excess of nine was rejected, but it was held that the wages which had been paid must be considered as having been paid for all the time worked, including overtime, and a proportionate amount was therefore allowed for all time in excess of nine hours in a day.

An order in council of September 30, 1937, under the Male Minimum Wage Act, 1936, providing for a minimum wage of 28 cents an hour for employees of the class to which the plaintiff belonged, was in effect during the whole period of his employment. As regards overtime, the Court found that there was no regulation fixing a special overtime rate for such a worker as the plaintiff during that time.

The position with regard to orders under the Act was set out by the Court. On May 31, 1937, before an order under the Act had established a minimum rate for male workers, an order in council stipulated that until such time as the Board of Industrial Relations made an order fixing a special minimum wage for male workers, they were not to receive less than the minimum rates which had been fixed under the Minimum Wage Act, 1925, for females in the same class of employment; also, that overtime permitted under the Hours of Work Act, 1936, should be paid for at the rate of one and one-half times the ordinary rate. A third section of the order in council fixing a penalty for employers failing to pay the minimum wage was rescinded on August 26, 1937. When the order of September 30, 1937, establishing the 28 cents minimum rate came into operation, the first section at least of the order of May 31 ceased to have effect. As to the provision concerning overtime, the Court expressed the opinion that "it may still be in force" but it did not assist the plaintiff since the overtime for which the plaintiff claimed payment was not overtime permitted under the Hours of Work Act. *Harris v. Rhodes and Heckle*, (1938) 3 Western Weekly Reports 53.

VOLUME 38] NOVEMBER, 1938 [NUMBER 11

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment showed a considerable increase in Canada at October 1, according to statements received by the Dominion Bureau of Statistics from 10,983 employers, each with a minimum of fifteen employees, whose staffs aggregated 1,119,291 persons, as compared with 1,104,865 in the preceding month. Activity has shown a falling-off between September and October in six and an advance in eleven of the preceding years of the record, the change, on the average, being a small increase; the improvement this year exceeded the average gain at October 1 in the years, 1921-1927, but was smaller than that noted at the beginning of October in the autumn of 1937. The index (based upon the average for the calendar year 1926 as 100) stood at 116·7 at October 1, 1938, compared with 115·1 at September 1, 1938, and 125·7 at October 1, 1937. At the same date in recent years of the record, the index has been as follows: 1936, 110·1; 1935, 106·1; 1934, 100·0; 1933, 90·4; 1932, 86·7; 1931, 103·9; 1930, 116·2; 1929, 125·6; 1928, 118·8, and 1927, 110·3. These returns are representative of all industries except agriculture, fishing, hunting and highly specialized business.

Unemployment in Trade Unions.—At the beginning of October, 1938, the percentage of idleness reported to the Department of Labour by local trade unions was 10·4, in contrast with percentages of 11·6 at the beginning of September, and 7·7 at the beginning of October, 1937. The percentage for October was based on the reports tabulated from a total of 1,860 labour organizations with a membership covering 223,876 persons.

Employment Office Reports.—Reports for September, 1938, received by the Department of Labour from the offices of the Employment Service of Canada showed declines from August, 1938, and September, 1937, in the average daily placements effected, farming and construction and maintenance being mainly responsible for the loss under the first comparison and logging, manufacturing and services under the second. During the month under review, September, 1938, the total opportunities for work numbered 39,279, applications 69,960, and placements in regular and casual employment 37,367.

Prices.—In retail prices the cost per week of a family budget of staple foods, fuel and lighting, and rent was $17.35 at the beginning of October as compared with $17.41 for September; $17.51 for October, 1937; $16.87 for October, 1936; $15.41 for June, 1933 (the low point in recent years); and $21.96 for October, 1929. The decline in October, as compared with September, was due to a decrease in the cost of foods, which was partly offset by a slight increase in the cost of fuel. In wholesale prices the Dominion Bureau of Statistics weekly index number, based upon prices in 1926 as 100, dropped from 74·5 for the week ended September 30 to 73·9 for the week ended October 28, the low point for the month. On a monthly basis the index number was 74·5 for September, 1938; 84·7 for October, 1937; 77·1 for October, 1936; 63·5 for February, 1933 (the low point in recent years); and 96·8 for October, 1929.

Business Statistics.—The latest information available reflecting industrial conditions in Canada is given in the table on page 1194. The index of the physical volume of business in September was 7·9 per cent higher than in the previous month, but was still 3·7 per cent below the level of September, 1937. All the groups making up this index showed increases over the previous month. The index of mineral production rose from 198·6 to 202·1, due to increases in the export of copper, nickel, zinc and asbestos which offset a sharp decline in the export of silver. Practically all the factors making up the index of manufacturing activity showed gains in September, contraseasonal gains in the output of newsprint and textiles being particularly noteworthy. The indexes of activity in construction and in the production of electrical power both showed small increases. The index reflecting distribution factors during September showed an increase over the preceding month

* Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

† For the week ended October 28, 1938.

(1) Calculated from yields of Ontario bonds. (2) For group figures see articles elsewhere in this issue.

(3) Adjusted for number of business days and seasonal variations. (4) Figures for end of previous month.

(5) Figures for four weeks ending October 29, 1938, and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending October 8, September 10, and August 13, 1938; October 9, September 11 and August 14, 1937. (7) MacLean's Building Review. (8) Index numbers are adjusted when necessary for seasonal variation.

as well as over the indexes for September, 1937, these indications being borne out in all the sub-groups with the exception of carloadings, which showed an increase over the preceding month but a decrease from the figure for September, 1937. Information available for October shows employment, the number of cars loaded, and gross earnings of the Canadian National Railways at higher levels than in September, but, with the exception of gross earnings of the Canadian National Railways, these figures are lower than those for October, 1937. The index number of wholesale prices and the value of construction contracts awarded were lower in both comparisons.

Strikes and Lockouts.—The number of strikes and lockouts during October was 31, involving 3,146 workers and resulting in a time loss of 18,122 man working days as compared with 15 disputes during September, involving 2,173 workers with time loss of 18,840 days. The disputes during October include nine strikes of coal miners in Nova Scotia, Saskatchewan and Alberta, and five strikes in automobile and automobile parts plants in Windsor, Ont., and also one in Oshawa, Ont. None of the disputes involved large numbers of workers for any considerable period. In September there were seven disputes causing time loss of more than one thousand days. In October, 1937, there were 32 disputes, involving 6,571 workers with a time loss of 50,616 working days. Most of the time loss was due to strikes of coal miners at Minto, N.B. and rubber factory workers at Kitchener, Ont., but there were also four brief strikes of coal miners in Nova Scotia. Of the thirty-one disputes recorded for October, 1938, twenty-six were terminated during the month, five resulting in favour of the employers affected and three in favour of the workers involved, while compromise settlements were reached in eleven cases and the results of seven disputes were recorded as indefinite. Five disputes, involving approximately 287 workers, were recorded as unterminated at the end of October. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or definitely declared terminated by the unions involved.

Industrial Disputes Investigation Act

During October the Department received the findings of the Board of Conciliation and Investigation in connection with a dispute between the Canadian National Railways and the Canadian Pacific Railway Company and their employees on the Montreal Wharf. Three applications for Boards were received, and the personnel was completed of a Board established in a previous month. The Department was notified of the ratification of an agreement negotiated before a Board, and of the settlement of another dispute on the basis of the findings of a Board. A full account of recent proceedings under the Act will be found at page 1201.

Statistics of Material Aid Recipients for September

Featuring the September re-registration of persons on Aid throughout Canada, carried out for the Department of Labour, were the decrease in numbers of persons on Agricultural Aid in the Province of Saskatchewan, due to the improved harvest, and a further decrease in the number of fully employable unemployed persons compared with August.

Preliminary figures show the total of the unemployed but fully employable persons on Aid throughout Canada in September at 118,000, a decrease of five and a half per cent from the August total of 124,325. The figure for September this year was nearly the same as that for September a year ago, there being a net increase of less than one per cent. Decreases in the numbers of fully employable persons on Aid have occurred in every month of the current year up to September, since the winter peak of 174,932 in February last.

A total of 452,000 persons were receiving Non-Agricultural Material Aid in September this year, about four per cent less than in the previous month. This category includes totally unemployable, partially employable and fully employable persons, together with all dependents of family heads. This aggregate showed a net reduction of about one per cent from September, 1937.

Approximately 38,000 farmers who, when their dependents are included, account for a farm population of 181,000, were reported as receiving Agricultural Aid for subsistence in September. These persons were largely located in the Province of Saskatchewan, that province alone showing a total of 145,000. The Dominion total on Agricultural Aid, 33 per cent less than in September, 1937, was 37 per cent less in September than in August, 1938. The Saskatchewan total had already begun to reflect the improvement due to this year's crops and from August to September showed a reduction of 42 per cent.

The grand total of all classes of persons on Material and Agricultural Aid in September, according to these early figures, was 633,000, a decrease of 16·5 per cent from August, and a decrease of 12·7 per cent from September, 1937.

Minister of Labour Visits Youth Training Projects

The progress of projects in Western Canada under the Dominion-Provincial Youth Training Program was the subject of favourable comment by Honourable Norman McL. Rogers, Minister of Labour, during a press interview on November 9. (At the last session of Parliament, $1,500,000 had been appropriated for Youth Training as compared with $1,000,000 in the previous session.)

Recently returned from a visit to the four Western Provinces, the Minister stated that he had visited a number of the projects and studied the type of training given. He described the enthusiasm of the young people in training, stating that the program generally was gaining momentum in both urban and rural centres. He announced that Physical Training projects, which have been operated with such success in British Columbia, were now under way in Alberta and were also being started in Saskatchewan.

The Minister was impressed with the rural training centres in the Prairie Provinces where young men and women were given training designed to make their farm life more happy and successful. One effect of these rural courses, he stated, was to assist in retarding the movement from the farms to the cities. The training was designed to make farm life more attractive and desirable.

Referring to the Youth Training movement generally, the Minister expressed the view that it was gaining momentum, and he emphasized the importance of community co-operation if it were to be a success all over the Dominion.

The Minister considered that employment figures in the Dominion were encouraging, and that general employment conditions in Western Canada were improving.

Second Maritime Conference on Industrial Relations

The second conference on Industrial Relations was held in Kings College, Dalhousie University, Halifax, on October 28 and 29, comprising representatives of the principal industries in Nova Scotia and New Brunswick. Representatives of the governments of Nova Scotia and New Brunswick and of the federal Department of Labour were also present on invitation. The Conference was under the auspices of the Institute of Public Affairs of Dalhousie University.

The Conference was opened by an address on "The Social Responsibility of the Employer" by A. B. Purvis, President and Managing Director of Canadian Industries Limited, formerly Chairman of the National Employment Commission. R. L. Dunsmore, Superintendent, Imperial Oil Limited, then addressed the Conference on "Company Pension Plans" and A. N. Jones, Vice-President of Pickford and Black, Limited, spoke on "Employees' Representation." V. C. MacDonald, Dean of the Dalhousie Law School, addressed a luncheon meeting on "Canada's Social Problems and the Constitution."

The afternoon session of the first day dealt with unemployment, there being addresses on "Economic and Financial Implications of the Canadian Unemployment Problem" by Stewart Bates, Professor of Commerce, Dalhousie University; on "Unemployment Relief" by R. D. Crawford, Town Clerk, Amherst, N.S.; and on "Public Works" by R. W. McColough, Chief Engineer, Nova Scotia Department of Highways.

The session on the second day was devoted to Arbitration and Conciliation with addresses on "The Legal Background" by G. V. V. Nicholls of the Legal Department of the Canadian Manufacturers' Association; on "The Practice in Nova Scotia" by E. B. Paul, Superintendent, Dominion Steel and Coal Corporation, formerly Deputy Minister of Labour for the Province of Nova Scotia. "The Viewpoint of the Employee" was dealt with by W. A. McDonald, Secretary of the National Association of Marine Engineers of Canada, substituting for D. W. Morrison, Vice-President of the Trades and Labour Congress of Canada and President of District 26, United Mine Workers of America.

The Conference closed with an address at a luncheon meeting on "The Social Responsibility of the University" by B. A. Fletcher, Professor of Education, Dalhousie University.

Some of the papers will be published in *Public Affairs*, the quarterly journal of the Institute of Public Affairs, Dalhousie University.

Report on Nutrition in Australia

The Advisory Council on Nutrition was appointed in February, 1936, to advise on the state of nutrition of the Australian people and on any evidence that the Australian people were in any degree undernourished or that their diet was improperly balanced or improperly prepared. The Council included members from the Commonwealth health and research authorities and the medical, dental and agricultural staffs of the universities. Committees for each state were set up to assist. Five interim reports were made. Investigations were made into the nature and quantity of foodstuffs consumed and into the physical condition of a group of children,

with a study of the diet consumed, in cities and throughout the inland districts.

(Reference to the commencement of the survey on the cost of living and nutrition in Canada was made in the Labour Gazette for September on page 967.)

Records of the quantities and cost of the various classes of foods for a period of one month were secured from certain families with incomes up to £400 per annum in Brisbane, Sydney, Melbourne, Adelaide and Perth, nearly 500 families being covered in each city. Supervisors visited each house regularly to check the records. An attempt to secure records of food consumed during one week from 5,000 additional families throughout the Commonwealth by notices in newspapers was not successful, only 178 records being secured. The nutritive values of samples of foods obtainable in the open market was ascertained by a staff of biochemists, 1,172 of the items listed in the reports of the housewives being analysed.

The statistical analysis of the data secured was made according to (*a*) expenditure on food; (*b*) consumption of food; (*c*) nutritive value of food consumed. Only 5·87 per cent of the families reporting were found to have a diet deficient in protein content (body building foods) or caloric value (energy and heat producing foods). In milk consumption 25 per cent of the diets were deficient. Butter and fat consumption were found to be adequate. In egg consumption 25 per cent of the diets were found inadequate. In potato consumption the same deficiency was found. In fruits and vegetables satisfactory consumption was found except in a few cases in Sydney. An analysis by size of families and numbers of children revealed that there was little tendency for families with several children to suffer from inadequate diets generally but there was proportionately less meat and fish consumed while the consumption of bread and cereals increased slightly. There was a tendency for the consumption of fruits and vegetables to fall below an adequate standard in families with more than two children.

A study of the mineral salts consumed indicated that the diets of many of the families reported were below the standards set by United States nutritional authorities. The Council considered these standards unduly high and recommended an intensive study of mineral requirements for Australian conditions. It was pointed out that the investigation revealed that families with several children tended to have diets deficient in the protective foods, fresh fruit and vegetables, milk, eggs, and mineral salts, even when adequate in respect to meat and fish, bread and cereals.

The investigation into the health and diet of groups of children in Sydney and in country districts revealed that the number of children who suffered from under nourishment or unbalanced diets varied from 11 to 24 per cent in the various districts. It appeared that the diets were deficient in milk, cream, cheese and that not enough cod liver oil was given.

The Council reported that while the people of Australia were on the whole well fed, the survey showed that six per cent were not obtaining enough food and that there was much ignorance as to the proper balance of food items; that some people both in town and country were unable for various reasons to obtain the essential fresh foods; and that "a considerable mass of minor departures from normal health (describable generally as malnutrition) existed among the young children in both town and country, and that the evidence pointed to faulty selection of diets as the main cause of malnutrition, sometimes necessitated by poverty but more often the result of ignorance." It was emphasized that the medium or severe types of malnutrition were not found, and the degrees of ill-health were of a minor character.

Fair Labour Standards Act Becomes Operative in U.S.A.

At midnight on October 23, the United States Fair Labour Standards Act became operative.

The Act, which has been reviewed in detail in its various stages in previous issues of the Labour Gazette (October 1938, page 1078; July 1938, page 719; August 1937, page 838; and June 1937, page 598), provides for minimum wages ranging between 25 cents and 40 cents an hour during the first year the Act is in force, and 30 cents to 40 cents an hour thereafter. The Act also requires industries subject to the measure, to observe a maximum work-week of 44 hours for the first year, 42 hours for the second year, and 40 hours thereafter.

The Act applies to concerns engaging in interstate commerce and to the production of goods for interstate commerce. It is also provided that special rates of wages may be prescribed by the Administrator for particular fields of business upon the recommendation of industrial committees.

The first industrial committee was recently established to inquire into minimum rates for the textile industry (Labour Gazette, October 1938, page 1078). The object of the committee is to recommend classifications for the purpose of fixing for each group the highest minimum rate of wages (not more than 40 cents and not less than 25 cents per hour) which will not substantially curtail employ-

ment and will not give a competitive advantage to any group in the industry. This committee commenced its sessions in Washington on October 11.

In a broadcast address Mr. Elmer F. Andrews, Administrator of the new Wages and Hours Division of the U.S. Department of Labor, said that the Act should become "one of the pillars of a sound economic system in the United States." Declaring that the administration expected the provision for an immediate minimum wage of 25 cents an hour in interstate commerce to result in considerably higher wages, Mr. Andrews said "our experience with state minimum wage laws proves that the minimum does not become the maximum, despite forebodings of opponents regarding that type of legislation."

Mr. Andrews estimated that 750,000 persons would receive increased wages under the law and that it would shorten the work-week for 1,500,000. It was also pointed out that as the wage scale increases and the work-week decreases, many more hundreds of thousands would benefit by the legislation.

Recommendations of United States Railway Labour Board

Following the recommendations of an emergency Board appointed by President Roosevelt to investigate a railway wage dispute, United States railway executives announced on November 4 the cancellation of their plan to put into effect on December 1 their proposed 15 per cent reduction in wages.

According to an Associated Press report, the wage dispute which the board investigated, started last May when the carriers served notice then that they would reduce wages 15 per cent July 1. Efforts were made to mediate the proposal, but these failed and the carriers issued a new notice that the reduction would take effect October 1. The railroad Brotherhoods announced in September they would strike unless the reduction proposal was withdrawn.

On September 27 the President created the emergency board to investigate the situation. Under terms of the Railway Labour Act, this automatically postponed for 60 days both the wage reduction and the threatened strike.

The Board summarized its unanimous report to the President as follows:

"1. Wages of railway labour are not high even as compared with wages in other comparable industries.

"2. A horizontal reduction of wages on a national scale would not meet the financial emergency of the industry, since the savings would not be distributed merely to the needy roads.

"3. A wage reduction in the railroad industry would run counter to the trend of wage rates in industry generally.

"4. The financial distress of the carriers which has obtained since October, 1937, when the last wage increases were granted, is as yet a short-term situation. As such, it cannot be regarded as grounds for a wage reduction, especially in view of present indications of an improvement in the business of the carriers.

"5. In the light of these findings, the board concludes that the proposal of the carriers for a reduction of the wages of railway labour should not be pressed and recommends that the carriers withdraw and cancel the notices which put such a reduction into operation as of December 1, 1938."

Minimum Wage Recommendation for Confectionery Industry in N.Y. State

On October 17, Industrial Commissioner Frieda S. Miller of New York State accepted the report of the Confectionery Wage Board, the third Board to report under the present Minimum Wage Law enacted in New York State in April, 1937. (LABOUR GAZETTE, July, 1937, page 815.)

The Confectionery Board recommended a basic minimum hourly wage of 35 cents, and a minimum weekly wage of $14 for 40 hours for women and minors in the confectionery industry of the State.

By setting higher rates for short work weeks, Commissioner Miller pointed out that the Wage Board seeks to stimulate the manufacturers' interest to plan his work so that fuller weekly employment is given to all workers on the payroll. During the period September 1 to April 1, which covers the two busy seasons in the confectionery industry—the four months preceding Christmas and the 10 weeks preceding Easter—all workers employed three days or less in any one week are to be paid $10 for that week. If an employee is called to work on the fourth day, she must be paid for four full days at the rate of 35 cents an hour, even though she works only one or two hours on the fourth day. For employees working more than four days in any one week, pay is to be at the rate of 35 cents an hour for the number of hours worked.

While the minimum weekly wage of $14 is not guaranteed as in the laundry industry, Commissioner Miller said that women workers in the confectionery industry will be assured at least $10 a week for any week in

which they are employed at all during the busy season, if the Board's recommendations are finally adopted.

In the slack season, which extends from April 1 to September 1, the Wage Board recommended that employees working two days or less in any one week be paid at least $7. If an employee is called to work on the third day, regardless of whether she works or not, it will be considered a full day of eight hours and she will receive compensation for three days at the rate of 35 cents per hour for the full three-day period.

Compulsory Unemployment Insurance in Norway

Replacing the voluntary insurance program which has been in effect in Norway since 1906, a nation-wide compulsory system of unemployment insurance was introduced under an Act dated June 24, 1938, to become operative on a date to be fixed by the Crown.

It is estimated that between 550,000 and 630,000 persons will come under the scope of the legislation, having practically the same coverage as the compulsory sickness insurance scheme. A few groups, including workers employed in farm labour, domestic service, fishing and certain other occupations are not covered by the legislation. Certain groups of public employees and all workers earning less than 600 kroner a year (krone = 26 cents) are also excluded from participation in the plan as well as those earning more than 6,000 kroner a year.

For the purpose of contributions workers are divided into five wage groups. The total contribution paid half by the worker and half by the employer ranges from ·36 krone a week for persons in the lowest wage class up to 1 krone a week for persons in the highest wage class. The legislation also provides that the Crown may increase the rates of contributions or reduce the benefits in the cases of groups of insured persons with a high risk of unemployment.

Benefits under the scheme are to be granted in the form of cash payments, travelling and removal grants, and the payment of sickness insurance contributions during unemployment. Instead of benefit, grants may be made in suitable cases towards the vocational training of unemployed persons. The daily rates of cash benefit vary according to the several wage classes and range from 1·40 kroner in the lowest class up to 4·00 kroner in the highest class. Dependents' allowances, at a uniform daily rate of not more than ·30 krone, are payable only in respect of children under 15 years of age; dependents' benefits together are limited to 80 per cent of the daily wage which determines the allocation of the worker to his wage class. No benefit is payable for Sundays.

The initial qualification for benefit is established after 45 weeks of insurable employment within the period of four years immediately preceding the claim. After benefit has been drawn for the prescribed maximum period, a new qualifying period of not less than 15 weeks' insurable employment within the period of two years immediately preceding the new claim must be served. Benefit is payable for 15 weeks in 12 months or at the rate of one benefit week for every three weeks of contribution for a maximum of 15 weeks.

Analysis of Social-Economic Conditions in 1937-38

In the *"I.L.O. Year Book, 1937-38,"* which has just been issued, the International Labour Office analyses events which have influenced the conditions of workers throughout the world and draws attention to certain characteristic features of world economic development during that period.

Seen in retrospect it is stated that 1937 appears as a "boom" year, the culminating point of the business cycle of the "thirties after the great World Depression."

During the year, however, apparently few of the characteristics of a boom were present. Production, employment and international trade all touched or surpassed the 1929 level, but it was doubted whether this can be looked upon as a high mark.

Since 1929, the population of the world has increased between 5 and 10 per cent. Furthermore, it is stated that if the "normal" rate of advance achieved in the pre-war period were still operative, the productive records reached in 1937 should have been some 20 to 25 per cent greater than in 1929.

"Against this," adds the International Labour Office, "there is the fact that much of the productive work done under present-day conditions escapes the statistical net. Thus, the fact that coal mining has remained relatively stagnant for many years weighs down the production index of a large number of countries; but the fact that there are now thousands of filling stations and one-man repair garages does not appear in any of the indexes immediately available. There is accordingly a certain danger in making comparisons with the records of previous years. But with all allowances made, the 'high point' reached in 1937 represented no more than a partial return of prosperity. The large percentage of unemployment in most of the leading countries is evidence of this.

In fact, the principal justification for looking upon the 1937 peak as a boom is that it was followed by a depression. How serious the downward movement will prove to be it is impossible to foretell. The excessive abruptness of the decline in the United States and the fact that other countries showed considerable resistance to the downward tendency afford good hope that the recession will be short. But there are new and inestimable factors in the situation which make all forecasts unreliable."

Bulletin on Trade Union History

An Outline of Trade Union History in Great Britain, the United States and Canada with Special Emphasis on the Causes Leading to the Present Division in the Canadian Labour Movement was the title of an address given at the Canadian Institute of Economics and Politics at Lake Couchiching in August by Miss Margaret Mackintosh of the Department of Labour. Mimeographed copies of this address in a somewhat extended form may be obtained from the Department.

Review of Operations Under Dominion Housing Legislation

Up to October 31, 1938, the total volume of loans approved under the National Housing Act and its predecessor, the Dominion Housing Act, was $24,695,268, according to a press release issued by the Department of Finance on November 7. These loans provided housing accommodation for 6,272 Canadian families. Up to the same date Home Improvement loans reported to the Department of Finance aggregated $22,319,546 in amount, and numbered no less than 55,820, enabling approximately that many Canadian families to modernize, extend or repair their existing dwellings. Adding these amounts together indicates that total loans exceeding $47,000,000 have been granted for house building and home repair purposes under these two Dominion measures during the last two or three years. It is estimated that these loans have made possible an expenditure on actual building construction (excluding land) of over $53,000,000. This does not of course take into account the substantial volume of repair and modernization work and also of new house construction which were stimulated by the Dominion legislation but which were financed in other ways.

It is stated that at least 80 per cent of the cost of house building construction and modernization is estimated as being spent, either directly or indirectly, on wages of labour, skilled or unskilled. Applying this percentage to the aggregate figure given above it is estimated that the loans made possible by Dominion legislation have accounted for payments of wages to Canadian labour of over $42,000,000. The extent, therefore, to which the legislation has contributed to the stimulation of employment and the elimination of unemployment is obvious.

More detailed analysis of the monthly figures of Housing Act loans indicates that the new National Housing Act, passed at the last session of Parliament, has already provided the increased stimulus to lending activity and to new housing construction which its sponsors intended. The Act was not assented to until the first of July and operations under the new agreements which had to be negotiated with lending institutions could not begin until about the first of August. In spite of the business recession which was under way, the serious political tension in Europe and the fact that building activity normally begins to fall off in the late summer months, National Housing Act loans approved in each of the months of August, September and October showed a substantial increase over the loans made in the corresponding months of 1937 when business conditions were more active.

For the three months period the increase is 72 per cent in amount of loans and 85 per cent in number of family housing units financed as compared with the same period in 1937. The figures for October are particularly encouraging in the indications they give of the outlook for more active building operations during the next building season. The number of individual loans approved in October was higher than in any other single month to date.

During October 307 loans were approved in the amount of $1,269,009, and provided housing accommodation for 361 families. The previous high month for number of loans was July, 1938, when 285 loans were approved. The increased use being made of the facilities of the Act for financing low-cost homes in the smaller and more remote communities and in the special areas of the larger communities was reflected in the smaller size of individual loans. Of the 361 family housing units financed in October, 283 or over 78 per cent were financed by loans of $4,000 or less; 139 by loans of $3,000 or less; and 84 by loans of $2,500 or less. It is also interesting to note that nineteen 90 per cent loans on houses costing less than $2,500 were approved during October, bringing the total number of such 90 per cent loans to 42 for the three months since the National Housing Act came into operation and made this special class of high percentage loan possible.

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

THREE applications for the establishment of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act were received in the Department of Labour recently.

The first application was submitted on behalf of employees of the Canadian Pacific Railway Company comprising its unlicensed personnel in British Columbia Coastal Steamship Service, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The application is signed by two officials of the union named. Approximately 400 men are stated to be directly affected and 2,000 indirectly affected by the dispute, which arose in connection with the union's request for an agreement covering the employees in question. In its statement in reply the company points out that an agreement with a committee representing these employees has been in effect since April, 1937, and that on no occasion has the delegates of ships' crews, or the members of the negotiating committee with which the company discussed matters of interest from time to time, intimated that they wished to discontinue the present method of conducting negotiations. An officer of the Department interviewed representatives of the parties in Vancouver recently and ascertained that the company was not opposed to its employees being members of a union, but that it would deal only with a committee of employees in discussing wages and working conditions. The manager of the British Columbia Coastal Steamship Service stated that if the majority of the employees wished to join the brotherhood he would meet a committee from the union, provided they were also employees of the company.

The second application was submitted on behalf of shop labourers employed in the Motive Power and Car Department shops of the Canadian National Railways at Transcona, Manitoba, being members of the Transcona Railroad Workers' Unit, One Big Union. The application is signed by the chairman and secretary of the union named. Ninety-five employees are stated to be directly affected by the dispute and 1,100 indirectly. The applicants desire to have a number of grievances rectified and claim that their organization represents the majority of shop labourers in the Transcona shops and therefore should be recognized as the negotiation and grievance committee.

The third application was submitted on behalf of employees of the following coal mining companies at Bienfait in the Estevan district in the province of Saskatchewan, namely, Western Dominion Coal Mines, Limited, Dominion Briquettes and Chemicals, Limited, Manitoba and Saskatchewan Coal Company, Limited, Bienfait Mines, Limited, Lignite Mines, Limited, Eastern Collieries of Bienfait, Limited, Baniulis Brothers, Limited, and Wilson Coal Company. The application is signed by the president and recording secretary of the Bienfait Local Union of the United Mine Workers of America. The number of employees directly affected by the dispute is given as approximately 575, the majority of whom are stated to be members of the United Mine Workers of America. The claims of the applicants include recognition of the United Mine Workers of America as the sole bargaining agency for the employees; wage increases to bring the rate for machine men to $6 per day, for miners and loaders to $4.75 per day, and for common labourers to $4.50 per day, with proportionate increases in the day wage rates for all other classifications, as well as in the contract rates of pay; adherence to the eight-hour day from bank to bank; and a uniform contract for all of the mines. A general strike had occurred in this coal field on October 17. The secretary of District 18, United Mine Workers of America, conferred with the Minister of Labour, who pointed out that the men were on strike in violation of the Industrial Disputes Investigation Act and urged that they resume work at once. The strike was terminated on October 20, and the following day application was made for a Board of Conciliation and Investigation. Another organization, however, the Saskatchewan Mine Workers' Union, affiliated with the Canadian Federation of Labour, protested against the establishment of a Conciliation Board, stating that it had working agreements with three of the mines covered by the application. This was supported by a telegraphic message from seven of the eight companies concerned, who advised that they recognized the Canadian Federation of Labour, that no demands had been made upon them by their employees, and that there was no dispute between the employers and the employees. On the other hand, the officials of the United Mine Workers of America declared that they had requested the operators to discuss matters and that their communications had been ignored. Both the Saskatchewan Mine Workers' Union and the operators expressed their willingness to have an enquiry by a commission.

The respective parties involved in this dispute conferred separately with the Minister of Labour while he was en route east from the Pacific coast at the end of the month. In view of the fact that two unions have membership in the field and each claims that its membership includes a majority of the employees of at least some of the mines, it has been decided

by the Minister to take a secret ballot in each of the eight mines to ascertain if the application is made on behalf of a majority of the employees in each mine. The Minister will be prepared to establish a Conciliation Board to cover those mines where the ballot of the employees establishes a majority in support of the application.

Chairman Appointed

A Board of Conciliation and Investigation was established by the Minister of Labour on May 27 last to deal with a dispute between Hendrie and Company, Limited, of Toronto, and their motor truck drivers, and Messrs. H. A. F. Boyde, of Hamilton, and J. L. Cohen, K.C., of Toronto, were appointed members thereof on the recommendation of the company and employees, respectively (LABOUR GAZETTE, June, 1938, page 608). Subsequently it appeared that a settlement might be effected through further direct negotiations and the appointment of a chairman was accordingly held in abeyance. In September, however, an impasse being reached, the Minister, on the joint recommendation of the two board members above named, appointed Professor Kenneth W. Taylor, of McMaster University, Hamilton, third member and chairman of the board. Professor Taylor was in Australia at the time and did not return to Canada until about the end of October, when arrangements were made for the board to proceed to function.

Agreement Ratified

The Board of Directors of the Canadian Press at a meeting held on October 14 approved the agreement between the Canadian Press and its telegraph employees which was negotiated in June last before a Board of Conciliation and Investigation composed of Professor Norman A. M. MacKenzie, chairman, Mr. W. Rupert Davies, nominated by the employers, and Mr. Leonard James Ryan, nominated by the employees.

The agreement is retroactive to August 1, 1938, and is to remain in force until July 1, 1940, and shall thereafter renew itself for periods of one year unless either party gives notice to the other at least sixty days before the end of the initial or any subsequent period of its desire to terminate the agreement.

A summary of the report of the Conciliation Board in connection with this matter appeared at page 724 of the LABOUR GAZETTE for July, 1938. The employees involved are mechanics and automatic printer telegraph operators, members of Canadian Press System Division No. 52, Commercial Telegraphers Union.

This agreement is summarized in this issue in the article entitled "Recent Industrial Agreements."

Settlement of Dispute Involving Coal Operators and Employees in the Drumheller District

An agreement was reached during September between various coal operators in the Drumheller district and their mine workers being members of District 18, United Mine Workers of America, based in large part on the recommendations of the Board of Conciliation and Investigation which dealt recently with a dispute involving wages and working conditions between the parties concerned. The dispute arose when contracts between the employers and the coal miners expired at the end of March last and were not renewed. On the application of the coal operators the dispute was referred to a board composed of Mr. H. A. Dyde, chairman, Mr. W. H. McLaws, K.C., nominee of the companies, and Mr. Patrick Conroy, the employees' nominee. The text of the board's report appeared in the August issue of the LABOUR GAZETTE, page 871. The board's findings were acceptable to the employees' committee, but certain phases of the recommendations were rejected by the coal operators. Following direct negotiations extending over a period of several weeks, and with the assistance of the Western Representative of the Department of Labour, accord was reached on the various points at issue and on September 23 a new contract was signed with all but three companies, namely, the Red Deer Valley Coal Company, Limited, at Nacmine, and the Rosedale Collieries, Limited, and Star Mines, Limited, at Rosedale, the latter two being under one management. Later these three companies also signed the agreement, which the miners in the district by a referendum vote subsequently ratified.

Report of Board in Dispute Between the Canadian National Railways and the Canadian Pacific Railway Company (Employers), and their Truckers, Checkers, Coopers, etc., on the Montreal Wharf (Employees)

The Board of Conciliation and Investigation constituted on September 22 to deal with two applications received from employees of the Canadian National Railways and the Canadian Pacific Railway Company, respectively, on the Montreal wharf, submitted its findings to the Minister of Labour during October. The employees involved in this dispute are truckers, checkers, coopers, etc., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

The report of the board, which is signed by the chairman, Mr. Brooke Claxton, of Montreal, and the board member nominated by the employees, Mr. Tom Moore, of Ottawa, recommends that the hourly rate of pay for truckers, who compose 80 per cent of the 650 employees concerned in the dispute, be increased from 50 to 57 cents, or 14 per cent. The employees in their application for a board had requested that the truckers' hourly rate be increased 12 cents, or 24 per cent. The parties to the dispute agreed before the board to let the recommendation as to truckers determine the action to be taken with regard to the wage rates of the remaining employees affected, and the report accordingly recommends that increases be granted to the other classes affected corresponding to that recommended for the truckers. It is also suggested that any adjustment in wages be made retroactive to August 15, 1938, and that any agreement which may be reached be effective for two years.

Mr. G. S. Currie, the board member appointed on the employers' recommendation, in a minority report dissents from the above recommendations and expresses the opinion that the present rates of pay should be continued.

The texts of the two reports follow:—

Report of Board

In the matter of the Industrial Disputes Investigation Act and of a dispute between the Canadian National Railways and the Canadian Pacific Railway Company (employers) and certain of their employees at Montreal Wharf being checkers, freight-handlers, coopers, etc., members of the Brotherhood of Railway and Steamship Clerks, Freight-Handlers, Express and Station Employees (employees).

To the Honourable,
The Minister of Labour,
Ottawa, Ont.

Sir,—The Board of Conciliation and Investigation appointed by you in the above matter now begs to report that it commenced its hearings at Montreal on September 28, 1938. The Board was composed of Mr. Brooke Claxton, Chairman, appointed by the Minister in the absence of a joint recommendation from the other members, Mr. Tom Moore, nominated by the employees, and Mr. George S. Currie, nominated by the employers. At the hearings the employers were represented by—

Canadian National Railways:
Mr. R. C. Johnston,
Superintendent, Montreal Terminals.
Mr. W. M. Armstrong,
Assistant Director, Bureau of Economics, Montreal.
Mr. D. Rodden,
Agent, Montreal Wharf.

Canadian Pacific Railway:
Mr. R. W. Scott,
Superintendent, Montreal Terminals.
Mr. H. D. Brydone-Jack,
Assistant Manager,
Department of Personnel, Montreal.
Mr. A. M. Sime,
Dock Superintendent, Montreal Wharf.

The employees were represented by—
Mr. F. H. Hall, Vice-President,
Mr. W. H. Rowe, General Chairman (C.P.R.),
Mr. F. E. McManus, Local Chairman (C.P.R.),
Mr. W. J. Evans, Regional Chairman (C.N.R.),
Mr. J. Burnett, Local Chairman (C.N.R.)
and
Mr. C. A. Giroux, Local Chairman (C.P.R.), Place Viger.
all of the employees union.

The application was for an increase in the rates of pay of approximately 350 men employed by the C.P.R. and 300 men employed by the C.N.R. at the Montreal Wharf as checkers, freight-handlers, coopers, etc., the increase requested being—

(*a*) to increase all hourly rates by 12 cents per hour; and in the case of employees of the C.P.R.—
(*b*) to increase the rate of pay of checkers employed during the closed season of navigation by an amount of $20 per month; and
(*c*) to increase the differential for night work by an amount of 5 cents per hour.

While the application of the C.N.R. employees did not expressly mention the 5 cent differential, it was understood that this was omitted through an oversight and that the finding on this head should also apply to the C.N.R. employees.

After consultation the Board decided to have the case outlined by the representatives of the two parties, and this occupied the first day. On the next day the Board adopted the suggestion made by the parties that it visit the wharves in order to appreciate the nature of the work, and in the presence of representatives of the employers

and employees we spent the afternoon seeing what the work was. We also had an opportunity of seeing other similar work being performed and this was most useful to us.

On September 30, 1938, the submissions of the two parties were developed at greater length. At the close of the hearing representatives of each side were canvassed as to the possibility of reaching a solution by the process of conciliation, but it speedily became apparent that any effort in this direction would be fruitless.

On October 3, 1938, the hearing was completed with the Railways filing additional material and further representations were made orally by both parties. The following days were given over to a consideration of the report which is now presented.

We shall first deal with the general application for an increase of 12 cents per hour mentioned in (*a*) above and in doing so shall follow both employers and employees in treating the case of the truckers as typical, representing as they do more than 80 per cent of the men employed.

The case for the employees may be summarized briefly. The employees concerned are employed by each of the two Railways principally to unload export freight out of the cars of the two Railways into the sheds on certain of the wharves at Montreal and to load import freight from the sheds into the cars. The work of loading the same freight into and out of ships is done by longshoremen employed by shipping companies. It was submitted that the work done by the truckers was practically identical with that of the longshoremen, apart from the slightly greater risk involved in working in the holds of ships. For the reason stated, however, longshoremen had traditionally received a slightly higher rate of pay than the railway truckers. But this year the longshoremen had been increased to 77 cents per hour, whereas the truckers were paid 50 cents. Shown in tabular form the two rates paid had varied as follows:—

COMPARISON OF RATES OF PAY OF TRUCKERS AND LONGSHOREMEN AT MONTREAL

Year	Rates of truckers on wharf cents	Rates of longshoremen cents	Differential cents	Longshoremen's rate to trucker rate per cent
1913.. ..	25	30	5	120
1921.. ..	57½	60	2½	104
1921.. ..	43	60	17	139
1923.. ..	48	50	2	104
1924.. ..	48	62	14	129
1927.. ..	50	65	15	130
1932.. ..	45	59	14	131
1934.. ..	42½	56	13½	132
1935.. ..	44	62	18	140
1936.. ..	45	65	20	144
1937.. ..	47	65	18	138
1938.. ..	50	77	27	154

It was submitted for the employees that it was unjust that longshoremen, doing substantially the same work, handling the same freight and in the same sheds, should receive to-day 77 cents as opposed to their 50 cents —a differential of 27 cents or 54 per cent. After midnight the differential was even greater, the hourly rate for railway truckers being 55 cents as opposed to 97 cents or a difference of 42 cents, amounting to 76 per cent, and in the extreme case of men working in temperatures under 32° after 12 midnight the longshoremen were entitled to $1.12 per hour.

It was further submitted that the rate of pay received by the railway employees affected was substantially less than was paid for similar work at any ocean port of Canada. At Halifax, N.S., and Saint John, N.B., the rates for truckers were 52 and 53 cents per hour, while at Vancouver the rate was 61 cents.

The employees urged that the use of tractor-trailer equipment since 1931 had considerably increased the amount of work done in each man-hour, and by adding to the size of the truckloads had made the work more onerous, particularly as freight had now to be piled higher on the trucks. The truck-trailer equipment had made trucking easier, but in speeding up the movement by truck had greatly increased the quantity of the heaviest work to be done, namely, lifting and piling. It was submitted that the employees should share in the benefits to the Railways of increased efficiency, in part due to mechanization, and in part to better organization or work.

Finally, the fact that work was only available in the season of navigation, some seven months in the year and that even during such period the work was exceedingly irregular, so that a living wage could only be earned by a few of the senior men, who were prepared to work long hours when work was available, entitled the workers to a higher rate of pay than other workers doing similar work but engaged at steady work the year round.

The case for the Railways was based firstly on general grounds. In the Railways' submission the employees had since April 1, 1938, had the same rate of pay as in the very much more prosperous days of 1927. That rate had been reaffirmed (with minor changes) by agreements made in 1936, subject to the general deduction of 10 per cent applicable then to all railway employees, but since April 1, 1938, by an agreement dated March 29, 1937, restored in full to all the employees of both lines. Nothing had happened since to warrant an increase. The real wage had

increased since the basic rate of 50 cents was established in 1927, while the revenue of the Railways had seriously decreased, even since 1936. Moreover, any change in the hourly rate of these employees would tend to upset long-established relationships between the wages of various classes of railway employees.

With reference to the particular case of the employees affected by the application, the Railways said that their rates of pay compared favourably with the rates of railway and other workers doing similar work. The rate of 50 cents was the same as that for the freight-handlers in the Bonaventure and Place Viger freight sheds and yards in Montreal, doing, they submitted, substantially the same work. Comparisons were made with other wages.

Dealing first with the Railways' contention that the cost of living and revenue of the Railways should be taken into consideration, it is pointed out that however proper it might be to give weight to such considerations in a reference affecting all railway employees, or any considerable group of them, it would not be a good cause for perpetuating an injustice, should one exist, in the rates of a relatively small number of workers engaged in a particular work at a single place. The present application was fundamentally based on the plea that the rates now paid these men were low, having regard to the nature and conditions of the work and the wages paid for similar work in Montreal and elsewhere.

The first question to be answered by the Board was, therefore, whether or not this application should be treated as relating to a local matter to be decided on its own particular merits, or were the employees affected to be considered as part of a larger group governed by a general agreement.

There is an agreement effective August 1, 1939, generally establishing a rate of 50 cents per hour for freight-handlers employed by the Railways at Montreal and other large centres, with slightly lower rates at other places; but this agreement does not govern the situation of freight-handlers on the wharves at Montreal, or for that matter, at any ocean port. The agreements at present in force in Montreal, dated August 21, 1936, and effective August 1, 1936, in the case of the Canadian National Railways, and dated July 14, 1936, and effective July 1, 1936, in the case of the Canadian Pacific Railway, are agreements solely between the Railways and the employees concerned in the present application. They do not relate to any other class of employees.

Moreover, we were informed that at all the other ocean ports there are special arrangements entered into because of the conditions existing at each place. At Halifax and Saint John agreements with this same special class of employees fixed the basic rates for truckers at 52 and 53 cents per hour, respectively, while at Vancouver the rate had been fixed at 61 cents per hour. The only other ocean port at which this class of work is done is Quebec, and at that city there is a special arrangement whereby the employees handle the freight from the trains to the ships, doing thus the work of freight-handlers and longshoremen, for a wage of 60 cents per hour.

These facts establish beyond question the employees' contention that freight-handlers at ocean ports are governed by special agreements; that there is no standard rate applicable to them; and that the rate payable in each place is arrived at separately in the light of special local conditions, as well as of more general considerations.

For these reasons the Board felt it should regard the matter as primarily a local question to be settled on its own particular merits and in the light of all the circumstances. These would include the nature of the work, the conditions of employment and the rates paid for comparable work, all to be subjected to the most careful scrutiny in view of the decline in the Railways' revenues since 1927 and of any increase in the purchasing power of the dollar.

Evidently there is no way in which the fairness or unfairness of a rate of wage for work of this kind can be determined by the application of abstract and absolute principles, and reference must be had to the wages paid to employees in the same or other localities doing work requiring similar skill and involving the same physical effort. We have mentioned that in their presentation the employees referred to the fact that the longshoremen working beside them in the same sheds and handling the same freight had recently had their rates of pay increased from 65 to 77 cents. This, the employees said, had brought to a head a feeling of injustice from which they had been suffering for some time, due to the fact that their wages were too low in view of the work done.

On our visit to the wharves we had an opportunity of seeing the work done by the longshoremen and comparing it with the work done by the freight-handlers. While it is true that both groups of men were working in the same sheds and handling the same freight, the conditions of work were not in all respects identical. In so far as the work of both took place within the sheds, it was identical. But when it came to moving the freight into the hold of the ship and stowing it there, it seemed to us that this involved some addi-

tional skill and exposure to less favourable working conditions due to the difference between the operation of stowing and unloading cargo in a hold and stowing or unloading freight from a railway freight car. It was also clear from the nature of the work that the longshoremen must be exposed to greater risks of accident and injury than were the freight-handlers. For these reasons we felt that the longshoremen were doing work of greater difficulty and greater risk under worse conditions. In fact a difference had always been recognized in the scale of wages paid to the two classes of employees, as shown in the table given above. The employees protested, however, at the widening of this differential to 27 cents or 54 per cent for day work and from 55 cents to 97 cents for night work. In our opinion, such a differential, amounting to more than 50 per cent, was not warranted and would inevitably create a sense of injustice on the part of the men having to do similar work for a very much smaller wage.

But this did not dispose of the matter since the Railways (though both through their subsidiary shipping companies are parties to the agreement with the longshoremen) were not directly responsible for the wage paid to the longshoremen and it did not necessarily follow that because the shipping companies for one reason or another had agreed to pay the longshoremen 77 cents, the Railways should pay the freight-handlers 62 cents. The justice or injustice of the rate of 77 cents paid to longshoremen was not in issue in the present reference and the Board expressly refrains from commenting thereon. But the fact that the two sets of men are doing similar work on the same wharves at Montreal for such widely different rates of pay is an element which cannot be overlooked.

The Railways endeavoured to meet this side of the employees' case by seeking to compare the work of the employees with that done by the freight-handlers in the raliway sheds and yards at Place Viger and Bonaventure in Montreal, where the current rate is 50 cents per hour. The employees answered by asserting that the work on the wharves was heavier than in the railway sheds. While this was not fully admitted by the Railways, it was the conclusion of the Board that the freight handled and the conditions of work differed sufficiently in the two places to entitle the employees at the wharves to a higher rate of remuneration. This had been recognized before as the rate on the wharves had been higher than that at the yards prior to 1921.

Comparisons were also made to the hourly rates of pay of other classes of labour employed by the Railways, such as track sectionmen 41-45 cents; enginehouse labourers, 43-46 cents; roundhouse labourers, 41-42 cents; main shop labourers, 37½-42 cents; coach cleaners, 44 cents; bridge and building labourers, 43 cents; carmen's helpers, 56 cents; as well as to various other classes of labourers employed by outside firms in Montreal and usually receiving 40 cents per hour. But it was not established that these could bear a close comparison to the truckers on the wharves either from the point of view of the nature of the work or the conditions of employment.

We have described briefly the nature of the work at the wharves; it is now necessary to refer to the conditions of employment.

The truckers at the wharves (still more the checkers and other classes affected) are not casual labourers who happen to work at the wharves; they are regular employees of the two Railways and for the most part have been many years in their service. As is general throughout the Railways, both companies have seniority lists or rosters. Of 199 truckers on the C.P.R. seniority list in 1927, 124 are still in its employ and of 217 truckers on the C.N.R. list in 1927, 120 are still in its employ. The 90th man on one roster had entered its employ in 1924. The Railways profit from these men's skill and experience being constantly available to them. Unless a man remains available he may be struck off the list and cease to be eligible for work. The C.P.R. has 329 truckers and the C.N.R. has 230. These are divided into gangs of 6 truckers and a checker, and as work is available gangs are called up in order of seniority as shown on the seniority roster of each company. In the case of the C.P.R. lists of the gangs required the following morning are posted each night at 6 p.m.; while in the case of the C.N.R. the men turn up at 7 a.m. and 1 p.m. each day to see if work is available. If work is available they receive 50 cents an hour for ten hours (with a minimum of three hours) and 55 cents after 7 p.m. with a minimum of two hours. The total amount a man could receive for ten hours' work on six days a week during the 33 weeks of open navigation would be $990, but no one does work ten hours a day during the season. For the amount of work available even during the season of 33 weeks varies with the ships in port and it varies greatly. For instance, in June and July of this year there was little work. In November each year there is a rush to load ships before the close of navigation and all men available on the rosters are required.

Work also varies with the days of the week. On Monday there may normally be work for 16 gangs on the C.P.R. alone, on Tuesday and Wednesday 23, on Thursday 32, on Friday 16 and on Saturday 10. For the week ending October 1, 1938, on the C.N.R. alone, 35 gangs worked on Monday, on Tuesday 46, on Wednesday 47, on Thursday 36, on Friday 24 and on Saturday 28.

As work is only available at best during 33 weeks, the men are ordinarily anxious to work any overtime available and occasionally men work as much as 30 hours at a stretch. For this they would receive $5 for their first full day of 10 hours, $5.50 for 10 hours' overtime at 55 cents and $5 for the second day, or $15.50 in all. This should result in a big wage but last year the average earnings of the first 180 men on the seniority roster of the C.P.R. was $748.90, or an average for the season of 33 weeks of $22.69 per week. The situation is shown by the table which follows in which the earnings of the 180 most senior truckers at the wharves are compared with those of the same number of men at Place Viger. While figures are only for the C.P.R. we were informed that those for the C.N.R. would be substantially the same:—

STATEMENT SHOWING COMPARISON OF EARNINGS OF THE SENIOR 180 TRUCKERS IN THE EMPLOY OF THE CANADIAN PACIFIC RAILWAY AT MONTREAL WHARF DURING THE SEASON OF 1937 (33 WEEKS) AS AGAINST 180 TRUCKERS WORKING ENTIRE YEAR AT PLACE VIGER.

Total Earnings	1937 Net		Earnings with Basic[3] Rates in Effect	
	Montreal Wharf[1]	Place Viger[2]	Montreal Wharf	Place Viger
1st 30 Men on Roster	$952 31	$1,106 76	$1,014 21	$1,184 23
2nd 30 Men on Roster	886 07	1,081 78	943 66	1,157 50
3rd 30 Men on Roster	869 71	1,018 33	926 24	1,089 61
4th 30 Men on Roster	767 95	872 28	817 86	879 39
5th 30 Men on Roster	636 71	716 02	678 10	721 03
6th 30 Men on Roster	380 71	559 26	405 46	563 17
Averages	$748 91	$ 892 40	$ 797 58	$ 932 48

[1]Montreal Wharf figures cover season 33 weeks.

[2]Place Viger figures cover year 52 weeks.

[3]The 1937 figures show actual amounts received after deduction of the percentage (5 per cent, 6 per cent or 7 per cent) then deducted from all the wages of all railway employees. The figures shown "with Basic Rates" show the amount that would have been received if the deduction had not been made. Deductions stopped on April 1, 1938.

Several observations should first be made about the wages earned in 1937 on the wharf. It will be seen that although the average of the first 180 men is $748.90 or $22.69 for each of 33 weeks, the amount received by each group of thirty men falls off rapidly as we go down the seniority list. While the remuneration of none of the men can be regarded as generous, the earnings of the men numbered from 151 to 180 on the seniority list only amount to $380.71 or $11.54 per week and these men in this 6th group have had from 10 to 5 years' service and they cannot do anything else during the summer season because they must be always available to the Railways in case their services are needed.

Further, it will be noted that the Statement does not go beyond the 6th group, and yet there are another 149 truckers on the seniority lists, employed by the Railways, available to work when required, in receipt of total earnings of considerably less than $380.71 per season.

It follows from the wages received that practically all the men are more than willing to work any overtime and in some cases even are glad to work 30 hours at a stretch in order to add to their earnings. We were not told the proportion of the total wage bill represented by payments for overtime, that is, for work after 7 p.m., but from a C.P.R. pay sheet for the week ending August 30, 1938, containing the names of 299 truckers at the wharves, it appears that 72 truckers received payments for overtime work, while the total wages of each of 63 truckers during the week did not exceed $10.

Comparing the conditions of employment of the truckers on the wharves and at Place Viger (we were told that Bonaventure would show a similar picture) we find that the men at Place Viger have an 8-hour day, as opposed to a 10-hour day on the wharves, and they get time and a half for overtime instead of the 5 cents extra on the wharves. The work goes on during the full twelve months; it is much less intermittent than that on the wharves and there is practically no overtime. The above table of average wages of the 180 senior men out of the 338 truckers employed shows that the earnings during twelve months of the men at Place Viger are not only greater for an 8-hour day,

but that the earnings of the less senior groups do not fall off to nearly the same extent as those of the truckers on the wharves. Steady work appears to be available to a much larger number of men, and there is no need of keeping men available to take care of peak periods as is the case on the wharves.

In their conditions of employment, the truckers on the wharves correspond very much more nearly to the longshoremen. But among the longshoremen, the rule of seniority does not prevail; work is allocated in rotation; and all the longshoremen willing to work receive much the same average earnings during the season. The Railways informed us that the average earnings of longshoremen in 1937 amounted to $1,297.22 or $39.55 per week for the season. If we contrast this with the figure of $748.91 for the *top* 180 truckers it seems fair to estimate that last year the average earnings of all the longshoremen amounted to more than twice the average earnings of all the truckers. We are basing this on the figures given to us for 1937 when the truckers were still subject to a deduction in common with all railway employees and before the longshoremen received the increase of 12 cents per hour or 16 per cent; but it should be added that it was the Railways' understanding that despite the increase, the longshoremen would receive less this year than last. This may prove to be the case; but it does little to bridge the wide gap between the earnings of the two classes of employees. Certainly it would appear that the work of the longshoremen is very much steadier than that of the truckers on the wharves. While it is the practice of the two Railways' steamship companies to use the same group of longshoremen, numbering usually about 475 out of the 2,000 in steady employment on the waterfront at Montreal, it is possible for these 475 men to obtain work from other steamship companies, an opportunity not available to the truckers.

When we come to compare conditions in 1927 with those in 1937, we find that the total man-hours worked during the seasons of 1927 and 1937 were as follows:—

Total Man-Hours Worked in Season	1927	1937	
C.N.R.	318,162	321,534	
C.P.R.	279,482	319,412	
Total	597,644	640,946	7% increase

The number of truckers on the two seniority lists was as follows:—

Number of Truckers Employed	1927	1937	
C.N.R.	217	230	
C.P.R.	199	329	
Totals	416	559	increase 143

It was impossible to get figures comparing the quantities of freight handled in 1927 and 1937; but we were told by all parties that there had been a very substantial increase in 1937 over 1927. It does appear as if the Railways had increased the number of men on the lists in order to be able to take care of the greater peak loads experienced today. But the average earnings in 1927 were little different from what they are to-day. The first 60 men on the roster made rather more in 1927 than in 1937, but the 5th and 6th groups made rather less.

The Railways urged that the seasonal character of the work should not be taken into account in fixing the hourly rate. But in their written statement in rebuttal the Railways suggested that the higher rate paid to freight-handlers at Portland, Me., was due to the intermittent nature of the work and at Saint John and Halifax, they said, it was in part due to the shorter winter-port season. It was only logical for the employees to use the same argument to justify a differentiation between themselves and the freight-handlers in the sheds and yards at Montreal, on the ground that these had steady employment during twelve months at eight hours a day, whereas they had highly varying employment during some seven months of the year. The Board appreciates that it would not be proper to endeavour to arrive at a wage for the freight-handlers on the wharves which would in seven months' work give them approximately the equivalent of the freight-handlers in the yards during twelve months, but the fact that the work is seasonal is a factor to be considered in the light of present conditions. Of the 650 men affected by the present application, only 22 employees of the C.P.R. receive regular work in the off-season months, while an even smaller number receive regular work from the C.N.R.; and it was stated that the extent of unemployment prevented the balance from being able to earn anything very much in the off-season months.

While the seasonal character of the work limits the amount that may be annually earned at this occupation, a more important consideration is the intermittent character of the work, with the demand varying from quiet periods, as in June of this year, when only a few men were required, to peak periods, as in November, when every available man is needed. To have constantly available to meet their requirements as indicated from day to day men able to do this work, the Railways should be willing to pay something more than the rates established by themselves for very much more steady, all the year round, employment in a similar, though if anything, less difficult occupation.

If these wide variations in the employment of long service experienced men are inherent in the nature of the business carried on, then the business should be willing to bear a wage rate which comes close to giving at least the senior men an opportunity to earn a reasonable wage in reasonable hours. It must be recognized that no change in hourly rates of pay would improve the position of the junior men. Apparently they stay on the lists in the hope of getting a better rate as the passage of the years gives them greater opportunities of getting work.

The employees advanced as a further reason in support of their application that the adoption in 1931 of tractor-trailer equipment in the C.P.R. sheds and of other mechanical equipment by both Railways and added pressure and better organization of the work had led to their doing very much more work to-day than was the case in 1927, when the rate of 50 cents per hour was first established. In support of this the statement was made that whereas it took 4 hours to empty a car of certain commodities in 1927, it only took 1½ hours to empty such a car to-day. The extent of this difference was questioned by the employers as only about one-third of the freight was handled by mechanical equipment, but that there had been an increase in the value to the Railways of the work done for the same wages paid was not denied. In our view some weight should be given to the employees' claim that they should share in any such benefit, which has accrued in part from their work and skill.

On the whole we are of the opinion that according to the merits and substantial justice of the case the Railways should increase the rate from 50 cents to 57 cents per hour for truckers and that it should allow a similar increase to the other classes affected.

The case of the checkers employed by the C.P.R. during the closed season of navigation and the application to increase from 5 cents to 10 cents the additional pay for work after 7 p.m. were not specially dealt with before us. It was stated by both sides that the recommendation as to truckers would determine the rest, and no doubt the parties will be able to deal with these matters in any general settlement.

The time as at which any increase should begin was not discussed before us, and we hesitate to express an opinion beyond suggesting that it would appear to be fair to date any adjustment back to August 15, 1938, as the approximate date when the application for the Board was made. We think that if an agreement is arrived at it should be for two years and it would of course be subject to any adjustment of general railway wages.

Further, we hope that the Railways and the representatives of the men will consider if it is not possible to work out some system whereby work is given more steadily and the necessity of men working overtime to gain a decent wage is avoided. We appreciate some of the difficulties involved, but if the representatives of both parties show the same goodwill towards each other as they exhibited before us, it should be possible to find a solution which would bring the earnings of at least half of the men to a reasonable level without undue additional expense to the Railways.

The objection of the Railways already mentioned that long established Railway rates should not be lightly changed was also put on the score that if the application is granted it will be used as a lever by other employees to obtain increases. But it is not seen how the finding here can have any general effect on, say, the rates of freight-handlers in railway sheds now generally fixed at 50 cents. It is solely because we consider the work and conditions of employment of the employees on the wharves as being different from that of other classes of employees, such as the freight-handlers in the sheds, that we reach the present conclusion. In the very unlikely contingency that the same combination of special circumstances existing here is found to be present in some other case, the persons having to consider that matter may reach a similar conclusion to our own. The fact that the views expressed here might be referred to on some future occasion is not a good reason for refusing to express them now.

We must commend in the highest terms the ability and fairness with which the representatives of both sides laid the matter before the Board. We feel that every effort was made by both sides to put us in possession of all the facts bearing on the question and we have nothing but praise for the manner in which the representatives of both parties conducted themselves before the Board.

It has unfortunately not been possible for the members of the Board to arrive at a unanimous report and Mr. G. S. Currie is submitting a minority report.

The whole respectfully submitted,

(Sgd.) Brooke Claxton,
Chairman.

(Sgd.) Tom Moore,
Member.

Montreal, Oct. 11, 1938.

Minority Report

In the matter of the Industrial Disputes Investigation Act and in the matter of a Dispute between the Canadian National Railways and the Canadian Pacific Railway Company (employers) on the one hand,

and

Certain of their employees at the Montreal Wharf, being Checkers, Freight-handlers, Coopers, etc. (employees) on the other hand.

To the Honourable,
The Minister of Labour,
Ottawa, Ontario.

SIR,—The Board of Conciliation and Investigation appointed by you in the above matter to inquire into the dispute between the Railways and certain of their employees commenced its hearings in Montreal on 28th September, 1938, at the Mount Royal Hotel. The following day, the 29th of September, the Board visited the Montreal harbour and there saw some of the men who are concerned in this dispute at their work and had demonstrated to them the conditions and nature of the work, not only of these particular men, but also of the longshoremen. The Board met again on Friday, 30th September, and on Monday, 3rd October, the hearing was completed. On following days the Board considered the submissions which had been made to them and the nature and terms of the report to be submitted.

The representatives of both sides presented their case with great care and thoroughness and there was apparently an excellent relationship between the parties.

At the hearings the employers were represented by—

CANADIAN NATIONAL RAILWAYS:
Mr. R. C. Johnston,
Superintendent, Montreal Terminals.
Mr. W. M. Armstrong,
Assistant Director, Bureau of Economics, Montreal.
Mr. D. Rodden,
Agent, Montreal Wharf.

CANADIAN PACIFIC RAILWAY:
Mr. R. W. Scott,
Superintendent, Montreal Terminals.
Mr. H. D. Brydone-Jack,
Assistant Manager,
Department of Personnel, Montreal.
Mr. A. M. Sime,
Dock Superintendent, Montreal Wharf.

The employees were represented by—
Mr. F. H. Hall, Vice-President,
Mr. W. H. Rowe, General Chairman (C.P.R.),
Mr. F. E. McManus, Local Chairman (C.P.R.),
Mr. W. J. Evans, Regional Chairman (C.N.R.),
Mr. J. Burnett, Local Chairman (C.N.R.)
and
Mr. C. A. Giroux, Local Chairman (C.P.R.), Place Viger.

The number of employees directly affected was estimated to be approximately 650, all of whom are employed on the Montreal wharf. The application on behalf of the employees of the Canadian National Railways proposed—

"To amend Article 7 by increasing all hourly rates specified therein by an amount of 12 cents per hour."

The application of the employees of the Canadian Pacific Railway proposed—

"To amend Article 7 by increasing the rate of pay of checkers employed during the closed season of navigation by an amount of $20 per month."

"To amend Article 9 by increasing all hourly rates specified therein by an amount of 12 cents per hour and to provide a corresponding increase for monthly-rated employees specified therein. To increase the differential for night work by an amount of 5 cents per hour."

The Articles mentioned refer to certain clauses in the agreements covering rules and rates of pay for certain classes of employees at the Montreal wharf, effective 1st August, 1936, in the case of the Canadian National Railways and effective 1st July, 1936, in the case of the Canadian Pacific Railway. Copies of these agreements were filed with the Board. It was explained to us that the men involved in the dispute may be designated as "waterfront freight-handlers" employed on the wharf for the handling of freight from railway cars to the sheds, in the case of freight destined for export, and vice versa, from shed to cars in the case of import freight. They have to do with ocean-borne freight. This freight is loaded and unloaded from the ships by another class of worker called longshoremen.

The Railways' representatives throughout the proceedings contended strongly that as the longshoremen are paid by the Steamship Companies and do work which differs materially from that done by the Railways' freight-handlers, the remuneration established by the Shipping Federation of Montreal in relationship to longshoremen's rates at other Atlantic ports should have no bearing on the rates of pay of railway waterfront freight-handlers in Montreal, which it was shown were related to the rates generally established throughout the two Railway systems for railway freight-handlers.

The basic rate of pay earned by the truckers, who form the largest group of the waterfront freight-handlers, amounts to 50 cents per hour, with a differential of 5 cents

per hour for all time worked after 6 p.m. The general 12 cent increase requested by the railway waterfront freight-handlers seems to have for its base a 12 cent increase granted to the longshoremen at Montreal through the Shipping Federation at the commencement of the present season. This increase brought the longshoremen's rates up to 77 cents per hour, from 7 a.m. to 12 noon, and from 1 p.m. to 6 p.m., to 87 cents per hour from 7 p.m. to 11 p.m. and 97 cents per hour from twelve midnight to 5 a.m. Apparently over a period of years there has never been any objection on the part of the railway freight-handlers to the principle that there should be a differential wage rate favouring the longshoremen, but the amount of the differential is now a matter of complaint.

At New York and Boston the present differential is 47 cents per hour. There the longshoremen's day rate is $1.05 per hour, and the railways at New York pay 58 cents to their waterfront freight-handlers. The railways in the United States have moved to bring about a general reduction of 15 per cent. The majority of this Board recommend an increase of 7 cents per hour for the railway truckers in the waterfront group, which would bring the railway workers up close to the New York level, while the longshoremen at New York would be 28 cents above the longshoremen here.

The representatives of the employees contend:—

1. That whereas in 1913 there was a differential of only 5 cents per hour in favour of the longshoremen, it has gradually increased to one of 27 cents per hour and that whereas the work of the waterfront freight-handlers is similar to that of the longshoremen, the differential of 27 cents per hour is discriminatory and unfair.

It would appear from information submitted that the differential in favour of the longshoremen at certain other important Atlantic ports is substantially greater than the differential of 27 cents per hour existing in Montreal. In fact, as stated above, in Boston and New York the differential is 47 cents. However, the difference between railway wharf freight-handlers' rates at Montreal and corresponding rates at United States ports is generally in about the same ratio as the difference in rates for other classes of Railway employees in the two countries. If the award as recommended by the majority of the Board is brought about, the rate of pay of the Montreal waterfront freight-handlers will be only one cent less than that at New York. The difference in the rates paid to waterfront freight-handlers and to longshoremen no doubt recognizes the fact that the conditions applying to the work in the Steamship services are materially different from those prevailing in the Railway service. In any event it seems reasonable to conclude that action taken by the Steamship interests, affected as they are by other than Railway conditions, is not relevant to the case at issue.

2. That the rate of pay of the railway waterfront freight-handlers should be higher than that of other freight-handlers employed by the Railways at their other terminals such as Place Viger Station and Bonaventure Station, where they now receive the same basic rate, because it is claimed that the work of the waterfront freight-handlers is harder and more arduous than that of those who work in the Railway terminals.

It has not been satisfactorily shown that there is any material difference in the nature of the work performed such as would justify any difference in rates paid. The same rates have prevailed by agreement over a period of many years and the relative conditions have not changed. The rates paid compare very favourably with those paid for similar work throughout both Railway systems and in the district of Montreal. Lake shipping interests, competing with the Railways for freight movements to and from the Port of Montreal, established this season for their waterfront freight-handlers at Montreal rates which on the average for day and night work are just below the Railways' rates. These rates were included in agreements made with the same organization as is concerned in this application.

3. That they are entitled to receive some of the benefit which the Railways have derived through the use of mechanical equipment.

It is estimated that the mechanical equipment is used to handle only about 30 per cent to 35 per cent of all freight moved. It was quite apparent that the mechanical equipment was installed to meet increased labour costs.

4. That the rates of pay of the Montreal wharf railway freight-handlers are lower than at any other ocean port in the country.

It was shown that the rates paid wharf freight-handlers at ocean ports are governed by special agreements which take into account special local conditions and also relationships to each other that have been established over a period of many years.

5. That the dispute in the main is a local question and problem and does not affect the general agreements with other Railway employees.

It is apparent, however, from an examination of the schedule of the rates of pay for other classes of work in the Railways that the rates of pay in this instance reflect a relationship to the rates paid to the other classes of Railway employees and to the same class at other points.

6. That the work is intermittent and seasonal, justifying a differential in their favour as against other railway freight-handlers.

This statement is not borne out by comparison with classes earning even lower rates of pay than the waterfront freight-handlers for similar work of an even more intermittent and seasonal character. The established rates appear to have been effected by agreement with full recognition of the conditions of the service.

On the other hand, the Railways submit:—

1. That the existing basic rates of pay were established in 1927 when general economic conditions were much more favourable than at the present time;

2. That the "real wage" value of the existing rates of pay is 17 per cent higher than it was in 1927;

3. That during the intervening years from 1927 to 1934 wage rates were reduced by agreement to the extent of 15 per cent;

4. That since 1934 reductions in rates have been completely restored, the basic rates agreed to in 1927 having been re-established April 1, 1938;

5. That the operating revenue of the Railways are now less than they were in 1931 at the end of which year the employees, by agreement, accepted the first reduction of 10 per cent from their basic rate of pay;

6. That the "real wage" and actual wage rates have increased since 1936 when the working agreements between the Railways and the employees were last revised;

7. That the action of the Steamship Companies in increasing rates of pay of longshoremen cannot be held to be valid reason for increasing rates of pay of Railway wharf employees;

8. That a differential between the rates of pay of longshoremen and railway wharf employees exists at all Atlantic ports in the United States and Canada, due to recognized differences in working conditions, and that generally the differentials at other Atlantic ports are considerably greater than the differential at Montreal.

9. That the granting of increased wage rates to Montreal wharf employes might have a disturbing effect on the established relationships between the wage rates of these and other classes of employees.

The facts and figures as submitted by the Railways were not disproved and from the evidence submitted, it would apear to me that the rates paid by the Railways to their wharf employes are fair and reasonable and at least equivalent or higher than rates paid to like classes of labour in other industries in Montreal and by the Railways themselves. It is realized that junior men cannot receive during the shipping season total earnings which are adequate to provide subsistence for a whole year and must depend upon some other employment. This, however, is not primarily due to the rates of pay but to the method of sharing the work available, and a moderate increase in the rate of pay would make little appreciable difference to such men. There does not seem to me to be any justification in granting an increase in the rates of pay to the more senior men who during the navigation season have steady employment and earn a fair remuneration.

It is generally recognized and admitted that some differential between the wage rates of railway wharf freight-handlers and ocean steamship longshoremen is justified, but as already pointed out, the differential at present existing in Montreal is less than that of other Atlantic ports.

Taking into consideration the existing economic conditions when compared with those at the time the rates were established, the revenue of the Railways and the fact that the present rates of pay have only been in effect for six months, I cannot see why an increase at this time is considered as warranted.

The Railways strongly represented that an agreed rate of pay for railway service paid in 1927, which in "real wage" value has increased from the equivalent of 100 to 117, should not now be further increased when conditions affecting the Railways have brought their operating revenues from the equivalent of 100 to 67.

Under present conditions it seems to me that there is no way of meeting increased operating costs of the Railways in Canada other than by increased taxation or increased unemployment. Therefore, it would be unfortunate if because of an increase being granted to a group of employees already receiving reasonable remuneration other employees should find themselves out of work entirely because of the necessity of offsetting the additional expense which such an increase as is recommended by the majority of the Board would involve.

In their submission the Railways drew attention to the rates paid throughout Canada (including Montreal) for various classes of labour, rated generally as considerably above what is termed "common labour." Some of these rates are—

	Cents per hour
Track Sectionmen—Maintenance of Way Forces—First Class Yards.	41-45
Engine House Labourers—Mechanical Department Forces.. ..	43-46
The Railways also showed a general rate for Freight Shed Truckers applying at many points of.. ..	50

This latter is the same rate as the day rate paid to Railway freight-handlers at Montreal. The majority of the Board now recommend that railway waterfront freight-handlers at Montreal should get 57 cents per hour.

I feel that the Railways have generally tried to be fair in the matter of wages paid to their employees and in fact sections of the public have not hesitated to criticize the Railways for the scale of wages generally adopted. Bearing this in mind and particularly the representations made that an increase granted to this group would be used by others to work up further increases, I cannot join in a recommendation that might, if acted upon, disturb a scale certainly by general acceptance not low. Besides, the local feature of the situation which is stressed seems to be not the rates paid to this class of Railway employees, but the rates paid to other workers by a federation of employers dealing with other than Railway conditions.

I cannot agree with the award and recommendation of the majority of the members of the Board, as I find the case of the employees unsupported by matters which I can regard as factors of sufficient weight to justify my joining in a recommendation for any increase in the rates of pay. In view of all the facts and the circumstances submitted and according to the merits and substantial justice of the case, I am of the opinion that the claim of the employees for an increase in their existing basic rates of pay is unwarranted and should not be granted.

Respectfully submitted.

(Sgd.) G. S. Currie.

Montreal, 11th October, 1938.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

Summary of Recent Decisions

REPORTS have been received of three cases settled recently by the Canadian Railway Board of Adjustment No. 1. Earlier decisions were outlined in the Labour Gazette, May 1938, page 491, and in previous issues; and the sixth report of the proceedings of the Board, covering the period from October 1, 1933 to September 30, 1936, was issued as a supplement to the February, 1937, issue of the Labour Gazette.

The Board was established under a voluntary agreement concluded in 1918, between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. It has power to determine all differences arising between the railway companies and the members of any of the six railway brotherhoods "including the interpretation of wage schedules or agreements having due regard to the rights of the several classes of employees and of the railways respectively."

The Board consists of six representatives of the railway companies and six representatives of labour, one for each of the following Railway Brotherhoods: The Brotherhood of Locomotive Engineers; the Brotherhood of Railway Trainmen; the Order of Railroad Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

Case No. 467.—Canadian Pacific Railway (Western Lines) and the Order of Railway Conductors and the Brotherhood of Railroad Trainmen

This case concerned a dispute with regard to the question of advertising short term work train assignments of less than ten days' duration.

Joint Statement of Facts.—In the joint statement of facts reference is made to the posting of a bulletin at Souris, Lauder, Reston, Minnedosa, and Wynward, advertising for one conductor and two trainmen for work train service to last for a period of about five or six days. It is also stated that this work started on August 3, 1936 and was completed on August 8, 1936, the crew being paid under the rules governing assigned work train rates and conditions.

Employees' Contention.—The employees contended that "all temporary or emergent work train service of less than ten days' duration should be compensated by the application of Article 3, Clause F of the Schedule, which rule was embodied in the Schedule to take care of all temporary and emergent work train service of less than ten days."

Company's Contention.—The company submitted that the provisions of its agreements with the Order of Railway Conductors and Brotherhood of Railroad Trainmen, under which men engaged in work train service are paid, have been in effect in their present form since 1917, and that there is nothing in these

agreements to prevent the Company advertising jobs of less than ten days' duration; and that since the practice of advertising work train jobs of less than ten days' duration has been recognized "without exception by all parties since the adoption of the rules governing the creation of assignments in work train service, it is justified under the agreements to continue the arrangement."

General Statement.—In the general statement the Board states that "Clause F of Article 3 of the schedule definitely provides for the assignment of regular crews to work trains when such trains are to operate for ten days or more; there is no specific provision in the rule with respect to the assignment of work trains which are to operate for less than ten days, and in these circumstances the Board cannot sustain the contention of either of the parties."

"As the matter stands, the Board in effect is being asked to develop a new rule. Under the agreement constituting the Board such action does not come within its jurisdiction."

Decision.—The Board recommended that the parties confer together and agree upon a rule to govern work train assignments of less than ten days' duration.

Case No. 468.—Canadian National Railways (Western Region) and the Order of Railroad Telegraphers.

This case arose out of a controversy with respect to the position of trucker on the station staff at Camrose, Alberta.

Joint Statement of Facts.—According to the joint statement of facts, the agent at Camrose, Alberta, made an application, through his Superintendent, for additional assistance to handle the traffic at that point. After an inspection it was recommended by the Staff Inspector that a trucker be appointed to work three days per week at the rate of 50 cents an hour, which appointment was authorized on a temporary basis, effective May 13, 1937, to be used as required.

Employees' Contention.—Outlining the staff requirements at Camrose as set forth in the Telegraphers' Agreement, the employees stated that by reductions the staff was cut from ten to six men, viz., an agent, two operators, a cashier, shed foreman, and a checker. It was also stated by the employees, that in January, 1936, it was proposed that the position of checker should be abolished, but it was finally agreed by the conference that the staff then employed should be retained until further notice with the understanding that the position of checker would not be taken off without inspection on the ground, and that the organization would be advised if any change was contemplated. However, early in the year 1937, the position of checker was abolished without a special investigation and without notifying the employees.

The employees submitted that the three day per week position is in violation of their agreement, as set out in Article 1 as follows: "Established positions shall not be discontinued and new ones created under a different title covering the same class of work for the purpose of reducing the rate of pay." The employees therefore contended that the man working three days per week was doing the same class of work formerly done by a checker and that as no bulletin was issued on this position they requested that full monthly wages be paid to the employee who worked in this position and full monthly wages to the employee entitled by seniority rules to the position "for the period in which it was improperly handled."

Company's Contention.—The Company stated that as the tonnage to be handled at Camrose was heavy on only three days per week it had been recommended by the Staff Inspector that a trucker be employed on the heavy days. The Company submitted that the position called for no work whatever of a clerical nature, or checking, and that as the trucker was not required to perform any clerical work it was considered by the Company that the position was outside the scope of Article 24 Class (*a*) of the Schedule. It was therefore requested that, as the claim of the employees was not warranted, it should be declined.

General Statement.—The following general statement in respect of this case was made. "The Board having given consideration to the arguments submitted on behalf of the employees and of the railway was concerned about misunderstandings that might arise from the implications of any decision which might be rendered in regard to it; and finding that there was some misunderstanding about the position of checker being not taken off without inspection on the ground and that the organization would be advised if any change was contemplated, and as it appeared that the position of checker had been abolished without special investigation, the Board expressed the opinion in a letter to the parties concerned that the matter should be dealt with in conference between representatives of the parties from the point at which the misunderstanding referred to was reached, with a view to arriving at a basis for any necessary adjustments of staff and that the conference suggested should include disposition of the claim which had arisen in respect to the employees affected by the change made.

"In reply to this letter the representatives of the parties to the dispute informed the Chairman of the Board that a conference as suggested had been held but that no further progress had been made towards an understanding or settlement in connection with the matter and expressed the desire that the controversy be again referred to the Board for a decision, requesting that the case be heard at the next meeting of the Board, when, it was stated, it was the desire of both parties that they be given an opportunity to present additional written or oral argument.

"At the hearing of October 11, 1938, representatives of the parties to the dispute again appeared before the Board. Little new matter was, however, presented."

Decision.—The Board's decision in this matter was that the arrangement made at Camrose was "irregular and should be discontinued forthwith, the claim of the employees is sustained to the extent of payment of the wages which a six day assignment would produce during the time or times a three day assignment was in effect, for the job involved, with the condition that the difference between the amount which a three day and a six day assignment would produce be distributed between the employees affected as the representatives of the employees and the railway may agree."

Case No. 469.—The Canadian Pacific Railway (Eastern Lines) and the Brotherhood of Locomotive Firemen and Enginemen.

This case dealt with a dispute concerning the application of Article 31, of the Firemen's Schedule, Eastern Lines.

Joint Statement of Facts.—Following the inauguration of the general pool between Montreal-Ottawa and Toronto, March 9, 1934, the runs of trains 21 and 22 on the Belleville Subdivision and 33, 34, 35, and 36 on the Havelock Subdivision were combined to form one assignment for engineers with home terminal at Smith's Falls, five men being assigned giving an average monthly mileage in the assignment of 4,160. The number of engineers assigned has been reduced to four, giving an average mileage in the assignment of 5,200.

It was further stated that since June 15, 1932, trains 705-706-707 and 708 between Toronto and Owen Sound have been manned by four engineers, giving an average monthly mileage in the assignment of 4,200. This number has been reduced to three, giving an average monthly mileage in the assignment of 5,397, any mileage in the assignments in excess of the agreed mileage limitations of engineers being allotted to assigned swing or pool engineers.

Employees' Contention.—The employees referred to Article 31 of the Firemen's Schedule and stated that the dispute arose out of the fact that the provisions of the rule had not been complied with because the new assignment not only made it possible for the engineers to average over 5,000 miles per month, but also caused engineers to be demoted to firemen and to remain assigned to firemen's positions when otherwise they would have been working as engineers.

The firemen therefore claimed that the previous assignment of five and four engineers on the respective assignments strictly conformed with the provisions of the rule, and as there was no change made necessary by a reduction in the number of trains or miles available, no change could properly be made without setting aside the provisions of the rule. Also that this rule was an agreement between the Railway Company and its Locomotive Firemen and appeared in the Firemen's Schedule of 1918 before it was an agreement with the Company and its Locomotive Engineers, and that the firemen were directly and detrimentally affected by the changes which were made, due to the fact that firemen's positions were taken away from them without any consideration being given to the provisions of Article 24, Clause (b) of the firemen's schedule.

In addition the employees also contended that the action of the Company in reducing these assignments was not in keeping with the practices, which have prevailed under the provisions of Article 31 for nearly twenty years, nor in keeping with the joint interpretations of this rule, issued by the two Chief Executives of the Engineers' and Firemen's Organizations.

Company's Contention.—The Company's position in connection with this case was stated in a letter addressed to the General Chairman by the Vice-President and General Manager of Eastern Lines. In the letter it was pointed out that "a reduction in these two passenger train assignments between Toronto and Owen Sound, and west of Smith's Falls, was made at the request of the local committee representing the Locomotive Engineers in accordance with their agreement," and it was further stated that this reduction was not considered in any way to be a violation of the agreement of the Company with its locomotive firemen and that under the circumstances no change in the arrangement was desired.

General Statement.—Both parties to the dispute appeared before the Board and presented additional oral and written evidence.

Decision.—The Board expressed the view "that these special circumstances in this case must receive consideration, that the violation of the agreement was technical in character and that no change in the assignment should now be made."

The decision of the Board therefore was that the contention of the employees be sustained "to the extent that a technical violation of Article 31 did occur. However, evidence submitted shows that in an endeavour to spread employment certain actions were taken and the violation occurred when the spread of employment was discontinued."

Concluding its decision the Board stated that "having regard to the circumstances in this particular case the violation was technical in nature and no change in the assignment of crews should be made."

Statistics of Steam Railways in Canada, 1937

For the fourth consecutive year gross revenues of Canadian railways showed an increase, amounting to $355,103,271 for 1937 as against $334,768,557 for 1936 according to a report recently issued by the Dominion Bureau of Statistics. The improvement began to slacken in May and was small for the last half of the year, September and December showing declines. Operating expenses increased from $283,345,968 in 1936 to $300,652,548, maintenance of equipment increasing by $9,411,494, or 14·8 per cent, whereas maintenance of way and structures was reduced by $2,069,125, or 3·4 per cent. Net operating revenues increased from $51,422,589 in 1936 to $54,450,723 and the net corporate income transferred to the profit and loss account was a debit of $31,222,713, as against a debit of $71,675,697 in 1936. Some of this apparent improvement was due to the elimination from the Canadian National Railways' accounts of the interest on Government loans which amounted to $36,428,873 in 1936.

This was effected under the Capital Revision Act, 1937, and by the same Act the cash deficits of the Canadian National system will be paid by the Dominion Government, so that no profit and loss debit balance will accumulate for the railway. The preceding explanation also accounts for the greater part of the reduction in the interest on funded and unfunded debt which dropped from $112,204,371 in 1936 to $77,819,294.

The mileage of railway in operation at the end of the year was 42,726·84, a net increase during the year of 174·85 miles. The principal increases were in the Canadian National system where 36·43 miles of the Senneterre-Noranda branch in Quebec were opened in November (the remainder will be completed in 1938), and branch lines in Saskatchewan and Alberta were opened, adding 146·90 miles to the Saskatchewan mileage and 64·49 miles to the Alberta mileage. The Canadian Pacific ceased operating 41·6 miles from Lindsay to Orillia, Ontario, and the Vancouver, Victoria and Eastern ceased operation of 24·53 miles from Hedley to Princeton, British Columbia. There were also other smaller additions and subtractions.

Compared with 1936 traffic, freight was heavier by 8·4 per cent in tons carried and 1·9 per cent in ton miles and passenger traffic was heavier by 7·5 per cent in number of passengers carried and 11·8 per cent in passenger miles. The reduction in the long haul wheat traffic was the chief factor in holding down the ton miles.

Employment and Payrolls.—The number of employees on Canadian railways increased from 132,781 in 1936 to 133,467, or by 0·5 per cent, and the pay roll increased from $182,638,365 to $193,355,584, or by $10,717,219 or 5·9 per cent. The reductions in rates of pay, which had been in effect for several years, were partially restored during 1937 and fully restored in 1938, as follows: reduced from 10 per cent to 8 per cent, April 1, 1937; to 7 per cent on June 1; to 6 per cent on August 1; to 5 per cent on December 1, and to 2 per cent on February 1, 1938, and the last 2 per cent was restored on April 1, 1938. The average daily wage of all employees on annual, monthly, and daily rates increased from $5·390 in 1936 to $5·583 in 1937 and the average hourly rate for those paid by the hour increased from 56·0 cents to 58·2 cents.

Estimated Value of Tourist Trade to Canada in 1937

The importance of the automobile tourist traffic to Canada is indicated in a report entitled *Automobile Statistics for Canada, 1937*, recently published by the Dominion Bureau of Statistics. Of the 1,383,130 cars entering Canada on 60-day tourist permits in 1937, the countries of origin were as follows: United States 1,382,366, Hawaii 275, Alaska 64, Newfoundland 41, and 126 from Mexico.

The report states that the estimated expenditures in Canada of United States motorists amounted to $181,332,000 in 1937 compared with $153,509,000 in 1936. The estimated amount spent in Canada by all tourists entering by train, steamer, aeroplane, etc., as well as by automobile, was $294,682,000 in 1937 and $251,299,000 in 1936. Touring motorists therefore, accounted for 61·5 per cent of all tourist expenditures in Canada in both 1936 and 1937.

The estimated expenditures in the United States by Canadian motorists amounted to $48,893,000 in 1937 compared with a corresponding total of $43,811,000 in 1936.

STRIKES AND LOCKOUTS IN CANADA DURING OCTOBER, 1938

THE following table shows the number of disputes, workers involved and time loss for October, 1938, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in man working days
*Oct. 1938	31	3,146	18,122
*Sept. 1938	15	2,173	18,840
Oct. 1937	32	6,571	50,616

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Although the number of strikes and lockouts recorded for October was twice as great as for September the number of workers involved was only fifty per cent greater and the time loss in man working days was slightly lower as most of the disputes involved comparatively small numbers of workers and were not of great duration. Nine of the disputes involved coal miners, three each in Nova Scotia, Saskatchewan and Alberta. Those in Saskatchewan, in the Estevan district, involved most of the important mines and followed organization of the miners in two unions. There were also five disputes involving automobile and automobile parts workers in Windsor, Ont. In September there was considerable time loss due to strikes of salmon fishermen on the Pacific Coast, lime plant workers at Blubber Bay, B.C., foundry workers (automobile parts) at Windsor, Ont., coal miners at Florence and Little Bras d'Or, N.S., restaurant employees at Toronto, Ont., and knitting factory workers at St. Cathraines, Ont. In October, 1937, most of the time loss was due to striking coal miners in New Brunswick and rubber factory workers at Kitchener, Ont. There were also four brief strikes of coal miners in Nova Scotia.

Seven disputes, involving 815 workers, were carried over from September and twenty-four disputes commenced during October. Of these thirty-one disputes, twenty-six were terminated during the month, five resulting in favour of the employers affected and three in favour of the workers involved, while compromise settlements were reached in eleven cases and the results of seven disputes were recorded as indefinite. At the end of October, therefore, there were five strikes and lockouts on record, namely: leather goods workers, Montreal, P.Q., furniture factory workers, Hanover, Ont., lime plant employees, Blubber Bay, B.C,. building labourers, Sydney River, N.S., and restaurant employees, Toronto, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to seven such disputes, namely: motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; coastwise longshoremen, Vancouver, B.C., November 23, 1936, several employers; meat packing employees, Vancouver, B.C., December 29, 1936, one employer; beverage dispensers, Toronto, Ont., March 4, 1937, one employer; dairy employees, Toronto, Ont., September 17, 1937, one employer; cotton factory workers, St. Gregoire de Montmorency, P.Q., July 11, 1938, one employer; and lithographers, London, Ont., August 31, 1938, one employer.

The dispute involving employees of one shoe manufacturing establishment at Perth, Ont., commencing January 6, 1938, and carried in the above list for some time, is reported by the union involved to have been called off on October 15 and has consequently been removed from the list.

The dispute involving clothing factory workers and one firm at Newmarket, Ont., commencing August 3, 1938, against alleged violation of agreement when the plant moved, is reported to have been settled and work resumed on October 24 when the firm returned to Toronto and reinstated all its employees at rates stated to be slightly lower than those previously in force. This dispute had also been carried in the above list.

Disputes involving men on unemployment relief work who are not paid wages but receive subsistence or allowances for which work is performed or may be required are not included in the record, no relation of employer and employees being involved.

A minor dispute resulting in a cessation of work on May 16 by two employees in a jewellery manufacturing establishment at Toronto, Ont., has recently been reported.

The Jewellery Workers' International Union reported that the employer had reduced wage rates and the union picketed the establishment. By October 1 one employee had resumed work at the previous rate and the other had started in business for himself and the strike was called off.

A minor dispute involved twenty carpenters on one construction job in Toronto for two hours on October 17. The carpenters under the agreement under the Ontario Industrial Standards Act do not work on Saturday, and on Monday, finding that some labourers had been employed to set up forms on Saturday, ceased work in protest. The union representative adjusted the matter with the employer and work was resumed, the contractor paying for one-half of the time lost.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

Disputes in Progress Prior to October

Salmon Fishermen, Johnstone Strait District, B.C.—The dispute involving fishermen at Alert Bay in the Johnstone Strait district, between Vancouver Island and the mainland, in a stoppage of operations from September 17 to October 3, was terminated by the signing of agreements between the cannery operators and the two unions, the Pacific Coast Fishermen's Union and the Salmon Purse Seiners' Union, on October 1. The strike was against a reduction in the price of chum salmon from 12 cents per pound for the 1937 season to 8 cents, and the agreements provided for 10 cents per pound in this area but also established prices for various kinds of salmon in the areas along the coast. It appears that the settlement affected 1,300 fishermen but that only about 450 were involved in the stoppage and that about one-third of these had resumed work by the end of September.

Coal Miners, Nacmine, Alta.—Employees in one colliery ceased work on September 23 demanding the reinstatement of two miners dismissed for insubordination in March. The dispute had been referred to an impartial arbitrator at the time under the terms of the agreement, the finding being in favour of the employer. The agreement, along with others in the Drumheller district had expired on March 31 but by mutual consent of all parties continued in effect until a dispute as to the terms of new agreements had been reported upon by a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act. The Board reported in July and as a result of further conciliation by the Western Representative of the Department of Labour a settlement covering most of the mines involved was reached in September. The miners at Nacmine, however, contended that the decision as to the dismissal of the two miners in March held good only during the period of the agreement then in effect and insisted on their reinstatement, and certain provisions as to senority rights in negotiating a new agreement, finally calling a strike. As a result of conciliation by the Western Representative of the Department it was arranged that if the two dismissed miners secured work in other mines and the employer took on two senior unemployed miners the agreement would be signed. The departmental representative found work for the men in two other mines and work was resumed on October 17. A preference in employment for senior men was also secured.

Knitting Factory Workers, St. Catharines, Ont.—The strike of fifty-four employees in one department of a knitting mill which commenced on July 30 was terminated on October 13 as a result of conciliation by the Mayor. The bonus system was eliminated but it was reported that some improvements in conditions were made. The president of the union, a local of the Canadian Full Fashioned Hosiery Workers' Union, affiliated with the All Canadian Congress of Labour, was not reinstated and union recognition was not conceded.

Foundry Workers (Automobile Parts), Windsor, Ont.—This strike, reported to involve 150 out of 350 employees in one establishment on August 3, was terminated on October 31 as a result of conciliation by an officer of the Ontario Department of Labour. The employer agreed to reinstate those on strike from time to time as required without discrimination. Production on new models of motor cars in the automobile plants for which the employer involved was making parts was under way. The strikers had demanded a closed shop agreement with the United Automobile Workers of America with adjustments in wages. An agreement which provided for recognition of a shop committee had expired on July 31. The employer stated that the union did not represent all of the employees and reported that only fifty of those on strike were employed and these were soon replaced so that operations in the plant were not seriously affected by the strike at any time. The plant was picketed throughout the dispute.

Lime Plant Workers, Blubber Bay, B.C.—About the middle of October negotiations for a settlement of this dispute were brought about by a member of the provincial legisla-

ture but a settlement had not been reached by the end of the month. It was reported that the employing company offered to reinstate about 20 of the 127 men involved, 104 on strike and 23 men alleged to have been locked out before the strike on June 2. Others would be taken on later. The strikers are reported to have been replaced to a great extent and operations at the plant carried on without interruption. The establishment and the dock on the island have been picketed throughout the dispute with some disturbances. A number of men, including one police constable, have been arrested on charges of assout, intimidation, etc. One member of a picket was sentenced to six months' imprisonment on October 3 when convicted of assaulting a constable.

Restaurant Employees, Toronto, Ont.—Toward the end of the month the pickets were withdrawn from the three restaurants operated by the employing company involved and negotiations for a settlement were re-opened. On November 3, a settlement was reached, a number of the employees being re-engaged immediately, the remainder, except ten, to be taken back as required.

Disputes Commencing During October

Coal Miners, Inverness, N.S.—Employees in one colliery ceased work on October 1 and demanded the suspension of the mine manager pending investigation of conditions in the mine as a result of a dispute with the local president of the union. The latter charged the manager with assault during a discussion of conditions in the mine about which the miners had complained for some time. The mine has been operated by the provincial government for several years after operation under a co-operative plan for a time. The property had reverted to the province after several years of operation by the trustee for the bondholders. The Minister of Mines notified the miners that the mine would be closed if work were not resumed by October 5 and the local member of the provincial legislature arranged for an investigation. Work was resumed on October 5. The charge of assault was dismissed on October 4 and on October 11 the Chief Inspector of Mines interviewed the union representatives. The charges against the manager were withdrawn and it was arranged that there would be a meeting later between the miners' representatives and the Minister to discuss improvements.

Coal Miners, Taylorton, Sask.—A number of employees ceased work in one mine on October 3, in protest against the dismissal of six or eight men who had failed to join a recently organized union, the Saskatchewan Coal Miners' Union, affiliated with the Canadian Federation of Labour, with which the employing company had made a "closed shop" agreement. It was reported that several of the important operators in the district had made similar agreements with this union. The United Mine Workers of America had organized a local of the miners in the district in August and it was reported that many of its members joined the Saskatchewan union also in order to retain their positions. The mine was picketed and the Saskatchewan union applied to the provincial government for police protection which was said to be promised if needed. Operations were suspended until October 20 when, strikes having occurred in other mines, the United Mine Workers called off the strikes pending reference to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act. Work was resumed on October 24.

Coal Miners, Bienfait, Sask.—Employees in one mine ceased work when called out on October 7 by the United Mine Workers of America, alleging that the mine was filling orders for coal for the mine at Taylorton where a strike was in progress. It was called off on October 20 along with those in other mines as mentioned above; and work was resumed on October 24.

Coal Miners, New Waterford, N.S.—Employees in one section of a mine ceased work on October 14 for one shift demanding payment for contract miners for the time lost and extra work due to breakages and delays not the fault of the men. As a result of discussion between the management and union officials, it was arranged that "datal" men, paid by the day, would perform the extra work involved.

Coal Miners, Estevan District, Sask.—Employees in five of the principal mines were called out on strike by the United Mine Workers of America on October 17, the operators having refused to negotiate with the union for an agreement with increased wages and improved working conditions. The union claimed that wage rates had been drastically reduced in 1934 and that while nominally hours were eight per day many miners were working ten to twelve hours to increase their earnings. The union reported that since organization was begun some weeks earlier the union had 500 members out of 700 in the district and had agreements with sixteen of the small mines to pay the district scale when negotiated. These mines and a stripping mine operated by steam shovels were not involved in the strike and continued operations. The Saskatchewan Coal Miners' Union claimed to have agreements with several

of the operating companies. The provincial government proposed that the dispute should be referred to a board under the Industrial Disputes Investigation Act. The operators stated that as two unions were involved it should be referred to a commission or board of inquiry as provided in the Act instead of to a Board of Conciliation and Investigation on which only the union applying would represent the employees. The Secretary of District 18, United Mine Workers of America, met the Minister of Labour, the Honourable Norman McL. Rogers, who pointed out that the miners were on strike contrary to the provisions of the Industrial Disputes Investigation Act. The union called off the strike on October 20 and next day applied for a Board. The western representative of the Department of Labour met members of the provincial government at Regina on October 21 and later the operators and representatives of both unions at Bienfait. On October 29, October 30 and October 31 the Minister of Labour, met representatives of the parties involved at Regina and at Winnipeg. The proceedings under the Industrial Disputes Investigation Act are outlined elsewhere in this issue.

COAL MINERS, WAYNE, ALTA.—Employees in one mine ceased work on October 17 when the operator refused to accept one of the provisions in the union agreement with other mines in the Drumheller district providing that four cents per ton extra should be paid in a coal seam of less than four feet. The operator claimed that as the mine had no thick seams operations would not pay. It was reported that the miners recognized the difficulty and resumed work after one day pending further negotiations.

BAKERY WORKERS AND DRIVERS, WINNIPEG, MAN.—The bakery employees in one establishment ceased work on October 28, as a

(b) Strikes and Lockouts commencing during October, 1938.				
FISHING AND TRAPPING—				
Fishermen (haddock, etc.), Freeport, N.S.	3	60	420	Commenced Oct. 3; for increase in price of fish; terminated Oct. 10; negotiations; in favour of workers.
MINING ETC.—				
Coal miners, Inverness, N.S.	1	295†	885	Commenced Oct. 1; for suspension of mine manager following dispute with union official; terminated Oct. 4; conciliation (provincial); in favour of employer.
Coal miners, Taylorton, Sask.	1	86	1,000	Commenced Oct. 3; against discharge of workers and against employment of members of one union only; terminated Oct. 22; conciliation (federal); indefinite.
Coal miners, Bienfait, Sask.	1	120	1,000	Commenced Oct. 7; sympathy with miners on strike at Taylorton; terminated Oct. 22; conciliation (federal); indefinite.
Coal miners, New Waterford, N.S.	1	78	78	Commenced Oct. 14; for payment for work and time lost due to breakage and delay; terminated Oct. 14; return of workers pending settlement; compromise.
Coal miners, Reserve, N.S.	1	24	24	Commenced Oct. 14; *re* lack of pressure for air operated machines; terminated Oct. 14; return of workers; in favour of employer.
Coal miners, Estevan District, Sask.	5	275	1,100	Commenced Oct. 17; for recognition of union and increased wage rates; terminated Oct. 20; conciliation (federal); indefinite.
Coal miners, Wayne, Alta.	1	22	22	Commenced Oct. 17; for extra payment in thin seam; terminated Oct. 17; conciliation (federal); indefinite.
Coal miners, Drumheller, Alta.	2	325	1,175	Commenced Oct. 25; *re* payment for timbering under the agreement; terminated Oct. 28; negotiations; work resumed pending settlement; indefinite.
MANUFACTURING—				
Vegetable Foods—				
Bakery workers and drivers, Winnipeg, Man.	1	125	125	Commenced Oct. 28; for reinstatement of workers; terminated Oct. 29; conciliation (provincial) and reference to arbitration; indefinite.
Fur, Leather, Etc.—				
Leather goods workers (handbags, etc.), Montreal, P.Q.	1	68	1,360	Commenced Oct. 8; for closed shop union agreement with increased wages, reduced hours, etc.; unterminated.
Fur factory workers, Toronto, Ont.	1	13	52	Commenced Oct. 20; alleged violation of agreement; terminated Oct. 24; negotiations; compromise.
Boots and Shoes—				
Shoe factory workers, Humberstone (Port Colborne), Ont.	1	25‡	200	Commenced Oct. 21; alleged discrimination against union workers and for rotation in employment; terminated Oct. 29; conciliation (provincial); compromise—employment by seniority.
Miscellaneous Wood Products—				
Furniture factory workers, Hanover, Ont.	1	30§	60	Commenced Oct. 29; for payment of union dues by assistant foreman; unterminated.

Metal Products—				
Automobile parts factory workers (springs), Oshawa, Ont.	1	60	800	Commenced Oct. 11; for renewal of agreement; terminated Oct. 26; conciliation (provincial); wages and conditions to be as previously, any disputes to be arbitrated; compromise.
Automobile factory workers, Windsor, Ont.	1	200	1,500	Commenced Oct. 13; for union recognition; terminated Oct. 22; conciliation (provincial); compromise.
Automobile parts factory workers (wheels), Windsor, Ont.	1	92	500	Commenced Oct. 17; sympathy with automobile workers on strike on October 13; terminated Oct. 22; conciliation (provincial); compromise.
Automobile parts factory workers(wire products), Windsor, Ont.	1	34	200	Commenced Oct. 18; against discharge of worker for union discrimination; terminated Oct. 24; conciliation (provincial); indefinite.
Non-Metallic Mineral Products—				
Glass factory workers, Windsor, Ont.	1	20	180	Commenced Oct. 17; for improvements in wages and working conditions; terminated Oct. 26; conciliation (provincial); compromise.
CONSTRUCTION—				
Buildings, etc.—				
Labourers, Sydney River, N.S.	1	20	200	Commenced Oct. 24; for increase in wages from 33c. to 43c. per hour; unterminated.
Other—				
Truck drivers, Millidgeville, N.B.	1	17	119	Commenced Oct. 3; for increased piece rates terminated Oct. 10; return of workers; in favour of employer.
Labourers, Sydney, N.S.	1	12	72	Commenced Oct. 10; for increased wages and reduced hours; terminated Oct. 15; conciliation (federal); in favour of workers.
TRANSPORTATION—				
Water—				
Freight handlers and longshoremen, Port McNicoll, Ont.	1	230	460	Commenced Oct. 6; for agreement providing for increased wages and improved conditions; terminated Oct. 7; conciliation (federal); compromise.
Stevedores, Soldiers' Cove, C.B., N.S.	1	100	200	Commenced Oct. 20; against employment of workers from other districts and for increased wage rates and union recognition; terminated Oct. 21; conciliation (provincial); in favour of workers.

*In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

†400 indirectly affected.

‡About 300 employees not called to work. § Later reports indicate 101 to 115 workers involved.

(*Continued from page 1220*)

result of the dismissal of three workers some days earlier on the introduction of an efficiency system following a change in management. Later in the day the drivers also ceased work. Both classes of labour were members of units of the One Big Union, each of which had an agreement with the management, and the latter refused or postponed discussion of the

staff reduction with the union representatives. The provincial Deputy Minister of Labour met the parties to the dispute and proposed that it should be arbitrated under the Manitoba Strikes and Lockouts Prevention Act, 1937, one man to be reinstated in the meantime. This was refused at first by the employees but later, after negotiations of the management with representatives of the Winnipeg Central Labour Council of the One Big Union, it was accepted and the management agreed to pay those on strike for the full week. Work was resumed on the next day.

Leather Goods Workers, (Handbags, Etc.), Montreal, P.Q.—Employees in one establishment ceased work on October 8 demanding a closed shop agreement with the International Ladies' Handbag, Pocketbook and Novelty Workers' Union of the United States and Canada, with a ten per cent increase for those on weekly wages and twenty per cent for piece workers with the abolition of piece work in thirty days, hours to be reduced from forty-eight per week to forty-four. An officer of the provincial Department of Labour was reported to be investigating the payrolls of the company with a view to a termination of the dispute. At the end of the month a settlement had not been reported.

Fur Factory Workers, Toronto, Ont.—Employees in one establishment ceased work on October 20 claiming that the agreement with the International Fur Workers' Union was being violated when the employer permitted non-union workers to perform work in the shop for another firm which had ceased operations. As a result of negotiations it was arranged that the non-union workers would do dyeing work only, and work was resumed on the night of October 24.

Shoe Factory Workers, Humberstone, (Port Colborne), Ont.—When one establishment, which had been closed down for some weeks, was re-opened on October 20 about one hundred out of nearly six hundred former employees were notified to come to work, these being selected on the basis of seniority and efficiency it was stated by the management. The Canadian Shoe Workers' Union had organized the employees in 1937 and had asked the management to divide the work by rotation among all the employees and alleged that in the selection of those to work there was discrimination against union members. A strike was declared on October 21, and when employees were entering the plant about 200 strikers and sympathizers attempted to prevent them. Within a few days the provincial police force at the scene was increased to thirty constables and over thirty men and women were arrested on charges of assault, etc. One worker was seriously injured on the first day of the strike. The Ontario Minister of Labour with departmental officials met the parties to the dispute on October 28 and October 29 and a settlement was reached providing that workers on the payroll on September 11 would be called to work as required in strict order of seniority. The Minister visited the plant and ordered a thorough investigation into the operations by the provincial inspectors as a result of complaints by the union. Operations were carried on in the plant during the strike by seventy to one hundred workers except for a day or two at the beginning so that there was little direct time loss.

Furniture Factory Workers, Hanover, Ont.—Employees in one establishment, members of the National Union of Furniture Workers, Local No. 3, affiliated with the All Canadian Congress of Labour, ceased work on October 29 when an assistant foreman refused to pay union dues. The management held that he was not eligible for union membership but the union contended that as he worked at the bench he should still be in the union. As a result of conciliation by an officer of the Ontario Department of Labour early in November it was arranged that the assistant foreman would pay the dues and work was resumed.

Automobile Factory Workers, Windsor, Ont.—On October 13 a small number of workers, reported to be seventy-eight out of 2,600, ceased work alleging that certain grievances were not dealt with. The United Automobile Workers of America were reported to have been organizing the employees but negotiations with the management had not yet been arranged. On October 17 the manager agreed to meet union representatives but in the meantime sympathetic strikes had been called in plants producing parts. By October 21 the company stated that 222 were on strike. No disturbances in connection with picketing were reported. On October 22 the Chief Conciliation Officer of the Ontario Department of Labour met the parties and a settlement was reached providing that all employees on strike would return to work without discrimination and that any disputes would be arbitrated by the provincial official.

Automobile Parts Factory Workers, Windsor, Ont.—On October 18, when a union worker refused to handle parts for a non-union worker and was discharged, the union called a strike. The Chief Conciliation Officer of the Ontario Department of Labour arranged a settlement providing that all on strike would resume work without discrimination and the

case of the dismissed employee would be arbitrated by him.

GLASS FACTORY WORKERS (AUTOMOBILE), WINDSOR, ONT.—A number of employees in one establishment, 20 out of 28, ceased work on October 17 when strikes occurred in other automobile plants, apparently partly in sympathy with these others and partly to secure better conditions. The Chief Conciliation Officer of the Ontario Department of Labour dealt with the dispute at Windsor and later at the head office of the employing company at Oshawa and it was arranged that all on strike would resume work without discrimination, wages and working conditions to be as before subject to minor adjustments to be negotiated, the provincial official to arbitrate any points not agreed upon.

LABOURERS, SYDNEY, N.S.—Employees on an improvement project to establish a park adjacent to the railway, to be paid for jointly by the city and the railway, ceased work on October 10 to secure 43·5 cents per hour, eight hours per day, the civic rate. The Federal Department of Labour took the matter up with the Department of Transport and it was arranged that the government rate for construction work in that localitly would be paid, namely 40 cents per hour, eight hours per day and forty-four hours per week. Work was resumed on October 17.

FREIGHT HANDLERS AND LONGSHOREMEN, PORT MCNICOLL, ONT.—Employees of a contractor for a railway and steamship company ceased work on October 6 to secure increases in wages to rates between 49 cents and 56 cents per hour with time and one-half rates for Sundays and holidays instead of 42 cents to 52 cents. The employees are members of the International Brotherhood of Railway and Steamship Clerks, Freight Handlers and Station Employees which has agreements for several other ports on the Great Lakes. The Department of Labour took up the matter with the union officials and work was resumed after two days pending negotiations which resulted in an agreement providing for rates from 46 cents to 55 cents per hour with two cents extra per hour for night work.

STEVEDORES, SOLDIERS COVE, N.S.—Members of the General Workers' Union, affiliated with the Committee for Industrial Organization, ceased work on October 20 in protest against the employment of men from other localities and to secure increases in wages. As a result of conciliation by the Nova Scotia Minister of Labour only local men were engaged and the rate of wages was raised to 30 cents per hour with one meal per day. An agreement with the union was reported to have been signed and work resumed on October 22.

Extension of National Youth Administration in U.S.A. to Include Out-of-School Youth

Aubrey Williams, Executive Director of the National Youth Administration, announced recently that the NYA had been authorized to use portions of the Algiers Naval Station, New Orleans, and the Naval Ordnance plant at South Charlestown, W. Va., for the establishment of regional resident work centers in connection with the expansion of the NYA work program for out-of-school unemployed youth. Both Government properties have been idle for many years.

Equipment and facilities at the two sites, said Mr. Williams, will be utilized in developing the plans of the NYA to enlarge its work experience program in mechanical and metalwork pursuits. The successful results attained by the NYA in the operation of the resident work project at Quoddy Village, Eastport, Me., he stated, had demonstrated the advisability of establishing resident centers of comparable nature in other portions of the country, particularly where necessary mechanical facilities are available. At the present time, a group of over 400 boys is employed at Quoddy, where they are receiving work experience and related instruction in shop practice and mechanical occupations, over a five months' period.

An increase in the number and size of resident centers for NYA youth, where the enrollees reside on the premises, said Mr. Williams, had been decided upon in order that NYA youth might find more opportunity for work training along these lines. It is felt that NYA youth, he stated, should be aided to obtain their share of the kinds of jobs modern industry has to offer.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the Labour Gazette from month to month, bringing down to date that given in the March issue, in the review of Strikes and Lockouts in Canada and Other Countries, 1937. The latter included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the figures are not for relatively recent dates. Statistics given in the annual review and in the monthly articles are taken as far as possible from the government publications of the various countries concerned. Information as to particular disputes is obtained for the most part from newspaper reports which at times are uncertain or incomplete.

Great Britain and Northern Ireland

In Great Britain the *Ministry of Labour Gazette* publishes statistics dealing with all strikes and gives some details in regard to the more important ones. These details, which are published after investigation, do not always agree with the information given earlier in the press.

The number of strikes beginning during September was 59 and 14 were still in progress from the previous month, making a total of 73 in progress during the month, involving approximately 26,500 workers with a resultant time loss of about 90,000 man working days.

Of the 59 disputes beginning during September, 10 arose out of demands for increases in wages, 2 out of proposed wage reductions and 11 were over other wage questions; 3 arose over questions of working hours, 18 were over questions respecting the employment of particular classes or persons, 6 arose out of other questions respecting working arrangements and 8 were over questions of trade union principle. One stoppage was due to sympathetic action in support of workers involved in another dispute.

Final settlements reached during September numbered 54. Of these, 13 were settled in favour of the workers, 25 were settled in favour of the employers and 16 resulted in compromises. In the case of 10 other disputes work was resumed pending negotiations.

The strike which involved the largest number of workers during September was that of 5,115 employees of an aircraft firm at Birmingham (Labour Gazette, September, 1938, page 981, October, page 1087). The stoppage began on August 29 over dissatisfaction with certain basic rates of wages. Work was resumed on September 7 under conditions prevailing prior to the strike, but negotiations were to be carried on.

On September 7, 1,057 workers in a West Lothian colliery ceased work, demanding extra pay for working on a burning bing. Work was resumed the next day on the advice of trade union officials.

On September 15 an allegation that they were not being credited with the full weight of coal produced, caused 428 colliery employees at Castleford to strike and 1,064 other employees were indirectly effected. Work was resumed the same day when the employer agreed to install an automatic weighing machine.

A refusal to work with a non-unionist caused 730 warehousemen and clerks employed by a wholesale grocery firm to go on strike on September 20, indirectly affecting 170 other employees. Work was resumed the same day when the employers agreed to recognize the union concerned and to advise all employees to join.

In addition to the strike of aircraft factory workers at Birmingham mentioned above the Ministry of Labour reports three smaller strikes in aircraft factories during the month (Labour Gazette, October, 1938, page 1088). On September 6, about 350 workers at Oldham went on strike against a piecework system. The piecework system was retained but certain modifications led to work being resumed on September 8. A similar number of workers at Southport ceased work on September 13 objecting to the employment of a non-unionist. Work was resumed on September 15 on conditions existing prior to the strike. On September 22, there was a one day strike of 663 workers at Southport, for the reinstatement of three employees dismissed for a breach of regulations. Work was resumed pending negotiations and subsequently an amicable settlement was reached.

On October 10, 300 porters, carters, cleaners, etc. at a London railway station went on strike because a 63-year-old ticket taker who had relinquished his trade union membership in 1926 refused to renew it. Officials of the National Union of Railwaymen were opposed to the strike but in spite of this fact, it spread to other stations and by October 14, there were about 5,600 employees out with the result

66620—3½

that London's food distribution system was seriously disrupted. On October 15 the strikers returned to work without having achieved their object.

Australia

On October 7, the strike of 22,000 coal miners, 80 per cent of whom were in New South Wales (LABOUR GAZETTE, October, 1938, page 1088) was settled on the terms proposed by the State Minister of Labour, calling for immediate resumption of work and investigation of the miners' claims by a judge of the Commonwealth Arbitration Court. This strike which commenced on September 9 lead to serious curtailment of railway services and production in factories dependent upon coal. It was reported in the press that as a result of fuel shortage 15,400 men were without work and 290,000 others were on short time.

United States

Preliminary estimates of strikes in August, 1938, which as the Bureau of Labour Statistics points out, are based on "scattered information from the newspapers and other sources and are subject to revision as more definite reports are received" show 250 strikes as beginning during the month, which with 120 unterminated at the end of July made a total of 370 in progress during the month. The number of workers involved in these disputes was 89,000 and the resulting time loss was 1,000,000 man working days. The comparable figures for the previous month show that there were 309 strikes in progress, involving 80,000 workers with a resultant time loss of 760,000 man working days.

On October 24 about 3,000 employees of some 150 warehouses in San Francisco, who had been out on strike since late in August (LABOUR GAZETTE, September, 1938, page 981) due to a dispute which arose in connection with the unloading of a freight car allegedly loaded by strikebreakers employed by a variety chain store warehouse, resumed work as the result of a contract between the International Longshoremen's and Warehousemen's Union and the Association of San Francisco Distributors, reached after mediation by a newspaper executive. The unionists conceded the principle of a master agreement; long term contract employers conceded a busy season termination date and the principle of preferential hiring. The agreement is to be in force until June, 1940.

A press despatch of October 24 notes that negotiations aiming at a settlement of the strike of approximately 5,000 department store employees in San Francisco (LABOUR GAZETTE, October, 1938, page 1088) were being continued, and on November 1, it was reported that a settlement had been reached, but no details were given in the report.

On or about October 14 the United Marine Division of the International Longshoremen's Association called a strike of tugboatmen involving about 2,000 members of crews of approximately 300 tugs operating in New York harbour. A previous agreement having expired on September 30, the Union demanded a $10 monthly wage increase for unlicensed personnel (firemen, deckhands, oilers and cooks) and a $5 monthly increase for licensed personnel (captains and engineers). While the strike was in progress ocean liners, coal barges, freight ferries, garbage scows, etc., were forced to do without the usual tug boat services. The Mayor emphasizing the necessity of keeping harbour services unimpaired summoned both parties to resume negotiations and on October 20 work was resumed after the employers had agreed to a wage increase of from $7.50 to $10 for unlicensed personnel.

Early in October there were several strikes of automobile workers in Detroit and other centres of the automobile industry in Michigan. One of the chief causes of these strikes was a demand by the workers for a 32-hour week in order ot share the work available. At one time as many as 20,000 men were on strike or indirectly affected but an announcement by the General Motors Corporation that they were taking on about 35,000 workers at rates of wages which were in effect before pay-cuts were put into effect last February has apparently done a great deal to improve the labour situation, and work was general resumed by those on strike.

Home Improvement Loans

The Department of Finance recently released figures showing 55,820 Home Improvement Loans in the amount of $22,319,546.51 reported to the Department by the lending institutions as at October 31, 1938. This compares with 48,918 loans for $19,477,480.15 reported as at August 31, representing an increase of 6,902 loans and $2,842,066.36 during the two-month period.

Of the total amount loaned in the 24-month period during which the plan has been in operation, approximately $9,000,000, or over 40 per cent of the total has been repaid. Default claims paid under the Government guarantee to October 31, 1938, number 28 in the amount of $7,108.88.

An increase in September and October of 3,395 loans amounting to $1,463,037 in Ontario brought the total for that province above the $10,000,000 mark. Quebec with 967 new loans in the amount of $491,068 maintained second place. Alberta stepped into third place for the two-month period with loans amounting to $238,864, Manitoba and British Columbia coming next with loans of approximately $200,000 in each.

OLD AGE AND BLIND PENSIONERS IN CANADA

Financial and Statistical Summary as at September 30, 1938

IN the accompanying tables, which have been prepared by the Department of Finance, information is given concerning the Old Age Pensions Act and the amendment to that Act providing for the payment of pensions to blind persons.

Old Age Pensions

In the first of the tables appearing with this article, particulars are given dealing with operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, Chapter 156; as amended by Statutes of 1931, Chapter 42), and under the various provincial concurrent acts, as at September 30, 1938. (The text of the Old Age Pensions Act was given in the Labour Gazette, for April, 1927, page 375 and the new regulations were reviewed in the issue for March, 1938, pages 286-288).

The Act made provision for the establishment of a Dominion-provincial pensions system to be effective in such provinces as might enact and give effect to special legislation for this purpose. All the provinces are now participating.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and over who is not in receipt of an income of as much as $365 a year and who has resided in Canada for 20 years, and in the province in which the application is made for the five years immediately preceding the date of the proposed commencement of pension. The Act also provides that an applicant must not have assigned or transferred property for the purpose of qualifying for a pension. Indians, as defined by the Indian Act, are not eligible to receive old age pensions.

The maximum amount of pension payable under the Act is $240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to reduction by the amount, if any, that their private income exceeds $125 a year.

Under the provisions of the Act as it was first passed, the Department of Labour of Canada (then the administering Department) paid quarterly to each province one-half of the net sum paid by the provincial pension authority during the preceding three months. At the 1931 session of the Dominion Parliament, however, the Act was amended, the amount of the Dominion contribution being increased from fifty to seventy-five per cent of the net sum.

In order to avoid duplication of departmental activities and to secure centralization of responsibility in carrying out the provisions of the Act, which involves accounting control and supervision, the administration of the Old Age Pensions Act was by Order in Council dated March 1, 1935, transferred to the Department of Finance from April 1, 1935.

Pensions for the Blind

An amendment to the Old Age Pensions Act, assented to on March 31, 1937, (Labour Gazette, May, 1937, page 503) provides for the payment of pensions to blind persons who have attained the age of 40 years and have fulfilled other conditions set forth in the Act. Such persons must be so incapacitated by blindness as to be unable to perform any work for which eyesight is essential, and must not be in receipt of a pension or allowance in respect of blindness under the Pension Act or the War Veterans' Allowance Act.

The maximum pension payable to a blind person, whether married or unmarried, is $240 per annum. The amount a blind pensioner may earn without having his pension reduced is $200 a year, if single, and $400 if married to a spouse who is not receiving a pension in respect of blindness under the Act. The maximum pension is reduced, however, to $120 per annum in the case of a blind person who marries another blind person.

Under agreements negotiated between the Dominion and the provinces, the Dominion contributes 75 per cent of the cost of pensions to blind persons, the provinces assuming the remainder of the cost of such pensions.

Regulations governing the payment of pensions to the blind were published in *The Canada Gazette*, of August 28, 1937.

The accompanying tabular statistics indicate the extent of operations under this amendment to the Old Age Pensions Act.

PENSIONS FOR BLIND PERSONS

EMPLOYEES' RETIREMENT PENSION PLANS UNDER CANADIAN GOVERNMENT ANNUITIES ACT

Canadian Companies Participating in Recent Superannuation Programs

FEATURING recent trends in industrial relations is the encouragement given by the Dominion Government to the establishing of employees' pensions by private employers. As an incentive in this direction the Dominion Parliament at its 1938 session amended the Income War Tax Act whereby Canadian companies were allowed a deduction from taxable income for lump sum contributions to employees' pension funds, such deductions to be spread evenly over a ten-year period (LABOUR GAZETTE, July, 1938, page 718, and August, page 893). These lump sum contributions must be in respect of past services and must be charged irrevocably to the employees' credit. In introducing this amendment, the Minister of Finance, Hon. C. A. Dunning, stated: "The Government hopes that this concession will encourage the present tendency in industry to create pension funds for its employees."

Provision had previously been made in the Income War Tax Act for contributions of an employee to a superannuation or pension fund to be allowed as a deduction to the employee in determining his taxable income, in an amount not exceeding $300 per annum. Also tax exemption for the amount contributed by an employer to such a pension fund was previously allowed when the contribution represented a payment for current services.

The Canadian Government Annuities Act provides for the purchase of annuities by employers for their employees, this section reading as follows:

> Employers of labour may, pursuant to agreement entered into with their employees in that behalf, such agreement to be of a form approved by the Minister, contract with His Majesty for the sale to such of their employees as are domiciled in Canada of annuities otherwise purchasable by such employees as individuals under this Act; and any sums of money necessary to the carrying out of this object, whether such sums are derived from the wages of the employees solely, or partly from the wages of the employees and partly from contributions of the employers, or from contributions of the employers solely, may be paid by such employers direct to the Minister . . . .

A number of retirement annuity plans covering groups of employees in various industries, as well as the staffs of various public bodies, were negotiated prior to the 1938 amendment to the Income War Tax Act; and subsequently more and more employers have availed themselves of the opportunity originally provided in the Government Annuities Act to establish superannuation and pension plans for employees. In recent months the following firms have adopted such plans in financial co-operation with their employees:

Firms	Approximate number of employees under plan
Carswell Co., Toronto	23
Sangamo Electric Co., Toronto	17
Davis-Lisson, Hamilton	13
Carnegie Library Board, Ottawa	16
Packard Electric Co., St. Catharines	11
MacLaren's Ltd., Hamilton	29
Royal Oak Dairy, Hamilton	16
City Laundry, Hamilton	11
W. J. Westaway Company, Hamilton	26
Dominion Foundries & Steel Ltd., Hamilton	670
Standard Oil Co. of British Columbia	125
Quaker Oats Company, Peterborough	494
John Labatt Ltd., London	408
Delcalcomania Co. Ltd., Toronto	21
Chartered Trust & Executor Co., Toronto-Montreal	81

It should be stated, however, that quite a number of Canadian companies, independent of the provisions of either the Government Annuities Act or the amendment to the Income War Tax Act, have adopted welfare plans (including pensions) on behalf of their employees. These have been reviewed from time to time in the LABOUR GAZETTE during the past fifteen years.

In regard to the present tendency in industry to link retirement programs with Government Annuities, it may be of interest to review typical plans now being put into operation by various companies. An analysis of three of these plans is presented herewith, and in succeeding issues of the LABOUR GAZETTE other plans will be similarly analysed.

Plan of John Labatt Limited

THE company of John Labatt Limited of London, Ontario, recently inaugurated a retirement annuity plan for its employees. The plan, which assures each employee who participates a definite income on retirement from the Company's service, is to be administered by the Annuities Branch of the Department of Labour, and is drafted in accordance with subsection 3 of Clause 6 of the Government Annuities Act, 1908.

The plan is available to both male and female employees, the company agreeing to

contribute dollar for dollar with the employee up to a maximum of approximately 3 per cent of the employee's rate of earnings. In appreciation of years of past service, the company is contributing for each employee who joins the plan, a lump sum equivalent to 3 per cent of his or her present yearly rate of earnings for each completed year of employment with the company.

The following details concerning the plan have been obtained from a booklet issued to each employee.

Eligibility.—All present employees of the company who have completed one year of continuous service with the company on October 1, 1938, the commencement date of the plan, are eligible to participate. Male employees may join the plan provided they have not attained their sixty-fifth birthday, and female employees may join provided they have not attained their sixtieth birthday. Employees who have attained these ages may join at the discretion of the company, while employees who have not completed one year of continuous service on the commencement date are eligible to join on the first day of January, April or July, 1939, immediately following the completion of one year's continuous service. Participation in the plan is not compulsory upon any present employee eligible to join the plan October 1, 1938; however, the plan provides that new employees must become members on specified dates immediately following the completion of one year of continuous service.

Contributions.—Weekly contributions by employer and employee depend upon the employees' earnings, and are determined from the following table:—

Salary or wage rate per week	Employee's weekly contribution	Company's weekly contribution	Total weekly contribution
$20 00 to $24 99	$ 70	$ 70	$1 40
25 00 to 29 99	80	80	1 60
30 00 to 34 99	95	95	1 90
35 00 to 39 99	1 10	1 10	2 20
40 00 to 44 99	1 30	1 30	2 60
45 00 to 49 99	1 50	1 50	3 00
50 00 to 54 99	1 65	1 65	3 30
55 00 to 59 99	1 80	1 80	3 60
60 00 to	2 00	2 00	4 00

The plan provides that overtime earnings, bonuses or special remuneration are not to be considered or taken into account in determining the amount of the contribution of either the employee or the company.

It is also stipulated that an employee may, if he wishes, contribute a larger amount in order to secure a larger pension. The company's contribution, however, remains the same as outlined and in no case is it to exceed two dollars per week for any employee. The employee's contribution is to be deducted weekly by the company and forwarded along with the company's contribution to the Annuities Branch of the Dominion Department of Labour at the end of each quarter. Provision is also made that "each employee eligible to join the plan at the effective date will, if he does so join, receive credit in respect of his back service of a sum equal to 3 per cent of his current salary or wage multiplied by the number of his years of service." It is stated in the outline of the plan that this part of the contributions, for which the company is paying the full cost, amounts in all to over $140,000.

Retirement Pension and Other Benefits Under the Plan.—Tables in the pamphlet give the retirement benefits under the plan. For instance a male employee 30 years of age enters the plan on October 1, 1938, having been with the company for 7 years, with weekly wage rate of $25, which for simplicity of calculation is assumed to remain at that figure.

In the case of such an employee the company would deposit in respect of his back service 3 per cent of his yearly wage for each year of service or an amount totalling $273. In respect of each deposit of $100 made by the company a male employee aged 30 would receive an annual pension of $34.71 from age 65. Thus in this particular instance where the company's deposit in respect of back service was $273 a pension of $94.76 is purchased for the employee from age 65.

The company and employee will also each contribute 80 cents per week during the man's service from age 30 to age 65—a total weekly premium of $1.60, which in itself will purchase a pension of $547.07 per annum from age 65.

Therefore the employee's total pension on retirement at 65 is $94.76 plus $547.07, a total of $641.83 per annum—the cost to the employee receiving this pension having been 80 cents a week.

Of course, as an employee's weekly salary or wage is increased, the amount of the company's and employee's contribution is automatically raised, resulting in the purchasing of an increased pension at retirement age. The amount of the pension is therefore determined by the rate of earnings of the employee, the number of years of future service with the company, and any additional premium contributions made by the employee, and also, in most cases, by an additional contribution by the company for past service.

Payments of annuities under the plan will be made as long as the employee lives, and a minimum of forty quarterly or one hundred and twenty monthly payments after retirement is guaranteed, irrespective of whether or not the employee lives to receive them.

If a contributing employee should die before the date on which the first instalment of pension becomes due, it is provided that the total amount of contributions made by the employee and those made by the company together with compound interest at 4 per cent will be paid to his legal representatives.

Regardless of the reason for which an employee leaves the company, any contributions made by the employee are to remain at his credit with the Dominion Annuities Branch.

In the event of an employee leaving the company of his own free will prior to the date of normal retirement, and after having completed 10 years of employment, the contributions made by the company on behalf of such an employee, together with compound interest at 4 per cent, shall be transferred to the credit of the employee with the Government, and at the date fixed for the employee's annuity to begin, the employee shall receive such annuity as the accumulated payments made by both the company and the employee would purchase. Should an employee leave the service of the company of his own free will before having completed 10 years of service, or should he be dismissed from the service of the company at any time for just reason of unsatisfactory conduct, contributions made by the company on behalf of the employee together with compound interest at 4 per cent may, at the discretion of the company, be applied towards the cost of pensions for other employees.

In the event of the death of a contributing employee before retirement, it is provided that all contributions which have been made by the employee and by the company plus compound interest thereon at 4 per cent per annum will be paid to the employee's beneficiary or to his estate.

In the event of death after retirement and before an employee has received the guaranteed pension payments for ten years, the unpaid balance of the guaranteed payments will be paid to his legal representatives.

Employees' Savings and Profit-Sharing Plan of Dominion Foundries and Steel Limited

Since this plan was described (Labour Gazette, July, 1938, page 753) details and final arrangements have been completed by the trustee on behalf of the company and its employees. The trustee, an officer of the company, acts only with the advice of an advisory committee consisting of five members (of which the trustee may be one) three members to be officers of the company elected by the board of directors and two members to be employees selected by a majority vote of the employees.

As previously described, the employees' savings "are invested only in recognized trust fund securities or government bonds or annuities." To safeguard these funds, the last option has been chosen, and the trustee of the "Employees' Savings and Profit-Sharing Fund" has arranged accordingly with the Government Annuities Branch of the Department of Labour, Ottawa. Through this Branch, the Dominion Government receives a premium every three months from the trustee of the "fund" equal to the sum of all employees' contributions for the past three months, credits the appropriate amount to an individual deferred annuity contract on the life of each employee, and accepts the responsibility of providing a secure income for the old age of the employee based on his total contributions plus compound interest thereon at the rate of 4 per cent per annum and his age at retirement. The annuity is payable for life from the date of retirement and payable for ten years, in any event. It is intended moreover, that the "profit-sharing fund" will supplement this annuity considerably upon each employee's retirement.

Date of Retirement.—The normal date of retirement is at the employee's attained age of sixty-five years, except that an employee entering the plan after his forty-sixth birthday shall have the opportunity of participating in the "fund" for at least twenty years, or until the age of seventy years, should he attain such age before the expiration of twenty years. It is further provided that the directors of the company, in their discretion, may reduce the normal retiring age to sixty years when conditions warrant.

Eligibility.—Employees who have three years continuous service at their credit are eligible, and as employees complete three years continuous service they will become eligible to participate in the plan. Practically one hundred per cent of all the eligible employees have already joined the plan, although it is not compulsory.

Contributions.—Each participating employee must contribute either 3 or 5 per cent of his earnings (not including overtime or special commissions) to the "fund" at his option but in no case more than $150 per annum, which may be increased up to $200 at the discretion of the directors of the company. The majority of employees have chosen to contribute 5 per cent of their earnings. The sum remitted regularly to the Government Annuities Branch by the trustee of the "fund" is equal to the total of these contributions.

Once a year the company will contribute to the "profit-sharing fund" an amount equal to 10 per cent of its total net earnings available for dividends as determined by the auditors of the company. This sum is limited only by the provision that it may not exceed four times the total of all employees' contributions during the year. This contribution is due approximately two months after the end of the company's fiscal year. It is further provided that the company shall not be under any obligation to make a contribution for a year's operations ending in a loss, or for any subsequent year unless and until the loss or losses previously sustained shall have been made up out of net operating earnings. These contributions are to be invested by the trustee in bonds, mortgages or income-bearing stocks and the income from these investments shall be retained in the "fund." Similarly, any profit or loss from transfers of securities shall increase or decrease the "fund" accordingly. In all matters of investment, the trustee is subject to the majority rulings of the advisory committee.

Benefits under the Plan.—In addition to the annuity purchased by the employees' own contributions, the trustee will withdraw from the "profit-sharing fund" contributed by the company a sum equal to the employee's pro rata share of this "fund" at the time of his retirement and use this sum to purchase further pension. The Government Annuity contract provides that the annuity shall be paid for the lifetime of the former employee or for ten years certain, i.e. if he should die prior to the completion of ten years' payments, the remaining payments shall be continued to his beneficiary or to his estate.

If he should die in the employ of the company, there shall be paid to his beneficiary or to his estate $2,000 from the fund or all his contributions together with compound interest thereon at the rate of 4 per cent per annum plus his pro rata share at that date in the "profit-sharing fund," whichever sum is greater.

In the event of the voluntary resignation or dismissal of the employee prior to his normal date of retirement he will receive one-half of his pro rata share in the "profit-sharing fund" at that time plus the option of all his own contributions together with interest thereon as above or the annuity which an equivalent sum would purchase from the Government Annuities Branch.

Any employee may borrow from the "fund" at the discretion of the trustee and advisory committee, such loan reducing proportionally his pro rata share in the "fund" until it is repaid with interest.

There is also a provision in the company's agreement with the employees assuring at least $2,000 from the "fund" for total disability when such occurs before the employee attains the age of sixty years.

Annuity Plan for Employees of Standard Oil Company of British Columbia, Limited

A plan of providing annuities for old age is made available to all employees of this company by arrangement with the Dominion Government whereby employees' contributions will be administered by the Annuities Branch of the Department of Labour, Ottawa. In addition the company undertakes to purchase a further amount of pension from an insurance company.

Eligibility.—All employees are eligible to join the plan after completing one year of continuous service, and those fulfilling this requirement on September 1, 1938, were to become members of the plan as of that date if they chose to participate. Employees must make their choice and submit their signed application within three months from the date of eligibility. Failing to comply with this regulation, an employee may participate in the plan only by special approval of the company.

Contributions.—Each employee participating in the plan will contribute monthly by payroll deduction in accordance with the following schedule:

Age (nearest birthday) at entry into plan.	Approximate rate of contribution during entire period of employment
Less than 30 years	4% of earnings
30-39 years	5% of earnings
40 or more years.....	6% of earnings

The employee's contributions will commence at date of entry into the plan and continue until termination of service, or retirement. They will be paid over regularly to the Annuities Branch, and the Government of Canada will thereafter be responsible for the employee's contributions and for providing a Government Annuity and death benefits under terms of the Government Annuities Act.

In addition the company contributes to the plan by purchasing further pension from an insurance company calculated to approximate the amount of annuity being purchased from the Annuities Branch by the employee's contributions.

Normal Pension Benefits.—For each employee the company intends to contribute sufficient to increase the employee's monthly

annuity to not less than a minimum of 1½ per cent of the employee's average monthly earnings on which he has contributed multiplied by the number of years of contributory service.

An example is given in the booklet showing a male employee who enters the plan at age 25 retiring at 65 with 40 years of contributory service. His monthly earnings gradually increase from $100 to $200 per month, averaging approximately $158 and his contributions increase from $4.20 to $7.90 per month. In this case his monthly pension is shown to be $50.70+$50.70=$101.40, which is approximately 1·6 per cent of $158 × 40.

Death Benefits.—The employee's government annuity contract provides that upon the annuitant's death before maturity of the contract all his contributions, together with compound interest thereon at 4 per cent per annum, shall be returned to his legal representatives. In the case of the normal form of annuity contemplated by the plan, if death should occur after maturity but before the payment of one hundred and twenty monthly instalments, the unpaid balance of these shall be continued to the legal representatives of the annuitant. No death benefits or guarantee period are provided with respect to the annuity purchased by the company from the insurance company.

Regulations Governing the Two Annuities.—The normal form of government annuity outlined in the booklet is a deferred annuity payable monthly for the lifetime of the employee and guaranteed for ten years in any event. The normal form of annuity purchased by the company is for life only. The normal date of retirement shall be the first day of the month next following the sixty-fifth birthday for men and sixtieth birthday for women. This shall be the normal date of maturity of the employee's contract with the Annuities Branch.

According to the regulations of the Annuities Branch, the annuitant may choose to change his normal annuity before maturity of the contract to any other type, including a last survivor annuity with a joint annuitant who must be a spouse or relative wholly or partially dependent upon him for support. A last survivor annuity may also be chosen by the employee in preference to the normal type of annuity being purchased for him by the company. Following such choice, the reduced amount of annuity will be determined by actuarial calculation.

Similarly, if the employee should retire before his normal retirement date, the two annuities shall be payable on a reduced basis subject to one provision, viz., in cases where the employee retires before ten years prior to normal retirement and before fifteen years of continuous service, he loses claim to any annuity purchased by the company for him. Regardless of the reason for early retirement from the company or the length of service at retirement, all contributions made by the employee are to remain at his credit with the Annuities Branch, subject only to the regulations of this Branch. He will then have the choice of accepting a paid-up annuity for whatever amount his payments plus compound interest at 4 per cent per annum will have purchased, or of continuing payments direct to the Annuities Branch.

Immigration to Canada During the First Six Months of Fiscal Year

During the six-month period ended September 30, the number of immigrants entering Canada totalled 10,704, an increase of 15·4 per cent compared with the corresponding period of 1937 when 9,272 persons entered the Dominion, according to statistics issued by the Immigration Branch of the Department of Mines and Resources.

Of the total number of immigrants 2,210 were from the British Isles, an increase of 16·6 per cent over the 1937 figure for the same period; 3,365 were from the United States, an increase of 3·7 per cent; 867 were from Northern European countries, an increase of 10·4 per cent, while 4,262 were classified under "other races," an increase of 27·4 per cent.

Adult males entering Canada during the period numbered 2,567; adult females 4,123; and children under eighteen comprised 4,014 of the total of all persons entering the Dominion.

Occupationally, 3,393 of the total number of immigrants were listed as farmers; 289 as labourers; 508 as mechanics; 784 as traders; 21 as miners; 603 female domestic servants; and 5,106 were listed as "other classes" of occupation.

The destination of the largest number (4,256) of immigrants was given as Ontario; 2,110 were going to Quebec; 1,160 to Manitoba; 1,052 to Alberta; 918 to British Columbia; 503 to Nova Scotia; 436 to Saskatchewan; 211 to New Brunswick; 50 to Prince Edward Island, and 5 and 3 to the Yukon Territory and Northwest Territories, respectively.

RECENT REGULATIONS UNDER PROVINCIAL LEGISLATION

Consolidation of Regulations Under Alberta Compensation Act—British Columbia Male Minimum Wage Orders for Shops Revised—Quebec Fair Wage Orders—First Regulations Under the Quebec Mothers' Assistance Act, Etc.

NEW regulations under labour laws in the Canadian provinces include a revision and consolidation of the regulations under the Alberta Workmen's Compensation Act, a revision of the British Columbia minimum wage order applying to males employed in retail and wholesale establishments, a new wage order governing persons employed in forest operations in New Brunswick, an order under the Quebec Fair Wage Act applying to employees in the wastepaper industry, and the first regulations under the Quebec Act providing for mothers' pensions. Quebec orders governing stationary enginemen and men employed in the operation of public buildings on the Island of Montreal have been amended to extend the period for which they are to remain in force.

Alberta Male Minimum Wage Act

An order of September 12 exempts persons governed by a wage schedule contained in a code of fair competition under the Department of Trade and Industry Act from Order 1 under the Male Minimum Wage Act (LABOUR GAZETTE, 1937, p. 1100), which fixes with certain exceptions minimum wages for all male employees in the province.

Alberta Workmen's Compensation Act

New regulations to come in force November 14 have been made under the revised Act of 1938. Broadly speaking, the new rules are a consolidation of regulations issued since the enactment in 1918 of the first Workmen's Compensation Act providing for a collective liability system. The first five regulations deal with definitions and repeal of previous regulations and tighten up generally the rules governing employers' records, medical aid reports and assessments. As provided by the former Workmen's Compensation Act, the regulations now stipulate that no assessment may be made on a worker's earnings in excess of $2,000 in a year.

In the new regulation 6 are consolidated all the absolute exemptions from the former regulations, and with two exceptions, those formerly omitted only from certain definitions. There are also a few new additions to the list. The following trades, businesses and employments are therefore now wholly excluded except where carried on as part of an industry within the Act or where the Board has approved an application to come under the Act: aeroplane pilots, architects, auctioneers, salesmen of new and used cars, commercial travellers representing industries outside the province, commission agents, commission salesmen, dentists and dental work establishments, janitors, mail contractors, pedlars, photographers, undertakers and undertaking establishments, veterinary surgeons, automobile schools, barber shops, beauty parlors, boarding houses, dairy farms, freight and passenger elevators of the "automatic-self-operating" type, feed chopping mills, fire insurance companies, cutting or manufacture of firewood, cordwood, mine props and piles, fishing, the lightning rod business, taxi business, production or distribution of moving pictures, shoe shine parlors, stock yards, surgical and medical establishments.

Employers or members of their families are within the Act only for the period for which assessment has been paid, and an application to be included takes effect on approval by the Board. The former regulation providing that employers or members of their families were to be assessed and compensation calculated on a salary basis of not less than $1,200 and not more than $2,000 per year is now incorporated in the new Act.

An hotel within the Act is defined as an establishment offering meals and lodging to the public for a consideration where four or more workmen are employed, but any licensed hotel is included.

Regulation 9 deals with teaming and cartage as well as motor transport. As before, these are under the Act only when carried on in a business regularly employing one or more workmen in conjunction with some other industry to which the Act applies. Where a teamster is paid for the team as well as for his services, for the purpose of assessment one-half may be deducted from the amount paid him as remuneration for the team and equipment, but the teamster's wages may not be calculated at less than $2.50 a day. Where the employee drives his own motor truck, his wages must be reckoned at $3.75 a day instead of $3.50 as formerly provided. The employer continues to be liable for assessment and medical aid dues of workmen whom his employees, being owners of trucks or teams, are obliged to hire, but the amounts may be recovered from the owners.

Regulation 10 incorporates practically the same provisions as formerly governed what are called super assessments. It stipulates that where, in any year, an employer is liable to an extra assessment because the amount chargeable to his account exceeds by more than 5 per cent the ordinary assessment, he must pay the difference between the ordinary assessment and the amount chargeable to his account for that year up to one-third of the ordinary assessment or 10 per cent of the excess, whichever is less. This additional charge is, however, not to be imposed on an industry until it has been within the scope of the Act for three years.

The 1928 regulations concerning accident prevention committees, gas and oil wells, buildings and excavations, which have been in effect since that time, are retained. No change is made in the Bureau of Labour regulations governing grain elevators and power transmission. The regulations under the Factories Act governing elevators and hoists remain in effect, and the Boilers Act regulations continue to govern refrigerating plants. Theatres remain under the Theatres Act.

Regulation 12 contains the first aid provisions recently adopted. (Labour Gazette, July, 1938, p. 750.)

British Columbia Male Minimum Wage Act

Two new orders of the Board of Industrial Relations relate to the mercantile industry. Order 26c of October 19 continues in force the exemption of messengers employed exclusively by wholesale and retail establishments from Order 26 governing the transportation industry and declares these employees to be covered by the Order for the mercantile industry. Order 59, effective October 20 repeals an order in force from July 20, 1936 (Labour Gazette, 1936, p. 698), and fixes minimum wages for all male employees, except indentured apprentices, in wholesale and retail establishments.

As in the rescinded order, employees in the mercantile industry are divided into two main classes: those over 21 years of age and those under 21 years. In each of these groups, special provision is made for inexperienced or partly experienced workers of certain ages who may be paid lower rates than the minimum rates fixed for other members of the group if permits are obtained from the Board of Industrial Relations. This special provision relates to such workers who are over 18 and under 21 years of age and those who are over 21 and under 24.

For all classes of employees the weekly rates established in the order are payable for a week of 37½ hours and not less than four hours must be paid for each day an employee is at work.

No change is made by the new Order in the minimum weekly rates but changes have been made in the hourly rates and daily minima. The minimum weekly rate for full-time employees under 17 years of age is $6 and the rates for those from 17 to 20 years of age inclusive are $7.50, $9, $11 and $13 according to age. The minimum hourly rate for part-time workers under 17 years of age is 15 cents and the minimum daily wage, 60 cents; for those from 17 to 20 years of age inclusive, the minimum hourly rates are, according to age, 20 cents, 25 cents, 30 cents and 35 cents and the minimum daily wage, 80 cents, $1, $1.20 and $1.30. These rates represent a decrease of 1 cent an hour and 5 cents a day for those under 17 but an increase of the same amount for workers 18 and 19 years of age. Rates for other ages remain the same.

Employees 21 years of age or over must be paid the same minimum as before, $15 per week for full-time employment and 40 cents per hour with a daily minimum of $1.60 for part-time employment.

The minimum weekly wage, payable only with permission from the Board, for inexperienced and partly experienced employees 18 years but under 21 years of age is $8 for the first year, $10 for the second year and $13 for the third year. Such employees working part-time must be paid at least 20 cents an hour and 80 cents a day during the first year, 25 cents an hour and $1 a day for the second year and 35 cents an hour and $1.40 a day for the third year. These rates were formerly 21 cents per hour and 85 cents per day for the first year and 27 cents per hour and $1.10 per day for the second year. Rates for the third year are unchanged.

For inexperienced or partly experienced workers between 21 and 24 years of age the weekly minimum is $9 for the first six months, $11 for the second six months and $13 for the third six months. For part-time employment the minimum is 25 cents an hour and $1 a day, 30 cents an hour and $1.20 a day and 35 cents an hour and $1.40 a day during the first, second and third six months of employment, respectively. Formerly, the rates for the first six months were 24 cents an hour and 95 cents a day and for the second six months 29 cents an hour and $1.15 a day. Rates for the last six months remain unaltered.

A minimum of 30 cents per hour and $1.20 a day is provided as in the former order for casual employees between 18 and 21 years of age who are employed for five days or less in any calendar month.

New provisions inserted in the order stipulate that wages must be paid semi-monthly and must include all wages due up to a day not more than seven days prior to the day

of payment; that unless a special arrangement is made and approved by the Board the cost of supplying and laundering any uniform or special article of apparel required by the employer must be paid for by him and not deducted from the employee's wages and except in special cases where written application for a different arrangement is made to the Board and approved by it every employee in the mercantile industry is entitled to 24 consecutive hours' rest in each week, the period of which he must be duly notified by the employer.

New Brunswick Forest Operations Commission Act

An order under this Act, effective October 1, decreases the average wage required to be paid by an employer to his employees for cutting, peeling, yarding and hauling from $40 to $34 a month with board. Wages paid to cooks, tractor operators and truck drivers, or for piece work are not to be included in determining the average rate. Piece workers must also be paid not less than an average of $34 with board. In neither case may an employee be paid less than $30 a month with board. This minimum is $4 less than that fixed by the order which came in effect May 1, 1937. When board is not furnished, an additional 50 cents a day must be paid.

Quebec Fair Wage Act

Two orders in council, gazetted on October 18, amend orders of the Fair Wage Board relating to stationary enginemen and men employed in the operation of public buildings on the Island of Montreal and in municipalities within a five-mile radius of the Island. A new order fixes minimum wage rates for persons employed in packing and grading waste paper.

According to Order 6, the wage rates fixed for stationary enginemen were to be increased by 10 per cent on October 15. The amending order repeals this provision and provides that wages payable under the Order from May 15 to October 15, 1938, are to remain in effect until April 15, 1939. (LABOUR GAZETTE, June, 1938, p. 624.)

The order relating to public buildings (LABOUR GAZETTE, October, 1938, p. 1099) was to come into force on September 1 but the date has been postponed to October 15.

Order 15 applying to all persons in the province employed in establishments buying, sorting, packing and selling waste paper is retroactive to June 15, 1938, and is to remain in force until April 8, 1939, and for a year thereafter unless a contrary order is issued. Where Order 4 is not incompatible its provisions are to apply to the employees covered by Order 15. (LABOUR GAZETTE, May, 1938, p. 512.)

Wages in effect on April 1, 1938, if higher than the minima established by the Order, may not be reduced except with permission of the Board.

For at least 60 per cent of the male workers the minimum rate per hour is 26 cents and for at least 60 per cent of the females, 20 cents. A minimum of 22 cents may be paid to not more than 25 per cent of the males and 18 cents to not more than 25 per cent of the females. For not more than 15 per cent of each sex, the minimum is 17 cents for males and 16 cents for females. Watchmen and office employees must be paid at least 25 cents and the latter $13.50 per week if not hired by the hour. The minimum for messengers is 10 cents per hour.

Time and a half must be paid for overtime work which is defined as time in excess of ten hours a day if the weekly hours are at least 54 or time in excess of 12 hours a day irrespective of the number of hours of work in the week or time in excess of 54 hours per week or in the case of watchmen 60 hours a week.

Quebec Needy Mothers' Assistance Act

The first regulations under the 1938 Act providing for mothers' allowances have been made. They set out the procedure for application which must be made either to the Bureau administering the Act under the Minister of Labour or to one of the revisers appointed under the Old Age Pensions Act to investigate eligibility. Evidence must be furnished that applicant is eligible for an allowance under the Act and two testimonials as to her ability to care for her children properly must be submitted. The Bureau has power to determine the rate of an allowance. Allowances are to be paid monthly by cheque and to take effect from the day following receipt by the Bureau of the information, but no pensions are payable before December 15, 1938.

Each beneficiary must establish annually her right to an allowance and notice must be given the Bureau of any change in circumstances that may affect the grant. The regulations fix the rate of the allowances to be paid.

A woman with two dependent children under 16 is to receive $40 monthly and an additional $5 for each additional child, the total allowance not to exceed $60. The Act provides for payment of the allowance to a grandmother taking the place of the mother but if she is the wife of the children's grandfather he is not released from the obligation to provide for the children imposed by the Civil Code of Quebec. Allowances may be reduced if the beneficiary or her dependants can be provided

for to some extent by relatives by marriage whom the Civil Code requires to contribute to their support.

If a beneficiary or her dependants owns real property exceeding in net value $1,000, the annual allowance may be reduced by 30 per cent when the applicant resides in a city or town of 10,000 or more, and by 39 per cent if she resides elsewhere. Where the net value of real property is between $500 and $1,000 there is a 15 per cent reduction. The allowance may be cut by 5 per cent where movable property other than household furniture is acquired to the value of more than $500. The allowance is to be decreased also where there are assets other than household furniture and clothing convertible into cash, and general power is given the Bureau to make reductions in other circumstances where it seems reasonable. A person owning or acquiring liquid assets other than household furniture valued at over $1,000 is not entitled to allowance.

CO-OPERATION IN ONTARIO

Summary of Educational Conference Held at Guelph

A three-days' conference on co-operation was held at Guelph, Ontario, on September 20, 21, and 22, having been called by the Hon. P. M. Dewan, Minister of Agriculture for Ontario, and Dr. G. I. Christie, President of the Ontario Agricultural College. The conference was more educational than conventional in character and was attended by all those interested in co-operation in Ontario, about 320 persons being in attendance.

The following résumé of the conference is based on information contained in *The Canadian Co-operator* for October, 1938:—

At the opening session Dr. Christie gave an address of welcome remarking that the Conference had been first suggested by Hon. P. M. Dewan. He said that co-operation was looked upon by many as simply buying and selling, but there was another side, co-operation was also a way of living. Prof. W. M. Drummond, of the Department of Agricultural Economics, University of Toronto, gave an introductory address explaining the purpose of the Conference, and was followed by Dr. J. F. Booth, of the Economics Division, Marketing Service, Department of Agriculture, Ottawa, with an address on "Agricultural Co-operation in Canada, with special reference to the number, variety and types of co-operative organizations in Ontario." In the course of his address Dr. Booth expressed the opinion that the Co-operative Movement had its greatest success when farthest from markets, quoting figures which showed the greatest strides had been made in the Canadian West. He traced co-operation on this continent from 1800 until the present time; from the early educational societies in Nova Scotia and Quebec, the barn raisings, mutual insurance companies, cheese factories, and grain growers' locals, up to the present powerful grain pools. He also traced government assistance which had been given and told of increased interest in co-operatives on the part of all provincial governments.

"Co-operation in Action in Nova Scotia" was the title of an address given by Prof. A. B. MacDonald of St. Francis Xavier University, Antigonish, N.S. The speaker outlined co-operative developments in the province, mentioning that the consumers movement was most highly developed at Sydney Mines, the Society at that point now doing a business annually of $1,160,000 having paid back to members over $100,000 last year. He told of the general purpose of co-operatives in the province, the livestock shipping clubs, poultry pools and seed cleaning plants, of seventeen co-operative canneries controlled by fishermen, and the study which was being made of hospitalization and medical service schemes which it was expected would be the next big step.

At a banquet, Hon. P. M. Dewan spoke on "Basic Requirements for Successful Co-operation." He declared that unscrupulous promoters must be kept down if co-operatives are to be kept on a sound footing. "Already" he continued "because we in Ontario have become more interested in co-operatives we find men trying to capitalize on this, and bringing forward all kinds of wild schemes which they call co-operation." He said it was unfortunate that these men appeared when an effort was being made to promote co-operation on a sound basis. He also charged that there are "many organizations playing with the name co-operative when they have no right to it at all." Mr. Dewan declared that through co-operation a man could improve both his economic and social position. It was only necessary to look to the movements in Denmark and the United States to realize this fact. "Because" he continued "there have been many failures in co-operative effort it does not mean that the movement is not a success, but merely that it has not been correctly carried out."

At another session of the conference Mr. George Keen, general secretary of The Co-operative Union of Canada, delivered an address on "Existing legal requirements for co-operative organization in Ontario and

suggested changes." He reviewed co-operative legislation in Canada, outlined in detail defects in Ontario co-operative legislation, and submitted proposed amendments thereto which had been placed before the Ontario Government.

Other addresses delivered during the course of the three-day conference were given by—Mr. W. H. J. Tisdale of the Canadian Co-operative Wool Growers' Association who spoke on "Limitations of Co-operation"; Mr. H. H. Hannan, secretary, United Farmers of Ontario who took as his subject "How to Organize a Co-operative"; Mr. George Wilson, Director of Marketing and Chairman of the Farm Products Control Board spoke on "Use of Ontario Farm Products Control Act in the furtherance of larger and more effective co-operative effort"; Mr. A. Leitch, Chairman of the Ontario Flue-Cured Tobacco Marketing Board, gave an address on "Producer Marketing Organizations in Action"; Mr. R. H. Mayberry, Vice-President of the Ontario Cheese Patrons' Association dealt with the subject of "British Marketing Schemes and their relation to co-operative marketing methods in Canada"; Mr. R. J. Scott, President of the United Farmers' Co-operative Company gave an address on "Co-operative purchasing of farm supplies in Ontario."

Resolutions Adopted

Resolutions were passed (1) stressing the importance of co-operatives becoming responsible for carrying on permanent educational work; (2) recommending every agency in the province interested in community betterment to pay increasing attention to co-operative education, and the application of co-operative ideals to community life in both the economic and social sphere; (3) recommending the establishment of the Conference as an annual event; that a regular short course on co-operation similar to other short courses now conducted at the College, be conducted; that greater stress than heretofore on co-operation be made in the regular course work in the Economics Department; that co-operative education be included in the program of all short courses, conducted by agricultural representatives; (4) declaring an important work could be done in the re-establishment of the Co-operation and Markets Branch of the Department of Agriculture, in the guidance of organization and supervision of co-operatives; suggesting the further organization of producers into various commodity groups and the providing of suitable means to finance themselves without any state aid, as well as the use of these commodity groups to disseminate co-operative educational information and to help them in the formation of co-operatives; urging the making of suitable revision of the Farm Products Control Act to make it more effective, and securing the support of the Provincial Minister of Agriculture when it became necessary to seek federal aid in marketing schemes that are inter-provincial in extent; recommending the revision of Part 12 of The Companies' Act along the lines submitted to the Conference by Mr. Keen, as secretary of The Co-operative Union of Canada, and the revision of the present Ontario Co-operative Credit Societies Act to conform with the best credit union legislation of other provinces and to make the same operative.

Membership Statistics of Trade Unions in Great Britain

According to the October issue of the British *Ministry of Labour Gazette* trade unions in Great Britain and Northern Ireland had a total membership of approximately 5,851,000 at the end of 1937, an increase of nearly 550,000, or over 10 per cent, as compared with the total at the end of the previous year.

The total number of unions known to have been in existence at the end of 1937, was 1,033, compared with 1,041 at the end of 1936. Ten unions, with a total membership of 5,950 at the end of 1936, were reported as having been dissolved in 1937, while 11 unions, with an aggregate membership of 35,000 at the end of 1936, ceased to exist in consequence of amalgamation with other unions. As a result of some of these amalgamations, two new unions were formed, with an aggregate membership of 32,000; and 11 other unions were formed in 1937, with an aggregate membership of 11,500. Of the total 1,033 unions at the end of 1937, 21 had their headquarters in Northern Ireland.

Statistics show that while the number of unions with a membership of under 1,000 was 706, or 68 per cent of the total number, such unions accounted for less than 3 per cent of the total membership. Of the remaining unions, 39 each had a membership of over 25,000, whose combined membership amounted to 72 per cent of the total for all unions. Nearly one-half of the total membership was concentrated in the 12 largest unions.

Industrially the largest membership (1,143,000) was reported in the group known as the "other transport (road, dock, etc.) and general labour." Of the 1,143,000 members reported in this group, 1,094,000 belonged to two unions namely, the Transport and General Workers' Union and the National Union of General and Municipal Workers.

Apart from this group the metal, engineering, and shipbuilding groups accounted for 800,000, the mining and quarrying groups for over 700,000 and the national and local government group for nearly 600,000, while the textile and railway groups each totalled between 400,000 and 500,000.

FIFTY-EIGHTH ANNUAL CONVENTION OF THE AMERICAN FEDERATION OF LABOUR

Proceedings Featured by Resolutions Relating to the Trades and Labour Congress of Canada

THE fifty-eighth annual convention of the American Federation of Labor, was held at Houston, Texas, commencing October 4, 1938, with an attendance of delegates representing more than 5,000,000 working men and women, and that the largest paid-up membership was reported on the books of the American Federation of Labor. Reference was made by the president to the activities of the Committee for Industrial Organization, and especially the stand taken by the chairman of that organization on subjects of present-day concern. It was the contention of President Green that both forms of organization were applied, "the industrial form where circumstances and conditions permit, the craft form where the skilled workers need protection in order to develop a wage standard commensurate with the requirements of American citizenship."

In his opening address, President William Green referred to the economic philosophy of the organization and emphasized that it was the desire of the Federation to establish a condition where men may exercise their right to organize and bargain collectively, free from intimidation and coercion, and an invitation was extended to employers of the country to accept this modern philosophy.

The speaker declared that the Federation was not opposed to the National Labor Relations Board, the complaint being "that the National Labor Relations Board, in the administration of the Act has become the ally of the C.I.O. (Committee for Industrial Organization)."

Report of Executive Council

In its report the executive council outlined the achievements of the Federation during the past year.

The report of the secretary-treasurer covering the year ending August 31, 1938, showed total receipts, including the balance brought forward of $2,430,770.78, expenditures totalled $1,987,139.59, leaving a balance of $443,631.19. Of this total $436,774.96 is in the defence fund for the local trade and federal labour unions and the balance, $6,856.23, is in the general fund.

At the close of the fiscal year the Federation had in affiliation 1,517 local trade and federal labour unions, 792 city central bodies, 49 state federations of labour, 4 departments, 846 local department councils and 102 national and international unions, with 32,631 local branches. The total paid membership of the American Federation of Labor, as at August 31, 1938, was 3,623,087.

According to the report charters had been issued to the following national and international unions: National Association of Post Office and Railway Mail Labourers; The National Association of Special Delivery Messengers; International Spinners' Union; and the International Union Progressive Mine Workers of America. The charters of the following unions were revoked: United Mine Workers of America; International Union of Mine, Mill and Smelter Workers; Federation of Flat Glass Workers of America; Amalgamated Clothing Workers of America; Amalgamated Association of Iron, Steel and Tin Workers; United Textile Workers of America; International Union United Automobile Workers of America; United Rubber Workers of America; and the Oil Field, Gas Well and Refinery Workers of America. The charter of the Journeymen Tailors' Union of America was cancelled while the charters of the Paving Cutters' Union of the United States and Canada and the Quarry Workers International Union of North America were withdrawn.

In regard to the extension of the organizing campaign the report stated that an organization department had been created in order to facilitate the organizing work of the Federation. Such work has been carried on among those employed as office workers and those classified as "white collar" workers, beet sugar workers, cement workers, gasoline station attendants, and in the flour and cereal milling, fabricated metal, aluminum, agricultural and cannery, chemical, distillery and communication industries, as well as miscellaneous workers employed in other fields.
